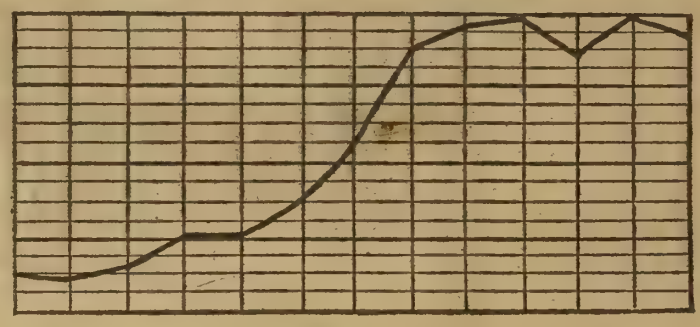
The office of provost marshal general has issued a formal statement to the exemption boards throughout the country showing what aliens are liable to army draft in this country. The statement shows twenty-one nations besides the United States now formal enemies of Germany and her allies. The following is a list of the nations now at war with Germany and Austria: The United States, Belgium, Brazil, China, Costa Rica, Cuba, France, Great Britain, Greece, Guatemala, Italy, Japan, Liberia, Monaco, Montenegro, Panama, Portugal, Rumania, Russia, San Marino, Serbia, Siam.



### Study Milk Production Cost.

Surveys were made recently on dairy farms in western Washington to show milk production costs. The average for 79 farms in western Washington was shown to be $3.29 per hundred pounds.

# Why live stock prices go up and down

WHEN there is more dressed meat on the market than there is consumer demand for it, meat and live stock prices go down.

But when the consumer demand for meat is greater than the supply, meat and live stock prices go up.

This is the law of supply and demand. It is the law that determines the prices the producer gets for his cattle.

* * * *

Between the producer of live stock on one hand and the consumer of dressed meat on the other hand is the service of the packer.

The packer turns the live stock into dressed meat and by-products and then distributes them to the retailer.

Out of every dollar the packer receives for this meat and by-products he pays 90 cents, approximately, for the cattle.

The remaining 10 cents on the dollar must pay for dressing, freight to market, operation of distributing houses, and in most cases delivery to the retailer.

Out of what is left must come the packer's profit. For Swift & Company during 1917 this amounted to a net profit of ¼ of a cent per pound of beef. On *all* products, it was only a little over half a cent per pound.

A reasonable profit margin is necessary to enable the packer to operate without endangering the efficiency of the business and its value to the producer as a marketing agency for live stock. Complete elimination of these profits would have practically no effect on the farm prices of live stock nor the retail prices of meat.

Swift & Company will gladly co-operate in the carrying out of any national policy that will tend to steady the prices of live stock and meat.

## FEEDS NO SILAGE.

### Grain a Doubtful Cow Ration?

"A cow that must have a heavy grain feed every day in order to produce well is not a farmer's cow," says B. J. Gross of Yakima, Wash. "I once sold a cow which I had raised from a calf, and the man who bought her had considerable trouble in teaching her to eat grain. I am feeding hay and pasture now, and am selling about 320 pounds of milk from eight cows. No, I do not feed silage. Putting up a silo would mean a considerable investment, and it would necessitate my hiring help part of the time. Now I am independent—I farm my 20 acres practically without any assistance."

Aside from the reason quoted, Mr. Gross has another tentative objection to feeding silage. He is not convinced as yet that it is not in part a forcing feed, which by driving a cow at the top of her producing capacity for a time shortens her career as a milker. This possible objection is entirely obviated by the alfalfa and pasture ration and as he is careful never to crowd a pasture beyond its feeding possibilities, he finds no need for ensilage.

Before going to Yakima the Gross family farmed over on Puget Sound.

"One of our big crops there was field peas," Mr. Gross comments. "We could raise a tremendous tonnage, and for feeding hogs they can't be beat. I remember taking in one hog which actually puzzled the butcher who bought it. He looked at the scales and looked at the hog and shook his head. 'Something is wrong,' he said. 'That hog can't weigh that much.' When I told him that the hog had been finished off on peas, he understood."

### Fatten on Wheat Straw.

Last winter J. B. Cornett of Shedd, Ore., cut wheat straw with his silo cutter, wet it down with molasses and fed it with a little oil meal and only a little chopped oats to his cattle. Mr. Cornett, who breeds pure bred Shorthorns, had several young bulls he wanted to get a good growth on, and keep in condition. They grew and fattened on the straw. This year Mr. Cornett cut all his hay and blew it into the barn with his cutter. He has long believed in cutting hay, but this is the first year he has done so. He cuts the hay short and expects to use the same kind of molasses on the hay, which is cheat that had vetch sown with it. But the aphis ate all but the skeleton of the vetch.

Mr. Cornett has a nice lot of young bulls coming on. He will have at least two in the Portland sale this winter. Golden Minority looks well and his calves are all good. H. A.

## Veterinary

Dr. S. B. Nelson

**Infectious Mammitis**—Will you please tell me what ails my cow. She is six years' old, Holstein-Jersey. Four months before freshening time she began to give thick yellow matter from one teat. I bathed her bag in hot water; that one got well; then another started; then the third. I dried her up. Then another cow bruised her bag and the bruised quarter is doing the same way. Please tell me (1) is it a disease; (2), is it contagious, (3) is it hereditary; (4), what can I do for it if it is curable? C. S.
Warren, Ore.

The trouble that you mention affecting your cows has all of the earmarks of an infectious mammitis or garget. This is different from the common garget because it will spread from animal to animal. I would recommend to you, because of its seriousness, that if you possibly can you segregate these two animals from the rest of your cows if you have more. Also disinfect your stables very thoroughly by first a one to one-thousand parts of corrosive sublimate in water. Three or four days later go over the stable thoroughly with a pasturated solution of bluestone in hot water. Then, three or four days later go over the stable thoroughly with whitewash, the entire barn, where the rest of your cows are. This would tend to lessen the opportunity for it to spread among your cows. If you can possibly avoid it, do not allow the person who milks your healthy cows to milk the diseased ones; but if one person has to do that, then use a 2 per cent solution of lysol on your healthy cows, and milk them first. Wash the udder and the teats thoroughly before milking, and then when you milk the diseased ones, wash the udder both before and after, and be sure and wash the hands thoroughly after the milking, or after each time the cows are handled. The treatment is not very satisfactory. Possibly as good a treatment as you might be able to use yourself would be to inject into the udder a 2 per cent solution of boracic acid. This solution should be made with sterile or boiled water. Dip the ends of the teats in tincture of iodine, and then insert your solution into the udder. Paint the affected part of the udder with the following solution: Tincture of iodine—two parts; soap liniment—six parts. Do this morning and evening after milking.

**Gives Bloody Milk**—I have a cow with her first calf, now six weeks' old. When it was three weeks' old she was badly bloated on new alfalfa hay, since then she has been giving bloody milk, just the very last "strippings" being bloody. Now she gives bloody clots at first. She seems to be in good condition, eats hearty and there does not seem to be any soreness in either udder or teats. All four teats are affected. She is on very short pasture and has a good feed of alfalfa hay morning and night. I. G. J.
White Swan, Wash.

Try giving the heifer a purge You can use a pound to a pound and a quarter of epsom salts with either a half a cup of common salt mixed with it, or better yet, a pint of heavy molasses, mixed with three quarts of water. Two days later, begin giving a teaspoonful of hyposulphite of soda in a pint of water night and morning for a few days.

**Soy Bean Meal**—Please tell me how to use soy bean meal for stock or poultry. G. W. D.
South Bend, Wash.

Write to Professor Woodward, head of the department of dairying, at the State College of Washington, Pullman, Wash. He will tell you in detail how to use soy bean meal for stock.

**Dry Cow Up**—Please inform me what to use to prevent a cow from sucking herself. I am now using a surcingle and a halter with a stick between her front legs, one end snapped on halter and one on surcingle. It is only partial—not a complete preventative. What is the best way to dry her up? C. R
Elma, Wash.

Try putting what is known as a crate on the neck of the cow. This is made of a series of pieces of wood, the length of from the neck to the shoulders, and approximately three-quarters of an inch square, and is made into a neck crate by putting these pieces about four inches apart, and fastening them together by means of leather straps. This is fastened around the neck and prevents the cow from throwing the head to one side. That sometimes is better than the surcingle stick which you mentioned. After you prevent the cow from sucking herself, go at it and dry her the same as you would any other cow, by milking her not quite dry and only once a day, and then after a little time every second day, etc., until she is dried. Cut down on the milk-producing feeds and give her only dry feed.

**Girls Have Seats.**

Hereafter girl elevator operators of Kansas City, Mo., will have seats in their elevators.

# Save the Calves and the Milk

## feed BLUE BAG Calf Meal

**The United States Government Experiment Stations and the Best Breeders in the country recommend calf meal in place of whole milk. It is pronounced to be the only profitable modern way in which to raise strong, healthy calves.**

**Just because the price of whole milk soars is no good reason for killing the calf to obtain an immediate turnover for the price of its hide. Sell your milk at the top price. BLUE BAG Calf Meal gives you this double opportunity to save the milk and save the calf. It is a complete substitute for whole milk. Made of locust bean meal, unpressed flax seed, wheat flour, blood flour, barley meal, ground peas and beans, rice polish, old process oil meal, hulled oats, cocoanut meal recleaned cottonseed meal, fenugreek, sugar, anise seed and salt, put together in such proportions as to make a well balanced ration.**

ANALYSIS:
Protein..24 to 26%
Fiber.....5 to 6%
Fat.....5%
Carbohydrates..
.....51 to 56%

The Ideal Food for the baby Calf.

**Many farmers have in the past adopted the Mallet on the Head idea of disposing of their calves. BLUE BAG Calf Meal gives the farmer the opportunity of raising not only all the heifers, but the bull calves as well, at a mere fraction of the cost of whole milk. Think of the high prices now prevailing on beef and veal and think of what the animal will be worth after a year or so. Raise every calf you are able to, for the cost of raising is small compared with the profits.**

**Think of it. One hundred pounds of BLUE BAG Calf Meal makes one hundred gallons of very nourishing gruel and at a very reasonable cost.**

# More About Strychnine

William H. Wheeler of Eugene, Ore., sends me the following letter recounting his experience with strychnine and chickens. We have had several communications on the subject of poisoning hawks and cats by feeding strychnine to chicks, the poison not affecting the chicks, it was said, but killing the hawks or cats eating the chick. These communications have reported success. There is little or no actual experimental data proving or disproving this theory, but here are a number of letters written in good faith asserting that the theory is a demonstrated truth. It is a theory apparently easy of demonstration, and it may be worth while to experiment, but I would repeat what was said before: Be careful with the poison. J. D.

I saw your remarks about chickens and strychnine in the Farmer and want to tell you my experience. I had heard that strychnine would not kill a hen, but doubted. I had a field of peas just coming out of the ground. Chipmunks commenced work on them and seemed likely to take them all. I dissolved strychnine in hot vinegar and added water and soaked a pint of peas in the solution. One or two peas contained enough poison to kill a chipmunk. I have seen one eat a pea or two and then go into convulsions and fall dead. I strewed that pint of peas along the edge of the field where the chipmunks came in. I did not know that my chickens ever went there, but I found two of them there that day. They had followed along the edge of the field and eaten nearly half of the peas. I never expected to see them alive again, but when I counted the flock in the morning, as was my wont, there was not a bird missing. I would not be afraid to put strychnine bait where hens would be likely to get it.

WILLIAM H. WHEELER.

**THE SELF-OILING WINDMILL**

has become so popular in its first three years that thousands have been called for to replace, on their old towers, other makes of mills, and to replace, at small cost, the gearing of the earlier Aermotors, making them self-oiling. Its enclosed motor keeps in the oil and keeps out dust and rain. The Splash Oiling System constantly floods every bearing with oil preventing wear and enabling the mill to pump in the lightest breeze. The oil supply is renewed once a year. Double Gears are used, each carrying half the load

# How to Can Chicken

**Time table for canning chicken:**
**Water bath, 3½ hours.**
**Five-pound pressure cooker, 2½ hours.**
**Ten-pound pressure cooker, 1 hour.**

Here is how a great many people are canning chicken or are getting ready to can them during the season when the young cockerels are at their best for table use:

Draw the fowl soon after it is killed, wash carefully and cook, then cut into convenient sections. Can by either of these methods:

1—Place meat in wire basket or cheesecloth and boil until meat readily parts from the bone; lift from boiling liquid and remove meat from bones; pack closely into sterilized jars; fill with hot liquid after it has been concentrated one-half, add level teaspoon salt per quart of meat; put rubber and cap in place lightly; sterilize as per time table.

2—Sear meat in hot oven or hot fat in frying pan, and steam or simmer until it can be torn apart. Pack meat in jars, fill the space with stock and add a teaspoon of salt to each quart of meat. Sterilize according to time table.

3—Free meat from bone and cut into pieces to go into jar easily; pack raw meat into tested clean glass jars to within 3-4 inch of top; add teaspoon salt to each quart of meat, but no water. Celery leaves, onion, pepper or other seasoning may be added. Sterilize according to time table.

A fowl weighing two pounds dressed should make a pint jar of solid meat and a pint of stock thick enough to jell.

Canning surplus cockerels saves feed, provides substitutes for meatless meals next winter, and makes a convenient food for unexpected visitors.

# Get Lame and Die

To the Editor: Could you inform me as to what disease our chickens have? At first they become crippled. We opened one which was crippled and her eggs had hardened in her and had become a purplish color like streaks of blood in them. There were small, hard growths on her intestines. They get so they can not walk, then they die. This happens mostly in the winter and spring.—W. S., Wauconda, Wash.

The hens are evidently afflicted with some disease of the ovaries. It may be bacillus pullorum, a germ disease that causes the so-called white diarrhoea in chicks. The growths on the intestines would indicate tuberculosis, though the description is not complete enough to say positively. When this is the case the intestines usually show many tubercles, varying in size from a pinhead to the size of a pea, and when touched with a knife are gritty. The liver is usually also affected. It shows small yellowish spots, which are also gritty to the touch of the knife.

There is no known cure for either of the diseases mentioned. It would be well to take the matter up with your state college experiment station poultry department, giving a more complete description of the trouble. J. D.

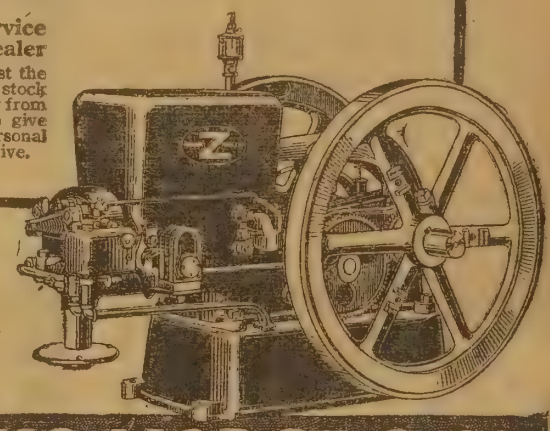
## Oregons Over the Top.

The report for the thirty-fifth week of the egg-laying contest at the Connecticut Agricultural college at Storrs gives the Oregons first place. The first place had been held by a pen of Wyandottes owned by O. G. Knight of Rhode Island for 23 weeks, but were finally forced to yield to the Oregons entered by the Oregon Agricultural college. The Oregons also led all other pens for the week, their record being 63 eggs, a 90 per cent yield. The contest has 17 weeks to run yet, and it bids fair to be an exciting race. J. D.

**Don't Want Negroes From U. S.**

A protest was sent to the Canadian minister of labor by Vanvouver trades and labor council against the bringing of negroes from the United States by the Canadian Pacific railroad for service in its dining cars.

**The Engine Selected by over 150,000 Farmers**



**RECORDS made by over 150,000 practical farmers buying over $10,000,000 worth of Fairbanks-Morse "Z" Farm Engines have never been equaled in Engine history.**

Demand, as they did:

1. Fairbanks-Morse Quality.
2. Economy in first and fuel cost, and low upkeep.
3. Simplicity and Staunch Durability.
4. Light-weight, Substantial, Fool-proof.
5. Gun-barrel Cylinder Bore.
6. Leak-proof Compression.
7. Complete with Built-in Magneto.
8. More than Rated Power.

**You Also Get Service from your Local Dealer**

Your local dealer has just the type "Z" for your needs in stock—waiting for you. Buy from him. He is prepared to give prompt delivery and personal service right where you live.

The 3 and 6 H. P. sizes are built to use kerosene, distillate, stove oil, tops or gasoline. The 1½ H.P. size uses gasoline only.

Chicago — Manufacturers

**ZEROLENE**

*The Standard Oil for Motor Cars*

**The Popular Motor Oil**

More ZEROLENE is used for automobiles on the Pacific Coast than all other oils combined.

Leading motor car distributors praise ZEROLENE, correctly refined from selected California asphalt-base crude, because it maintains its lubricating body at cylinder heat and gives perfect lubrication with less wear and less carbon deposit. Get our lubrication chart showing the correct consistency for your car.

*At dealers everywhere and Standard Oil Service Stations*

STANDARD OIL COMPANY
(California)

Engines are either water-cooled or air-cooled. This the air-cooled type, like all *internal-combustion engines*, requires an oil that holds its full lubricating qualities at cylinder heat, burns clean in the combustion chambers and goes out with exhaust. ZEROLENE fills these requirements perfectly, *because it is correctly refined from selected California asphalt-base crude.*

IN THE ORCHARD

Write to the Editor.

GRANVILLE LOWTHER, Editorial Contributor.

# Orchard Troubles

## Diseases, Pests and the Remedies

By Granville Lowther.

I have been asked for information on diseases, pests and treatment of fruit. I am disposed to give the subject careful treatment, because I know how important it is to the fruit industry of the country. It is not possible to even catalogue in one brief article the names of all the diseases that affect the different species and varieties of fruits in this country.

I will begin in the alphabetical order of the names of fruit diseases, and give in this issue and the next those that I consider of most importance, together with the remedy. I will treat of the pests in issues to follow.

### Apple Diseases.

Alternaria Decay—A disease of apples caused by a fungus that generally enters the blossom end and produces a cobweb growth around the core and seeds. The remedy is to spray in the beginning of the disease, before it enters the core, with Bordeaux mixture. This is a spray composed of lime, bluestone, or copper sulphate, in the following proportions: Unslacked lime, 4 pounds, copper sulphate, 4 pounds; water, 50 gallons.

Anthracnose—This is a fungus disease that affects a number of varieties of fruits. In apples it is manifest by the formation of a dark, sunken, cankerous appearance in the bark of the younger branches, but is sometimes found in the older branches and on the fruit. Various specias of anthracnose attack the following plants, namely, alfalfa, apple, avacado, beans, blackberry, glue grass, butternut, cantaloup, chestnut, citrus fruits, clover, cotton, cranberry, cucumber, currant, eggplant, gooseberry, grape, lettuce, loquat, mango, maple, muskmelon, oak, orange, peach, pear, raspberry, rose, rye, sorghum, spinach, squash, timothy, tomato, watermelon, wheat and various other farm crops and plants. Remedy: Spray with lime sulphur or Bordeaux.

Bitter Rot—This disease is so called on account of its bitter taste. It attacks apples, peaches, pears, grapes, eggplant and various other fruits and vegetables. Remedy: Spray with Bordeaux 25 per cent stronger than the ordinary mixture.

Black Rot—This disease is due to a fungus that destroys the skin, dries up and mummifies the fruit. Remedy: Spray with Bordeaux or with lime sulphur. In all of these fungus diseases my preference would be the use of Bordeaux if it were not for the fact that we use the lime sulphur for scale insects, and the same spraying is often sufficient for fungus diseases as well.

Black Spot Canker—This disease is so similar to anthracnose that it has been difficult to determine any difference between them. The same remedies will apply in both cases.

Blight—This disease is variously called fire blight, pear blight, twig blight and blight. The technical name is bacillus amylovorus. It is a bacterium that gets into the sap generally through the blossom, some puncture in the bark or some injury that exposes the sap, and it is generally carried by insects from one part of the tree to another. Bees are perhaps the most frequent distributors of this disease, because the disease exudate oozing from the broken bark has a sweetish taste and is carrired to the blossoms of adjoining trees as the bees visit them in order to get the nectar. This is probably one of the most difficult diseases to control that we have in our orchards, because it often is carried down onto the roots by ants that carry the aphis down and deposit them on the roots, where they puncture the bark and infect the roots of the trees. Remedy: The only remedy that we know at present as being efficient is to cut it out and burn it. If it is on the roots, or if it affects the bark of the trunk, which is sometimes true, then the remedy is to cut out the diseased portion and paint it over with a strong solution of lime sulphur or some other good disinfectant.

Blotch—This is a fungus disease that lives parasitically on the fruit twigs and leaves of the apple. A parasite is a fungus bacterium animalcula or perhaps an insect that lives on the growing substances of the tree or fruit. The difference between a parasite and saprophite is that saprophite lives on the dead and decaying substances, while the parasite lives on the growing substances. Remedy: Spray with Bordeaux.

Blue Mold Decay—This disease is the same as that found on the jellies, jams and preserved fruits. It is a saprophite. It therefore attacks ripe fruit rather than growing fruit, and fruit in storage more frequently than in other places. Remedy: Avoid in so far as possible all cuts, bruises or punctures of the skin that would admit the air and cause fermentation to begin.

Cankers—Cankers are of several varieties, such as sphaeropis canker, bitter rot canker, myxosporium canker, coryneum and phoma cankers, cytospora cankers, pear blight cankers, etc. These cankers are almost always the result of various forms of fungi, and can be killed if the diseased portion can be reached by fungicides like Bordeaux or lime sulphur.

Collar Blight—Is a form of pear blight attacking the apple tree at the thickened portion of the trunk just above and below the ground; some forms of collar diseases are the result of winter injury, generally such terms as blossom blight, twig blight, body blight, collar rot, root blight, fire blight, etc., mean the same thing. This is not always true, but bacillus amylovorus is the technical name for a bacterium attacking different parts of the tree. Cut out the diseased bark, paint the wound, and if necessary to the health of the tree, bridge graft. Bridge grafting is done by setting a graft into the healthier root below the diseased portion and the upper end of the graft into the healthy bark above the wound. This insures circulation and compensates in part at least for the loss of the cambium in cutting out the diseased portion.

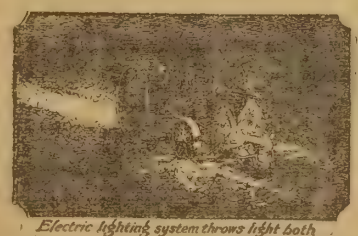
(To be continued next week.)

## Peach Crop at The Dalles.

"Our peach yield this season is not as large as it was last year, but the quality is better," said Mrs. M. J. Pippin of the Pippin fruit ranch at The Dalles, Ore. "It is the same all through the fruit district about The Dalles. In the low places the frost caught the fruit, but on higher ground the crop is a fair one in quantity and very fine in quality. The early peaches run larger in size and the flavor is better than usual. I think the same is true of prunes, and it was with cherries."

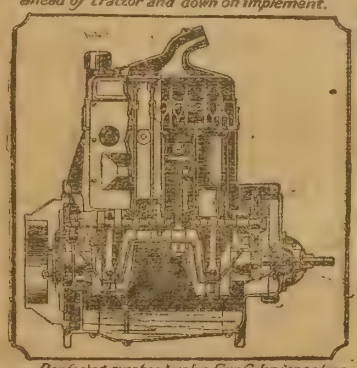
Mrs. Pippin took fresh fruit to Portland to sell in quantity six years ago, and had some difficulty in getting connections for selling. "Everybody was suspicious. They thought the samples were fine, and wondered if what they ordered would be as good" she says. "One of the railroad men saw my cherries and wanted to buy the whole lot to ship east. I wouldn't sell then, because the fruit was dead ripe and wouldn't hold up, and finally he ordered some. When it was delivered he was so pleased he wanted a big order, and it was too late in the season, so he placed an order right then for the next year. We ship now to over 20 states of the Union regularly."

Mrs. Pippin says she does not know about apples this year save by hearsay, but understands The Dalles crop is medium in quantity and high in quality, as with all other fruit.



### Superstition of the Sword.

In the east superstituous reverence is still paid to the sword. The daimios of Japan, when they voluntarily surrendered their rank, kept, as a rule, the wonderful blades which had been handed down from generation to generation, in some cases for more than 1000 years, and which had absorbed, as they believed, some of the character and life of the men that had owned them.

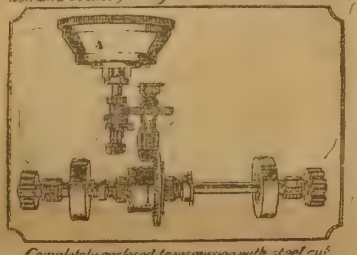


### Lack of Water Keenly Felt.

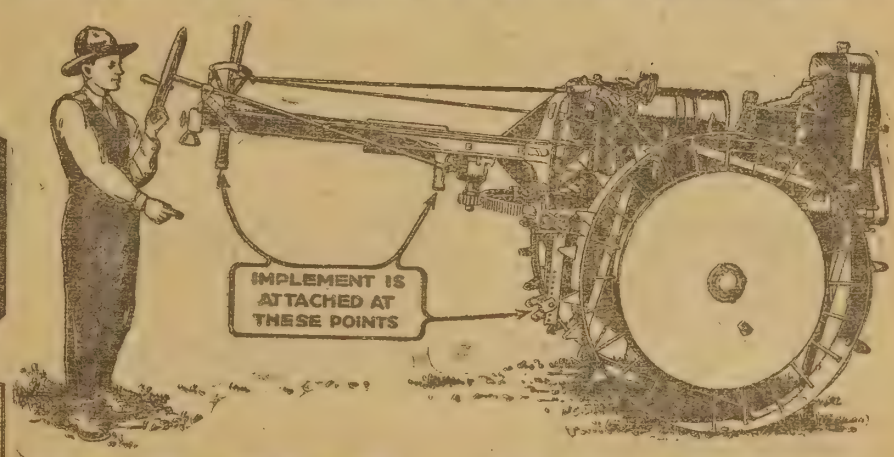
Florida contains about 4,000,000 acres of land waiting to be reclaimed by drainage.

# No Other Tractor Has So Many Good Mechanical Features=

Electric lighting system throws light both ahead of tractor and down on implement.



Perfected overhead-valve Four-Cylinder engine, with force-feed oiling system under 35 lbs. pressure.



Diameter of connecting rod bearings 2¼ in. compared to piston diameter of 3½ in. insuring long life.

Valves placed in perfect adjustment by turning down ball and socket joint of rocker arm with screwdriver.

Completely enclosed transmission with steel cut gears, Hyatt bearings, differential lock, and brakes

# MOLINE UNIVERSAL TRACTOR

## It Solves The Farm Help Problem

EVERYONE who knows what a tractor should do, agrees that the Moline-Universal has three distinct advantages over all other tractors: lighter weight; greater economy and ease of operation; ability to do all farm work, including cultivating; and ONE-MAN control of both tractor and implement from the seat of the implement, where you have always sat, and where you must sit in order to do good work.

Aside from these distinct advantages which the two-wheel construction gives, the Moline-Universal Tractor, Model D, is still the best tractor on the market. In every detail it has been refined and perfected to the utmost limit of modern engineering knowledge.

### *Self Starter—Electric Lights*

The Moline-Universal is the only tractor regularly equipped with a complete electrical starting, lighting, governing and ignition system. The starter saves many hours of productive work, besides eliminating back-breaking labor. Electric lights enable the tractor to be worked at night during rush seasons.

An electrical governor perfectly controls the engine speed. By simply turning a dial, within easy reach of the operator, engine manitains any speed from ½ to 3½ m. p. h., and automatically handles all changes in load.

### *Perfected Four-Cylinder Engine*

The perfected four-cylinder engine is the latest development in overhead-valve construction. With a bore of only 3½ inches a 2½-inch crankshaft is used. The strength and thickness of the crankshaft eliminates all vibration. Oil is forced through hollow crankshaft to all the main and connecting rod bearings under a pressure of 35 pounds to the square inch. The bearings float on a film of oil, so their surfaces never touch.

Double valve springs give unusually quick action with soft seating. Rocket arms are swiveled on ball and socket joints that may be turned down with a screw driver, placing the valve mechanism in perfect adjustment at all times. This engine develops unusual power and is very economical in operation.

### *Steel Cut and Hardened Gears*

The transmission is completely enclosed, with drop forged, hardened, and cut steel gears running in oil that reduce power loss to a minimum. All gears are mounted on heavy duty Hyatt roller bearings, with high grade ball bearings fitted with adjustable collars to take up end thrust. Fifteen Hyatt roller and five ball bearings are used in the Moline tractor. Seven splined shafts are used in locking gears to shafts. This is the strongest construction known, and has the additional advantage that it makes the transmission easy to take apart.

For pulling in soft ground, the two drive wheels can be made to revolve as one by means of a differential lock, doubling their pulling power.

### *Complete Enclosure of All Parts*

The final drive is completely enclosed in dust tight shields, the edges of which are sealed by heavy grease used to lubricate the gears. Every part of the Moline-Universal tractor is protected against friction and wear.

All working parts are accessible. All the weight is so well balanced on two wheels that the rear end of the tractor can be supported with one hand.

The Moline-Universal Model D will give you longer and better service at less expense than any other tractor. It is built for positive reliability.

Our catalog describes the Moline-Universal in detail. Send for it. Address Department 50.

MOLINE PLOW COMPANY, Moline, Ill.

HOLSTEINS

*"The Most Profitable Cows on Earth"*

The average purebred Holstein yields about six times the profits of the scrub cow.

Why feed six cows, why milk six cows, when one will do the work?

Let us show you the purebred Holstein way to greater profits—Free.

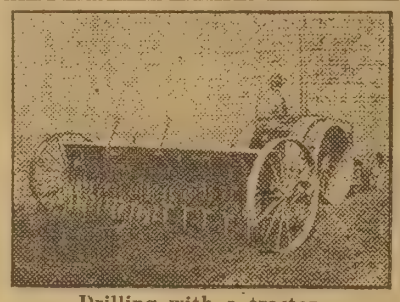
## Live Stock Is Moving

The week ended July 20 is given as the record week at the Spokane Union Stockyards for the number of live stock handled. The report shows that 131 carloads were received during the week, of which 1000 head were cattle, 13,000 head sheep, 100 head calves, and 50 head horses.



It is reported that William Hislop of Spokane recently paid to Archie Prior of Yakima, Wash., $15 per 100 pounds for eight carloads of spring lambs on board the cars at Spokane. This is believed to be the highest price ever paid for as large a shipment of lambs as this in any market of the west or middle west.

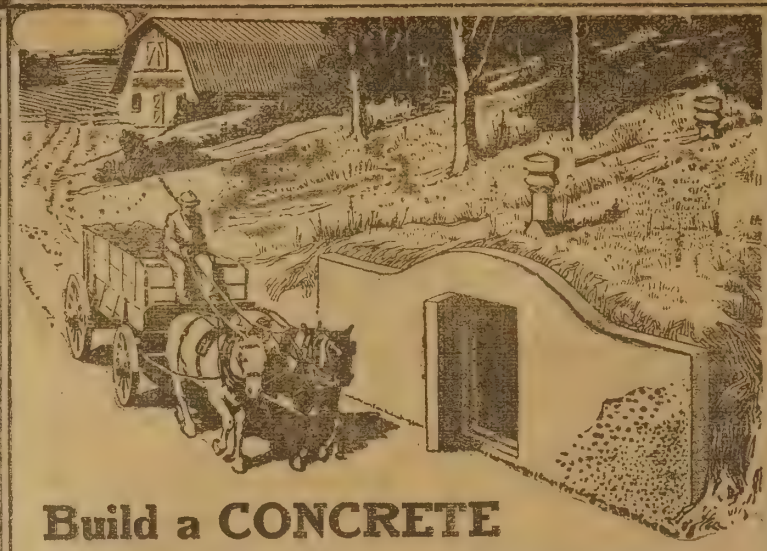
## Gathers Tractor Data

During the present year the United States department of agriculture determined to ascertain whether the tractor as an investment justified itself in the performance it had given and might be expected to give over a period of years. A questionnaire was sent out to owners of tractors, and reports came back to the number of 600.

Nine out of every ten owners consider their investment in a tractor a profitable one, which is good proof that the tractor is 90 per cent reliable. In the light of this fact, and considering the improvements that are being made, it is safe to conclude that we are rapidly approaching a day when the tractor will be as efficient as any machine.

A very large majority of those reporting to the department of agriculture laid stress on the tractor's ability to perform heavy work and to do it quickly, thus covering the desired acreage within the proper season. It was shown also in these reports that the tractor unquestionably affected a saving in man power and that through its use a larger acreage could be handled than could possibly be undertaken with horses. Then, again, a third and equally

Drilling with a tractor



important advantage referred to by these tractor owners related to the depth of plowing.

When plowing is done with horses, particularly in the fall, there is a strong tendency to skim the surface at a depth of three or four inches. By reason of this shallow plowing year after year the lower soil becomes hard, making penetration by plant roots very difficult. With only a shallow root system it is easy to understand that even short periods of drouth will injure a crop much more severely than if the roots could penetrate their normal depth. The tractor, offering as it does the power to plow deeply even in very dry weather, will certainly be the means of introducing the deeper tillage which, on most soils, will result in greater production than shallow tillage.

While the report of the department of agriculture indicated that the average tractor was used only 45 days during the year on an average, we question whether this includes its service at belt work. In any number of ways—such as in the grinding of grain, filling of silos, sawing of wood and pulling of stumps—the tractor can be used to a great advantage, thereby spreading its period of usefulness over a much greater part of each year.

A splendid record of increased production has been made this year. Yet the government is asking for an increase in the state of Washington alone of 300,000 acres for 1918, and in other states correspondingly. Some neighborhoods have contributed large numbers of horses to the army; and with this reduction of power at a time when greater production is called for, tractors on farms in the Pacific northwest will play an important part in helping to carry out our successful war program.

It may be worth suggesting to those who may be contemplating the purchase of a tractor for fall plowing that the demand is much in advance of the supply. One tractor distributor in Washington reports that he received, just a few days ago, the last carload of machines called for in an order placed with his factory early last spring and that no definite promise will be made to ship from now on except as limited factory output will permit.

Build a CONCRETE Vegetable Storage Cellar Now

Keep apples, potatoes, onions and other vegetables fresh throughout the winter and spring. Store them when gathered. Market them when prices mean a profit.

If you own a concrete storage cellar, you have not only solved the problem of even food supply for yourself but have helped greatly to solve it for others.

Build a concrete storage cellar because concrete construction means easy control of temperature in storage—and concrete is rotproof, ratproof, fireproof, permanent.

*Write our nearest office for free storage cellar plans and building instructions*

# Can Fruit in Spite of Sugar Shortage

Owing to the action of the national food administration in again reducing the amount of sugar that may be secured by any family for canning purposes, it is feared by some that much fruit will be allowed to go to waste that would otherwise be canned or preserved. This should not be. Every pint possible should be canned without the use of sugar if the supply is not sufficient to can as usual.

Under the new sugar regulations only one 25-pound lot of sugar is allowed to each family. If a family has already purchased one 25-pound allotment no permit will be granted for the purchase of a second, but where the first purchase of this amount has not yet been made the family is entitled to one 25-pound purchase. This amount is for canning only. None of it is allowed for jellies and jams. Three pounds a month per person is allowed for general use, but it is urged by the food administration that every person reduce this amount as much as possible. The regulations are due to shortage of the sugar crops in some producing countries and to the shortage of shipping for importing it.

In a bulletin on "Canning Without Sugar" J. S. Caldwell, government by-products specialist, says that sugar is not essential for the preservation of fruits, but that they can be canned as successfully without as with it. The following extracts from the bulletin describe the methods of canning, which are in the main applicable alike to canning with or without sugar:

"Many housewives are apparently unaware that practically all fruits may be successfully canned without the use of sugar. Such fruit preserves more of the natural appearance and flavor than does fruit put up in heavy sugar syrup, is fully as palatable and much more easily digested, is in better condition for use in cooking, and is available for all purposes for which fruit canned in syrup could be used. A heavy sugar syrup aids in a slight degree in preventing the growth of the yeasts and bacteria which cause spoilage, but perfect sterilization makes its use unnecessary.

"Fruits may be canned without the use of sugar by any method which the housewife is accustomed to use, but in every case the following rules should be observed:

1. Fruit to be used for canning should be firm, not overripe, and free from decay. Vegetables should be young and tender. To attempt to use very dirty, overripe or decayed fruit, or old, tough vegetables is to invite failure, since it is very difficult to sterilize such materials.

2. Jars should be tested by partially filling with water, adjusting rubbers, tightening covers, inverting and shaking.

3. Jars, covers, rubbers, spoons, cups, funnel and all utensils which are used in canning must be placed in a pan of cold water deep enough to cover them, placed on the stove and boiled for 20 minutes. Allow them to remain in the hot water until needed for use. This will prevent subsequent breakage and will insure perfect sterilization.

4. Rubbers should never be used a second time.

5. The neck of the jar should never be wiped off before sealing, as the cloth will almost certainly leave bacteria or yeasts in the jar.

**The Cold Pack Method.**

"The cold pack method has rapidly come into general favor, since it preserves more of the natural color, appearance and flavor of the fruit, and also saves the time, energy and labor of the operator. It requires no special equipment other than a wash boiler, lard can or other deep vessel with flat bottom and tightly fitting cover. Make a false bottom of wire netting or light wooden slats nailed to cross pieces and cut to fit in the bottom of the vessel used. If an oil or gasoline stove is available, increase the comfort of the operator by moving the entire outfit into a shady spot outside the house. Place the pan of boiling water containing jars, covers and utensils on the stove and keep hot. Put the false bottom in place in the wash boiler, fill the boiler about one-fourth full of warm—not hot—water, and you are ready to begin work.

"Transfer a jar from the boiling water to the wash boiler, fill it immediately with cold, raw fruit, packing it down firmly. Add enough cold water to fill the jar within one-half inch of top, using a knife or spoon to displace air bubbles. Take a rubber from the boiling water and fit it on, then set the cover loosely in place. Continue the process until the boiler is filled with jars. Now fill the boiler with cold water to within one and one-half inches of the tops of the jars, fit the boiler cover tightly on, place the boiler on the stove and heat to boiling. In the case of quart jars the following time table may be used as a guide:

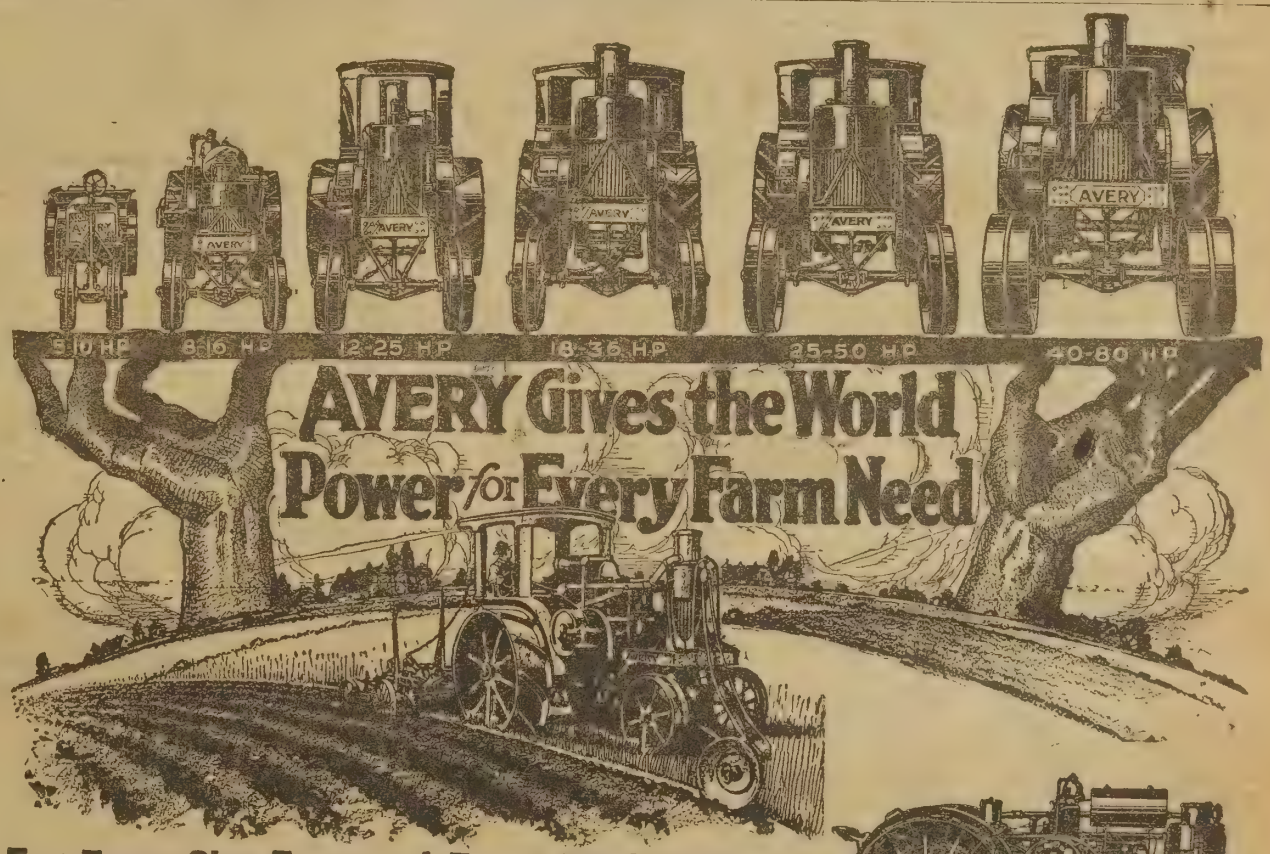
"For strawberries, blackberries, loganberries, continue boiling vigorously 8 to 12 minutes. For acid fruits, such as cherries, currants or gooseberries, boil vigorously for 5 to 8 minutes. For apples, peaches or pears boil vigorously for 20 to 35 minutes, the time depending upon the variety and degree of ripeness of the fruit.

"When the fruit has boiled for the specified time remove the jars from the boiler and immediately screw the covers tightly on. Wipe dry and place on a shelf out of drafts to cool, inverting the jars in order that leaks may be detected at once.

**The Open Kettle Method.**

"The open kettle method differs from the cold pack method in that the fruit is placed in a porcelain lined or other suitable vessel with enough cold water to cover it and cooked for the necessary time before transferring to the jars. Jars, rubbers, covers and utensils are sterilized in boiling water as described above. When the fruit is sufficiently cooked a jar is transferred from the boiling water to a plate or dish, packed with the fruit and filled to overflowing with the boiling juice, a rubber and a cover are taken from the hot water and fitted on, and the cover is screwed tightly down. Do not delay a moment in closing the jar tightly, and never attempt to wipe off the overflowing juice before putting the cover on, as you will almost surely introduce organisms which will cause spoiling of the fruit.

"While this method is a favorite one with many canners, it is wasteful of fuel and of time, since the amount of fruit which can be prepared at one time is small; the operator must stir the fruit continually to prevent sticking and scorching, consequently is exposed to the full heat of the stove, and the fruit loses much in appearance and flavor. For these reasons, those who have given the cold-pack method a fair trial usually adopt it.



"If fruits are allowed to boil for the full times stated above and are sealed without allowing anything which has not been thoroughly sterilized by boiling to come into contact with the fruit or cover, they should keep indefinitely. If the operator is working at high altitudes, the method of double sterilization should be employed. Proceed by either of the methods just described, but after 24 hours return the jars to the wash boiler, fill it to the shoulder of the jars with cold water, place on the stove and bring to boiling. When the water begins to boil—not before—loosen the covers sufficiently to permit the steam to escape, and continue boiling, with the cover of the boiler in place, for eight to 10 minutes in the case of the softer fruits, 12 to 15 minutes in others. Now remove the jars from the boiler and tighten the covers while fruit is still actually boiling in the jars. This method should always be employed when tomatoes, peas, beans, or vegetables low in acid content are being canned."

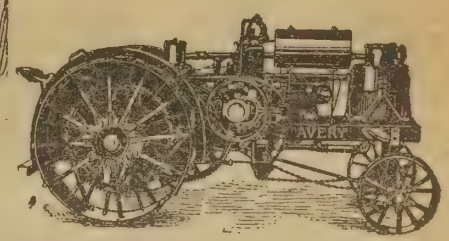
## Center of Production.

The center of agricultural production of the United States, according to the value of crop and animal products for 1917, is in west central Illinois, as shown by a diagram just issued by the department of agriculture. The states of greatest production are: Iowa, $1,330,000,000; Illinois, $1,255,000,000; Texas, $1,045,000,000; Missouri, $947,000,000; Ohio, $851,000,000 Nebraska, $774,000,000; Indiana, $766,000,000; Kansas, 735,000,000; New York, $700,000,000; Minnesota, $646,000,000; Pennsylvania, $636,000,000; Georgia, $605,000,000; Wisconsin, $598,000,000; California, $575,000,000; Michigan, $534,000,000, and Kentucky, $529,000,000.

## Much Beef Is Exported.

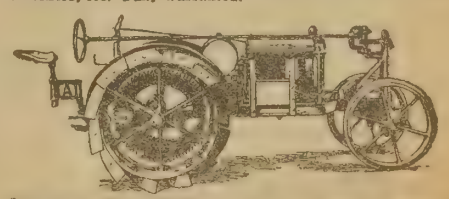
The government food authorities have announced that during the month of May nearly 100,000,000 pounds of beef was shipped to Europe. Most of this went to this country's allies. This is said to be the largest shipment for any one month in the history of this country.

## For Every Size Farm and Every Kind of Work



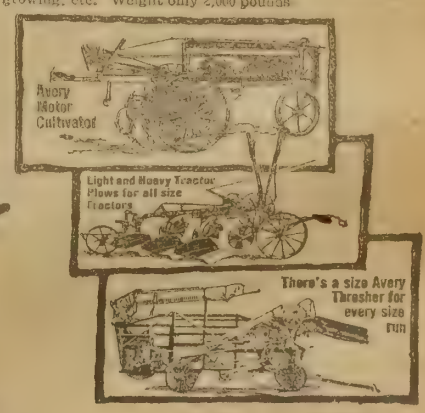
THE Avery is the **one standardized, thoroughly proved complete line of motor farming machinery** for every size farm in the world. With one of the sizes of Avery Kerosene Tractors, you can plow, prepare your seed bed, and plant **and harvest your grain crop.** With an Avery Motor Cultivator you can cultivate your corn, cotton, beans or any crop planted in rows. With one of the eight sizes of Avery "Grain-Saving" Separators, you can thresh all kinds of grain, kaffir corn, clover and other seeds. Every size Avery is a one-man outfit. For any kind of field work, belt work, or road work there is an Avery motor power machine that can be used safely, successfully and profitably.

Avery Tractors are entirely built in our own big factories and every part of an Avery Tractor (motor, radiator, transmission, etc.) is built **especially** for tractor work and **only** for the Avery Tractor. The Avery Company are builders—not assemblers. They specialize in motor farming machinery. Don't confuse the Avery Tractor and other Avery machinery with the ordinary assembled machine.



**Special Features** **With the Avery Tractor you can unhitch from one machine and instantaneously hitch to another at the drawbar, or apply belt power. And you don't have to use a wrench to do either—the coupler is automatic and the belt pulley is always in place.**

Avery Tractors are the only make with a Duplex Gasifier. It does the trick—turns kerosene or distillate into gas. The Avery motor is low speed. Main bearings are adjustable from the outside. Patented inner cylinder walls are removable. All parts are accessible and every part renewable.



**See the Nearest Avery Dealer** Go to the Avery dealer and select and buy the size tractor and equipment to meet your requirements (no matter how small or how large the acreage you cultivate) or write direct for complete Motor Farming Catalog.

**Avery 8-16 Tractor** pulls 2 or 3 plows and drives 19-inch threshers, etc. Fully warranted.

**Avery 5-10 Model B Tractor**—just the tractor for small farming, fifty acres or less. Also for truck gardening, fruit growing, etc. Weight only 2,000 pounds.

## A Great Race Is Being Run

### *Will Food Production Maintain Lead Over Consumption?*

The republication in 1916 by the late Lord Rhondda, British food controller, of an address on the food problem delivered 18 years before by Sir William Crookes, emphasizes certain phases of this momentous world puzzle usually overlooked. We are too apt to assume that the present food shortage is due solely to the war, and that as soon as the black cloud has passed conditions will swing back to normal. But what is "normal?" Have we any right to assume that because the world has up to this time been able to increase its food supply to correspond with its increase in population, it will always be able to keep up this balanced increase?

Sir William Crookes is not optimistic on this point. His main thesis is, "England and all civilized nations stand in deadly peril of not having enough to eat. As mouths multiply, food resources dwindle." And in support of this thesis he calls attention to the fact that the population of the world is increasing by geometrical progression — something after the manner of compound interest —while food production is being increased by arithmetical progression, or like simple interest. Morover, the per capita consumption of the big staple of the white race, wheat, is increasing. Not only are there constantly more mouths to feed, but each individual mouth demands more.

Finally, after touching upon the point that wheat is the cereal food par excellence and that upon it depends at least some of the superiority of the white race in matters of enterprise, organization and endurance, the famous English scientist suggests the one possible remedy: The laboratories of the world must come to the assistance of the grain fields. There is a definite limit to the world's wheat lands, and although we may not yet have approached that limit even distantly, eventually we shall do so. After that the necessary increase in wheat production must come from greater yields per acre rather than from increasing acreage. Nitrogen is the magic word which promises to make this increase possible, for nitrogen is the dominant manure for the wheat crop. And only the research work of the laboratories can make available the greatly increased quantities of nitrogen necessary for this feeding of the soil.

## Rats, Wheat and Fines

America and the allies today form a family group and all food supplies belong to the family table. No one has a right to waste food, whether it is food he has bought or food he has grown. In a wide sense, no man can do as he pleases with his own property, if such action is detrimental to others. America recognizes this in a moral sense, and calls waste a sin; England pronounces it a crime and imposes a penalty.

Rats, they declare, are expensive guests and a farmer must not entertain them, even unaware. England not only swats the rat but swats the farmer who allows rats in his ricks.

John Andrews of Charlton Cross farm was fined £60 (about $250) because he permitted five or six bushels of wheat to be destroyed by rats. About 100 rats were believed to have been in the stack, and acccording to the English idea a farmer should keep ahead of the rat game better than that. Wasted wheat cost this farmer nearly $50 a bushel. Food wasted is food lost and no money can replace it.

### Love of the Home.

The man who kindles the fire on the hearthstone of an honest and righteous home burns the best income to liberty. He does not love mankind less who loves his neighbor most. The germ of the best patriotism is in the love a man has for the home he inhabits, for the soil he toils, for the trees that give him shade, and the hills that stand in his pathway.

The love of home, deep-rooted and abiding; that blurs the eyes of the dying soldier with the vision of the old homestead amid green fields and clustering trees; that follows the busy man through the clamoring world, persistent to put cares aside, and at last draws his tired feet from the highway and leads him through the shady lanes and well-remembered paths, until, amid the scenes of his boyhood, he gathers up the broken threads of his life and owns the soil his conqueror—this—this lodged in the heart of the citizen is the savin principle of our government.—Henry W. Grady.

## SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University.)

## Exercise Before Bedtime and Keep Cool All Night

Dr. Hirshberg.

'Tis a hard job to make yourself fall asleep during some of these hot summer evenings. The room is stuffy and not a breeze stirs. Even your bed is very hot and produces a scorching sensation when you lie down upon it.

The sun is strongest from noon to about 4 in the afternoon and if you permit the rays to pour in during these hours it will take a very long time to cool off your room when you enter it at night. Your windows should remain open only until noon, and the shutters closed or shades drawn until 4. After this hour throw the windows wide open again and allow whatever breeze there is to stir the atmosphere of your sleeping quarters. When you come into your room at night do not allow the fatigue of the day to overcome you and think that your foremost and only task is to undress and throw yourself upon the bed. Such action will neither help you keep cool nor make your strong for the next day's work.

If you merely go to sleep with no exercise beforehand you are apt to feel dizzy the next morning and perhaps you will attribute your condition to the heat. The heat, to be sure, has much to do with lowering your vitality, but you can minimize this by taking the proper kind of exercise.

**Some Helpful Movements.**

The proper exercise in summer time has a strengthening and cooling effect. A cool shower or plunge into a tubful of cold water is the first refreshing move for the evening's rest. Use a Turkish towel and dry yourself with as little bodily friction as possible so as to produce the least possible amount of heat.

After your shower or plunge put on your evening garments. Do not leave off your underwear, for even in the very hottest times undermost garments are necessary in order to absorb the ever-present and profuse perspiration. If you remove your undergarments you run the risk of letting the moisture on your skin evaporate too fast and an obnoxious "cold" can easily result.

Before you are ready to retire take some light exercise. Begin with turning the head slowly sidewise and backward. Your arm movements should follow next. Stretch hard, forward, sidewise, upward and downward, so that you feel the strain of the movements to the very tips of your fingers.

Do your regular trunk movements after this, turning slowly forward, sidewise and backward. Be careful not to strain any part of the body.

After the trunk movement proceed with your leg movements, using the same movements as for the arm exercise. In order to exercise the muscles of the calf of the leg, stand erect, stretch your arms upward, and without bending the knees try to touch the floor with your finger tips. At first you will not be able to do this, but as you repeat the exercise from time to time you will be able to do it without any trouble.

**Perspire to Be Cool.**

A good movement for the joints of the knee is to stand erect, rise on the tips of your toes and sink slowly down, knees outward for balance until you assume a sitting position. While in this attitude throw out your chest and place your arms on shoulder level with fingers touching the back of the neck, and bend the head backward slowly, thus giving your spine a good exercise. Rise slowly on the balls of your feet, stretch your arms and sink slowly. Repeat this exercise two or three times.

Your final exercise should be the breathing movements. Throw your shoulders back, hold the chin in and breathe first of all in your stomach. Let your stomach come forward in the process, and be sure that you have taken as deep a breath as is in your capacity. As time goes on you will find that you can deepen your breath with continued exercise. Breathe thus on seven counts four times, then let your ribs swell out and repeat this breath exercise in the same manner as you did the other. Finally, take your chest breathing exercise as you rise slowly on your toes and raise your arms.

You will find that after these movements you will perspire, but that is necessary in order to feel cooler. The more perspiration escapes from your internal self the cooler you are left inwardly. The perspiration evaporates, and then your skin is left cool.

After you have exercised you can wipe away the perspiration and sponge yourself with alcohol. This evaporates rapidly and helps leave your skin cooler.

Now you are prepared for a good night's rest. With the pillow thrown aside and with just as little covering as is convenient you are quite apt to sleep the night through and rise in the morning thoroughly fortified against the day's heat.

## NEED WINDBREAKS.

### Are Valuable Addition to Farm.

By B. R. STURM.

The average western farmer does not yet realize the importance of planting a windbreak or a "shelter belt" around his farm yard, buildings and orchard to protect his family, live stock and orchard from the ravaging effect of the cold winds of winter and the strong winds of summer or fall, which we experience in every section of the country. A windbreak has long since been recognized as an important part of the farm equipment in the prairie states east of the Rocky mountains, and its value can not be longer overlooked by western farmers.

It will pay for itself many times over in the actual saving of fuel for the house and feed for the stock. It is well known that stock will keep fat on less feed in cold weather if not exposed to the wind, than if constantly exposed. The importance of a windbreak from an economic standpoint should not be disregarded. Some farmers give up to the fatalistic idea that trees can not be grown in their neighborhood. Yet every region where farming can be carried on, no matter how poor, will grow trees, probably not as high as in more favorable localities, but large enough to be an important factor.

The most practical windbreak is made of trees and shrubs. A single row of trees will often do the trick, though in an exposed section or where the wind is very severe and the winters very rigorous, a shelter belt composed of three or four rows of trees and shrubs planted alternately is most effective. These should be planted rather thickly, say eight or ten feet apart. The old park superintendent's rule—"plant thick, thin quick"—works admirably in this case. While the trees and shrubs are young, they will protect one another, but later on when they crowd they should be promptly thinned out.

The best trees for this purpose are Canadian poplar, Carolina poplar, Lombardy poplar, box elder, black locust, as they are quick growing and hardy. Of course they should be cut back severely when planted so they will throw out plenty of side branches low down, which should not be trimmed. The Canadian poplar is the hardiest of these. As its name indicates it is a native of Canada and thrives on the cold, bleak plains of Alberta and Manitoba. Its bushy habit of growth makes it especially valuable for windbreak purposes. For the outside and inside row of shrubs, any thick-growing bushes, such as lilac, tamarix, syringa, etc., are desirable.

## Sidelights

**Swore, in Fact.**

"Did Jim speak in high terms of the doctor who treated him?"

"No; in low terms on account of his high terms."

**Not Quite.**

"Does the new soprano's voice fill the church?"

"No; I noticed some vacant seats up in the gallery."

**God's Service Flag.**

The other night a dear little 5-year-old, gazing up into the sky dotted with a million stars, said: "Oh, mother, what an awful lot of God's men have gone to war."

**Easy.**

Wife—Your aunt Maria is coming to visit us, but really I don't see how I can find time to entertain her.

Hub—Invite your Aunt Eliza and they will entertain each other telling about their diseases.

**A Mere Trifle.**

President Hazard of Wellesley told the following at a banquet:

"A girl graduate, in taking leave of her dean, said, 'Good-by, professor, I shall not forget you. I am indebted to you for all I know.'

"'Oh, I beg of you,' replied the professor, 'don't mention such a trifle.'"—Miss E. Hopkins, Oregon.

**Exact Dope.**

Old Farmer (to soldier son just returned from the front)—Well, Dick, what be these tanks like that there's so much talk about?

Son—Why, they're just wobbling thingamabobs, full o' what-you-may-call-'ems, and they blaze away like billyo!

Old Farmer—Aye I heard they was wonderful things, but I never could get any details afore.—Tit-Bits.

**Not a Best Seller.**

"Have you any good books in here?" asked the superior person.

"We have thousands of volumes, sir," the clerk replied. "I'm sure there is something in our stock to suit the most exacting taste. What do you require?"

"I want a book of synonyms."

"Just a moment, sir, until I speak to the boss. I don't believe we have any of—er—Synonym's works."—Birmingham Age-Herald.

**Why the Four Servants.**

"Why are you leaving us, Mary? Haven't I treated you right?"

"Oh, yes, ma'am. I have been treated beautifully. But you only keep two servants."

"Well, what of that? You don't find the work hard, do you?"

"Oh, no, ma'am. But, you see, I've always lived where there were four servants. And that suits me better on account of my fondness for auction bridge, ma'am."—Philadelphia Star.

### OLD GLORY.

Here's to the red of it—
There's not a thread of it,
No, not a shred of it
In all the spread of it
From foot to head,
But heroes bled for it,
Precious blood shed for it,
Bathing in red.

Here's to the white of it—
Thrilled by the sight of it,
Who knows the right of it
But feels the might of it
Through day and night.
Womanhood's care for it
Made manhood dare for it
Keep it so white.

Here's to the blue of it—
Heavenly view of it,
Star-spangled hue of it
Honesty's due of it,
Constant and true.

Here's to the whole of it—
Stars, stripes and pole of it,
Here's to the soul of it—
Red, white and blue.
—James B. Davis, Shelley, Idaho.

# All the World's a Stage, and All the Men and Women Merely Players

## Section of Red Cross Motor Corps

—Committee on Public Information.

Mrs. J. Borden Harriman, who is colonel of the District of Columbia Red Cross motor corps, is intensely interested in the problem of women in industry, particularly in connection with the war. She is the only woman member of the federal industrial relations commission and is chairman of the committee on women in industry of the advisory commission of the council of national defense. The uniform of the women's motor corps of New York is almost identical with that of the woman's radio corps except for the insignia.

## Increasing U. S. Hog Production

—Copyright, Underwood & Underwood.

The management of ranch 1733, near Kearney, Neb., has the right idea about increasing hog production. This ranch is saving all its best young sows for breeding purposes. When the photographer took this picture, the ranch had 125 fine young sows. If these sows have an average of eight pigs apiece, there will be 1000 more hogs for wartime meat. Last year the increase in the United States was 3,871,000 head, and in all probability the increase this year will be more than double that of last year.

## CHAPTER XXVII.

### At the Hill Without Design.

Astounded at the unexpected sight of so many Indians in the river, Ben sat still for a few moments, staring in consternation. Recovering his presence of mind, he dropped his paddle, seized his rifle and leaped to his feet. Jodo also snatched up his rifle.

It was because the stream was wide here and comparatively shallow, that the red-skinned band, who had neither horses nor canoes, had chosen this for a fording-place. And even here the water was as deep as they could wade.

All the time the current was sweeping the three canoes straight toward the wading Indians. As they drew near, Ben and Jodo, bethinking themselves that their positions were too much exposed, dropped down and crouched as low in the canoe as they could. Their guns were still cocked, and still held in readiness to shoot. Martin was crouching low, and Jodo had handed him his pistol.

The Indians seemed fully as much astounded at the unexpected appearance of the white men as were the whites themselves. They stared at the canoes in a half-stupid, half-frightened way. All were in water so deep that it was as much as they could do to keep the current from sweeping them off their feet. If they put their hands down either to swim or to shoot, both their guns and their powder would instantly become useless. And anybody who ever tried to wade very deep water knows how impossible it is to hurry through it. Eager though the warriors doubtless were to attack the whites, they were utterly helpless to do so.

Very soon the canoes had drifted down almost against the Indians. The waders parted to make room for them, some pushing their way on and the others retreating. They looked as if they fully expected the whites to open fire. But Ben said, as he rose to his feet:

"Don't shoot, boys, unless you see one trying to shoot us. You watch that side and I'll watch this. But I don't believe they can use their guns if they try. We've caught them helpless."

So Ben stood eyeing the savages on the right, while Jodo and Martin, one with a rifle and the other with a pistol, sat watching those on the left. Soon the current had swept the canoes through the parted line and on down stream. As the warriors were passed, the whites kept turning so as to watch them. Not till the canoes were beyond shooting distance from the Indians did the canoemen put down their weapons and take up the paddles.

"Well, we got through all right," remarked Ben. "But such a thing won't happen again in a hundred years, I'm safe to say."

"Yes, we've got through 'em, but not through with 'em," Martin answered. "They'll soon be after us hot and heavy, every redskin of 'em. And we've got to split water fast if we don't want 'em to overtake us."

"The foremost warriors are just now getting out of the water," Jodo announced, after a glance behind. "And they're stepping livelier than they were when we passed 'em."

"You keep casting an eye up stream, Jodo, and see if any of the rascals are following us." Ben was paddling too fast to look back.

The canoes were now a quarter of a mile from the Indians, and another bend in the river soon hid the red men from view. Realizing that there was a race for life before them, the three white men were standing, dipping their paddles as fast as they could.

"If we had only one canoe, we'd make 'em run their fool selves to death before they caught us!" declared Ben, without missing a strike. "But with three canoes together, and all loaded deep—"

"Maybe, we'd better cut loose from the other two," the settler suggested.

"Never!" declared the trapper. "They've cost us too much. We'll hang to 'em and fight for 'em as long as we've got a bullet left to fight with!"

"All right! Just as you think best, boys! I'm with you, whatever comes!" answered the settler. "We'll give the red rogues a race anyhow!"

"Country's pretty rough along the west bank." Jodo had just glanced in that direction. "They won't be able to get over ground very fast there."

"You keep glancing behind, Jodo, and see if you can catch sight of any of them coming!" called Ben from the prow. Jodo was farthest back.

"Yes, I'll keep a lookout," was the answer. And the three paddles kept driving the canoes onward.

"Did they all get across, Jodo?" Ben soon thought to inquire. "All the Indians, I mean. Did they all cross to the west bank?"

"I think they did. The hindermost were nearly across, and were hurrying to get out of the water, when we rounded the bend."

"Good! I'm glad they're all together. Though, of course, some may cross back. If they all stay on the west bank, they can't attack us from both banks at the same time. That's what I'm afraid of."

"That would be bad—for 'em to split up," Martin agreed. "If they attack us only from the west side, we can make t'wards the east bank and git purty nigh out of rifle-shot. But if they take us between two fires—"

"We're likely to have a hot time of it," completed Ben.

On rushed the three canoes, as fast as the three paddles and the current could drive them. At length Jodo cried out:

"Yonder's one! I see one!"

The others held their paddles long enough to look back. With his paddle Jodo pointed to a lone Indian standing on the river-bank, several hundred yards up stream. But even as they watched him, that Indian was joined by another Indian, and the two by a third.

"They're right after us, every red varmint of 'em!" Narry bit of doubt of that!" panted the settler, as he began to dip his paddle again.

Soon the three warriors disappeared from the top of the rock they were on. But it was not long till they or others were seen again, this time only about half as far behind. Still the white men drove their canoes down stream, laboring with their paddles till the sweat dripped from their faces.

At length a warrior burst out of the woods on the left bank, scarcely a hundred yards fro mthe canoes, threw up his gun and fired at the white men. The bullet struck the water and glanced over their heads. Another Indian quickly appeared on the same bank. But before he could shoot, Ben grabbed his own rifle, threw it to his shouldler and was about to fire when the savages dodged back into the brush. While Ben was trying to see something to shoot at there was acrack and a puff of smoke, and a bullet came ping-winging from the woods. It passed between Martin and Ben, and scarcely a foot above the canoe.

Laying down his empty rifle, Ben took up his paddle and began to steer toward the east bank. "Maybe we can get out of range before they can load," he said.

He was right. For the next bullet that came out of the woods fell short, sending up a splash several yards from the canoe. Ben quickly reloaded his own gun. Telling the others to keep on paddling, he took a shot at every puff of smoke that the Indians' guns sent up. And the red marksmen kept firing at the canoes. The savages remained invisible, and all the white men were crouching as low as they could.

For a good while the battle was kept up. But it proved harmless to the whites, and probably to the Indians also, because of the long range.

"Looky yander, boys! Just looky down yander!"

It was Martin that utter that shout. He pointed down stream, to where a wide sheet of water was opening to view.

"The Missouri at last!" exclaimed Bene, after turning his eyes from the left bank long enough to glance ahead.

"We'll be all right when we onct git out onto that!" the settler shouted, to encourage the others.

The larger stream was still a good distance ahead, however; and those pursuing savages—Sacs and Foxes and Pottawatomies or whoever they were—had no intention of letting the canoemen escape if they could prevent it. Martin and Jodo were still using their paddles as hard as they could, and Ben was still sending an occasional shot at a puff of smoke, when he happened to glance behind him and saw two Indians coming down the open east bank at a run. They were still too far away to be dangerous. But they kept running, and when they were getting close the trapper faced the other bank and three up his rifle.

But the Indians quickly turned aside and dodged into some brush. The canoes were now so close to the east bank that a bullet from there would be very dangerous.

"Martin," said Ben, "you crawl over the things and get to this end with your paddle. You can steer better here than back there. Steer for the middle of the river! Jodo, keep an eye on the west bank as you work, and if you catch a glimpse of a redskin grab your gun and send a bullet at him! But don't stop paddling long. We'll soon be out of danger. I must watch the east bank."

Martin was quickly over in the prow, and the canoes were making for mid-stream. Another bullet soon came from the west bank, and buried itself in the side of their canoe. But the Indian that fired it was not to be seen. Ben kept watching; for one of them suddenly appeared in a little opening near the bank and raised his gun for a shot.

But Ben was too quick. A bullet from his rifle sped toward the warrior. The shot was too hasty to be deadly, but it seemed to take effect. The bullet from the Indian's gun went off through the air, and the Indian turned and dived into the woods, quickly disappearing.

A few minutes later another shot was fired from the west bank. The bullet passed so close to Jodo that it made him shudder. He caught up his rifle and fired at the smoke.

The canoes were now passing out into the Missouri. Both rifles were empty, but Ben was reloading his as fast as he could. Before it was loaded, two bullets, one from the east bank and the other from the west, and fired scarcely a second apart, came toward the white men. One buried itself in the side of the canoe. The other came straight toward Ben, but struck his rifle-barrel glancing off and cut a hole through his sleeve.

"The closest yet!" he exclaimed. "Down with you, boys! Down flat in the canoes!"

He himself dropped down till out of sight, and the others quickly did the same. The current was fast sweeping them out into the Missouri. The wisdom of their sheltering themselves was soon evident; for several more bullets were fired at the canoes before they could drift out of range. Some struck the canoes, some struck the water, and others went singing through the air just above the canoes.

When at last the white men had drifted out of range, and the shots had ceased, Ben stood up and finished loading his rifle.

"All over now, boys! Those red boogers are certainly greedy for scalps! But for our furs and things, I'd have been in favor of abandoning the river and taking to the woods ourselves. Risky business, that fighting in the open while your enemy is under cover."

"But how I did wish for my old rifle!" exclaimed Martin, as he stood up and gazed back toward the stream they had just come out of. Several Indians were standing on the river-bank, in plain sight. "But ain't that impydent of the boogers?"

The canoes were now drifting down the middle of the Missouri river and were out of rifle-shot or bow-shot of either bank. Martin and Ben after watching till the Indians had disappeared seated themselves and took up their paddles. After reloading his rifle Jodo, too, went to paddling.

"Wasn't it most uncommon strange, though, the way we ketched that gang of red boogers in the river?" remarked the settler. "They couldn't hurt us, and I guess we could have turned loose and killed most of 'em. It would have served 'em right, too, if we'd done that very thing. That's what they tried to do to us, just as soon as they could."

"Did either of you notice anything peculiar about their guns as they held them up?"

"No, I didn't. What was it, Ben?" questioned Jodo.

"Why, in the first place every Indian of them was armed with a gun, which is very uncommon. Usually some of them are carrying bows and arrows. And then every gun had a new look, as if it had never been used before. Even their powder-horns had a newish look to me."

"Seems to me like I noticed somethin' of the kind, now that you've mentioned it," said the settler. "And that's easy enough accounted for. Them redskins had been down below some'r's, where the Britishers is passin' out free guns and ammunition to all that wants 'em. That's how the boogers come to be newly armed. Oh, us settlers is likely to have a time of it before this trouble blows over!"

"I thought that French village was opposite the mouth of the Osage," Jodo soon remarked.

"Not right at the mouth. The Hill Without Design stands about two miles below where the Osage comes in," Ben explained.

"The Hill Without Design! What's that?" demanded Jodo.

"That's what those Frenchmen call their village. That's what Cote Sans Dessein means."

"How did they ever come to give their village such a name as that?"

Here Martin explained: "Over on the north side of the Missouri, and not a great way from our village, is a hill standin' out by itself. Looks kind of out of place there. Fact is, it looks just for all the world like it had been broke off from the hills south of the river and then shouldered up and packed across to the north side. The French call all such hills as that cotes sans dessein—hills without design. That's how our village got its name."

"Odd kind of a name to me," laughed Jodo. "But I can see the smoke from the village now. Looks rather good, too, after eight long months in the wilderness."

"It certainly does look good," agreed Ben. "When we catch sight of the village itself, I shall feel like we're almost in sight of home."

Not a great while later the canoes had been made fast to the north bank and the three men were walking across the valley toward a little cluster of log houses.

And scarcely had they entered the village when a number of the French people gathered around them, all eager for news and all talking volubly in their own tongue. Martin spoke French, and so did Ben, though not so well. But Jodo understood scarcely a word, and it was all meaningless chatter to him.

Martin had been expected home the day before it seemed, and all were well pleased at his safe return. There was much excitement in the village when it became known that the party had been engaged in a running fight with the savages.

When the excitement had subsided, the young trappers were taken to Martin's house, where Martin's French wife gave them an excellent breakfast, with eggs and other things which they had not tasted since leaving home. The village was only a collection of farming people, the men going out daily to tend their little farms. Unlike the Americans, the French settlers chose to live all together. But, like everybody else in this part of the country, they depended more on hunting and trapping for a livelihood than they did on farming and stock-raising.

The young trappers were urged to remain several days in the village. And, though they were both eager to get home, they decided not to go on till the following morning.

All the talk among these people was now of the prospective war between the United States and England, and of the expected hostilties of the Indian tribes against the frontier settlements. In fact, though the neighboring Indians had not yet attacked this settlement, or any other so far as was known, they had already murdered several men whom they had chanced to come upon out in the woods, farther up the Missouri. As a matter of fact, this village was destined to be fiercely attacked and heroically defended during the next two or three years.

Partly in honor of their young visitors, and partly as a preparation for the foreseen Indian war, a shooting-match was held at the outer edge of the village during the afternoon, with all the men and big boys taking part, and all the women and children looking on. Ben and Jodo both tried their rifles, and both shot so well that they received many admiring glances and many friendly smiles from those black-eyed French girls. The swarthy Benoni, with a picture in his mind of a pair of blue eyes that he was hoping soon to see, was not much impressed. Jodo, on the other hand, was wonderfully impressed. But as he knew no French, and the girls spoke little or no English, nothing came of it.

A party from Cote Sans Dessein had intended to set out in canoes for St. Louis within the next few days, to obtain a supply of ammunition. But on learning that the young trappers had nearly 30 pounds of gunpowder and 50 pounds of lead to sell, they promptly bought both powder and lead at the highest market price, paying for them in furs. Knowing that they were likely to have further trouble with the Indians before arriving at the main settlements, the trappers were very careful to save plenty of ammunition for their own use.

When night came, being unable to take their canoes to the village, Ben and Jodo thought it prudent to go to the river and sleep. There was danger that some of the Indians might cross somehow, and steal the canoes. To make sure of there being a sufficient guard, Martin and several French boys went and slept on the river bank with the trappers. Nobody sat up, but several of the village dogs were with the boys and would not fail to sound an alarm if an Indian approached.

When morning dawned, Ben and Jodo went back to Martin's for breakfast. It was well on in the forenoon when they returned to the river, entered their canoes

(Continued on page twenty-seven.)

# Handicraft For Boys

By A. Neely Hall

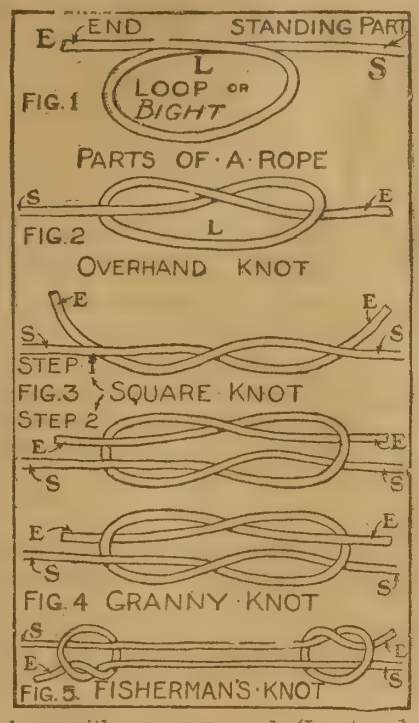
(Copyright by A. Neely Hall.)

## Knots and Hitches.

Any boy can tie a knot, but there are safe knots and unsafe knots, and if he doesn't know the correct method of tying, nine times out of 10 he will tie the knot incorrectly.

Below are a few knots and "hitches" that every boy should know. Get two pieces of light rope and work out each as I describe its formation.

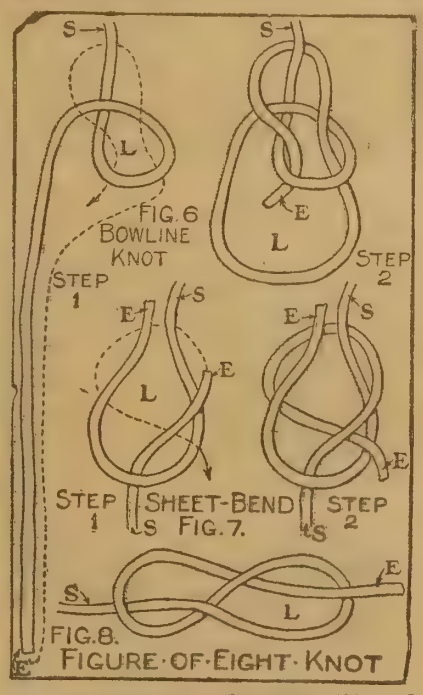
A rope has three parts—the "bight" or loop (L, figure 1), the "standing part" or long end (S, figure 1), and the "end," usually the short end used in forming the knot or hitch (in figure 1).



To begin with the simple overhand knot (figure 2), make a loop (L) and pass the end (E) through the loop.

In joining two pieces of rope with a square knot (figure 3), first twist the ends (E, E) as shown in step 1, and then form an overhand knot on top as shown in step 2. Notice the difference between the positions of the rope ends in this knot and in the granny knot shown in figure 4. In the former, the ends and standing parts pass out on the same side of the loops; in the granny knot they pass on opposite sides. The square knot will hold; the granny knot will slip.

The fisherman's knot (figure 5) is a secure knot and one easily loosed. In joining two ropes, tie an overhand knot in each rope end (E), forming it over the standing part (S) of the other rope, then pull the knots together. They can be loosed by pulling on the ends (E).

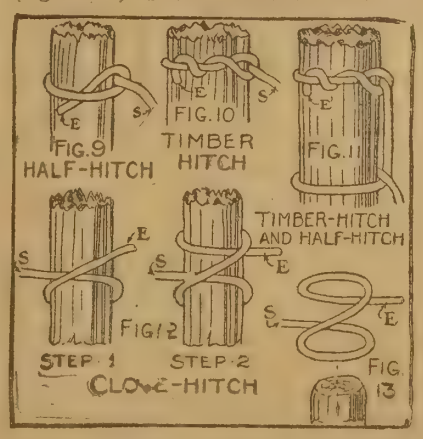


The bowline knot (figure 6) will neither slip nor draw tight. First form a small loop in the rope (L, step 1, figure 6), then bring the end (E) up through the loop, around the standing part (S), and down through the loop (step 2, figure 6).

The sheet bend (figure 7). Make a

loop with one rope end (L, step 1, figure 7), then pass the end of the other rope through the loop, around both the standing part and end of loop, and out through the loop between the loop and itself (step 2, figure 7).

Figure of eight knot (figure 8). Make a loop (L), then pass the end



(E) around the standing part (S), and out through the loop.

The half-hitch (figure 9) is a secure method of attaching a rope to a timber when the pull on the standing part will be steady.

In the timber-hitch (figure 10), the end (E) tucked in several times.

The timber-hitch and half-hitch (figure 11) is a combination used for

fastening rope to timbers for hoisting.

The clove-hitch (figures 12 and 13) is secure under every condition. Pass the rope around the pole or post, with the end (E) crossing the standing part (S, step 1, figure 12); then pass the end around a second time and slip it under this last turn (step 2, figure 12). In making a clove-hitch near the top of a post, the two loops may be thrown over the top, as indicated in figure 13.

THE BEST LINIMENT
OR PAIN KILLER FOR THE HUMAN BODY
Gombault's
Caustic Balsam
IT HAS NO EQUAL

For the Human Body —It is penetrating, soothing and healing, and for all Old Sores, Bruises, or Wounds, Felons, Exterior Cancers, Boils Corns and Bunions GAUSTIC BALSAM has no equal as a Liniment.

We would say to all who buy it that it does not contain a particle of poisonous substance and therefore no harm can result from its external use. Persistent, thorough use will cure many old or chronic ailments and it can be used on any case that requires an outward application with perfect safety.

# If War Bread Fails

## Don't Just Sit Down and Grumble

Dear Family Circle: These are times when all of us are discovering we can do a lot of things we did not know we could do, and get along without many things that we have been used to using. I run across some new recipe for something or other about every week, and when it is especially good I secure it for future use.

**Raisin Bread.**

Here is a fine recipe for raisin bread: One cup of white flour, one cup barley flour, one cup graham flour or if you have no graham flour use one and a half cups of corn flour and one-half cup more of barley flour, one-half cup sugar, one teaspoonful of salt, one cup of raisins or chopped nuts may be used. Five level teaspoons of baking powder, thoroughly sifted through the flour, one teaspoon of cinnamon and one and one-half cups of sweet milk.

To make you mix all these ingredients together except the milk, then stir in the milk and bake slowly for one hour. If you make this raisin bread once you will keep making it often.

**Steamed Brown Bread.**

Here is another kind of bread that I like—steamed brown bread. One cup of rolled oats, one cup of corn meal, one cup wheat flour, one-half cup barley flour, one-half cup rye flour, one teaspoon salt, one teaspoon, heaping, baking powder, one level teaspoon soda, three tablespoons molasses, three tablespoons sugar, four cups hot water.

To make: Mix molasses, sugar, soda and two cups of hot water with the rolled oats and corn meal. Sift the wheat, barley and rye flour with the baking powder, and to this add the other two cups of hot water and mix with the first mixture. Butter a deep basin, put the whole in it and steam one and one-half hours. Sometimes it is a little heavy, according to the flours used. In that case the next time you make it leave out some part of the heavier flours and use white flour in its place. Instead of steaming it in a basin I prefer to divide the batter in two or even three parts and steam it in baking powder cans, greasing thoroughly first. The cans should not be more than one-half full.

Many women have made a few efforts to bake bread with the war flour and the substitutes, and after making a failure have given up and settled down to grumble. Government experts are advising women to make their bread just as they always have done, only use the war flours. Perhaps your bread won't be so very good the first time, but, if that is the case, think it over, and put in less or more of one kind or another.

Whatever result you have keep cheerful and sweet about it. It is much better than if you had mixed 50 per cent sawdust with it anyway, and that is what is being done in some of the war-cursed countries.

I heard yesterday that large flocks of sheep are being shipped into northern Michigan from Idaho and other places, where free range is granted. This is a movement in the right direction. I wish this had been done last year. If it had been we need not now be keeping our hands idle about one-half the time when we want to knit, waiting for a mixture of fiber and cat's hair or something which resembles it, mixed with wool enough to hold it together. There is enough good grass going to waste in northern Michigan right now to feed sheep and goats sufficient to furnish our entire army with woolen garments such as are knitted. I am sure I have seen enough today, having ridden over 200 miles by auto, to furnish splendid range for millions of sheep.

When things are more equally divided, as they are getting to be, through the tutorship of this awful war, no one in this great, marvelous land need go hungry or cold. A. W. B.

# Cakes With No Wheat

The following recipes are submitted by Mrs. W. F. Stecher of Pullman, Wash., and require no wheat:

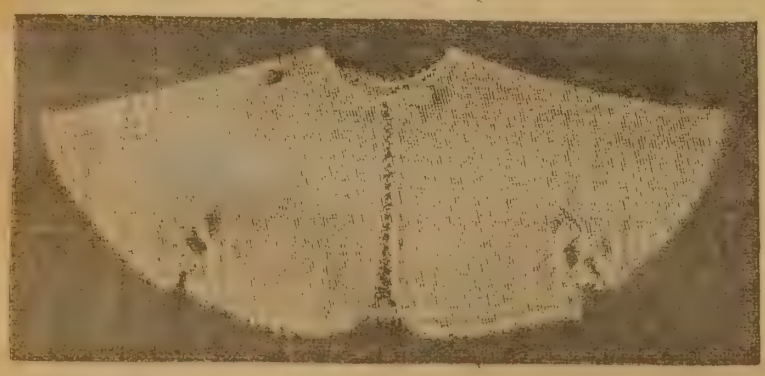
**Sponge Cakes.**

Yolks of three eggs beaten light, beat in gradually one-half cup sugar, the flour with a pinch of salt, one and one-half tablespoons water or fruit juice, the flavoring and the stiffly beaten whites of the eggs. Bake in a moderate oven. This cake will serve six or eight persons. The following is the right quantity of the various flour substitutes to use for a three-egg sponge cake: Two-thirds cup corn starch or three-fourths cup rice flour, or one cup oat flour or three-fourths cup corn flour or one-half cup each of corn starch and soy bean flour mixed. This last makes the lightest cake, corn starch alone comes next. The other flours make a somewhat heavier cake, but it is more moist.

**Angel Nut Loaf.**

Whites of six eggs beaten stiff with a pinch of salt. Beat in gradually one scant cup sugar, one-fourth teaspoon cream of tartar, a few drops any desired flavoring extract, one cup corn starch, one-half cup soy bean flour, two-thirds cup finely chopped nuts or cocoanut. Bake in a rather deep, well oiled and floured mold, keeping it covered for 40 minutes or longer if you use a round, deep mold. The secret of success lies in beating the eggs and sugar till you can no longer taste a grain of the sugar, and leaving the cover on till your cake is done. Two ordinary loaf pans of the same size, one turned over on top of the other for a lid is fine. If you take this cover off too soon your cake is apt to fall. The oven should be very moderate, as this cake burns very easily. Frost with chocolate frosting. This makes dainty little cakes baked in gem pans, sprinkled with cocoanut or chopped nuts.

**Codfish Cutlets.**



Soak picked-up codfish for a short time in cold water; then drain. Beat in one egg, a little chopped parsley and grated onion and moisten with a little milk. Mold into flat cutlets, dip in egg and crumbs and fry in deep fat. Serve with a border of parsley and sliced lemon.

**Baked Squash.**

Pare and remove the seeds of two medium-sized squashes; cut into thin slices. Brush a casserole with bacon drippings or butter, and put into it the squash, a little salt, pepper and half a cupful of water. Bake in a slow oven until tender. Before serving mix with a fork or an egg whip.

# Infant's Sack

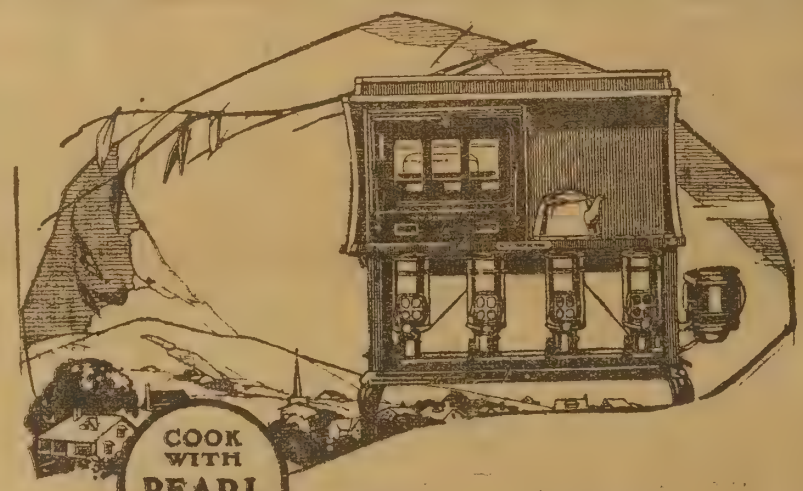
By WINIFRED WORTH.

The illustration will help you to fashion and crochet this useful sack for the little one.

Cut flannel desired size and double crochet all around, chain back with picot. Chain 1, join. Place ribbon as shown in illustration to tie together.

# If You Want an "Inexpensive" Piano Don't Buy a "Cheap" One

There is a big distinction between the words "cheap" and "inexpensive." Some folks like to get things "cheap"—only to find that in the end they proved to be the most expensive—because they had to buy another that would give service.



Now we do not sell "cheap" pianos, but we do carry a number of "inexpensive" instruments. The prices are within the reach of most every home. These Pianos will render many years of satisfactory service—they are good, substantial values and are worth every dollar asked. We gladly arrange convenient terms of payment.

**We invite you to call at any of our stores—or write us asking for illustrated catalogues and prices.**

*We are dealers in Steinway and other Pianos, Pianola Pianos, Aeolian Player Pianos, Player Music, etc.*

**Sherman, Clay & Co.**

Sixth and Morrison Streets, Portland
Third Avenue at Pine Street, Seattle
928-30 Broadway, Tacoma
808-10 Sprague Avenue, Spokane
Stores also at San Francisco, Oakland, Sacramento, Stockton, Fresno, San Jose, Vallejo.

COOK WITH PEARL OIL

A New Perfection Oil Cook Stove means kitchen comfort and convenience. Ask your friend who has one. Used in 3,000,000 homes. Inexpensive, easy to operate. See them at your dealer's today.

## Cooking Comfort

On hot summer days you want your kitchen cool and comfortable to cook in. A New Perfection Oil Cook Stove makes it so.

No smoke or odor; no dust or dirt, and all-the-year-round service.

None of the bother of coal or wood. Lights at the touch of a match and heats in a jiffy. Economical.

And you have all the convenience of gas.

In 1, 2, 3 and 4 burner sizes, with or without ovens or cabinets. Ask your dealer today.

# Washington Boys in War Service

From the Twice-a-Week Spokesman-Review.

**W. F. LATHROP, Craige, Wash.**—Is now with the 146th machine gun company in France, enlisting April 6, 1917. A brother, Sergeant Emory Lathrop, is also in France with the 116th engineers. His parents are Mr. and Mrs. E. C. Lathrop of Craige.

**HAROLD H. AMES, Park Rapids, Wash.**—Enlisted February, 1918, in the 23rd engineers, at Fort Wright, and is now "somewhere in France." He is a son of Mr. and Mrs. E. J. Ames of Park Rapids, who have charge of the postoffice at that place.

**EARL L. FAIRBANKS, Sunnyside, Wash.** — Enlisted in June, 1917, with the 147th machine gun company, but was transferred to the 5th provisional company casualty detachment, Newport News, Va. He was a student in the Cheney normal when he enlisted.

# Harvest Cooking

## Forethought Will Save Labor

By Margaret Palmer.

The meals to be served to the men during threshing should be substantial and wholesome and served in good, plain style. Much of the work, as well planning the meals, can be done before the arrival of the threshers. By doing so it will not tax one's strength so much, for even with the best of planning it always makes an extra demand on the strength and nervous system of the one who has the full responsibility of the affair. At best, one will be tired after the threshers are gone, but one can avoid having that wornout feeling by planning and then doing some of the cooking early in the morning.

In planning the meals try to vary them as much as possible. Serve the hot things hot, on warm plates, so they will stay hot, and the cold things thoroughly chilled. The threshers work hard, and as it is dusty work they will appreciate some cool, refreshing drink—if the weather is warm—to cut the dust in their mouth and throat. Then, on the other hand, it will put new life into them as nothing else will. There is nothing as good or so cool and refreshing as the drinks made from fruit juices. If one does not have ice it can be chilled and kept cool until the men come in by setting it on the cellar floor after it has been prepared.

The shells to the one-crust pies can be made two or three days ahead of time and they will keep fresh in a dry place. It takes only a short time to make the fillings for them, and by having them ready it will be found a great time and step saver in the rush. War cookies and cakes which keep fresh for a few days can be prepared ahead of time, as well as rusks for serving at breakfast.

The vegetables for salads, as lettuce, cucumbers, tomatoes, etc., will keep fresh for two days at a time after they have been washed and placed in an air-tight bucket with what water will cling to the leaves. The bucket should then be placed on the floor of a cool cellar. Tying them in a cloth wrung out of cold water before shutting them up in the bucket is also good to keep them fresh.

The noon meal is essentially hearty. The meat should be well cooked and tender, with plenty of nice, brown gravy. Potatoes with one hot vegetable, together with one cold vegetable served as a salad, pickles of some kind, bread and butter, and occasionally the men like gelatin which has been thoroughly chilled with fresh fruit and nuts in it, as it goes well with a hot dinner. This can be made the evening before. With a good dessert and something to drink, as coffee, and tea or cocoa, this makes a good wholesome and nourishing meal for them.

For the evening meal one can serve to good advantage plain or jellied sliced cold meats, baked or browned potatoes, creamed or baked macaroni, sliced tomatoes with or without onions, a fruit or vegetable salad, cake, cookies, bread or muffins and butter, sauce and something to drink. A meal of this kind is easily and quickly prepared, and is always acceptable. Hot biscuits or corn bread are good to eke out a scanty meal or make the bread hold out.

Some of the breakfast can be prepared in the fireless cooker, as baked beans or the breakfast food. Eggs and ham or fried fresh fish are all good to serve at this meal, though we must conserve the hog meats as much as possible.

As far as possible, plan to cook many of the hot dishes to be served at the evening meal in the oven, as baked or scalloped potatoes and other scalloped dishes, macaroni and cheese, a custard pudding, hot ginger bread, etc. This will save standing over the hot stove for one meal, and is also a time and step saver, as it does not take as long to prepare the meal, as many of the dishes can be prepared in the morning, ready to be placed in the oven, with but very little extra labor. This will give the housewife a chance to rest an hour of two in the afternoon.

Aim always to serve plenty of everything, and never scanty, for one must always remember that the men work hard and therefore will eat heartily.

The coffee can be ground ahead of time and kept in sealed cans. It is well to have the emergency shelf well supplied at this time, so it can be drawn on if need be.

This all takes a little forethought and planning, but it is well worth the while, as one will not be worn and tired out by doing so, and then if the threshers should come a day earlier it will not make so much difference with so many preparations made ahead of them. The new recipes for war rations fit well into meals for threshing days.

### Currant Cake

Rub four tablespoonfuls of butter and one cupful of sugar to a cream. Add nutmeg and cinnamon to taste and two eggs, beaten lightly. Then add two scant cupfuls of flour sifted twice with a teaspoonful of baking powder. Finally put in one cupful of chopped currants. Roll out lightly and quickly. Then sut into shapes and bake in rather hot oven.

## The Farmers Record and Account Book

Viewed from the most immedintely pressing angle, The Farmers Record and Account Book furnishes an adequate and accurate basis for making complete income tax return to the government. Get one of these useful record and account books and keep the information and figures that you will need at the end of the year.

The Farmers Record and Account Book is sent postpaid for TWO subscriptions to your State Family Farm Paper,

**The Washington Farmer**

Subscriptions may be for one year at 25c; three years at 50c, or five years at $1.

# SUBSCRIPTION PLAN SAVES YOU MONEY

**RATES**
For Subscriptions to The Washington Farmer

**25c** For One Year

**50c** For 3 Years

**$1** For 5 Years

We are holding open our direct-to-the-reader subscription plan during the summer months. It means a real saving at a time when most things cost more.

The central idea of the plan is to deal direct with our subscribers in securing and renewing subscriptions, thus eliminating the middleman and giving our friends the benefit of every penny saved.

It is gratifying to know that the new cooperative system has had the heartiest kind of backing; and that it has been put on a successful basis. We could not have got along without the assistance of well wishers who have told their neighbors about the plan and passed along copies of the paper.

There are many things of value which your state farm paper can bring you and your neighbors during the summer months. The various departments will be full of helpful hints, instructive articles and entertainment. Send in the orders!

NAME .....

TOWN ..... R. F. D.....

STATE .....

My dear Corner Cousins: One of the girls asked for a recipe of honey cookies and I wonder if the following will suit her taste; I am sure they are good.

Take one-half cupful of sugar, one cupful of strained honey, three tablespoonfuls butter, one egg, one cupful sour cream, one teaspoonful soda, and flour. Cream the honey, sugar and butter; add the well beaten egg, then the soda dissolved in the sour cream and mix in the other ingredients, adding flour enough to roll. Knead carefully to make the cookies soft, but not too firm. Cut out and bake in a moderate oven. Now, doesn't that sound good?

AUNT NELLIE.

**From Our Grown-Up Cousin, Esther.**

Dear Aunt Nellie: Will you admit a cousin that has just grown up big, but is still little when with children? I have read all the little cousins' letters and certainly think they are nice. We certainly had a nice, big and itneresting Corner a couple or three numbers back, didn't we? Let's every one write and keep the corner big! We all admire Aunt Nellie for helping us keep up the Corner, don't we? I think she is doing a splendid work! I should think Aunt Nellie would have a time judging all those splendid letters. Can any one guess this puzzle:? A lady counts her geese and finds she has two before, two and two behind two and two between two, how many has she? Now, some of you are wondering who I am, and I am going to tell you, but then I shall have to run. I am a big girl 5 feet and 5 inches tall, have brown eyes and wear "specs," I also have brown, curly hair. I am nearly 20 years old. Is there any one whose birthday is April 15? If there is I would like to know. I hope this escapes the waste basket. I must close now, with lots of love to Aunt Nellie and all the cousins.—Esther E. Erickson, box 108, Route 2, Lynden, Wash.

**All Kinds of Fun in the Country.**

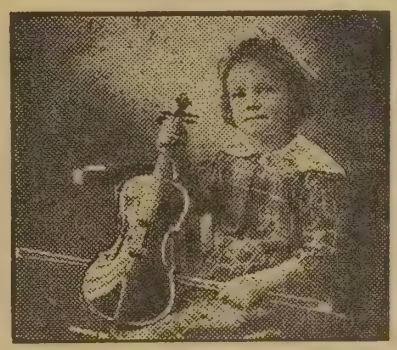
Dear Aunt Nellie: My papa has taken the Farmer for two years, so I have been reading the letters every week and enjoy them very much. I am 9 years old and am in the fourth grade in school. We have always been living in Seattle until two years ago we moved on our farm. We live on a 40-acre farm. We have three cows, three heifers, one little calf that is all black, one pig and 25 chickens, and the nicest black and white cat. He seems to understand everything. I am so glad that papa and mama moved out in the country here, we have so many kinds of fun that we could not have in the city. I am so glad when the berry time comes. We have so many berry bushes and fruit trees. I think it is the most fun to pick berries and fruit. Now, Aunt Nellie, I am going to tell you how many sisters and brothers I have. I have one sister, named Agnes, and she is 11 years old. I have two brothers, Henry, age 6, and Roy, 3 years old. My teacher's name is Miss Hemingsen and I like her awfully well.—Nina Anderson, R. F. D. 2, box 112, East Stanwood, Wash.

**Live 18 Miles From Town.**

Dear Aunt Nellie: I think the cousins write nice letters. May I be a cousin? I am 12 years old. I will be 13 November 11. Have I a twin? If so I would like to hear from him or her. I go to school. Our teacher's name is Miss Polk. I like her fine. I am in the eighth grade with five other children. I go to Central school, distrit No. 49. I have three brothers, whose names are: Maynard, Frederick and Leonard. I also have one sister, whose name is Mary. We have five head of horses, 14 head of cows and calves. I have one calf and two rabbits. I have a dog, too. His name is Teddy. He plays with my brother, Leonard. I have a pony. I like her very well. Her name is Daisy. I herd cattle. We have two cats. We have a Ford car, and that is best of all. I have one war saving stamp. My brother Leonard and father and mother have one also, besides donations to the Red Cross. I live 18 miles from town.—Charles McReynolds, R. F. D. 6, Spokane, Wash. (Of course you may be a cousin, Charles. We want to hear from you often.—Aunt Nellie.)

**Shep Is a Faithful Dog.**

Dear Aunt Nellie: I am 10 years old and in the fifth grade. My birthday is March 1. Have I a twin? I have one apple tree. It had three boxes of apples on it and I got $3 for them. My sister's name is Blanch. She had a tree with 10 boxes of apples on it. She got $5 for them. Blanch is in the seventh grade. Our teacher's name is Miss Sharpe. She is very nice. We live on a 20-acre farm. Now I will tell you about our pets. We have two rabbits and one kitten, two dogs, seven cows, and four horses. The kitten's name is Polly. We like her very much. The dog's names are Queen and Shep. We like Shep because he is so faithful and we like Queen because she will catch the pheasants for us. I never saw a farm until we moved out here from Seattle one year ago. It seemed strange at first not to have the street cars, but my sister and I have learned to drive our old bay horse, Bob. We take the Farmer. I am always looking for the Children's Corner, so I shall be watching for my letter.—Ruth Erwin, R. F. D. 1, Box 54, Prosser, Wash.



**Live on a Fruit Ranch at Peach.**

Dear Aunt Nellie: This is my first letter to the Children's Corner. I like to read the letters very much. I think the Farmer is a very interesting paper. My teacher's name is Miss Verna Welford. I like her very much. I am 11 years old and will be 12 March 28. Have I a twin? If so, I would like to correspond with her. I am in the sixth grade at school. I can knit and crochet. I have made two Red Cross handkerchiefs. We have a Junior Red Cross and a sewing and cooking club. I have four sisters and five brothers. One of my brothers is in the navy. I have a cousin in the navy also. The Columbia river flows through here. Peach was named for all the peaches we grow. We have a fruit ranch of about eight acres, and lots of chickens, geese, turkeys, pigeons and guineas. We have rabbits also.—Clara Nelson, Peach, Wash.

**Three Miles From the Nearest Town.**

Dear Aunt Nellie: I have dark brown hair and dark brown eyes. I am in the fourth grade. My birthday is January 3. Have I a twin? We are now living on the Double Ditch road, but are soon going to move to North Wood. There is a creek going through our land so we can go fishing this summer. There are two rooms in our school. The teachers' names are Miss Zweegman Miss DeValois of the smaller room. the teacher of the higher room and Miss DeVlaois of the smaller room. There are 26 children in the smaller room, and 21 in the higher room. We live three miles from the closest town. My brother goes to high school. I go to the Ebenezer Christian school. Stanley Albers was the teacher of the higher room, but he had to go to war.—Jacoba Muyskens, Route 1, Lynden, Wash.

**Little Cousin Letha.**

Dear Aunt Nellie: My papa takes the Farmer and I read the letters. We have three horses and one colt and its name is May Dodge. For a pet I have a cat and its name is Flossie. I am sending you my picture. I am 7 years old—Letha Burford, Cove, Ore. (I am sure the cousins will enjoy the dear little picture and I thank you so much, Letha, for it. You wrote your letter so nicely for such a little girl and you must not forget me but write often.—Aunt Nellie.)

**Home Is in the Valley.**

Dear Aunt Nellie: I would like to be a member of the Children's Corner. I enjoy reading the cousins' letters. I live on a 160-acre farm. I have nine brothers and three sisters. I am 13 years old. My birthday is September 8. Have I a twin? I go to Oak Dale school and walk one mile to school every morning. We have a two-room schoolhouse. My teacher is Miss Fitzsimmons. I am in the seventh grade. My chum is going to write, too. Her name is Bessie McFarland. She is in the sixth grade and is 12 years old. My home is in a valley. I have seven cousins and one brother in the army. Five cousins are in France now. Our school is 100 per cent Red Cross. We have been knitting at school. I will write again. I would like to correspond with the boys and girls of the Corner.—Florence Anderson, box 6, La Center, Wash.

**Hopes to Graduate in May.**

Dear Aunt Nellie: I am 12 years old and will be 13 June 21. I am in the eighth grade at school and hope to pass the examinations in May. I go to Central school. I have two brothers who go with me. Our teacher's name is Miss Polk. There are about 20 pupils in our school. My three oldest brothers go to North Central high school in Spokane. I like to crochet and tat. We have five horses and three cows. I may take music lessons in the summer. I saw a twin in one of the papers, but I forget her address. Her name was Dorothy Curtis. I wish she would write to me.—Gladys Cauvel, Age 12, R. F. D. 6, Box 64, Spokane, Wash.

**Would Like to Find a Twin.**

Dear Aunt Nellie. This is the first time I have written to the Children's Corner. I would like to find a twin. I am 9 years old and my birthday is November 14. I have three sisters and two brothers. Their names are Gordon, Stuart, Pauline, Frances and Hazel. We live 12 miles from town and two from the store. We have five pigs. I am in the third grade at school. We have 15 children in school. We have 25 horses and two cows and five calves. There were two more children came to school last Monday. We have 40 hens and four roosters. We have three dogs and four kittys and the dogs' names are Prince, Bob and Scout and the cats' names are Fannie, Ruth, Jessie and Topsy. I have light hair and hazel blue eyes and a light complexion. I go to school at district 36.—Virginia Mae Rouse, Mold, Wash.

**Favorite Sport Is Horseback Riding.**

Dear Aunt Nellie: This is the first time I have written to you. I am 13 years old and will be 14 December 9. I go to school every day. Our school has not had an absence mark this year. My teacher's name is M. B. Jaques. I have blue eyes, light hair and a light complexion. Have I a twin? If so I wish they would write. Necia Hire, I am going to answer a riddle that you sent Aunt Nellie. It is a needle. My favorite sport is horseback riding. I like all kinds of flowers, but I believe the deep red rose is the prettiest. We live on 436 acres of land. The soil is sandy and dry. May I become a member?—Bessie Ross, box 3, Hooper, Wash. (Yes, Bessie, all the boys and girls who write to Aunt Nellie are cousins. We can not have too many.—Aunt Nellie.)

**Has Good Times at Home.**

Dear Aunt Nellie: My father has taken the Farmer for a long time, so I thought I would write to you and all the cousins who are writing. I want to know if I could be a cousin. May I? If so, I will write again. I will first describe myself. I have light hair and hazel eyes. My hair is curly. I am about 4 feet 10 inches high. Our school ended March 24, and I am very glad of it, too, for I do not like school. I have lots of fun at home, but not at school. I am 11 years old and in the sixth grade in school. My father lives on a big farm. There are five girls and one boy in our family besides me. I would like to have some of the cousins write to me. I will close, leaving a kiss for you and the cousins.—Irene M. Larsen, Bickleton, Wash.

**Dick Has a Horse Named "Bob."**

Dear Aunt Nellie: This is my first letter to the Children's Corner. I like to read the cousins letters. I am 11 years old. My birthday is on July 11. Have I a twin? I am in the sixth grade at school. There are eight pupils in my room. My schoolhouse is a two-roomed building in the country. I have six brothers. Their names and ages are: Forest, 10; Ray, 8; Roy, 6; Horace, 4; Don, 2, and Earl, two months. We have 42 horses, colts and all. We have one dog and his name is Towser. We have two cows and one calf. I have one horse and his name is Bob. I clean out the barn and harrow after I get home from school. I disked today.—Dick Engle, Krupp, Wash.

**Making a Blanket for Soldiers.**

Dear Aunt Nellie: This is the first time I have ever written to the Children's Corner, but I read them every time we get a Farmer. I am in the fourth grade. My teacher's name is Miss Sherman. I have a bob-tailed cat. At our school we are knitting for the soldiers. We are making a blanket. I have six squares on my row. We have two horses. Their names are Nig and Bill. We have two cows, Lucy and Spot; and four heifers. I am 10 years old. My birthday is June 15. I will be 11 years old.—Fatima O. Lowght, North Bend, Wash.

**Hunts Agates on the Beach.**

My Dear Aunt Nellie: I have now written to the Corner twice. I hope that my letter will help me be on the roll of honor as I don't think I can win a prize. I am going to tell you this time what I do in the summer. I ride my horse down to the beach, go in swimming, and go fishing. Also, sometimes I hunt agates. I can row and swim a little. I have had nice rides since last time I wrote, and played with my dog. With love to all the cousins, hoping they are well.—Virginia Gibson, East Sound, Wash.

**Bernice Is a Cousin Now.**

Dear Aunt Nellie: May I be a cousin? I am 13 years old. My birthday is October 4. Have I a twin? I am in the seventh grade. I like school fine. My school chum is Hilda Hansen. She is 12 years old. Her birthday is December 27. My teacher's name is Mr. Sensibaugh. I like him fine. This will make the seventh term he has taught our school. I have one brother and no sisters. My brother's name is Lester. He is just 14 years old and goes to high school. He is 5 feet 8 inches tall. I belong to the Junior Red Cross.—Bernice Large, Kalama, Wash.

**A Contest at Kirby School.**

Dear Aunt Nellie: How are you and all the cousins? I hope you are all well. This is the third time I have written to the Children's Corner. I was 13 years old March 29. We are going to have a contest at the Kirby schoolhouse. I would like to correspond with Edna Requa. She is about my age. She is just from May to March older than I am. Ellen Elsensohn and Mildred Riley go to the same school as I do. It is the Kirby school.—Hattie Malone, R. F. D. 2, Pomeroy, Wash.

**Our New Cousin, Dorothy.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am in the fifth grade and I am 11 years old. I live in Prosser, Wash., on a 20-acre farm. We have three horses, one pony, and two colts. We have two cows and two calves. I have two sisters and three brothers. We have a lot of pigs. I have hazel colored eyes and light hair. My birthday is March 7.—Dorothy Furgeson, Prosser, Wash.

**School Is Out Now.**

Dear Aunt Nellie: I will write to the Children's Corner again. I got one letter from one of our cousins. Her name is Alice Case. I saw my letter in print and I sent it to my grandpa and he sent one back to match it. How many of the cousins can say Black Bugs Blood five times without stopping? I was out picking flowers today. My sister went with me. She is only 3 years old. She has long, curly hair and blue eyes and a light complexion. I have long hair and light blue eyes and I have a light complexion. I am 12 years old and in the sixth grade now. Our school is out. I wish we had school yet. The flowers are all in bloom that I like, but it is awful hot. The last time I was weighed I weighed 109 pounds. We have a horse and I call him mine. He is sorrel with a white face and a light mane and tail. He is a nice horse and his name is Stogans. All of us children rode him to school this winter. Just before school was out there were four new children came. There was one girl and three boys. I was the only girl in our school all winter and it was lonesome, too. I am making a quilt now for myself and after I get it made I am going to make some for the Red Cross.—Stella Davis, Fruitland, Wash.

**Lives in Pleasant Valley.**

Dear Aunt Nellie: I have a brother and a sister. Their names are Johnnie and Lorena. I am 9 years old and will be 10 November 5. Have I a twin? I live on a 600-acre farm in Pleasant Valley. I have to go one and one-half miles to school. I ride horseback. We have two cows. My pony's name is Tip. We have six horses. My brother is sweet as a strawberry. My sister is 11 years old and she will be 12 in August. My father takes the Farmer. We have two orchards and raise fruit. I read the letters in the Farmer. I wish the Corner would grow. My brother is not old enough to go to school. I am in the third grade. My teachers' names are Miss Houpt and Miss Argyle. We had a new schoolhouse in Pleasant Valley. It has two rooms. I am in the third grade arithmetic, spelling and language and geography. I have joined the Red Cross.—Anna Thomson, Goldendale, Wash.

**What Elsie Does in School.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I enjoy reading the letters very much and hope to see mine in print. I am 8 years old and in the third grade. My teacher's name is Miss Johnson. Miss Bourg used to be my teacher, but she went away to rest. I am four feet two and one-half inches tall. My hair is light brown. I am rather fat. My brothers and sisters tease me because I am so fat. I almost forgot to tell you what we do in school. We have reading, spelling, arithmetic, geography and history. There are five children in the third grade, five children in the fourth grade, six children in the second grade and seven children in the first grade. I think I will close and do something else for my arm is getting tired.—Elsie Hoglund, R. F. D. 222, Port Orchard, Wash.

**Patriotic Pictures in Schoolhouse.**

Dear Aunt Nellie: Our school is working for the Red Cross. We made over 500 gun wipers last Friday. I made 68 that day and 55 today. We have lots of patriotic pictures in our schoolroom. One has a picture of Lincoln on it. Below the picture it says: "The government of the people, by the people and for the people shall not perish." The pictures are advertising the third Liberty loan. Our whole school joined the Junior Red Cross. We took some money that we made from a basket social. My mother has knit three sweaters and my sister, one. We play basket ball at school every nice day and have lots of fun.—Lenore Fox, Washougal, Wash. Box 35.

**"Dutch" Is a True Americans.**

Dear Aunt Nellie: I live on a farm now. I like it much better than in town. I have a dog named Dutch, but he is a true American. He likes to play ball with me and will jump through a hoop. When he comes in the house he sits in a chair. I like to read the letters very much. I live a mile from Colbert and school. I am in the third grade. I like my teacher very much. She gives me music lessons on the piano. I was 8 years old October 13, 1917. Have I a twin?—Harold Skinner, Colbert, Wash.

Address all letters to Aunt Nellie, Care of The Washington Farmer, Spokane, Wash.

# News for Breeders

Felzer Bros. of Tangent, Ore., who breed both Shropshires and Shorthorns, sheared their rams early this year and yet had an average of 10 pounds of wool. They have sheared as high as 18 pounds from a Shrop ram. Barrington Gold, by Golden Goods, is still good as a herd sire and they will have a few young bulls in the Portland sale this winter.

W. H. Willins has approximately 90 head of stock on his half section farm just east of Latah, Wash. Twenty are cattle, seven horses and the balance, nearly 50, hogs. Mr. Willins raises good stock, but has not gone in for purebreds very heavily as yet. He raises his own feed, including field peas for his hogs. While he superintends the activities of the farm to considerable extent himself, Mr. Willins employs John H. Dow and family the year 'round to look after the many needs of the live stock and crops.

Jacob Fox of Silverton, Ore., who won grand championship on Jersey cow at last year's Oregon state fair, now has seven Jerseys on official test, besides two that have just lately finished. These two are 2-year-old heifers, one by Foxhall's Fern Lad, the other by Sugar's Golden Chief. Complete returns have not been received from the A. J. C. C., but they have produced about 300 and 330 pounds of fat, or 377 and 412 pounds of 80 per cent butter. Mr. Fox is only milking twice a day, but will have a herd average of 550 pounds of 80 per cent butter, with two over 700, and four over 600 pounds. Like most farmers in the Willamette valley, Mr. Fox is short of hay and help. He will probably not exhibit at this fall's state fair.—H. A.

Leslie P. Trigg of Norway, Coos county, Ore., recently purchased three register of merit Jersey cows and a heifer calf, out of one of them, from J. M. Dickson & Son of Shedd, Ore. Mr. Dickson reports a number of sales to Coos county dairymen, among them a son of Foosty's Gladys (510 pounds of fat), and by St. Mawes of Ashburn, to George S. Davis of Coquille; a son of Countess of Ashburn 2d (a full sister to Star of Ashburn, that holds the Oregon junior 4-year-old record), to R. A. Davenport of Myrtle Point; a son of Ruth Viola (543 pounds of fat), to M. M. Weiland of Myrtle Point, and a son of Foosty of Ashburn (468 pounds of fat as a 3-year-old), to A. B. Herman of Broadbent. This young bull is a full brother to the one that heads the University of Idaho herd. H. A.

## Five Jerseys on Test.

N. H. Smith of Oregon City, Ore., who first became famous as a Jersey breeder when Kadia F. broke the Oregon milk record for Jerseys, and came well up toward a world's record, now has five on test. Mr. Smith, however, is short of both help and pasture and does not expect as good records as those already furnished. Although he may be compelled to sell his herd he believes the Jersey cow and the dairymen will "come into their own" again as soon as the war ends. The following records made by Mr. Smith's Jersey, have been authenticated by the A. J. C. C.:

Minetta of Ashwood, begun at two years—566.32 pounds of butter fat, or 707.9 pounds of 80 per cent butter, and 11,478.9 pounds of milk.

Pride of Cedar Hill, begun at one year 11 months, 517.11 pounds of fat, and 10,204.2 pounds of milk.

Fawn of Cedar Hill, a daughter of Kadia F., began at one year, 11 months, 436.31 pounds of fat, and 9471.5 pounds of milk.

Picalo, reentry, at nine years, three months, 698.33 pounds of fat, and 12,742.0 pounds of milk.

Ella of Cedar Hill, at one year, 11 months, 395.25 pounds of fat, and 8022 pounds of milk.

Brown Bessie's Alphena Gem, at eight years, 11 months, 708.62 pounds of fat (gold medal), and 14,673 pounds of milk. H. A.

## Nine Jerseys on Test.

R. L. Buckhart, proprietor of Maple Lawn Place, Albany, Ore., has at present nine Jerseys on official test. Five of them are daughters of his bull, Karnak's Noble 4th, that is of pure Island breeding. Beside Karnak of Maple Lawn Place, the first daughter of Karnok to finish her year's test, July 31, produced a little over 510 pounds of fat; over 600 pounds of 85 per cent butter or 637 pounds of 80 per cent butter—as it is now frequently estimated. She is a high tester, she never produced less than 40 pounds of fat, and made 46 pounds her tenth month. Her first month she stood 50 in her class in all the United States. Noble's Dorothy Poge's of Maple Lawn Place, another of Mr. Burkhart's good heifers, was fifth in class under two years, with the exception of a short time at the beginning of the test. All Mr. Burkhart's cows have been milked only twice a day. Labor shortage precludes any other way of milking.

Mr. Burkhart, like most Willamette valley farmers, has a short hay crop, but when I was there his corn gave promise of a good yield.

## Pure Breeders Meet.

A new plan of holding meetings is being tried out by the Lewis County (Wash.) Pure Breeders' association. Each month the members visit one or more of the breeders, look over his stock and examine equipment. A short talk is given by some one familiar with the particular breed represented and general discussion follows. This plan should meet with success in many ways. It encourages the members to keep their stock and premises in the best of shape and at the same time it advertises the farm.

The July meeting was held at the Shady Grove farm, owned by F. M. Svinth, breeder of purebred Holsteins. The August meeting will be held at the farm of J. A. Scollard, who has a herd of purebred Angus and also a large dairy herd. A. B. N.

**Proceed With Work at Gold Hill.**

It is announced that the state line board will proceed with the work at Gold Hill, which will be finished about the first of August. What money is needed will be borrowed on the credit of the members of the board until either the state emergency board or the next legislature can act. The plant will be operated without bunkers.

## FARM SERVICE WAR FLAG

A Flag for Every Farm Home in the Northwest

An Extra Small Star for Each Farm Worker

(Patent applied for.)

## Irrigation Is King
### An Empire in the Making

# The Jordan Valley

**Malheur County Oregon**

Thirty thousand acres of productive soil is to become a center of profitable production, surrounded by extensive stock ranges, which means a home market for the hay, grain, and alfalfa grown on the irrigated farms.

**THE JORDAN VALLEY FARMS COMPANY** are now offering to farmers and stock growers a very attractive combination of land and water rights.

There are several very necessary qualifications to a successful irrigation project.

First—A water supply ample and reliable at all times when required.

Second—A reservoir, dam, canals, and water distributing system, honestly constructed and ample for all water conveying.

Third—Land that possesses the producing qualities to justify reclaiming.

Fourth—A management who **realize** and **know** that the **success** of the **settlers** is the **success** of the **enterprise.**

Fifth—The Jordan Valley Farms company is offering the public an opportunity to purchase a farm under a project that possesses all of the above features, "and then some."

Sixth—The state of Oregon is, by virtue of the fact that two-thirds of the land under the system is under the Carey Act, an interested party, and all construction work is in direct charge of an experienced reclamation engineer on behalf of the state and land and water company jointly. The state of Oregon is requiring a bond of $100,000 for the faithful performance of all construction contracts.

## WE WANT YOU TO INVESTIGATE

We want you to investigate Jordan Valley, then see it. Our automobiles leave Boise, Idaho, weekly and they are at your disposal. If you want to get into a new country where land is cheap, water plentiful and climate favorable, this is the place to go. We desire to continue our policy of colonizing this land with earnest, industrious people who will make dependable, permanent settlers. If you are interested, drop us a postal card right now and we will send you detailed descriptive matter. Address all communications to

**JORDAN VALLEY FARMS**

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, July 29.—Welcome rains and the breaking up of the hot wave in the southwest had a decided bearish effect today on corn. Largely as a result, prices although steady at the close were 2 1-8 to 2 3-4c net lower, with August $1.52 3-8 and September $1.53 7-8 to $1.54. Oats finished 1c to 1 1-2c down. In provisions, the outcome ranged from 20c decline to 22c advance.

Corn traders devoted chief attention to the fact that moisture had been supplied to every state in the belt, and that the amount exceeded a full inch at many places. Cheering war news and continued liberal receipts added to the force of bearish sentiment.

Oats weakened with corn. Receipts from the new crop were larger.

Hog market strength lifted provisions, but subsequently was more or less offset by the weakness of grain.

**Chicago Futures.**

| | Open. | High. | Low. | Close |

## Portland Market.

PORTLAND, Ore., July 27.—The butter market is in a complicated condition, with cubes advancing and some of the creameries cutting the price on prints. The general print quotation now is 50 cents in paper wrappers and 51 cents in cartons. Cube extras have moved up to 47 cents.

Eggs are scarce and firm on the basis of 46 cents for ordinary candled.

There was a firmer tone to the poultry market at the close, as receipts were not so heavy as a short time ago. Dressed meats were also stronger.

The peach market is heavily supplied with Oregon fruit, but the demand is good and prices steady at $1@1.35.

The tomato market is glutted, as the Oregon crop has come on earlier than expected, and dealers were loaded up with Californias. Prices range from 75c@$1.25 for local stock.

Butter—Cubes, extra, 47c; seconds, 45c; prime prints, extras, 50c; cartons, 1c extra; butterfat, No. 1, 51c delivered.

Eggs—Oregon ranch current receipts, 43c; candled, 46c; selects, 48c per dozen.

Cheese—Jobbers' buying prices, f. o. b. dock, Portland; Tillamook, triplets, 23 1-2c; Young Americas, 24 1-2c per pound; Coos and Curry, f. o. b. Myrtle Point, triplets, 23c; longhorns, 24c per pound; 1-4c discount to Portland trade.

Poultry—Hens, 24@25c; broilers, 28c; ducks, nominal; geese nominal; turkeys nominal.

Veal—Fancy, 19c per pound.

Potatoes—New, 3 3-4@4c per lb.

Hay—Buying prices, f. o. b. Portland; eastern Oregon timothy, $32@33 per ton; valley timothy, $27@28; alfalfa, $21@24.50; valley, grain hay, $24@26; clover, $21; straw, $9@10.

## Portland Wheat.

PORTLAND, Ore., July 29.—The merchants' exchange has adopted a resolution that changes the methods of doing business on the board in several important particulars. Hereafter all transactions in eastern oats, corn and other cereals will be at prices based on shipment during a specified month and not on the delivery bases, as heretofore. Much confusion and generally unsatisfactory results were experienced last season on sales for a specified delivery date, owing to the uncertainties of transportation. All deals in home products, barley, sacked oats and the like will be at prices delivered as in the past. An extra month of trading is also provided for in the amended rules. For the past year two months' options were posted and in the future three months will be traded in.

The oats market was firm at the close of the week, with $61.50 bid for sacked and $56@57.50 for bulk. Barley was firm at $56 offered for standard brewing and $55 for feed grade. Corn bulk was unchanged at $65@67.

## San Francisco Produce.

SAN FRANCISCO, July 27.—Butter, cubes, 52c.

Eggs—Fresh extras, 49½c; fresh extra pullets, 47½c.

Cheese—Young Americas not quoted; new firsts, 24½c.

Poultry—Large hens, 29@31c; roosters, young, 40@43c; fryers, 38c; broilers, 38c; pigeons, $2.50; squabs, $2.50; geese, 21@25c; turkeys, live, 25@28c.

Vegetables—Green peas, 7@9c; asparagus, 5@5½c; summer squash, 75c@$1; eggplant, $1.40@1.60; peppers, bell, $1.50; chile, $1.40; tomatoes, 75c@$1.25; lettuce, 85c@$1; celery, $1.50@2; potatoes, white, $2.85@3; sweet potatoes, 8@10c; onions, red, $1.75@2; yellow, $2.15@2.25; garlic, 15c; beets, $1.50@1.65; carrots, 90c@$1; turnips, 65@75c; rhubarb, $1.75@$2; cabbage, 1@1¼c; artichokes, $2.50@4; cucumbers, 75c@$1; string beans, 3½@4c; lima beans, 6@7c; okra, 12½@15c; corn, 3½@4c.

Fruit—Cantaloups, standards, $3@3.25; watermelons, 1¾@2c; casabas, 2½c; lemons, choice, $5@6; grapefruit, $2@2.50; oranges, $3@6; bananas, Hawaiian, 5@7c; pineapples, $2.50@6; apples, $2@2.50; strawberries, $8@10; cherries, black Tartarians, nominal; blackberries, 6@8c; raspberries, 7@10c; peaches, 90c@$1.25; gooseberries, 5@9c; currants, $8@9; loganberries, 5@9c; apricots, $1@2; pears, Bartletts, $1.75@2; figs, double layer, $1@1.25; white, 75@90c; plums, $1@1.25.

Receipts—Flour, 12,904 quarter sacks; barley, 24,782 centals; beans, 966 sacks; potatoes, 5159 sacks; onions, 364 sacks; hay, 530 tons; hides, 720; wine, 39,000 gallons.

**METALS.**

LONDON, July 27.—Bar silver, 48 13-16d.

## Spokane Market.

While mutton remains at unchanged prices, beef shows a downward tendency. A few alterations have been made in the list, which is compiled from those furnished by the Armour and Carsten packing houses.

Ham and bacon have advanced 1 cent a pound, as has also fresh pork. This is usual at the beginning of the harvest season.

Compound substitutes for lard have declined.

**Wholesale Meats.**

**Beef**—Beef steers, 12½@20c lb; cow beef, 11@15c lb; heifers, 15@16c lb; best loin, 25@31c lb; steer chucks, 11c lb; square chucks, 12c lb; prime ribs, 30@24c lb; rump and round, 19@20c lb.

**Mutton**—Breakers, 21c lb; wethers, 20c lb.

**Lambs**—Diamond T. C. lambs, 28c lb; lambs, 26@27c lb.

**Pork**—Packer dressed hogs, 27@28c lb; pork loins, 32@33c lb; legs, 31c lb; shoulders, 25c lb; leaf lard, 28c lb; tenderloins, frozen, 40c lb; spareribs, 31c lb; country dressed hogs, with head on, 21c lb to producer; country dressed veal, 14c lb to producer.

**Smoked Meats**—Washington hams, 35½c lb; T. C. hams, 36½c lb; T. C. bacon, 50c lb; Washington bacon, 40@44½c lb; picnics, 24c lb; lean backs, 33@34c lb.

**Star Brand**—Hams, 36½c lb; Shield hams, 34½@35½c lb; picnics, 24c lb; bacon backs, 34c lb; Star bacon, 47@51c lb; Shield bacon, 40@44½c lb; Simon Pure lard, $17.50 case; Shield lard, tierces, 27c lb; White Cloud compound, tierces, 23¾c per lb.

**Dry Salt Meats**—Clear bellies, 28¾c lb; loin backs, clear, 31c lb.

**Lard**—Tierces, 26½c lb; $13.99@14.74 case; Diamond T. C. pure leaf lard, $15.50 case, $7.90 half case; Snowcap compound, tierces, 23c lb.

**Apples**—Express arrivals, 11 crates, Washington; market weaker. Washington: Various varieties, standard boxes, according to grade, $1.50, $2.00. Few boxes jumble packed, $1.00. Transparent, wrapped, $2.00.

**Potatoes**—Freight arrivals, 7 cars, California; 1 car, Washington, 12 sacks, Washington; market slightly weaker. California: 100-pound sacks, white variety, $4.00, $4.25, mostly $4.00. Homegrowns, 100-pound sacks, white varieties, $4.00.

**Onions**—Freight arrivals, one mixed car, Walla Walla, containing onions. Market steady. California, 100-pound sacks, red and yellow varieties, $2.50@2.75, mostly $2.50, some red varieties, slightly off grade, $2.25; Washington, Walla Walla district, 100-pound sacks, Yellow Danvers, $2.50.

**POULTRY.**

**Live Poultry**—Live hens, 18@20c lb; spring chickens, 28@30c lb; roosters, 12½c lb to producers, f. o. b. Spokane.

**GASOLINE, LINSEED OIL, ETC.**

**Gasoline**—Red Crown, bulk, 25c gal, cases, 36c gal; Shell, 25c gal; refined oil (Pearl), bulk, 14c gal, cases, 23c gal; Eocene, 15½c gal in bulk, cases 26½c gal; engine distillate, 17c gal, bulk.

**Linseed Oil**—Raw, bbl, $1.97 gal, cases $2.15 gal; boiled, bbl, $1.99 gal, cases $2.17 gal.

**Turpentine**—Bulk, 79c gal, cases 99c gal.

## Trappers of the Ozarks

(Continued from page eighteen.)

and paddled away. The whole village was on the river bank to see them off, and a number of boys, in their own canoes, accompanied the voyagers for at least a mile.

After so long a time spent in the wilderness, Ben, and even Jodo, had enjoyed the stay in the lively, French-chattering village very much. And when the attending canoes had turned back, both spoke of feeling rather lonely. However, they were now looking forward to seeing their friends at home.

But there was still much wild, dangerous country to pass through before they could arrive at home. From here on to Loutre island, which they expected to reach some time the next day, not a settlers' cabin would be seen.

"I'm almost sorry we sold those people our powder and lead," Jodo remarked as they were paddling along. "But for that we'd have company, and a livelier trip."

"Yes. It seems good to be with civilized people again, even though they are foreigners. We shall not soon forget our visit at Hill Without Design."

The weather was now both clear and mild—so mild that the sun grew almost uncomfortably warm at midday. The voyagers did not land for dinner, but ate while their canoes were drifting with the current. After a short rest they went to paddling again.

The Missouri was rather low as yet, but just as swift, apparently, and certainly just as muddy, as if it had been much higher. There were many snags in the stream, which would make traveling after dark very dangerous, if that should be necessary. There were also occasional small islands.

More than once during the afternoon the travelers noticed little flocks of deer on sand bars. And once they watched a bear trotting across a stretch of sand between the water's edge and the wooded bank. But no human being did they catch a glimpse of till about an hour before sunset.

Then a lone man was seen standing on the river bank, a good distance down stream. On coming nearer the canoemen could make out that he was an Indian. And he was watching them as intently as they were watching him.

He soon disappeared, but a little later, happening to glance into an opening that led from the river bank back into the woods, they saw five Indians cross the opening, one after another, and all going at a trot.

"They're after us! Don't you see they are? They're keeping right along with us!" exclaimde Jodo, in no little dismay at the discovery.

"Yes, I see," answered his fellow-voyager. "Looks for all the world as if we're in for some more trouble."

(To be contoinned.)

### Are Rounding Up Idlers.

The authorities all over the country are endeavoring to make idlers go to work or go to war.

### Write for Information.

The readers of this paper are again reminded that a great information bureau is maintained for them at Washington, D. C., the national capital, and that it will serve them free of all charge except postage. It is maintained as one of the means this paper takes of serving its subscribers. If there is any question upon which you desire information, simply write to the address given below. If you want a personal letter in reply, enclose a 3-cent postage stamp but no other money. No pay is asked or accepted for the service. If you want any one of the bulletins or pamphlets that the bureau has on hand enclose a 2-cent stamp but no other money. Here are some of the booklets that you may receive:

Book on Canning.
"German War Practices."
Book on Colds.
Garden Book.
Book on Knitting.
War Cookbook.
Book on Navy.
Book on Drying Fruits.
Book of Recipes.
Bread Book.
"How War Came to America."
Book on Household Pests.

Don't address your inquiry to the state office of The Farmer, but be sure to address it as follows:

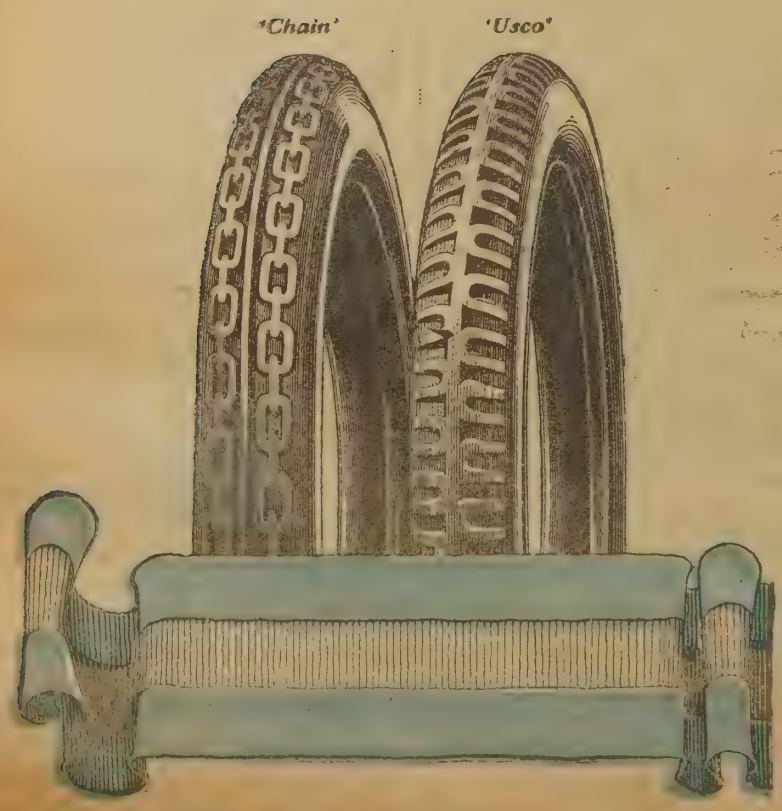
## United States Tires are Good Tires

"This car is as much a part of my farm as the barn is. It's working every day. It's a business proposition. So I'm going to make her upkeep strictly business.



"These United States Tires are a beginning. I've been investigating and gathering evidence all over the country. I'll bet I've talked to a hundred farmers who drive cars. The majority vote is United States Tires for long wear and economy. It was unanimous with the fellows who are keeping books on their cars and finding out what it costs them to ride a mile or a hundred.

"You see I'm starting on the idea that quality pays in the long run. I'm fitting the car out right to begin with. That's the way to shove down the little old-cost-per-mile at the end of the year."

Any sound investigation of tire costs among experienced motorists will lead you to United States Tires as business-economy equipment.

There are treads and types for every purpose—all United States quality.

Any United States Sales and Service Depot dealer will cheerfully aid you in selecting the right tire for your car and your roads.

# Yakima Grain Yield Large

## Crops Are Reported Fine on Irrigated Lands; Fair Potato Crop Is Expected; Conditions Are Improved Over Last Few Weeks.

YAKIMA, Yakima County, Wash., July 26.—Crop conditions in Yakima county are in general quite satisfactory this year. While the first cutting of alfalfa was not a normal crop, the yield was practically as good as last year, and farmers are just beginning the harvesting of the second crop of alfalfa, which is giving an excellent yield of high grade hay. In general, the yield of alfalfa per acre will be about the same as last year, but the total acreage in the county has been considerably reduced on account of the plowing up of old fields.

Grain harvest is well under way in the county and while we have received no reports on the yield of threshed grain, the general appearance of the grain crop indicates that we will secure perhaps the largest yield of grain in the history of the county. This is especially true of the irrigated sections. During the early part of the season the prospects for the potato crop were very poor. Conditions, however, have improved during the last few weeks so that in most sections we will have a fair crop, though not a normal yield.

Up to the present time we have been supplied with sufficient labor to carry on farm operations and are not expecting any shortage until the apple harvest begins. Arrangements have already been made to provide the extra help needed during the fruit harvest and we do not anticipate any serious shortage at that time. The greatest difficulty in the labor situation in this county is not so much a shortage in the number of farm laborers as in the inefficiency of much of the help that is available this year. J. N. PRICE.

### Grain Looks Some Better.

HUNTERS, Stevens County, Wash., July 29.—The crop outlook during June and early July was discouraging. The hay crop was very light and it seemed that there would be but half a crop of wheat and oats. Since July 9 we have had showers off and on amounting to 1.52 inches precipitation. As a result of this the grain is filling real well and the yield will be much better than expected. The rains came too late to benefit the second crop of alfalfa materially. Hay will be at a premium here this fall and it is already worth $20 per ton. Potatoes and garden stuff has been much benefited by the rain and corn is looking well. Apples are a light crop here, due to insufficient bloom and an unusually heavy June drop. Indications are for a good quality of fruit.

ELIAS NELSON.

### Wheat Yield Varies.

CENTERVILLE, Klickitat County, Wash., July 29.—Our harvest has been on the move for about a week, but on account of the light rains in this county, the fore part of last week work was somewhat hindered. The report of grain turned out in the Horseshoe Bend district is, so far, rather lighter than expected. There must have been a dozen of the small combines delivered in this part of the county this year, all at work and most of them have proved satisfactory. The day of the large threshing outfit is getting shorter, though it was possible for the headers to work when the combine couldn't. We apparently have plenty of harvest help, as we hear no complaint. In a week the largest part of the harvest will be over and steam threshing begun. The combined wheat is already moving to market here with a prospect for a better cash deal on wheat this year. Our garden products are bringing good prices. Potatoes are still 4 and 5 cents a pound, with a fair supply of peaches, apricots and apples at good prices. Everything in the growing line was hurt badly by a few hours of extremely hot wind, which may cause a shrinkage in the turn out of wheat.

CLARENCE A. LESTER.

### Grain Below Normal.

MEAD, Spokane County, Wash., July 27.—The cutting of winter wheat is finished and threshing will begin in a few days. While the yield will be below normal it will be better than expected a month ago. The present cool weather and light rains will help late spring wheat and oats, though too late to be of very great value. Both will be below normal in yield. No marked shortage of labor as yet. Because of the low yields of all crops and high price of all things we must buy, the farmer will not make much this year; some will go behind. Some would increase their stock of cattle, but the very low figures offered by the packers and the scarcity and high price of feed makes it impossible. Pastures and second crops of alfalfa will be improved by present rain. Potato crops will be uneven, some plots being poor and others a good average. Notwithstanding the drawback of the season, all are in good spirits and more than ever determined to do all they can to meet the government requirements.

GEORGE HINGSTON.

### Hay Will Be Scarce.

NEPPEL, Grant County, Wash., July 28.—What wheat there was has been harvested and yielded but a small return to the producer, and leaves the farmer without any hay and but little stock feed to face the coming winter. Stock buyers are busy buying up stock that people just have to let go, and there are some good cows among them, too, for which they are paying their own price, usually about 3 cents a pound. Crop conditions have been benefited by rain, alfalfa especially, and is yielding well when watered and taken care of. But help is not to be had and weeds are taking quite a number of food producing gardens. In the near future this locality will probably have an irrigation district and the Moses Lake Water Users association will help things along for the advancement of the community and will safeguard our water rights from the irresponsible promoter who only seeks a profit from the work and labor of others and usually acts the dog in the manger. However, Moses lake district, with a heavy production of hay and food stuff and short of help, has shown what the patriotic spirit of the people here could do to help win the war for democracy. So let us roll the wheat a little faster, as the boys in France are going over the top every day and will need our food and help as never before.

MARTIN PENHALLICK.

### Crops Are Below Normal.

COLFAX, Whitman County, Wash., July 26.—Crop conditions here are poor. Oats are practically a failure. Some fields of winter wheat promise a fair yield but the majority are very poor, and spring wheat is badly burned. It is showering today, which is hard on the hay in the field and not of much benefit to the dried up crops. Harvesting is beginning and labor is scarce. The yield promises to be about 50 per cent of normal. This holding down the price of wheat is going to prove a calamity for both the farmer and government. Farmers will plant more oats and barley in an effort to make up their losses on wheat. A heavy crop of these cereals will result in lower prices, which will prove a loss to the farmer and the government will lose the wheat that might have been grown.

E. C. HUNTON.

### Whatcom Drouth Broken.

FERNDALE, Whatcom County, Wash., July 24.—The drouth has been broken by a heavy rain, which has been a great help to all crops and the pastures. The rain cracked a great number of ripe cherries. Some cherries were lost through the inability of the cannery to handle them. String beans are now arriving at the cannery. The usual high prices paid this year for all kinds of berries and fruit have led every one to pick every marketable pound of fruit, and consequently the cannery has worked at full capacity to handle it. The labor shortage is not critical here, as the farms are small and the farmers help each other through the busy season.

CARL J. MENZ.

### Irrigated Crops Good.

GRANDVIEW, Yakima County, Wash., July 26.—There is some splendid wheat in this community and also barley and some of the crop is harvested. There is some of the best corn I have seen for years, but no large fields. Potatoes are fair. Labor is scarce, but by exchanging work the hay crop has been put up in good shape, and it is a fair crop. Crops are pretty good in the irrigated sections, but reports from dry land farmers are not so good. Beets are nearly a failure on account of blight and gardens are the poorest we have ever had. The market for hay has started pretty good, but apples won't be a third of a crop.

E. H. FAULKNER.

**Risky Variation.**

"A wise man may change his opinion."

"Yes," replied Senator Sorghum; "but he takes an awful chance if he changes it more than once or twice during the same campaign."—Washington Star.

**Fill Your Silo Yourself with an International Ensilage Cutter**

TAKE NO CHANCES this year on getting your ensilage into the silo at the right time.

The following table shows the sizes and capacities of the five types of **International** ensilage cutters. There is, you see, a size for every farm. The smaller sizes will easily fill a 30-ft. silo. The largest are used to fill the highest silos in the country.

| Type | Feed Throat Sizes | Capacity Tons per Hour | Power Needed | Length of Cut | Speed |
|---|---|---|---|---|---|
| A | 16" x 6⅛" | 16—25 | 20-25 H.P. | ⅜" to 1 3/16" | 500—700 R. P. M. |
| B | 14" x 5½" | 12—16 | 15-20 " | ⅜" " 1 3/16" | 700—800 " |
| E | 11" x 4½" | 10—12 | 10-15 " | ⅜" " ⅞" | 800—900 " |
| G | 11" x 5 " | 8—10 | 8-10 " | 3/16" " 1 " | 800—900 " |
| F | 9" x 3 " | 3— 6 | 4—6 " | 3/16" " 1 " | 800-1000 " |

All **International** cutters are of the knife on blower type—simplest and requiring least power. All are equipped with a corn chute for feeding from the wagon. Steady power feed insures even cutting, silage packs properly and keeps. The low speed at which they run, and the safety devices on the machines insure the safety of the operator. The machines are complete, there are no extra sprockets or gears.

A post card will bring you prices and full information on any of the cutters listed above. Send for it to this address.

# Agree on Grain Price Deductions

## *Millers and Buyers Will Double Charges To Cover Handling, Commission and the Like*

Desiring to make a reliable comparison between the proposed charges for handling, commission, storage and the like this year, with that of previous years, this paper has made inquiry of some of the best known wheat growers of the Inland Empire. Here is what D. A. Scott of Ritzville, prominent as a wheat producer and as well informed as any man in the state on subjects of this kind, telegraphs: "Buyers here are deducting seven and three-tenths cents per bushel; 1917 they deducted four and one-half cents per bushel; previous years two and one-fourth cents per bushel." W. J. Sutton of Cheney, no less prominent as a producer, and no less conversant with wheat marketing than Mr. Scott, corroborates the testimony of the latter in the following telegram: "Farmers here last year received for wheat, price fixed by government, less four cents per bushel and freight; warehouse company made good profit. Previous to war the deduction was three cents per bushel and freight. Any fair minded person will have to admit proposed charge of eight cents a bushel by northwest dealers is excessive."

The following are two vitally important matters for the consideration of the wheat producers of the northwest:

(1) The federal grain buying corporation, in a set of rules recently issued governing the buying of wheat this season, gives the following rules applying to handling charges and insurance: "Country elevators and buyers are entitled to receive fair compensation for their services in the handling and marketing of wheat, and the charges for such services are necessarily a deduction from the terminal price of wheat. These charges, or margins, are well established by custom and vary in different sections of the country according to local conditions.

"Insurance: The government carries no insurance on the property which it owns. It does, however, require that the elevator operators shall exercise due diligence in protecting grain stored in their warehouses or elevators from ordinary hazards. Owners of grain stored in warehouses or elevators should therefore protect their grain so stored which has not been delivered to or paid for by the food administration grain corporation."

(2) The North Pacific Millers' association and the Northwestern Grain Dealers' association, at a meeting in Seattle shortly after the issuance of the above rulings, announced the following agreement as to charges on these points as reported by the Seattle correspondent of the Northwestern Miller: That mills and grain dealers in buying wheat from growers should deduct 7 cents a bushel for storage and handling charges, these charges to include 3 cents for 30 days' storage, 2 2-10 cents for commission, 1 cent for interest, 4-10 of a cent for insurance and 4-10 of a cent for inspection, weighing and allowance for bad order sacks. In addition to this, it was agreed that a handling charge be made in purchases by mills and exporters from Coast and country dealers of 1-2 of 1 per cent (about 1 cent a bushel), that interest on drafts be at the rate of 7 per cent, and that interest be charged until three days after arrival of wheat on track at coast terminals.

It is evident that this means that the producer is to receive as the price for his wheat the Coast basic price less the freight to the Coast terminal less eight cents for storage, handling, insurance, interest, commission, inspection and the like. In other words, if the government's basic wheat price is such as to make the price of a given crop of wheat at a given Inland Empire point $2.05, it will be worth to the farmer $1.97 instead.

The point at issue is: Is eight cents a reasonable charge for the services rendered by the country warehouse or elevator and the buyer?

From the figures given in the telegram from Mr. Scott, quoted at the opening of this article, it is seen that at Ritzville, which is a representative wheat growing and shipping point of the northwest, the charges covering the items in question (storage, handling, commission, insurance, interest and the like) are increased two and eight-tenths cents this year over last year, and a little more than five cents over two years ago. This is an increase this year of about 62 per cent over one year ago and more than 200 per cent over previous years.

The figures quoted for the Cheney district by Mr. Sutton show that the proposed deductions this year would be nearly double those of last year, and at least two and one-half times those of years before the war.

These figures are sufficient to warrant the most searching investigation by growers and representatives of the federal food administration, which guaranteed the producer a minimum of $2.20 a bushel at Pacific coast terminals this year.

Here is where farm organizations like the grange, the farmers' union and the nonpartizan league can render valuable service to the producers. If growers feel that these intermediate charges are excessive, they can protest through their organizations to the national food administration. Farmers' organizations can clear away obstructions in the road to the terminals and make it easy for their members to ship to the grain corporation. Instead of letting their members deal individually through commission men in Seattle, Tacoma and Portland, they can locate their own agents at the terminals.

Another valuable service can be performed by the farmers' organizations—the securing of cars for wheat to be shipped to the government markets. The official announcement of the food administration says: "the government does not discriminate between shippers in matters of transportation," and undoubtedly that is the intent of the food administration; but the mills and other private buyers will know the ropes and thus have an advantage over the average individual grower who may want cars to ship his produce to the government markets.

Justice to the grower and the public welfare require that the wheat grower shall receive, down to the last mill, the full measure of the price that was allowed him under the food control law of congress. It is especially essential that no unjust and unreasonable intermediate charges be imposed upon him this year of short yields and at this critical stage of the great war, when every possible effort must be made to foster and stimulate the growing of a great wheat crop in 1919.

The following is a composite table compiled from separate tables issued by the federal food administration showing the revision in the basic prices of wheat at various terminals throughout the country resulting from the recent increase in freight rates.

| | Old Price | New Price. | Increase. |
|---|---|---|---|
| New York | $2.28 | $2.39½ | .11½ |
| Philadelphia | 2.27 | 2.39 | .12 |
| Baltimore | 2.27 | 2.38¾ | .11¾ |
| Newport News | 2.27 | 2.38¾ | .11¾ |
| Chicago | 2.20 | 2.26 | .06 |
| New Orleans | 2.20 | 2.28 | .08 |
| Galveston | 2.20 | 2.28 | .08 |
| St. Louis | 2.18 | 2.24 | .06 |
| Duluth | 2.17 | 2.22½ | .05½ |
| Minneapolis | 2.17 | 2.21½ | .04½ |
| Kansas City | 2.15 | 2.18 | .03 |
| Omaha | 2.15 | 2.18 | .03 |
| San Francisco | 2.10 | 2.20 | .10 |
| Portland | 2.05 | 2.20 | .15 |
| Seattle | 2.05 | 2.20 | .15 |
| Tacoma | 2.05 | 2.20 | .15 |

The statement issued by the food administration contains the following relative to the so-called premium and discount wheats:

"The 'premium' wheats are as follows:

| | Premium. |
|---|---|
| No. 1 dark hard winter | 2 cents |
| No. 1 dark Northern spring | 2 cents |
| No. 1 amber durum | 2 cents |

"The 'discount' wheats are as follows:

| | Discount |
|---|---|
| No. 1 yellow hard winter | 2 cents |
| No. 1 red spring | 5 cents |
| No. 1 red walla | 7 cents |
| No. 1 red durum | 7 cents |
| No. 1 soft white | 2 cents |
| No. 1 white club | 4 cents |

"Discounts for other grades than No. 1: No. 2 wheat, 3c under No. 1; No. 3 wheat, 7c under No. 1. Grade below No. 3 will be dealt in on sample on merit.

Other portions of the statement issued by the administration concerning the purchase of wheat are as follows:

"The Food Administration Grain Corporation will buy warehouse receipts in approved elevators at the principal primary markets as named above. In the intermountain territory, where there are no public storage facilities available, an adjustment will be made to make effective the $2 minimum for the No. 1 grade f. o. b. outgoing car, available for transportation to a public terminal elevator. The intermountain region comprises southern Idaho, western Montana, western Wyoming, Nevada, Utah, western Colorado, New Mexico and Arizona. Further details can be obtained at grain corporation offices.

"At all these principal primary markets there is an open market where all classes of buyers are well represented, and the producer and the consumer will be amply protected through the competitive activities of the several interests, the Food Administration Grain corporation being prepared to buy and protect the 'fair price' basis.

"As the miller is restricted to a 'fair price' basis for his flour, he can not pay more for wheat than the expense of milling and a reasonable profit will allow.

"The farmer can protect himself by the study of the primary prices, deducting intermediate charges, or he can ship to the Food Administration Grain Corporation, or he may ship to a commission merchant at a terminal market and through him secure the benefit of competitive buying.

"There is nothing in the '1918 plan' which prevents a buyer at point of origin from placing his own grade upon the wheat which he purchases. If, by the buyer's act, the grade is raised, it is equivalent to an increase in the price. If the buyer lowers the grade the producer or dealer's protection is to ship to the Food Administration Grain Corporation.

Producers or dealers have the right to bill cars of wheat direct to the Food Administration Grain corporation at any of the principal primary markets named above. When the wheat is unloaded in the elevator, and weight and grade returns are made to the Food Administration Grain corporation, remittance will be made on the basis of weight and grades so reported and on the basis of the government price, less 1 per cent administration charge for the service.

"The government does not discriminate between shippers in matters of transportation.

"The food administration maintains a traffic bureau for the purpose of assisting shippers of grain and flour in securing their car supply and also in expediting the movement of shipments to destination. Application for assistance can be made to Food Administration Grain corporation offices in each primary market.

"Charges for handling: Country elevators and buyers are entitled to receive fair compensation for their services in the handling and marketing of

(Continued on page fourteen.)

## *In Unity There Is Strength*

The report of rural church workers that there is a growing tendency toward church unity in small communities is gratifying. It is a travesty on the great church movement that one little village of 500 souls should have four to six churches struggling along in a discouraged way. Five hundred people trying to pay the salaries of four ministers, which, needless to say, means salaries on which the ministers can not decently support families! Five hundred people paying insurance, repairs, mortgages, fuel and the like to maintain four separate church buildings! And all because of insignificant differences in beliefs. In unity there is strength, and it is a hopeful sign to see small churches uniting in the liberal support of one good minister and one live cooperative church organization.

There are, as Shakespeare said, sermons in stones, books in running brooks and good in everything—including war.

## *The Call Has Been Sounded*

Speaking through the United States department of agriculture, a hungry world is calling upon the farmers of the United States to increase their acreage of fall wheat this year. Of the four northwestern states all are asked to seed an increased acreage except Montana. That state is asked to seed the same acreage as last year; Washington is asked to increase its acreage 80 per cent; Idaho is asked for 25 per cent increase, and Oregon for five per cent.

That is the task before the wheat growers. It means that those who have been raising wheat will plant more, and that many who have not been wheat producers will this year make a new venture for the good of the one great cause—winning the war. Prices in all respects are not just as every one would like them, but every producer knows that when he takes a bushel of good grain to market he will receive not less than $2 for it. Heretofore he has been taking two gambling chances, one with the productivity of the season and one with the price. He must again risk the weather, but he knows that a reasonable price will be paid him for whatever he produces. Without doubt the farmers of the northwest will rally royally to the call and thereby do their utmost to prevent the possibility of a serious food shortage a year from now.

## *Produce Something Needed*

These are times when every one should be producing something of a very real nature. It is not enough to be engaged in an occupation that has heretofore been considered essential. Dealing in commodities that are not necessary for the maximum fighting efficiency of the nation should be reduced to the lowest point possible. If one walks up the street of almost any city he will observe on all hands forms of employment that might well be dispensed with during these strenuous times. For "business as usual" they may all be considered essential, for they all cater to some demand of the people or of part of the people. The responsibility, therefore, after all, reverts to the people as a whole. The way to eliminate these nonessentials is to cease patronizing them, remembering that every time one purchases anything that is not absolutely necessary for his well-being he is employing some one in a non-essential line of business and thereby keeping that some one out of a real war-winning activity.

There is talk of strikes in some of the war industries of this and other allied countries. What if the army in Europe should strike?

## *There Is Too Much Free Counsel*

Some one has extracted from the writings of the Roman author Livy another proof that human nature today is pretty much the same as human nature of 2000 years ago. In the year 168 before Christ Rome decided to carry on a war against the Macedonians, and selected the Roman general Lucius Aemilius Paulus to lead its army. Instantly the general was assailed with a flood of confusing counsel, coming chiefly from persons who were in nowise qualified to give it. After he was half-distracted by public clamor, General Paulus went out from the senate chamber one day and thus addressed the Roman populace:

"In every circle, and, truly, at every table, there are people who lead armies into Macedonia; who know where the camp ought to be placed; what posts ought to be occupied by troops; when and through what pass Macedonia should be entered; where magazines should be formed; how provisions should be conveyed by land and sea, and when it is proper to engage the enemy, when to lie quiet.

"And they not only determine what is best to be done, but if anything is done in any other manner than what they have pointed out they arraign the consul as if he were on his trial. These are great impediments to those who have the management of affairs.

"I am not one of those who think that commanders ought never to receive advise; on the contrary, I should deem that man more proud than wise who did everything of his own single judgment.

"What, then, is my opinion? That commanders should be counseled chiefly by persons of known talent; by those, especially, who are skilled in the art of war and who have been taught by experience; and next, by those who are present at the scene of action, who see the country, who see the enemy, who see the advantages that occasions offer, and who, embarked as it were on the same ship, are sharers of the danger.

"If, therefore, any one thinks himself qualified to give advice respecting the war which I am to conduct, which may prove advantageous to the public, let him not refuse his assistance to the state, but let him come with me into Macedonia.. He shall be furnished by me with a ship, a horse, a tent; and even with his traveling charges. But if he thinks this too much trouble and prefers the repose of a city life to the toils of war, let him not, on land, assume the office of a pilot.

"The city, in itself, furnishes abundance of topics for conversation; let it confine its passion for talking, and rest assured that we shall be content with such councils as shall be framed within our camp."—Livy, Book XLIV, Chapter 22.

Throughout the length and breadth of the United States today, just as it was in Rome 2086 years ago, town and village oracles who think they know it all, but in reality know next to nothing, are free with their protests against the manner in which the allied armies are fighting the Huns and to shout suggestions on the way to win the war.

Fortunately for the United States and the allied cause, no one in high command or authority pays any heed to these protestations. War is expert business, and as old Paulus told the Roman people, commanders should be counseled by those who are skilled in the art of fighting.

Let's not get gloomy. The first necessity may be soldiers at the front, but the second is soldiers at home, and the same degree of bravery and optimism should be manifested here as over there.

## *The Fair Is a School*

Most of us are just like we were when we were boys. We go to school to have fun, not to learn. That is the way we attend the fair as a rule, but it is a mighty poor way, for there is valuable information at every fair that should be carried away and put to practical use. Agricultural exhibits themselves are educational, and in most cases the exhibitors are able and willing to explain methods of production that it would prove profitable to follow out. But there is another line of education there—machinery, farm construction, modern equipment of every kind. There are engines, stump pullers, wood saws, tractors, motor cars and trucks, grain bins, silos, cream separators, cider mills, light plants, water systems, fencing, and a score of other things of interest to modern farm developers. There are men demonstrating all these things and giving out descriptive literature. It is the logical opportunity of the whole year for the farmer who is interested in any of the modern implements and devices of farming to get first-hand information. Listen to the demonstrators and take their literature. Then, in the quiet of the farm after all the fun and entertainment of the fair is over, weigh both talk and literature in the light of your needs.

It was a liberal-minded preacher who said: "I would join with Satan himself in prayer for allied victory if he would but pray with me." This indeed a time for cooperative effort to the exclusion of personalities.

## *The Fourth Liberty Loan*

Three Liberty loans have been floated since the war began. A fourth is soon to come. Now is the time to plan to meet it. The American people must finance America's part in the war. There is no other way, and no real American hesitates to go down into his pockets as deeply as possible to do his full part. While the war continues the people of this country will again and again be called upon to meet special war demands—bond issues, increased taxes, food conservation and the like. These things are as indispensable to the successful prosecution of the war as are soldiers. They must be met fearlessly, wholeheartedly and with the same determination that has marked the sacrifices made by the peoples of Belgium and France. Come what will, America will never be called upon to make one-tenth the sacrifices that these peoples have already made. Therefore, let us look ahead to the coming of the fourth Liberty loan the last of September. Let us plan from this very day what we can invest in its bonds, and make the amount as great as possible, remembering always that it is a sound business investment, and not a gift or contribution, though it serves the purposes of both.

A thought is the most powerful thing in the world either for good or bad.

## *Where Women Can Serve*

When we read of the American soldier going over the top with shells bursting and bayonet fixed for the rout of the enemy, we must not forget that back of the trenches are the Red Cross hospitals waiting, ready to receive him if he comes back wounded. While we are sounding the praises of the soldier boy, great as his glory may be, let us not fail to cheer for the soldier girls back there, many of them within the range of enemy guns, daring death as bravely as the hero of the trench. And let us not forget another heroine, the young woman who, responding to the tremendously real need, has enlisted for service in the home guards of health, the one who takes up duty as a home nurse to release her trained sister for the battle front. Right now there is a great need for these home guards. The demand for trained nurses on the battle fields is greater than the supply. The government is appealing for enlistment of young women for training, some of them actually to go to the front if the war lasts till their training can be completed, and some to remain at home taking the places of those already gone. It is a wonderful opportunity, and one that will touch the heroic heart of the women of the land.

# Will Change Draft Age Limits

## *Both Younger and Older Men Will Be Subject to Call*

Secretary of War Baker, following long conferences with other government leaders, has announced that the war department will urge upon congress the enactment of a bill changing the draft ages from 21 to 31 years, as at present, to 18 to 45 years. This sweeping change is proposed, says Secretary Baker, because the war department is convinced that it is necessary to secure the number of men that are needed to whip Germany. How many men these age limits would provide is not openly estimated by the authorities, nor the number that will be required to win the war. It is openly asserted, however, that the government is determined to send men and munitions to Europe as rapidly as possible, increasing the number of fighting men on the battle fronts to the greatest possible number in the shortest possible time, with a view to overwhelming the enemy. The war department has the new proposals ready to present to the committees of both houses of congress this week. These committees, which are in session during the summer vacation of congress, will thresh them over until congress reassembles late in this month, by which time it is hoped to have the provisions of the bill so drawn and so approved that they will be quickly adopted by both houses and become effective.

### Would Call Men by Age Classification.

Under the provisions being worked out by the war department the men drafted under the new age limits would not all be subject to immediate call, but they would be divided into classes, according to age. While nothing definite has been announced on this particular point, it is understood that it is proposed to call the older men who are qualified, rather than the men under 21 years. Training of the younger men would begin early, however, so that they would be ready to go to the fighting front as soon as they arrive at the age of 21.

There has been much opposition expressed to the drafting of men under 21 years, and some objection to drafting men as high as 45 years. It is possible that a compromise may be agreed upon, possibly 19 to 40 or 19 to 36 years. It is believed more probable that the original plans of the war department will be adopted, however, thus placing nearly all the manpower of the nation subject to the call of the government at any time needed.

### Allies Continue to Win Successes.

The French and Americans have continued their successes on the Marne front until at this writing the line between Soissons and Rheims is practically straightened out instead of being the pocket-shaped line of a month ago. The advances of the allies were exceptionally rapid the last of the week, their capture of two or three important points from the Germans throwing the latter into a predicament requiring their rapid withdrawal nearly all along this 25-mile front. The fall of Soissons occurred Friday, and this was followed up by the advance of the Americans and French to the Aisne river, which has since been crossed and advances made on its northern banks. It is considered likely by military authorities that the enemy will soon make a determined stand, probably only a short distance north of the Aisne river. The shortening of the Soissons-Rheims line, while it gives the allied forces a shorter line to concentrate their attack on, also gives the Germans a shorter line to defend. No official report of the number of the enemy captured has been made. It is declared that the amount of guns and ammunition taken by the allies is large.

### England May Strike in the North.

Whether or not the British forces are preparing for a drive in the north is but conjecture, but it does not seem improbable that they are. Two facts at least point to it: (1) The French and Americans must have a breathing spell on the south in which to bring up their bases to the advanced line, and (2) it is known that considerable portions of the German army in the north before the British positions have been taken south to help withstand the France-American assault. The British forces have been comparatively silent since the drive began on the Marne front, which might be taken as an indication that they were not only giving the Germans an opportunity to withdraw some of their forces, but that they were preparing to launch a drive of their own at the psychological moment.

### Object of Army Is to Kill Men.

In a statement issued at Washington, D. C., General March, President Wilson's chief of staff, says that whatever the original objectives of either side to the war had been up to this time, it was now to kill as many men as possible. This policy was indicated some time ago when a high officer of the allied forces probably estimated the duration of the war on the basis of how long the German army could maintain its forces while the allies were killing the number of German soldiers that they were then. General March says that where the battle has been raging for the last month, between Soissons and Rheims, all other objects have been swept aside but the development of the fighting into the one object of destroying as many men as possible in the opposing forces.

### American Army Is a Great Unit.

General March at Washington has announced that General Pershing has under his immediate control now 1,000,000 Americans. This shows something of a change from the situation several weeks ago, when American divisions were being distributed here and there to fill up weak places in the entire allied line for the purpose of tiding over a critical period. In itself this announcement indicates the increasing power of the allies.

There are eight divisions of Americans, or in the vicinity of 300,000 men, now in the fighting zone where the great battle is going forward, and General March pointed out that General Liggett had set his headquarters in the center of the line, where his six divisions are assembled, together with two additional divisions. General Liggett is the first American officer to command a wide section of the front, and to his lot has fallen the advance that has broken the back of the German effort.

### Costs of War Are Stupendous.

Official figures show that during the month of July the expenditures of this government were approximately $48,000,000 a day, of which more than three-fourths was for the regular expenses of the army, navy and other war activities. Loans to the other allies averaged $10,000,000 a day. Even these enormous figures are below those of May and June. In May the total expenditure was $1,508,000,000; in June, $1,512,000,000, and in July $1,482,000,000. Figures given out by the British authorities show that the war is costing the people of England approximately $35,000,000 a day. England's national debt has increased from about $3,225,000,000 to nearly $40,000,000,000.

### Liberty Loan Campaign Begins September 28.

Secretary McAdoo of the United States treasury has announced that the campaign for the sale of the fourth Liberty loan bonds will begin on Saturday, September 28, and end on October 19. No official announcement has been made as to the amount of bonds to be sold, but it is predicted that the issue will be one of $6,000,000,000, and that the rate of interest will be 4 1-2 per cent. Government officials have announced that special appeals will be made to the farmers of the country to subscribe for the bonds of this new loan.

### Germany In Trouble With Turkey.

Reports of serious controversies between Turkey and Germany have been circulated during the last several days. At one time it was predicted that these two allies were about to break off diplomatic relations. The immediate cause of the trouble, it was stated, was that Germany had appropriated one of Turkey's warships to take the place of a German ship that had been lost while loaned to Turkey. Another source of trouble was the division of Rumanian territory between Turkey and Bulgaria, following the fall of that country at the time of the collapse of Russia.

### No Casualty List Has Been Received.

At this writing no casualty list nor estimate of the probable American losses in the last great drive has been received by the war department. There was a rumor abroad that it had been reported that the American losses totaled 12,000, but the government has denied that this report had any foundation. General Pershing has promised an official report as soon as reliable information can be compiled.

### President Wilson May Make Western Tour.

It is announced that President Wilson will make a speaking tour in behalf of the fourth Liberty loan bond issue, which will be put on the market beginning September 28. The president may include the northwest in his trip, according to advices from the national capital. The tour would be made some time between September 28 and October 19.

### Three Hundred Thousand Go Over in July.

It is officially announced that there were 300,000 American soldiers sent to France in July, the largest number for any month. This brings the total force there to more than 1,300,000, and at the rate they are now being transported there will be 2,000,000 there by early in October.

### Would Insure Maximum Production.

Herbert Witherspoon, a banker of Spokane, Wash., has been appointed by the war industry board as regional adviser for the three states of the northwest. His headquarters will be in Seattle. The object of his effort will be coordination of manufacture and distribution of war contracts on a basis that will insure the greatest possible production. The three states are divided into several smaller districts, each of which will be under the supervision of a district chairman and a general committee, Mr. Witherspoon being the adviser for all the offices of these districts.

### Get a Farm Service Flag.

The man, woman, boy or girl who stays at home and works hard to produce necessaries for the soldiers in Europe are entitled to real war service recognition. That is the idea back of the Washington Farmer's farm service war flag. It is pennant, shaped, made of the good old red, white and blue, and has a star representing the producing farm home. Small stars are added to represent each worker of that home.

.....

**Convenient Order Blank.**

THE WASHINGTON FARMER, .....1918.

Review Building, Spokane, Wash.

Enclosed, find five cents (5c), for which please send me a Farm War Service Flag (printed on enamel paper) with ..... extra small stars for farm workers.

Box ..... State .....

## *Washington Gleanings*

About 40 Pend Oreille county farmers have organized a live stock association for the purpose of community shipping and buying of feed.

Abram Heidegger, who lives south of Kettle Falls, has just finished shipping the last of his cherry crop of 2000 boxes, which brought him an average of $1 a box.

The various election boards of Skagit county will be composed this year entirely of married women, according to the plan of Commissioner S. M. Butler of Mt. Vernon.

The board of trustees of the Bellingham normal school have adopted a resolution requiring all students to take an oath of allegiance to the government before receiving their certificates.

All counties of southwest Washington with the exception of Wahkiakum were represented this year in the student body of the Centralia summer normal school, which has closed a successful session.

A new farmers' elevator has been built at Gravelles, Lincoln county, with a capacity of 46,000 bushels. The elevator is 42x50 feet, and from the ground to the peak is 96 feet. C. N. Peck is the manager.

Charles H. Swigart, for many years connected with the reclamation service in the Yakima valley, has left to become supervising engineer of the Columbia River irrigation district, including 13,000 acres on the Columbia river, near Kennewick.

J. H. Lawson of Farmington has purchased a half section of land from B. C. Leonard for $100 an acre. The land had been owned and farmed by Mr. Leonard since 1893. Mr. Lawson recently sold 300 acres four miles west of Farmington for $30,000.

Carroll Goods, a thoroughbred registered Shorthorn bull calf, valued at $300, has been donated by E. W. Downen, Pullman Shorthorn breeder, in the interests of the Red Cross, Y. M. C. A. and Knights of Columbus war organizations, and is to be sold on October 1.

One of the finest carloads of beef cattle ever shipped from the Reardan section was recently shipped to Welch's market, Spokane, by W. F. Runkle. Besides other stock in the car were 25 head of yearlings, one of which weighed 864 pounds. The lot brought $2520.

The grape producers of Detroit and Pickering Passage, Mason county, have formed an organization with the view of bettering their produce and marketing conditions. The following officers were chosen: Adam Eckert, president; Edward Suiter, vice president, and A. P. Huston, secretary.

Orville Billings, president of the Pacific Building and Loan association, at Tacoma, is converting his three-story mansion into an up-to-date apartment house, as he believes that it is neither right nor practical to occupy a great big house when so many other persons are finding it difficult to get a place to live in.

The 40-acre crop of pears on the Keck ranch, near Zillah, belonging to Frank Hill, J. T. Brunton, J. P. Woodall and the Keck estate, has been sold to E. E. Sampson of Yakima, the purchase price being $1.40 a box. The tonnage is estimated at 30 cars, and the approximate amount to be received by the growers is $30,000.

With the first alfalfa cut up in the Kittitas valley it is estimated that about 10,000 tons have so far been contracted for by hay dealers. Prices started unusually high, alfalfa going at from $25 to $28 and timothy at $27 and $28. Hay acreage over the valley is much smaller than usual, but the crop is reported of good quality.

An automobile trailer, fully equipped with chemical tanks and other fire-fighting apparatus, is to be maintained by the Pullman Chamber of Commerce during the harvest season for fighting grain and farm fires in Whitman county. A volunteer fire department of 15 men is to be organized by the city council of defense, and the two organizations will cooperate.

Forty-two convicts confined in the state penitentiary have been paroled by the state board of control to join the allied armies. The list included Americans, Greeks, Scandinavians, Italians, British and French. As soon as they enlist they will be given their final releases and restored to citizenship, but in the meantime they can be taken back if their violate any laws.

Estimates as to the size of this year's crop in the apple district of north central Washington are steadily being revised upward. District Horticulturist Darlington's estimate for this year is 7200 cars on the same scale of loading as last year, 825 boxes to the car. The apples this year are of good size, as owing to the early season they had a good start and a long growing season.

Colonel William Duling, extensive rancher, of Garfield, has by practical demonstration shown that business men in town can be well utilized to help in handling the labor problem by work in the harvest fields after business hours. Recently he took four Garfield business men into the Duling and Bishop ranch, where they labored in the hay field for two hours, being paid the usual wages of 35 cents an hour.

The Island County Guernsey Breeders' association has sent J. M. Pratt of Oak Harbor to Wisconsin to select a carload of pure-bred Guernsey heifers for the members of the association. The following citizens have ordered one or more head of stock through the association: H. Riksen, Arthur Case, Charles Nienhuis, Joe Flannigan, J. P. Frostad, N. M. Bos, Fred Morgan, F. R. Morgan, J. M. Pratt, Walter James and Ralph Engle.

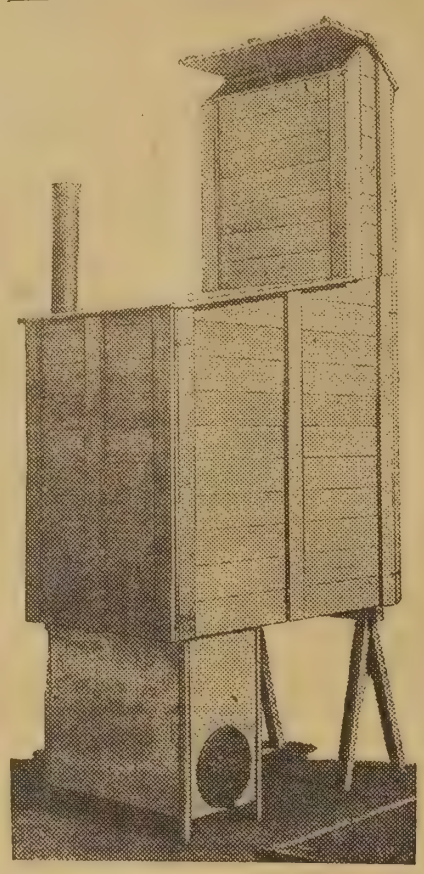
# Dry Fruit and Vegetables

## *Simple Equipment Is All That Is Needed for Success*

There has been considerable demand for a medium sized evaporator for prunes and other fruit. Professor Barss of the Oregon Agricultural college has designed one, shown in the photograph herewith. This dryer can be modified in size to suit the needs of the grower. It is easily built and convenient for handling. It stands about 10 feet high. This evaporator is built for a capacity of six bushels of prunes at a filling. It is simple to operate anad on test did excellent work.

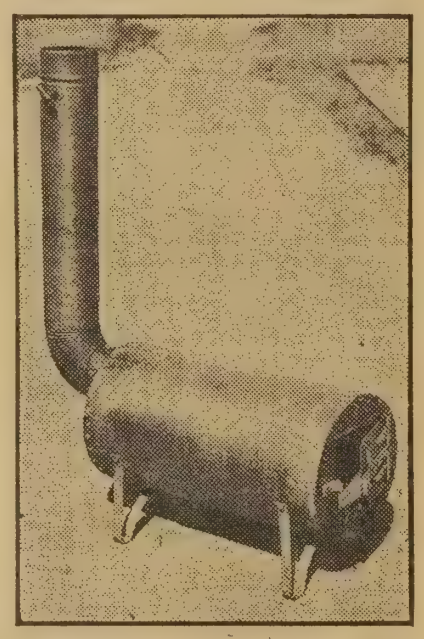
The cannon stove is 12x24 feet and was made of black iron and riveted by a local tinsmith. It stands four inches off the ground. It was made at a cost of $4.50. There is a collar at the flue end to take standard five-inch pipe. A pipe damper and slide in the door regulate the fire. About two inches of ashes should be left in the bottom to prevent burning.

The cabinet is standard 31 1-2x37 1-2 feet. The trays are of double spruce frame with galvanized tray cloth between, though wood trays may be used. The ventilator is a foot wide and three feet high, with wings to prevent choking of draft.



Many American housewives are hesitating to try the drying process of conserving food products for one of two reasons: First, they are afraid the equipment necessary will prove too costly or cumbersome; and second, they do not know just how they and their families will like dried fruits and vegetables.

The only answer to these possible objections is the demonstration of experience. A handy man or boy around the house, or even the cook herself, can easily construct a dryer which will serve all practical purposes. There are two types of home-made dryer, one using the heat of the sun to remove the surplus water from the article to be dried, the other utilizing artificial heat. The advantage of sun-heat dryers is that they need less attention and are not so liable to over-dry or to burn the product. Their disadvantage is that cloudy or rainy weather places them practically out of business. Artificial heat is more dependable in this respect, but requires more careful watching. The advantages and disadvantages are about even, and either type will do good work with a little care.



One of the best sun-heat dryers is that devised by C. R. Campbell of Bellevue, Wash. The sides are made of boards about 12 inches high, and are provided with ventilators—slots covered with wire gauze. The bottom is made of tin, to serve as a reflector, and the top of glass. Trays with wire gauze bottoms hold the fruit to be dried, while the entire dryer is mounted on a base provided with a universal joint, permitting the fruit to be kept pointed directly into the sun's rays throughout the day.

A simple and satisfactory dryer to use with artificial heat can be made by constructing a frame of 12-inch boards, no top or bottom, and nailing two sets of cleats along the inside to hold the two wire bottomed trays upon which the fruit is to be placed. The frame is constructed just large enough to fit the top of the kitchen range, and is placed in position whenever needed.

A little careful experiment with either or both of these dryers will teach the home canner more than reading volumes of directions, though it is highly advisable that all the advice obtainable should be carefully studied. The state colleges and the United States department of agriculture will gladly send bulletins with complete instructions.

**The small drier recommended by the Agricultural college of Oregon.**

**Stove used in the O. A. C. drier.**

# Recruit Students

## Should Not Quit School for War

It is a significant fact that the war department is taking the lead in a nation-wide campaign designed to keep the young men and young women of the country in school this year rather than have them withdraw and take up army or other war work. President William T. Foster of Reid college, Portland, has been appointed by the war department as a northwest representative in the nation-wide "go to college" campaign. Emphasizing the need of special training before entering war service, President Foster says:

"To add a million untrained men to the army, the government has only to draft them. But to add a thousand trained men, in any specific field is impossible until they have first been trained. That is why the government is eager to have as many men as possible go on to college, for a few recent high school graduates have the maturnity of special preparation which makes them immediately valuable for national defense."

Under the new plan of the war department, high school students over 18 years of age, may enlist in the United States army and although subject to the call of the president of the United States, will be given reasonable assurance that they may pursue their studies until 21 years old, at the same time receiving military training under officers of the army. The war department provides uniform, equipment and instruction.

## Poison Potato Beetles.

Arsenate of lead is recommended for the destruction of potato beetles in preference to paris green, not only because it is cheaper this season, but because it has the following additional advantages:

(1) It contains less soluble arsenic; (2) it is less harmful to young growing plants, and when applied properly does not scorch them; (3) it adheres more strongly to the foliage; and (4) it is of greater value than other arsenicals (except zinc arsenite) in that it leaves a white coating on the foliage, so that its presence can be determined readily after spraying.

Use arsenate of lead in proportion of two pounds of powdered form to 50 gallons of water. Mix first with small quantity of water and then stir thoroughly into the full amount. Apply with a good pump throwing a fine mist. Cover the foliage completely.

**"IF CHILDREN WERE AS HEALTHY AS THE** dogs, cats, rabbits, calves, lambs and colts they love to play with, the condition of childhood as affected by sickness would be marvelously different from what now obtains." So says Dr. S. B. Nelson, head of the department of veterinary science of the State College of Washington. Dr. Nelson begins a series of articles in next week's Farmer on the relation of the pet to childhood.

## CLIP APPLE TREES.

### Method of Controlling Aphis.

Clipping badly infested twigs and tips from his apple trees is the method of aphis control practised by Richard N. Pemberton of Seattle, Wash., in his Kittitas county, Washington, orchard. Mr. Pemberton found that many of these tips were so badly infested with aphis that spraying was rarely effective in getting all of the stem mothers and their progeny. Even when these new growths were dipped into a strong solution of nicotine not all of the pests were killed. For this reason he resorted to the heroic remedy of amputation, and the results were better than he had hoped for.

"There is another place where amputation is advisable in the orchard," continues Mr. Pemberton. "When you find a limb carrying a heavy load of fine apples, first thin these out to a reasonable number and then clip off the tip of the limb, to throw the energy of the tree into fruit production. By following these two plans for controlling aphis and checking excessive development of wood at the expense of fruit formation, I secured some of the finest apples raised in my neighborhood. Of course I followed out all the other modern cultural methods—sprayed five times, pruned, cultivated, etc. And the results obtained justified the work, for my apples were purchased two successive years by one of the railways for display purposes."

## CAN GET $3 AN ACRE.

### Seed Loan Regulations Announced.

Official announcement has been made that under the provisions by which the government is to furnish the farmers of drouth-stricken areas $5,000,000 for the purchase of seed wheat, $3 an acre is the maximum that will be allowed and the greatest amount that any one farmer can secure is $300. The $5,000,000 fund, which was recently set aside by the president, will be administered jointly by the United States department of agriculture and the United States treasury.

Loans will be made only to those farmers whose credit and resources already are exhausted and who consequently can get no money from private banks. The loans will bear 6 per cent interest, payable on October 1, 1919, in the southern districts and on November 1, 1919, in the northern district, which latter includes the northwest. The loans in the northwest will be made and the interest and principal collected when due by the Spokane branch of the federal farm loan bank. Applications for loans should therefore be made to the bank at Spokane.

Applicants must agree to use seed and methods of farming approved by the department of agriculture. No part of the loan will be made until the seeding is completed, a certificate being given by the government on which temporary credit may be secured locally. Each borrower will be required to agree that if his wheat yields seven bushels or more to the acre he will pay 25 per cent of his loan into a guarantee fund to cover possible losses to the government through the administration of the fund.

**Did Not Need a Press Agent.**

At Columbus, Ind., a newspaper editor roasted the telephone service. The next day he called a number and the operator rang in his ear, sweetly informing him that she was demonstrating the bad service "so we can get another writeup in the paper." This was one instance where she did not need a press agent to get prominent mention.

### Worth More.

Editor, Washington Farmer: I am pleased to renew my subscription to your valuable paper. I consider it worth a great deal more than is charged.

JOHN FELLOWS.
Long Beach, Wash.

# Tax Profits

## Stupendous Sum Would Be Raised

Secretary McAdoo thinks congress ought to raise $8,000,000,000 the coming year by taxation, leaving about an equal amount to be raised by the sale of Liberty bonds and war savings stamps. The house committee on ways and means is now working out the problem.

The farmers' national committee on war finance, which has opened offices in Washington, wants higher levies upon incomes and profits, and says $12,000,000,000 should be raised by taxation. A signed statement by Benjamin C. Marsh, executive secretary of the organization, says:

"The report on statistics of income for 1916, just published by the commissioner of internal revenue, and figures compiled by him for 1917 make it clear that $12,000,000,000 can be raised by current taxation during the fiscal year 1919. In 1916 the gross income of corporations reporting a net return was over $32,500,000,000, their net income nearly $8,800,000,000. In 1916 the income of the 437,036 persons or married couples making returns was about $8,350,000,000; total over $17,000,000,000.

"The total income from personal service and business was, in 1916, $4,490,000,000; from property, $3,860,000,000. Those in receipt of incomes of $40,000 or less derived the major part of their income from personal service and business, but over 60 per cent of the incomes of those receiving over $40,000 was derived from property—that is, from secure investment. It is obvious that a very heavy tax was must be levied upon these incomes, as on the incomes derived from corporations. All these are lazy incomes and do not represent any exertion on the part of the recipient.

"About one-tenth of 1 per cent of the American people received in 1916 nearly $2,500,000,000 of unearned income.

"Less than one-quarter of 1 per cent of the farmers of the country received in 1916 a taxable income of over $3000, the proportion of brokers was 80 times as large, of manufacturers over 40 times, of mine owners and operators 32 times as large.

"The average income of farmers, including big land owners who merely collected rent, was $8998. The average income of stock and bond brokers was $41,009, of mine owners and operators $45,317; 14,407 farmers received only $129,642,000, while 2544 mine owners and operators received a total of over $115,000,000; 2839 stock and bond brokers received $116,425,000.

"The total national income for 1917 was about $60,000,000,000. For 1918 it will doubtless approximate $70,000,000,000.

"There are hundreds of thousands of people in the United States today, and have been since we entered the war, too rich to ask Uncle Sam to pay them interest for saving all their property. He should be too honest to borrow. He should take all he needs in taxes for arms, as he takes all he needs in men under arms."

## Coming Events.

August 19-25—Convention National G. A. R., Portland, Ore.

August 27-29—National Farmers' conference, Washington, D. C.

**Fairs, Shows, Exhibits.**

August 26-30—Southwest Washington fair, Centralia-Chehalis.

September 2-7—Spokane Interstate fair, Spokane, Wash.

September 16-21—Washington state fair, Yakima, Wash.

September 19-21—Roundup, Pendleton, Ore.

October 1-6—Western Washington fair, Puyallup, Wash.

November 7-13—Northwest live stock show, Lewiston, Idaho.

**Talking Politics.**

"I don't hear you talking politics very much."

"No," replied Senator Sorghum. "Talking politics is all right in time of peace, But I'm willing to fight for the future privilege of talking my politics strictly in my native language."

# Give Hens "Liberty of Action"

## *Best to Let Them Balance Ration for Themselves*

By JAMES DRYDEN.

**As it is quite difficult to balance a wheatless ration for chickens, it would help a great deal if you would publish a table showing the amount of protein, carbohydrates and fats required, also the proportions of these nutrients found in the various substitutes."**

**D. B., Loon Lake, Wash.**

A knowledge of the composition of feeds lies at the foundation of successful feeding, and yet the chemical composition does not tell us everything. Proteins vary in efficiency, depending upon their source. A pound of protein in meat and in wheat, for example, have not the same value, otherwise fowls could do without animal feed. The protein of milk has double the efficiency of the protein of corn and wheat as demonstrated in experiments at the Wisconsin station, a subject which was discussed in a previous article. At the same time the protein is a measure of value which can not be set aside.

The composition of wheat does not vary greatly from other grains such as corn or barley. The variation may not be a factor worth considering in practical poultry feeding. If only one food were fed and that were either corn or wheat, there would be a difference. The fowls would probably do better on wheat, but they would not live long on either, if they had nothing else.

As to the nutrients required by the hen, the ration that we have fed at the Oregon experiment station has the following composition, not including green feed and shell:

The weights given are for one laying hen for a year.

| | Pounds. |
|---|---|
| Water in the food | 8.12 |
| Ash | 2.14 |
| Protein | 13.32 |
| Carbohydrates | 48.33 |
| Fat | 3.09 |
| Total | 75.00 |

Ratio of protein to carbohydrates and fat 1:4.14.

The following table gives the percentage composition of the principal poultry feeds:

| | Water. | Ash. | Protein | Fiber. | N-Free Ext. | Fat. |
|---|---|---|---|---|---|---|
| Wheat | 10.5 | 1.8 | 11.9 | 1.8 | 71.9 | 2.1 |
| Corn | 10.9 | 1.5 | 10.5 | 2.1 | 69.6 | 5.4 |
| Kaffir corn | 9.3 | 1.5 | 9.9 | 1.4 | 74.9 | 3.0 |
| Oats | 11.0 | 3.0 | 11.8 | 9.5 | 59.7 | 5.0 |
| Peas | 10.5 | 2.6 | 20.2 | 14.4 | 51.5 | 1.2 |
| Barley | 10.9 | 2.4 | 12.4 | 2.7 | 69.8 | 1.8 |
| Wheat bran | 11.7 | 5.2 | 14.0 | 8.1 | 57.3 | 3.6 |
| Middlings | 11.7 | 2.8 | 15.2 | 4.9 | 60.8 | 4.5 |
| Shorts | 11.8 | 4.6 | 14.9 | 7.4 | 56.8 | 4.5 |
| Linseed oil meal | 9.9 | 5.6 | 35.9 | 8.8 | 36.8 | 3.0 |
| Soy bean meal | 10.8 | 4.5 | 36.7 | 4.5 | 27.3 | 16.2 |
| Skim milk | 90.6 | .7 | 3.3 | ... | 5.3 | .1 |
| Meat scrap, high grade | 10.7 | 4.1 | 71.2 | ... | .3 | 13.7 |

The nitrogen-free extract and fiber made the carbohydrates.

The above will give the feeder some idea as to how to balance the ration, but the first difficulty he will encounter is that the protein of one food may have a different value from the protein of another. We find that the hen when she has the liberty of balancing her own ration eats about 75 pounds of cereal foods and six to eight pounds of meat scraps or 50 to 70 pounds buttermilk, besides green food, grit and shell. Corn, oats or barley will take the place of wheat, but bran and shorts should be fed, and at present prices the mill feeds should be heavily fed to reduce the cost of the ration. The more cheap mill feeds that are fed the less high priced grain will be eaten.

A satisfactory way to feed is to let the hen do the balancing of the ration herself. This can be done by feeding the meat scrap in a hopper and allowing the hens to eat what they want and when they want it. If the scrap is kept before them all the time each hen will eat what she needs and no more. If the hopper, however, is allowed to get empty and the fowls get no scrap for several days, when it is filled again they will eat too much. We have practiced this method for a number of years. A moist mash is fed once a day. When dry mash is fed the practice is to put the meat or fish scrap in the mash. If this is not done the hens will eat too sparingly of the mash. The addition of the meat scrap or fish scrap makes it more palatable and more of the mash is eaten. This method also throws on the hen the burden of balancing her ration. The mash is richer in protein than the grains and the more mash the hen eats the narrower the ration will be; that it, there will be less difference between the amount of protein and the amount of carbohydrates.

Few if any practical poultry feeders actually balance the ration for the hen. It is hardly practicable. If all the feeds were mixed together in one mass it would be possible then to know just the ratio of the food the hen ate. But when we feed one kind of food at one time of the day and another at another, sometimes as many as three feeds a day, foods differing in compositipn, we don't know what the hen is eating. One hen may eat more of one kind of food than another hen, and the ratio will be different with different hens.

It is a good plan to give the hens "liberty of action" when it comes to balancing the ration, because their needs vary. The hen that is laying heavily requires a different ration than one that is not laying or laying little, and the important thing for the poultryman is to see that they have all the necessary foods.

**Watch for the Comics.**

Owing to mail difficulties, which are undoubtedly due to the use of the railroads for rushing war shipments, the comic pictures did not arrive in time for this issue. They will be here for next week, however, and we hope that they will be on time always thereafter, as we know with what interest the boys and girls turn to look for them each week.

## ESTIMATES WHEAT.

### Forecasts 30,000,000 for State.

P. J. Sweeny, state grain inspector, in an estimate recently issued, forecasts the wheat crop of the state of Washington at 30,000,000 bushels. This is 3,000,000 more than last season's yield. Inspector Sweeny reports estimates for Oregon and Idaho at 18,000,000 and 8,000,000 bushels respectively. Together these yields would make a total for the three states of 56,000,000, which would be nearly 15,000,000 bushels more than the three states produced last year.

Inspector Sweeny says that there has been a falling off in the hay production of the northwest this season, owing to the unusual drouth and heat.

## MUST REPORT WORK.

### Threshermen Must Keep Records.

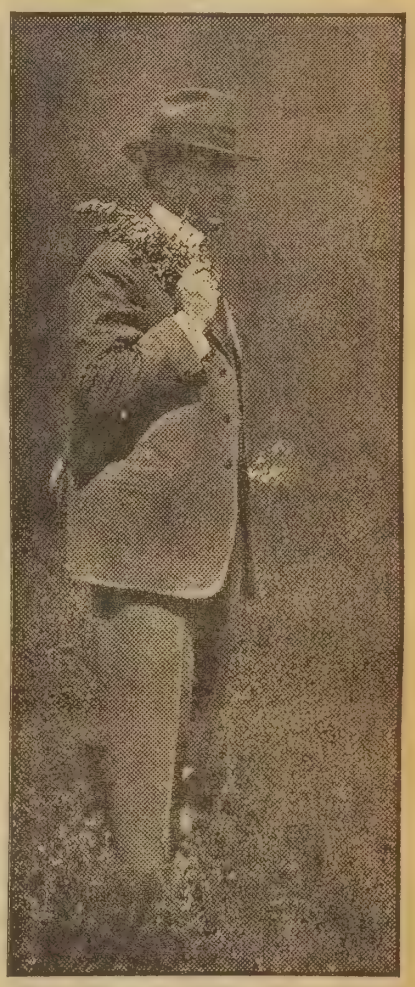
Under the direction of the federal bureau of markets, the government is this year requiring that every thresherman keep a detailed record of the work that he does and file it with the county agent in his county or with the bureau of markets itself. To facilitate the making of reports, the bureau has prepared record books and blanks which the county agents are required to distribute among the threshermen. It is required that each thresherman make a report on each field threshed, showing the number of acres, the owner, and the number of bushels or sacks of grain threshed.

### Some Sections Need Assistance.

In a communication to Senator Poindexter at Washington, D. C., R. Insinger, chairman of the agricultural bureau of the Spokane Chamber of Commerce, has urged the senator to do all he can toward having the government authorities assist county banks in certain of the drouth-stricken wheat-growing sections of Washington, in making loans to farmers for the purchase of seed grain. Mr. Insinger says that the farmers in some of the dry counties of the Inland Empire will have to buy winter wheat for seeding this fall, if they join in increasing the acreage requested by the department of agriculture, and that both their fall and spring crops are practically failures, so that they will lack funds with which to buy seed. He says that local banks will need all the assistance they can secure from the government in meeting the farmers' needs.

# Uses Gypsum

## Alfalfa Yield Greatly Increased



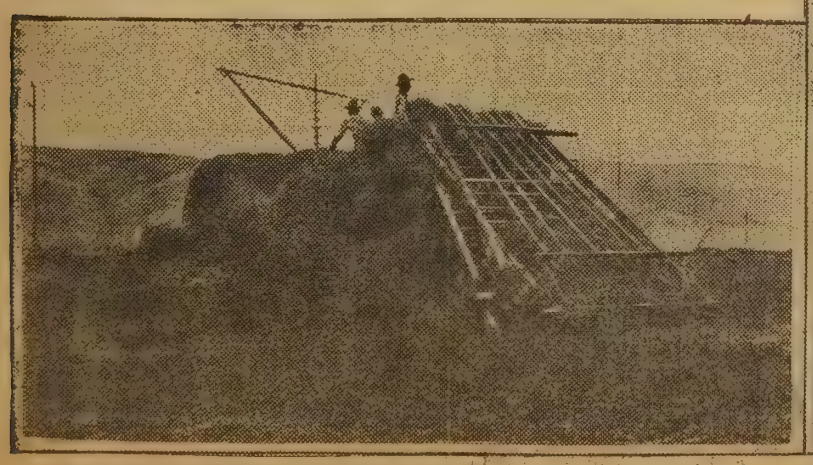
By Joe L. Ashlock.

The use of 200 pounds of gypsum per acre on the less fertile clay points of the farm of H. H. Curtis, near Pullman, Wash., produced the stand of alfalfa shown in the first picture herewith. The gypsum was put on with a gypsum

spreader a year ago last spring, after the rains, unfortunately, so that the gypsum was not carried down into the soil until the opening of the growing season of 1918. The yield was at the rate of 3.54 tons per acre for one cutting.

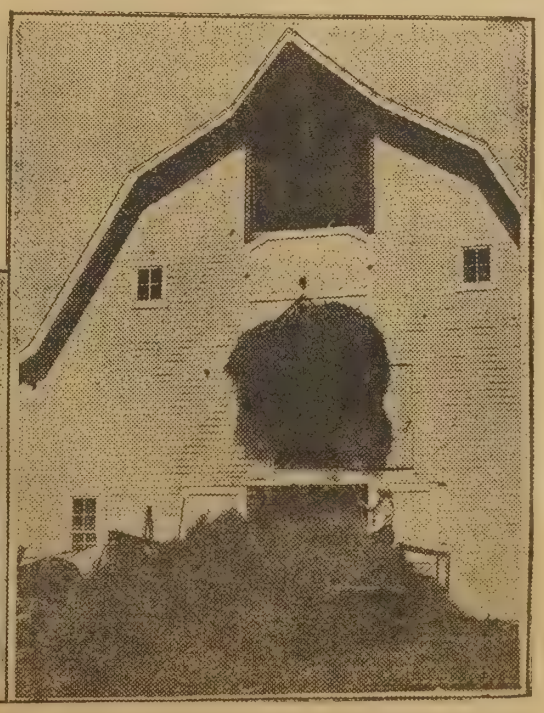
The alfalfa in the second picture, hardly above the shoe-tops, is in the same alfalfa field on the Curtis farm. The soil here is naturally rich, but was not treated with gypsum. The yield was at the rate of 1.22 tons per acre.

The man in the picture is Professor Olson of the Washington State college chemistry department.



The gypsum cost Mr. Curtis $12.50 a ton, to which should be added the costs of application and of cutting the extra yield, these costs being slight in comparison with the returns, and variable, likely, on different farms.

The gypsum experiments began several years ago on the state college farm at Pullman, Wash., and more recently have been carried on in a practical way on many farms in the Palouse country adjacent to Pullman. Many farmers note a tendency in alfalfa to reach its maximum production the second year, and decline from that point, by the fourth year often reaching the point of unprofitable returns.



A great many farmers have expressed a desire to use more alfalfa in conjunction with their wheat farming, if the fields could be made to remain longer in profitable production. Results now obtained indicate that by the use of gypsum every second year the alfalfa fields can be kept in heavy production many years, if not indefinitely.

# Believes in Using Machinery to Save Human Labor

N. M. Williams of Walla Walla county believes in using machinery wherever such use will save human labor and add to human efficiency. County Agent H. H. Boone states that Mr. Williams' labor income is probably the highest in the county. The accompanying photographs bring out one phase of this subject—the use of up-to-date equipment in caring for the alfalfa crop. The land on which his alfalfa crop of approximately six tons to the acre per annum was raised was once "alkali land," and was reclaimed by flooding.

Hay loader on the N. M. Williams ranch, Walla Walla, Wash.

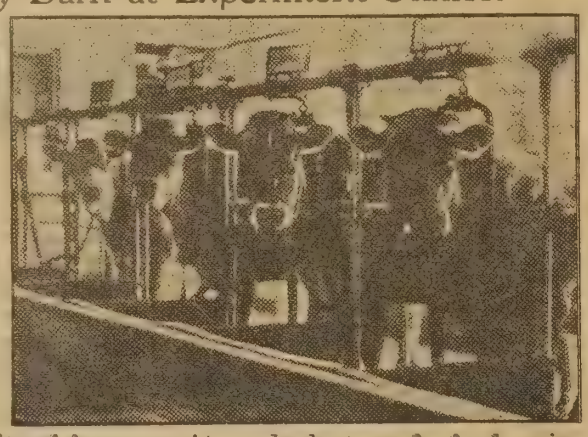
### FEED LEGUME HAY.

**Figures Prove Its Feeding Value.**

An unusually interesting report of four years' records in cow testing has been compiled by the United States department of agriculture, one of the outstanding features of which is the evidence of the value of legume hay and corn silage. The report says that the tests seemed to prove that larger production can be obtained by making these feeds a large part of the ration than by other feeding methods. It is also shown that this production is more economical than where other feeds are used largely. The report covers the records of more than 5500 cows tested during the four-year period. Discussing the feeding of dairy cows, the report of the department continues:



The feeding of concentrates to dairy cows should be based on known production. Farmers who are too busy to test their own cows may now have the work done for them at nominal cost by joining a cow testing association. As ordinarily conducted, a cow testing association is an organization of about 26 dairy farmers who cooperatively employ a man to test their cows for economical production. The tester not only weighs the milk and the feed, but he tests the milk for butter fat and assists the farmers in feeding their cows according to production.

Before the formation of a cow testing association in a certain dairy district few farmers fed grain to their dry cows, and none fed a balanced ration to any of their cows; prepared feeds of unknown merit were largely used; and some farmers dished up the grain with a scoop shovel and fed all their cows alike, regardless of production.

Through the active cooperation of all the members of the association those conditions were rapidly changed. Better feeding of dry cows increased the milk flow during the next lactation period; the use of a well-balanced ration brought about more economical feeding, and abandoning the scoop-shovel method and feeding concentrates according to production greatly reduced the cost of feed. However, the elimination of low producers that did not respond to better feed and care effected the greatest saving of all. In some herds these changes more than doubled the income over cost of feed. The dairymen belonging to that association demonstrated that it pays to keep good cows and to feed them well.

The cow testing association records clearly show that the most practical, far-reaching and vitally important facts connected with the economical production of milk may be grouped logically under these three heads: Selection, breeding, feeding. Careful and intelligent feeding, care, and management lift the dairy business to a certain level, but the highest level can be reached only when to these are added a careful selection and intelligent breeding.

## Model Dairy Barn at Experiment Station

One of the centers of interest at the western Washington experiment station at Puyallup, Washington, is the model dairy barn and the herd of Jerseys which it houses. The barn is built with a roofed in and walled in exercise enclosure, in which, during the stormy winter months, the cattle get the benefits of free exercise and plenty of fresh air, without being subjected to the rains. The accompanying photograph shows part of the sanitary equipment of the barn.

### Home Made Fly Spray.

When you drain the old oil from the crank case of your car do not throw it out. It makes a good spray for flies by mixing as follows: Half gallon old cylinder oil, half gallon coal oil and one quart crude carbolic acid. Spray this on the cows when they come in to be milked and you will not be bothered by flies. It does not injure the coat and is very effective. This spray has been used successfully by A. A. Osborne of Centralia, Wash.

# Jordan Valley

**Malheur County Oregon**

**A great irrigation project in the making.**

"A Square Deal for Every Man."

**THE JORDAN VALLEY FARMS COMPANY** are now offering to farmers and stock growers a very attractive combination of land and water rights.

There are several very necessary qualifications to a successful irrigation project.

First—A water supply ample and reliable at all times when required.

Second—A reservoir, dam, canals, and water distributing system, honestly constructed and ample for all water conveying.

Third—Land that possesses the producing qualities to justify reclaiming.

Fourth—A management who **realize** and **know** that the **success** of the **settlers** is the **success** of the **enterprise.**

Fifth—The Jordan Valley Farms company is offering the public an opportunity to purchase a farm under a project that possesses all of the above features, "and then some."

Sixth—The state of Oregon is, by virtue of the fact that two-thirds of the land under the system is under the Carey Act, an interested party, and all construction work is in direct charge of an experienced reclamation engineer on behalf of the state and land and water company jointly. The state of Oregon is requiring a bond of $100,000 for the faithful performance of all construction contracts.

## WE WANT YOU TO INVESTIGATE

We want you to investigate Jordan Valley, then see it. Our automobiles leave Boise, Idaho, weekly and they are at your disposal. If you want to get into a new country where land is cheap, water plentiful and climate favorable, this is the place to go. We desire to continue our policy of colonizing this land with earnest, industrious people who will make dependable, permanent settlers. If you are interested, drop us a postal card right now and we will send you detailed descriptive matter. Address all communications to

## RUSH FATTENING.

### Short Fed Cattle Most Profitable

There is a tendency at the present time toward the concentration of effort on the production of short-fed cattle rather than on the so-called long-fed, or highly finished animals. It is argued by many beef men that for the last several years cattle feeders have been putting more finish upon animals than economy would justify.

This idea was evidently in the minds of the advisory committee of agricultural and live stock producers appointed by the department of agriculture and the food administration when that committee recently made the following recommendation:

"We feel that cattle marketed at the present time in class 4 (longfed or export and highly finished cattle), and known as 'exports,' owing to the high costs of labor and feed, are not an economical product, and their production should not be encouraged."

Not only has the advisory committee thus warned against the heavy feeding of cattle, and it is also understood that the government officials directing the buying policies of the government will not consider themselves responsible for the prices of very fat cattle.

Recent experiments by various state experiment stations have borne out the fact that good beef can be produced by using a relatively small amount of grain, or with nitrogenous concentrates in connection with silage and some other cheap roughage in the form of hay.

The principle that should be followed in future feeding operations, according to the advice of the department of agriculture, is to reduce to a minimum the amount of high priced feed and to make judicious use of cheap roughages. In other words, instead of feeding from 50 to 60 bushels of dry corn per steer in a long feeding period, as was the custom in the past, the quantity may be reduced to 15 to 20 bushels in a shorter feeding period, or the dry corn grain can be eliminated altogether, as the liberal use of good quality silage will furnish an excellent ration.

The use of cottonseed meal, linseed meal, or other protein rich feed, even though high in price, is to be highly recommended, because the higher other feeds are the more profitable becomes the use of a protein supplement. Expensive hay may be completely eliminated in the ration by the use of a cheaper dry roughage, such as corn stover, coarse hay or straw.

The department believes that by avoiding too heavy feeding and too high finish, and by following the suggestions given above, feeders should be able to feed cattle at a profit in spite of the high prices of feed and labor. The recent statement of the United States food administrator and the available reports from foreign countries indicate that there may be a great increase in the demand for beef, which is encouraging to the cattle feeders of this country and especially those who suffered losses during the last feeding season.

## Veterinary

Dr. S. B. Nelson

**Horse Has Lampers**—Can you tell me if there is any cure for a horse that has what they call lampers? He rubs his tail and flanks so the hair and skin is off on both sides of the tail. The horse has been on pasture all spring, so he is otherwise in fairly good condition. G. E. E., Hillsboro, Ore.

The lampers is an irritation of the gums surrounding the teeth and is due either to an irritation from teething or is due to a disturbance of digestion, which shows itself in the same way. I would advise you to call your local veterinarian and have him determine just what is causing this trouble, and he can easily remedy it for you.

**Dog Is Sick.**—Will you please prescribe some remedy for our sick dog? I will try to describe the symptoms the best I can. First, we noticed he laid around the house and acted as though he was lazy and he lost his appetite. Then we noticed his legs got stiff, espe-cially his front legs and seemed worse in the mornings. Some mornings he could hardly walk. He has been sick for about three weeks now and has hardly eaten anything for the last two weeks. There seems to be something wrong with his stomach. It acts at times like he has cramps in it, as it jerks and twitches so it seems to draw his body together. We haven't seen him vomit. He ate some decayed meat and this may be what started the sickness. A neighbor said he thinks it is what they call the "Salmon sickness."

M. F., Castle Rock, Wash.

I am not able to make a definite diagnosis of the disease affecting your dog, and therefore can not prescribe a particular treatment. I can make the following suggestion, however, and that is that you give the dog, depending on its size, from half to an ounce of castor oil, and then the next day or two, begin giving it five grains of potassium iodine and 10 grains of sodium salicylate in a capsule morning and evening for two or three days.

**Cowpox**—Could you describe what the cowpox is and also what to do for it? Is it contagious?

A. J. B., Tenino, Wash.

Cowpox is an infectous disease which shows itself by small pimples running into blisters, and then into little pustules containing pus, which appear on the udder. These pustules later break and become covered with a scab. The disease runs about three weeks and runs in crops; that is, blisters will come day after day for a few days, and then gradually disappear so at times you will see both the pimples and the blisters and the pustules and the scabs in some cases. The best thing to do is to wash the udder and the teats with a disinfectant, using any of the standard coal tar disinfectants, in about a 2 per cent solution. Lysol is also good in the same strength. This washing should be done both before and after milking and then when it is dry after milking, apply a little zinc oxide ointment to the scabs. Whenever this appears in a herd, the affected cows should always be milked last; in every case; the milker should wash the udder of all cows with a disinfectant solution prior to his milking them.

## POULTRY

Write to the Editor.

JAMES DRYDEN,
Editorial Contributor.

# The Mite Offensive

The mite offensive is pro-Hun because it destroys every year great quantities of food, it is a Hun offensive because it is mite against right. It is a midsummer offensive. Vast hordes of these enemies are brought into action by the warm days of the summer. They have been getting in their work by drawing the life blood from the chickens, and their sabres reek with the blood of their victims.

The mite is a blood-sucking insect and there are billions of them now plying their trade on millions of hens and chickens.

It is time to order a counter offensive. A gas attack will not get the mites. They seem to have gas masks; at any rate gas and fumes do not affect them, so far as they have been tried. They need a liquid attack, something that will burn into them. Coal oil will kill them, but crude carbolic acid is better. Kreso dip and Zenoleum, diluted 1 part to three of coal oil are effective. Sheep dip is also good, diluted in the same way. Carbolineum is good. Apply with a brush to the perches and nests, or wherever the mites are found. Rub it well in, to all sides of the perches and nests.

If this is done early in the season, before the mites begin to hatch, or in the nature of an early spring drive or offensive, there will be no need of counter-offensives later. But wherever there are signs of mites apply the liquid.

J. D.

## PRESERVING EGGS.

### Different Methods Put to Test.

The Arkansas experiment station has published the results of an experiment in testing different methods of preserving eggs, and they should be given publicity. Incidentally the effect of washing eggs on their keeping quality was tested, and the results showed that there was no difference in the washed and unwashed eggs at the end of the stored period, the eggs being preserved in water glass. This result of course would not apply to eggs put in cold storage.

A test was made of the relative merits of water glass and lime water. The lime water was prepared in the following way: Three pounds of quick lime were placed in an earthern jar and enough water added to thoroughly slack it. The milk of lime was then added to five gallons of clean, boiled water. The solution was well mixed and allowed to settle. The clear liquid was then drawn off and, when cool, poured into earthern jars. The eggs were placed into this saturated solution as soon as gathered. The jars were covered to prevent evaporation. A new solution was added once during the summer. The jars were set in a cool, dry basement room.

The water glass was used in the following proportions: One of commercial water glass solution to nine of water that had been boiled and allowed to cool. The following was the conclusion arrived at: "Water glass and lime water gave about equal results for preserving eggs for winter use. Lime water is the cheapest preservative, according to results obtained."

The following commercial preservatives were also tried: Fleming's Egg Preservative, Yankee Egg Preservative, dry salt, E-Z Egg Prescrvative, Vaseline. The following are the conclusions as given in the bulletin:

Eggs preserved in water glass and lime water are as good as fresh eggs for all purposes except poaching.

Eggs preserved in salt were salty, and when used in custards had a peculiar alkaline flavor. They also evaporated badly, as shown by the large air space.

The E-Z egg preservative was superior to any of the other patent preservatives or the vaseline. None of them, however, gave really satisfactory results.

The color of the shell does not seem to have any influence on the keeping qualities of eggs in the preservatives tested.

Infertile eggs were slightly superior to fertile eggs, especially with the patent preservatives. Had the eggs not been preserved as soon as gathered, the difference would no doubt have been much greater.

Soiled eggs can be washed and preserved with reasonable success in water glass, provided they are fresh.

It is a very practical and economical plan to preserve at home eggs laid in the spring and summer for fall and winter use with either water glass or lime water. J. D.

# Candling the Eggs

The Food Administration is issuing regulations requiring the candling of eggs by shippers. This is done for a double purpose, first to conserve food by discouraging methods that are responsible for bad eggs, and second to conserve shipping space by preventing the shipping of eggs that are rotten or unfit for consumption. It will be the duty of the country merchant or first buyer of eggs to candle them and stamp the egg cases with a certificate that they were candled.

When this ruling becomes effective the producer will remember that he will be paid only for good eggs, not for bad eggs, and that it will be to his interest to take good care of the eggs from the time they are laid in the nest till marketed. It is a simple business, merely a matter of care.

The way to prevent bad eggs is to gather them twice a day in summer; break up the broody hens as soon as possible; furnish plenty of nests; keep the eggs in a cool cellar, and market them twice a week.

If these things are attended to there need be no loss from bad eggs. J. D.

## DRY ALFALFA LEAVES.

### Sack Them Up for the Chickens.

Alfalfa leaves contain the vitamines which make growth in animals and fowls. Moreover, the fowls need the green feed or roughage. In certain sections there is a dearth of green feed on account of the dry summer. Feed the green alfalfa or clover now and save the dry leaves for winter use. Poultry keepers must make a desperate effort to keep the hens supplied with green feed of some kind. Buy alfalfa meal if necessary to supply it. When the eggs drop off in summer it is not always because it is natural for the hen to decrease her output, but the decrease is very often due more to a lack of green stuff in summer. Feed green food and more green food. J. D.

## See What Advertising Brings You

More and more people are making a point of buying the advertised in preference to the unadvertised article.

Experience has shown them that the advertised goods bring with them a number of benefits, including low prices, assurance of fair dealing, high quality, and in addition to all that—a guarantee of satisfaction on the part of the paper in which the advertisement appears.

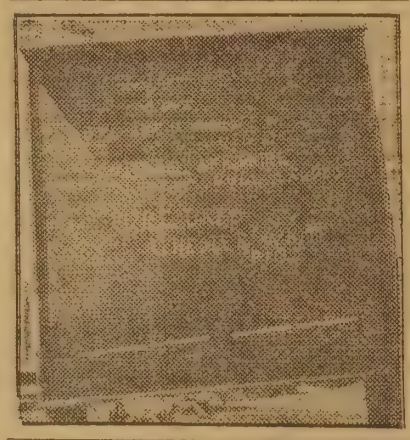
Are you a steady reader of our advertising columns? If not, it will pay you to become one.

# Farmers Get $18,000,000 From Land Bank

In a statement just issued by the Spokane branch of the Federal Farm Loan bank it is shown that the farmers of the northwest have received a total of more than $18,000,000 in loans on their farms. In addition to this amount, many loans are now in the process of being made, some of them being ready for the mails at the time the statement was issued. It is shown that the total amount of loans approved up to this time by the Spokane bank has reached $25,798,000, all of which will have been placed in the hands of farmers within a short time.

The statement shows that up to August 1, the Spokane bank had received applications for 20,702 farm loans, totaling $53,046,000. Of the applications 18,606 had been passed on and the loans allowed on 11,384. Applications either withdrawn or rejected by the bank for various reasons totaled 6722, aggregating more than $16,000,000. The number of loans actually approved and the money sent to the farmers totaled 7780.

President O'Shea of the Spokane bank says that the capital stock of the bank has been increased from the original $750,000 with which it started, to $1,660,000. He says that there is still a misunderstanding on the part of many people as to how a farm loan bank is actually financed; that many of them believe that it is lending government money. Instead of doing this it is run in almost the same manner as a private banking institution.



The government created the land bank system by lending to each of the 12 district banks, of which Spokane is one, $750,000 with which to start business. Each bank loaned this $750,000 to the farmers of the district, taking first mortgages on their farms to secure the loans. These first mortgages were then used as collateral to secure land bank bonds which were issued and sold to investors. The money secured from the sale of these bonds was then used to be loaned to other farmers, who in turn gave mortgages that were again used to secure other land bank bonds. These bonds were then sold to other investors and the money used for other farm loans and so on. In addition to this source of revenue, the land bank act requires that each borrower shall purchase stock in the bank equal to 5 per cent of the loan that he secures.

It is required by the land bank act that each district bank shall pay back to the government the original $750,000 with which it started business, as soon as the money from the sale of its bonds and the 5 per cent investments by borrowers shall have reached a sufficient total to enable a bank to continue to do business. Thus it is seen that the land bank is not lending government money, but that it is self-sustaining and that, viewed from the broadest angle, it is a gigantic farmers' cooperative concern, supervised, directed and managed by the federal government.

# Farm Bulletin Board

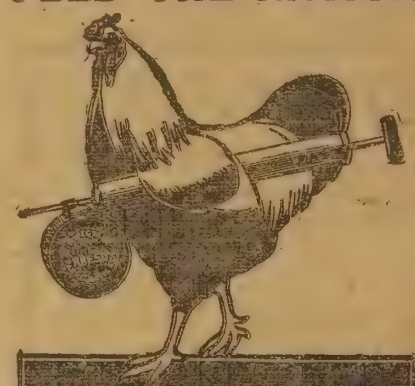
By CARL J. MENZE.

Whenever merchants have certain merchandise which they desire to move fast they either advertise in the daily papers and magazines or else place a card in the window or some conspicuous place calling the attention of the public to the articles on sale. Some farmers also advertise certain products in the daily papers or else in some farm magazines. The merchant and farmer use the different methods according to the demand, quality and quantity of the things they have to sell. For the farmer who has a small amount of produce which he believes his own neighbors in his locality are desirous of purchasing will find a bulletin board such as the illustration herewith a handy thing to list his sales and wants. If

he lived on a main road where there is a great amount of traffic he can reach a large number of people. Immediately after he has sold his produce he can erase it off the board. This advertising costs him practically nothing. Furthermore, the bulletin board can not only be used by farmers to make sales, but can be used to acquaint other farmers with their wants. Suppose a farmer wanted a certain number of sacks for threshing. He would only have to advertise it on the bulletin board, and it would be only a short time before someone offered to sell him some, because there is almost always some one who has sacks to sell in every neighborhood. It is merely a case of bringing the buyer and seller together.

## Government Employment Agency

A government employment agency was opened at Eugene, Ore., June 22. Frank Armstrong, who is in charge, states that he already has furnished help to farms, mills and especially those lines of labor of most use to the war. He has already been of considerable service and expects to do more as people become familiar with the working of the office.



He has sent many to the ship yards on Coos Bay; has had applications for work from children and has furnished berry pickers and men and children for other farm work. The papers, Mr. Armstrong says, have co-operated and publicity has secured workers for the cannery, for pickers for fruit, for shipping and for other work.

# Orchard Troubles

## Diseases, Pests and the Remedies

By GRANVILLE LOWTHER.

This is the second instalment of a catalogue of fruit diseases and their remedies under the above head. In the following issue I will continue the cataloging of fruit diseases, and will then begin a discussion of fruit pests as distinguished from diseases.

**Crown Gall:** This is a very common disease in all the orchards I have ever visited, and attacks apples, peaches, pears, prunes, cherries, raspberries, blackberries, loganberries, grapes, chestnuts, willow and many other trees of the orchards and the forests. It is designated by a tumorous warty-like enlargement of some part of the tree, and doubtless received its name from the fact that it is so frequently found on the crown of the tree, where the trunk and the roots adjoin. However, it may be found on any part of the tree, on branches, on branch roots or on the tiny rootlets that sometimes become matted together and are designated by hairy roots. It has been likened to cancers and tumors in the human organism because the germ technically known as bacterium tumefaciens gets in generally by means of some puncture of the bark, and then multiplies by dividing the cells and forming warty excrescenses. The remedy is difficult to apply because the disease is so frequently on the roots. Valuable trees may be saved, however, by bridge grafting, setting the lower end of the graft down below the gall and the upper end in the healthy bark of the trunk.

**Fruit Pit:** This disease is characterized by sunken areas on the surface of the apple, the skin normally is clear, but later it turns brown because the tissue under the skin is diseased and brown. It is very common at times in the orchards of the northwest, but authorities do not agree as to the causes, and in so far as I know have suggested no remedy.

**Fruit Rot:** This disease and fruit spot are similar in appearance, but technically one is caused by the fungus coniothyriose, the other by phoma pomi Remedy: Spray with Bordeaux or lime sulphur.

**Jonathan Fruit Spot:** The spots are dark brown in color and more or less circular in outline, varying from one-eighth to three-quarters in in diameter. It is wholly on the surface of the fruit, and does not seriously affect its nutritive values but does affect its commercial value. It occurs nearly always on maturer fruit, and generally develops after the fruit is picked. Early picking and cold storage have been recommended as a remedy, but I have not seen a really effective remedy.

**Mushroom Rot:** This is technically known as Armillaria mellea. This disease generally attacks the trunk and roots at or near the crown. It attacks many forest trees as well as apples, plums, cherries, peaches, olives, bush fruits, citrus fruits and grapes. It is very much the same in appearance as blight when that disease is on the crown of the tree. Treatment: Cut out the diseased parts and destroy them the same as in blight.

**Powdery Mildew:** This is a fungus disease very common in the northwest, and very destructive. It develops mainly on the surface of the growing twig and leaves, sending feeding rootlets into the cells of the tender parts. It very much resembles a mold. It is a fungus, and the remedy is to spray with lime sulphur, a little stronger than is generally used for scale and that is supposed to destroy the fungus that has lived during the winter in the branches, then, after the foliage is out and after the first blossom spray for codling moth, spray with Bordeaux.

**Rosette:** Rosette is generally called apple rosette, but I have found it on willows, maples, elms, pears, cherries and many other fruits and forest trees. The popular opinion is that it is confined to the Rocky mountain and Pacific coast states. I am sure that it appears in these states in a worse form than in most places where I have seen it, but I have studied it for nine years and under a good many different conditions in Kansas, Oklahoma, Texas, Arkansas, Missouri, Illinois, Indiana, Kentucky, West Virginia, Pennsylvania, New York, Michigan, and I am sure that in all of these states the disease is manifest and is so clear to one who has given the subject careful study as to place it beyond controversy. We might describe the disease by saying that the leaves are not well developed, they are below the normal size and bunched together in such a way as to give it the name rosette. The wood of a current year's growth has not reached its normal length at a time when it should be two feet in length—for instance, it may be one or two inches. The wood of the previous year's growth has not enlarged as it would normally do, and often presents a shrunken appearance.

The cause is a subject of dispute. I have an opinion based on a good many hundred cases studied in different parts of the country, and while I would not hold myself bound at any future time to agree with my present or past statements on the subject, provided I had information that justified a change, nevertheless my present belief is that the cause of the disease is starvation. In other words, the tree is not getting sufficient food. The difficulty is generally on the roots, which contain the organs for extracting and conveying the food substances from the earth into the branches of the tree. The undeveloped and diseased conditions on the branches are symptoms of a condition on the roots, and the tree is starving. If it be asked what are the causes of the tree not getting sufficient food, I would answer it is sometimes root injury; perhaps gophers have eaten the tender rootlets, woolly aphis may have punctured the bark in many places and galls have been formed, alkali may have destroyed the little root hairs which extract the chemical food substances from the earth. In the case of the orchards around Salt lake, in Utah, salt water has evidently injured the roots; too much water will affect them and sometimes destroy them, and the results are manifest on the top of the tree; not enough water will bring about the same results in a different way, for it requires water to dissolve the chemical substances in the soil so that the roots can drink them up. Sometimes hardpan near the surface, or a rock formation, or adobe soil, or scab soil will produce the same results. Sometimes it seems that an unbalanced ration of food substances will affect the tender rootlets, as in the case of too much hen manure or barnyard manure, where trees are situated near the buildings. The remedy: Remove whatever causes seem to be abnormal, and give the tree plenty of food and in the proper proportions.

# Value of Poultry Products Ranks High

The three days' poultry meeting that was held at Moscow, Idaho, a few weeks ago was not a poultry show, but a meeting of the instructors and investigators of poultry of the Pacific slope. There were representatives present from as far south as New Mexico and as far north as Canada, there being three representatives of the Canadian government's poultry division, which is regarded as one of the important divisions of the war work.

That the government considers poultry raising as one of the greatest assets of the United States, and of special importance during the war, was shown by Professor Thompson of New Mexico, who is looking after the poultry industry for the government in that state. Professor Thompson said he wanted to enter the army, and people asked him why he did not become a soldier. He asked permission from the department of agriculture to enter the army, but was told: "You can do more good for your country where you are. Stay with the poultry business and help feed the nation and the soldiers. Your work is more important than carrying a gun."

Professor E. H. Upton, provincial poultry instructor for the province of British Columbia, told how his government regards poultry raising as a great government asset and one of vital importance during the war. He told of government assistance and supervision of the poultry industry, which has resulted not only in increased production of poultry but of eggs per bird since the war began.

Forenoon, afternoon and night sessions of the convention were held. Professor James Dryden, chief of the division of poultry husbandry at the Oregon Agricultural college, read a paper on "War Time Feeding of Poultry in the Northwest." Professor E. J. Dougherty of the poultry department of the University of California was not able to be present, but sent a paper on "The Future of the Commercial Poultry Farm," which was read by the secretary.

Mrs. George R. Shoup, poultry specialist for the western Washington experiment station at Puyallup, read a paper on "War Time Poultry Feeding."

The visiting delegates were guests of the Moscow Chamber of Commerce at luncheon at noon, and a number of them delivered brief talks, which were given close attention by the business men. Mrs. Helen Dow Whittaker, until recently head of the poultry department of Washington State college, made a strong plea to the merchants to fix 40 cents as the minimum price for eggs and to maintain that as the minimum for the entire year. She said that with the present high price of feed it requires 40 cents to give any profit for eggs during the war time.

President Lindley of the university, Dean Iddings, head of the agricultural college, and Pren Moore, head of the poultry department of the university, with their wives, entertained the visitors at a five-course dinner at the Hotel Moscow. Dean Iddings presided as toastmaster, and toasts were responded to by a number of those present.

The convention brought out many facts of interest to poultry raisers. It was shown by government reports that the poultry industry in 1917 brought in a total of $725,000,000, and that prior to the war poultry was second in value of products of the United States, being exceeded only by corn. Since the war the price of wheat has advanced, and the same is true of cotton, until these two commodities, with corn, exceed in value the annual production of poultry.

Among the poultry specialists in attendance at the convention were A. A. Peters of Los Angeles, a government man in charge of poultry husbandman division No. 6; N. E. Luce of the same department, in division No. 5; A. G. Lunn of British Columbia, Charles S. Brewster of the Oregon Agricultural college and W. K. Whittaker of Pullman, in addition to those previously mentioned, and all of these took part in the program.

Pren Moore, head of the poultry department of the University of Idaho, was elected president, and Mrs. Helen Dow Whittaker of Pullman was elected secretary of the association.

# Who Pays for Thirty-Cent Cotton?

## *Consumers Should Make Protest Against Big Advance*

Cotton, the great agricultural staple of the south, is free from government control and prices have shot upward amazingly, to the enrichment of the planters and the burden of the consumers. When the world war started in 1914 cotton brought less than 7 cents a pound at the farm. According to the United States Year Book of Agriculture, the farm price in 1917 was nearly 28 cents. In three years the price quadrupled.

If the wheat grower had enjoyed a like advance, he would now be receiving about $4 a bushel for his product, for the same government authority reports that the average farm price of wheat in 1914 was nearly 99 cents.

This seeming discrimination has led to frequent accusations that sectional and partizan influences swayed congress when it passed the law to hold down the price of wheat and left cotton to run its course under the law of supply and demand. It has been pointed out that if cotton had had the same treatment as wheat, the price would have been limited to about 14 cents a pound and cotton would not now be selling around 30 cents.

Every farmer's wife knows the meaning of 30-cent cotton. It means that the prices of all kinds of cotton goods have gone up 400 or 500 per cent. The writer was discussing these advances the other day with an Idaho drygoods merchant.

"Before the war," he said, "I bought prints at less than four cents a yard. For the same quality of prints I now have to pay 22 cents wholesale. A similar advance has taken place in ginghams, sheetings, etc., and the wholesalers are the most independent people I have ever known.

"A Spokane merchant was telling me of some of his experiences in buying the other day. A traveling salesman had quoted his prices and the Spokane man said he would think it over and decide upon his order the next morning. 'But these prices I have just quoted will not hold over-night,' the salesman said. 'When I go out of that door all offers will be off.'"

There is an old saying, "Beware of the Greeks when they come bearing gifts," and that spirit of caution will be felt by many people now that the southern cotton growers are proposing government price-fixing for their product. The fear will rise in northern minds that they want the government to hold prices around the present high level.

A press dispatch from Washington says that a scheme of price-fixing on raw cotton, suggested to Bernard M. Baruch, chairman of the war industries board, by the cotton delegation which has just closed its conferences at the national capital, has been laid before President Wilson by Representative Lever, chairman of the house agricultural committee. After accomplishing their object, that of getting their plans before the chief executive, the cotton growers have left the capital, "confident that their proposal will meet with fair treatment by the government."

Apparently the cotton growing interests fear a slump in price, for the price-fixing plan was advocated by a delegation of cotton bankers who were in Washington at the same time.

When the scheme of price-fixing on cotton is proposed, it is not likely to follow out the scheme of price-fixing on wheat, or iron and steel, or any of the other commodities upon which the government has fixed a price. The proposal which seems to have the greatest support was to have a maximum and a minimum price. The minimum price would be the price at which the government would buy the cotton. For instance, whenever the price of the commodity went to the minimum and threatened to go below the government's cotton corporation would be directed to step in and take the cotton. The maximum price, it was suggested, would be five cents a pound higher. Whenever cotton threatened to go over the maximum price the government would commandeer the cotton.

The full meaning of 30 cent cotton, with all it implies of extraordinary prosperity for the southern growers and correspondingly high prices for the consumers, is better grasped when one glances at the range of prices for the last 40 years. Through the 80's prices were uniformly around 8 and 9 cents. Through the 90's they ranged from 5 to 9. From 1901 to 1910 they ranged from 7 to 14 cents.

The price was below 7 cents when the war started in 1914, and shot upward to 20 cents in 1916. The average for 30 years before the war was close to 8 cents.

Cotton goods are a necessity and high prices are just as burdensome to the public as high prices for flour. There should be government control of one as well as the other, and the basis of price-fixing should be the same for both. That is, the government should take the average prices of wheat and cotton over a range of 10 or 20 years before the war, and allow the same percentage of increase for both staples. The west and the north should protest emphatically against 25 or 30 cent cotton.

# What Are Fruit Price Prospects?

## *Supply and People's Purchasing Power Will Decide It*

By GRANVILLE LOWTHER.

Almost every one now knows what percentage of a normal fruit crop he will have. The reports from the government, the states and the local commission houses and buyers, who keep pretty close tab on the crops, have reports and a consensus of opinion is being formed as to probable prices.

My belief is that the prices will be better than we have had in the last 10 years. This is not a prophecy, for I have no means of knowing except as I calculate probable results growing out of causes that are now apparent.

What are the causes? What are the existing conditions likely to affect fruit prices?

A general answer would be, that they will be stimulated by the same influences that have affected the prices of all other commodities. Everything that people buy is higher in price than formerly. In general, the present generation has never seen prices like those of this period. Naturally, fruit prices will be affected by the general stimulation, or overstimulation, or whatever it may be.

A law that more than any other has influenced the prices of commodities is the law of supply and demand. The oldest students of political economy or of sociology have recognized this as primary in its influences, and as fundamental. For instance, in China are 400,000,000 of people. Since they raise no apples of consequence, we ought to be able to send them at least 40,000,000 boxes per annum. But we send them nothing of consequence. A few of the wealthy classes of Chinese buy our apples at high prices, but not one in a hundred of the inhabitants ever saw one. A few years ago H. M. Gilbert visited China, in hopes to open up a market for apples. He found Ben Davises selling from six to eight dollars per box. Now since the masses of Chinese live on less than 10 cents a day each, it can be seen that there is no demand in China among the masses for apples that would retail at 10 cents apiece.

There are 200,000,000 of people in India, as poor as the masses in China, with the exception of a few who belong to the aristocracy, and a few others who have been brought to better conditions by Great Britain.

It is safe to say that one-half the population of the globe, on account of their extreme poverty, not only can not buy our apples, but they can buy nothing the world produces, above the bare necessities, and in so far as the world's markets are concerned they might just as well not exist. They furnish no demand for anything that the higher civilization produces. This is an economic reason why the higher civilizations should pursue a policy in reference to the lower that would give them a place among the progressive nations of the world, and cause them to want things the existence of which they never knew.

No matter about the supply of fruits in the United States, or in any other country, if the masses have no purchasing power, or because of extreme poverty have never been able to see our products in their markets, there will be no demand.

This illustrates the law of demand. Then if the conditions are such that the producer can put them on the market and sell them at a fair profit, this insures a sufficient supply. Thus there comes to be a kind of equilibrium, between the supply and the demand. Weather conditions, such as frosts, freezes, drouth, etc., may temporarily affect the supply, but this year there is in the Pacific northwest something approaching a normal crop.

Washington will average about the same as last year. Spokane will be ahead of last year, Walla Walla, lighter, while Wenatchee and Yakima will be about the same as last year. In Hood river valley, Oregon, the crop is heavier than last year, in Rogue river it is light. The average will probably be about the same as last year. Idaho was badly injured by frost, so the crop is far below the normal, except for the number of young trees coming into larger bearing, which will bring the output up to probably 3500 cars.

Taking the United States as a whole, the supply of apples will probably be slightly above that of last year, but the lesser supply of soft fruits will probably equalize that, so that the supply in general will be about the same as last year.

**Other Factors Affecting Prices.**

First—Good prices for labor. When the laboring masses have plenty of money, they are lavish buyers. There never was a time when labor was so well paid as it is now.

Second—General demand for labor. When everybody is employed or can be employed at good wages, everybody has purchasing power.

Third—Stability of labor. When the conditions are uncertain in reference to strikes and lock-outs, they tend to unsettle prices. At this time it is more difficult to declare a strike or a lock-out than at any time in the history of the organization of trusts or of labor unions.

Fourth—Stability of business. There has never been a time in this generation when there was such insistent demand for all kinds of manufactured products as now.

Fifth—The money conditions. There was never so much money in the United States as now, and the banks are inclined to take an optimistic outlook and to grant reasonable loans. In other words, there is no reason for retrenchment.

Sixth—Everybody is optimistic about the near future in all lines of business.

**The Other Side.**

It is true, that on account of the war, some of our markets are restricted. But that is not as large a factor as might at first seem. We produced last year twice as many apples in the Yakima valley as Germany ever imported from all the world any one year before the war. Austria never imported even as many as Germany. Turkey is so much like India and China that their inhabitants had no purchasing power.

England and France will take less of our green fruits, but more dried fruits, so that the differences will not be very great. Yet I am forced to believe that the balance will be slightly against us in exports on account of the war. However, the fact that we are using more substitute foods in order to save wheat, sugar, meats, etc., for war purposes, means that more than the average amount of fruit substitutes will be used.

The principal thing to cause a feeling of caution, if not unrest, is the high price of labor as compared with the prices of fruits. Our government did a splendid thing in fixing the prices of certain commodities. Now, unless they also fix the prices of others related to them, and the prices of the wages that produce them, there are bound to be inequities or injustice somewhere. Now it looks like it might fall heavily upon the fruit men. However, we will hope that the high prices we are almost sure to get for fruit will enable us to pay the high prices we must pay for labor, and leave us a profit.

**New Flowers Shown.**

The feature of this year's exhibition of the British Horticultural society is a new orchid, with mauve petals and rich purple tip, which has been named the General Pershing.—London Correspondence of New York Tribune.

**Liked Bee Articles.**

Editor of Washington Farmer: We enjoy your paper very much and find many helpful things in it, especially the articles on bees. The only trouble with them was that there was not enough of them.

MRS. E. H. GORSCUH.

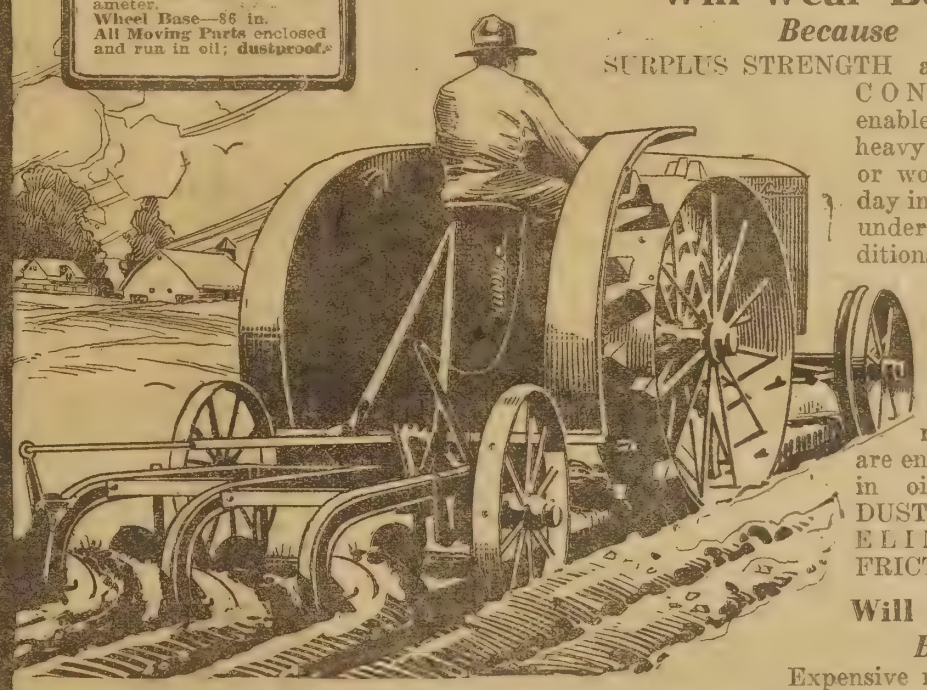
Pianos for Sale — Kranich & Bach, Gordon, Hensel

MAIL ORDER HOUSE
W. MARTIUS
Musical Instruments Merchandise Music



Write to Us. 1009 1st Ave. Seattle

SPECIFICATIONS.
Engine — Lauson-Beaver, 4-cylinder valve in head; 4½x6-in.
Rating—Drawbar h. p. 15, belt 25.
Lubrication — Splash and force feed.
Ignition—Dixie Magneto with Sumpter Impulse Starter.
Belt Pulley — 18x7¾ in., 475 R. P. M.
Transmission — Lauson selective type sliding gear.
Speed—Low 1¾; plowing 2½.
Drive Wheels—54 in. diameter.
Guide Wheels—32-in. diameter.
Wheel Base—86 in.
All Moving Parts enclosed and run in oil; dustproof.

The LAUSON 15-25
DUST PROOF-ALL GEARS ENCLOSED
"Built like a watch, but rugged as a locomotive"

The Lauson Farm Tractor

Will Wear Better
*Because*
SURPLUS STRENGTH and PERFECT CONSTRUCTION enable it to stand the heavy strain of tractor work steadily—day in and day out—under any soil conditions.

Will Last Longer
*Because*
All gears and moving parts are enclosed and run in oil, making it DUST-PROOF and ELIMINATING FRICTION.

Will Cost Less
*Because*
Expensive roller and ball bearings are used to insure smooth running, less strain on the powerful engine, and LOWEST FUEL CONSUMPTION.

THE LAUSON will do all your plowing, discing and harrowing, the heavy hauling and grading, stump pulling or manure spreading.

The LAUSON 15-25 is powerful—in the field and at the belt. With it you can afford to own your ensilage cutter and fill the biggest silo in the shortest time when your grain is ready to cut. You can grind feed, bale hay, do neighborhood threshing—anything and everything the large or small farm engine will do.

If you have a farm of 100 acres or more we can show you where it will pay you to purchase a LAUSON 15-25. If you are interested we will be glad to make a demonstration of the tractor on your farm. Fill in the coupon below for full particulars and prices.

# Favors National Farm Insurance

## *Farm Loan Bank President Suggests New Legislation*

President D. G. O'Shea of the Spokane branch of the federal farm loan bank believes that the time has come when something in the form of national insurance against farm crop failures might wisely be considered. He says that it does not seem reasonable to expect the farmer to take all the chances when he is contending with elements over which he has no control, but that the people as a whole should be willing to cooperate with him in taking these chances.

President O'Shea's statement was inspired by the serious losses suffered by the farmers of many parts of the northwest last year, and this year from drouth and heat. In this connection he says:

"The farmer has ever had to contend with the elements to secure his crop in the first place, and thereafter, in the past, if he did secure the crop, he had to sell his product in a market he could not regulate or control. It should be an established policy to encourage men to stay with the farm and on the farm; the world needs at this time the products of the farm more than it ever has at any period. There are calls for labor from shipyards and other industries where the returns for service and short hours are liberal and definite. The production of wheat is as essential as the building of the bottoms to convey it. The man who produces wheat lives remote and with social disadvantages as compared to workers near manufacturing centers. The production of wheat should not be wholly a speculative business. The elements can not be controlled by man, and he who has to contest with the elements in doing something essential and necessary should be assured in some way of a small return at least for his time, labor and effort.

"It does not seem reasonable to expect the farmer, under the conditions as recited herein, to continue to take all the chances. It is not suggested that he should receive something for nothing, but that a method should properly be devised for affording him a reasonable protection for the chances he necessarily has to take when contending with the elements, over which no control can be exercised. In past years grain crops in Montana were seriously menaced by hail. Hail insurance companies were in business charging exorbitant rates and at times defaulting in payments. There is now in effect a state hail insurance law, which is operating successfully, economically and dependably and affording protection to the farmers who elect to become subject to it, so that in the event of the destruction of a field of grain by hail, they will receive at least more than they have invested in the crop. Some such method should be devised to protect the farmer against other failure. It is not to give him charity or a gift, but to furnish him with insurance to the end that he will be sure to receive at least what it has cost him to plant the crop plus a small remuneration for his labor in the event that there be an absolute failure caused by weather conditions over which he could exercise no control. Such insurance should be national. If adopted at once it would bring hope and inspiration to those who are now seriously discouraged and keep on the farm many men who otherwise would answer the call of the manufacturing centers, where life may be more alluring and rewards are definite and assured.

"A scheme of insurance can readily be worked out under the operations of which no unworthy person could receive a benefit; the cost may be borne by the farmers themselves or the national government may contribute to the fund; the fund should be administered by the government. Provision may be made to prevent the application of the law to areas not cultivated in the past until after same would have been examined and reported upon by representatives of the department of agriculture to the effect that such localities are reasonably adapted to agricultural pursuits. Reasonable provision can easily be devised for determining losses which may be limited to a stated maximum figure sufficient only to cover the cost incurred and a small margin for labor and living expenses.

"There seems to be a specific need at this time for this form of legislation; the operation of the Federal Land banks can be better assured and extended if such insurance be provided; and many men who naturally will become discouraged at repeated failures may be kept on the farms and inspired to make renewed efforts for the coming season if a means be provided to insure them a small return for their labor even though the elements be against them."

### Have Good Cranberry Crop.

A survey of the cranberry marshes of the north Pacific coast indicates that the 1918 yield will be at least twice that of 1917. Some dealers and growers predict that the yield will be three times that of last year. This is especially significant in view of reports from other cranberry districts indicating a reduced yield this year.

The marshes on both sides of the Columbia river are counted on now to produce more than 10,000 barrels against a 5,000-barrel yield last season, while the scattered yield will bring this up to about 14,000 barrels for a total. It is said that no chance remains for any damage to the crop now, as the danger period is past when the plant has sent out its bloom.

The principal matter troubling the growers at present time would seem to be the labor supply, which is liable to be tied up in other lines at the time when the cranberry bogs needed attention. The growers say they expect to start picking about September 1 this year, two weeks ahead of the regular time. This is mainly due to their desire to get the crop into the warehouses before the start of the fall rains.

### Milk Price Advances.

An increase of 25 cents per hundred has been allowed to milk producers serving the city of Seattle, according to advices received by Food Administrator Charles Hebberd. This makes milk in Seattle $3.15 per 100 pounds on a 3.6 butter fat basis. The price to the consumer is 14 cents a quart, delivered.

Milk is retailing in Spokane at 14 cents a quart, also, but a move is under way by the Inland Empire Dairymen's association looking toward an increase in the price to the producers which will apparently, if allowed by the distributors, cause an increase of probably a cent a quart to the consumer.

### Missed One Copy.

We missed getting our last week's paper and as there is so much valuable information in every one we do not like to miss a copy.

MRS. J. W. HORTON.
Meyers Falls, Wash.

## Running Water System

To the Editor: I would not be without a running water system on the farm, because it is more beneficial to the health, cleanliness and comfort than any other improvement. We have had our running water system on the farm for seven years, and have found it convenient in case of fire, sickness and irrigation. It also takes a load of work off the housework problem and watering the stock.

It is beneficial to the health because on farms where there is no running water system the women must pump and carry thousands of pounds of water daily, which is responsible for backaches and many other similar ills.

Cleanliness, which is one of the main necessities of life, can be had by the running water system. Since we have had our running water we can take a real bath in a real bathtub, and have hot or cold water in the kitchen at almost any time, which makes dishwashing a pleasure instead of hard work. There are many other minor reasons why I would not like to be without the water system.

MISS ANNA BERGER.
Route No. 1, Spanaway, Wash.

### A War Kitchen.

The food administration of Pierce county, cooperating with the State college and the United States department of agriculture, maintains a war kitchen in Tacoma, where demonstrations in food conservation are given. The kitchen is in the Central market on Market street between Eleventh and Twelfth streets, and is open Wednesday and Saturday afternoons. The demonstrations are given under the direction of Miss Georgia E. Meek, city home demonstration agent, and Miss Elmina White, county home demonstration agent. Demonstrations in canning and drying, the use of wheat substitutes and cottage cheese have been given.

These demonstrations have been very practical, and have been well attended by the women of the county.

### The Third Leg.

All business stands on three legs, capital, labor and management. The third leg is vital. Capital and labor can't stand on two legs. One languishes and the other starves if there is no management. All business is therefore a three-legged stool, whether a peanut stand or a sawmill.

## Mill at Home

### Should Keep Feed in Northwest

As a result of activity on the part of the agricultural bureau of the Spokane Chamber of Commerce a conference may be held soon between representatives of the food administration, the U. S. grain buying corporation, and farmers and business men interested in the feed situation in the northwest.

The problem involved is set forth strongly in a statement made by R. Insinger, chairman of the Spokane agricultural bureau, to Charles Hebberd, food administrator for the state of Washington, last week. While he was referring particularly to the situation as existing in Washington, the conditions which he described and the possible solution which he suggests, appear to be generally applicable over the entire northwest. The following are extracts from Mr. Insinger's statement:

"As you are well aware, a large part of this territory has to ship in feed for horses, cattle, pigs and chickens at an enormous expense. The mill feed, which formerly used to be used only for cows and pigs, now has to be used also for horses, as in many parts of the country no other feed is available.

"The farmers of eastern Washington have had two light crops; they have had to import hay at an enormous expense, and many of them can not afford to continue farming next year unless the administration will show a desire to assist them where it can in retaining the feed that is in the country for the use of the farmers. I respectfully request that you urge the food administration to allow the millers of the Inland Empire and also on the west coast to mill wheat to full capacity, and that the food administration retain in our country sufficient wheat for that purpose. Unless something of this kind is done the damage to the agricultural interests of eastern Washington will be enormous. Immediate action is necessary.

"We have found in former experience on the question of stock feed that some members in the east connected with the food administration have no realization of the condition in this part of the country; and we are glad to depend upon your hearty cooperation in seeing that we are assisted, not by charity, but by the use of proper business methods, in handling our wheat crop.

"The matter is so urgent that I would request the favor of a meeting of the agricultural committee with yourself and any representative of the farmers' organizations, grain dealers, millers and other experts as may be desired. It would be highly desirable if at such a meeting we could have the presence of the grain corporations in this territory."

### Limitation on Choice of Names.

France curbs the desire of parents to christen their children with extraordinary names by limiting their choice of names to the 13,000 saints in the calendar.

## There Are Not Enough Fields Like This Now

**Where corn will grow successfully the feed problem need give little trouble. Corn silage is the king of all succulent feeds in the minds of many.**

## Agree on Grain Price Deductions

(Continued from page three.)

wheat, and the charges for such service are necessarily a deduction from the terminal price of wheat. These charges, or margins, are well established by custom and vary in different sections of the country according to local conditions.

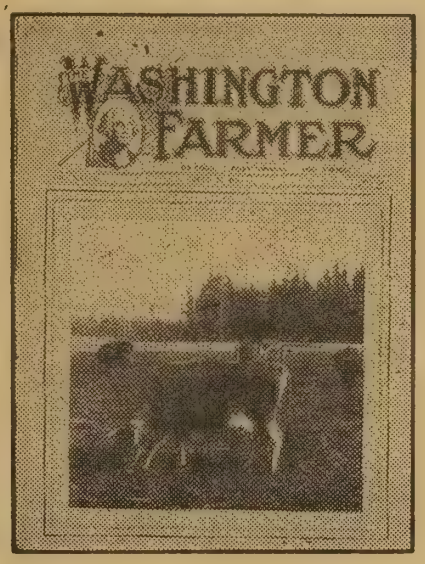
"Insurance: The government carries no insurance on the property which it owns. It does, however, require that the elevator operators shall exercise due diligence in protecting grain stored in their warehouses or elevators from ordinary hazards. Owners of grain stored in warehouses or elevators should therefore protect their grain so stored which has not been delivered to or paid for by the Food Administration Grain corporation.

"Inspection: Shippers to any of the principal primary markets should insist that their grain be inspected and graded by inspectors licensed by the secretary of agriculture.

"Producers and dealers, in shipping grain to said primary markets, should advise their commission man to see that their grain is correctly inspected and graded, and that, if in his judgment, the grain has been improperly graded, an appeal should be taken to the federal supervisor.

"It is the policy of the food administration and of its agents and representatives to work in entire harmony with the department of agriculture in maintaining the integrity of grades named and defined by them under the grain standards act, in order that the producer, the consumer and all interests handling grain may be properly protected.

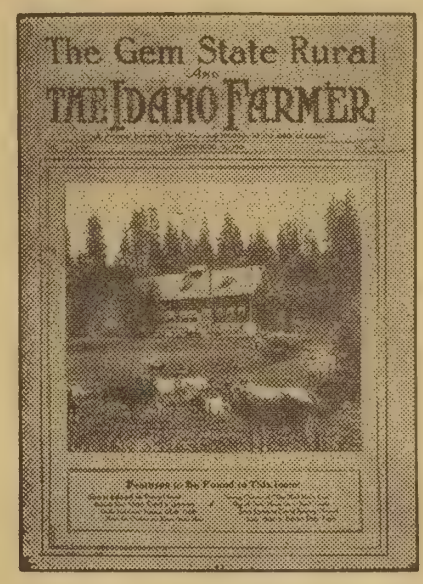
"The producer or dealer should always keep in mind that if he is not satisfied with the prices paid by individual buyers, or with the grading of wheat, his protection lies in his being able to ship to the Food Administration Grain corporation at the various terminal markets named above."



## Lawn Dies Out

To the Editor: My lawn has been planted about four years, on cleared forest land, and has had every ordinary care. This year it is gradually dying out, owing to a covering of moss about a fourth of an inch thick, which no doubt causes the trouble. I will be obliged for information as to the cause. W. W. C.

The following answer is given by Professor O. M. Morris, head of the horticultural department, State College of Washington:



"The moss undoubtedly developed in your lawn through the opportunity given by a considerable amount of shade. Moss ordinarily will not grow in direct sunlight. If you can not clear the overhead so as to give direct sunlight to your lawn, the next best thing for you to do would be to spray the ground thoroughly with a strong solution of common lime-sulphur spray. Use about one gallon to seven or eight gallons of water. This is a very strong mixture, and may injure your grass somewhat. But the grass will grow out of the injury, while the moss will be killed."

# "Want" Ads in These Papers Are Economical and Effective

## Take Advantage of the Low Combination Rate for Insertion of "Want" Ads in These State Farm Papers

The "want" ad is a method of communication which will prove helpful at various times to all of our farm folks.

Do you desire to get in touch with a reliable, experienced hired man? The "want" ad brings your need to the attention of competent workers throughout three states.

Do you wish to turn used machinery into cash? The "want" ad reaches farmers in other districts who have use for your discarded implements, and who will probably be glad to make the saving you will be able to offer them.

Have you farm products to sell, such as live stock, poultry, seeds or dried fruits? Once more, the "want" ad in the three state farm papers offers a solution for the difficulty. It reaches the very class of homes where there is a constant demand for these things.

Have you a piece of land for which you are eager to find a buyer? The "want" ad in The Washington Farmer, The Oregon Farmer and The Idaho Farmer affords a splendid method for making a sale; inasmuch as these three papers are read by tens of thousands of farm owners and farm renters, a goodly proportion of whom are considering the purchase of farms or orchards in other sections.

To sum up, our "want" ads enable you to reach the people who have what you want or who want what you have. They are easy to insert. They are low in cost. Even if there is nothing you care to advertise at this time, you will always find interesting, profitable reading in our "want" ad columns.

Rates are printed at the top of these columns in every issue. Don't miss the "want" ad page today!

**Send Orders and Inquiries Regarding "Want" Ads to The Washington Farmer, 617 Central Bldg., Seattle, Wash.**

# Must Save Grain

## Careful Threshing Being Urged

R. J. Stephens, chairman for this state of the grain threshing division of the food administration, is urging upon every thresherman and farmer who does his own threshing to make every effort possible to prevent loss of grain during threshing this season. He has issued the following statement on the subject:

"A year ago the farmers of the United States were asked to increase the acreage of winter wheat. They responded and the records show that they planted the second largest acreage of winter wheat in the history of the United States. The farmers in Washington, because of the lack of sufficient moisture to germinate the seed, did not plant their normal acreage of winter wheat. They, however, did plant the largest acreage of spring wheat in the history of the state. During the growing season conditions were not ideal for spring sown grain. The result is that our crop of wheat will only be about 32,000,000 bushels, as against 29,000,000 in 1917, 37,000,000 bushels in 1916 and 51,000,000 in 1915. As food will win the war, we are asking our farmers to harvest their crops so as to save every kernel of grain possible.

"The grain threshing division of the food administration is working closely with our state college at Pullman, and with the agricultural department at Washington along the lines of better threshing. The local managers of the stationary threshers and combined harvester companies are assisting us in seeing that extras are furnished promptly and that their machines are put in the field in the best possible condition to thresh every kernel of grain out of the straw and to clean it properly. There has been some delay in making delivery of new machines and harvesting in some sections has been delayed on this account; but we understand that all deliveries will be made within the next 10 days.

"The farmer is discounted for cracked grain, cobs, seeds and trash of any kind that is left in his grain, and unless the grain is cleaned either at his local shipping point or by the interior mills, this dockage will be shipped out and will be a loss from a feeding standpoint as far as the farmer is concerned.

"Eighty-two per cent of the total dockage placed on our 1917 crop of wheat consisted of cracked grain, seeds and trash, all of which could have been eliminated if better threshing methods had been used. Our state grain inspection department shows a dockage of 8,532,896 pounds for foul matter, not including smut, on about 15,000,000 bushels inspected. Figuring our crop last year at about 29,000,000 bushels and that the percentage of dockage would be the same, we would have a total dockage of about 16,000,000 pounds or about 265,000 bushels. The farmer paid about 10 cents per bushel to thresh this 265,000 bushels of dockage at a cost of $26,500. He used about 12,000 sacks at 12 cents each, or $1440. The cost of hauling to market would be about 5 cents per bushel or $13,250. The average freight rate to the Coast is about 10 cents per bushel or $26,500; warehouse charges 2 cents per bushel or $5300, making a total cost of $72,940 to the farmer on this dockage. The feeding value would easily be worth $20 per ton, or $160,000.

"We believe that the farmer who operates his own threshing outfit can eliminate the cracking of grain by properly feeding headed or bound grain to his machine and that the seeds and trash can be separated from the grain and kept at home, if just a little more care is exercised in the operation of his machine. Threshing machine and combined harvester owners who make it a business to cut and thresh for others, will make a special effort this year to do better and cleaner threshing than ever before and they are asking the cooperation of the farmer. We believe that this working together of the threshing machine men and farmers will save thousands of bushels of grain which would be charged a total loss, and that the discounts for cracked grain, trash and cobs will be less the coming season than ever before. Our boys in England, France, Italy, or wherever they may be, must have wheat bread, and it is up to us to see that they get it, so that when victory crowns the flags of the allies and our boys bring back again the Stars and Stripes from its conquest for democracy in Europe, we can salute that flag and cheer the return of those heroes as men who have honestly done our part in helping to win the war.

"It has been arranged that farmers needing seed wheat can secure it without a permit and every effort should be made to increase the crop acreage this fall."

# Motor on the Farm

The United States department of agriculture is endeavoring to impress upon the farmers of the United States the necessity of applying the work-or-fight policy to machinery as well as to men. It is urged that farmers cooperate as much as possible in keeping machinery actively employed during as lengthy seasons as possible, with a view to relieving as much man power as possible for various war activities, including the production and harvest-

We have just received the 1918 revised and enlarged edition of "The Model T Ford Car, Truck and Tractor." The book is practical and improved over past issues. It retails at $1.00. It is issued by the Norman W. Henley Publishing company, Putnam building, New York city.

"Tractor Farming" is a booklet issued by The Farm Engineering Society of America, Chicago, Ill. There are 145 pages. It is illustrated, and seems adequate, treating of both the use of the tractor and also of the care of the machine, with quite a bit on tractor troubles and how to cure them.

The government wishes to find out what proportion of the automobiles in use are really giving business service and what proportion are purely "pleasure cars." This paper has been asked to help secure such information, and therefore wants to hear from our subscribers on this topic. The information given may have a great deal to do with the ability of auto owners to get tires and other auto supplies hereafter. If you are a car-owner please let us hear from you at once. We believe that the farmer's auto is a business rather than a pleasure car, but we want to know. Will you write us your own experience at once, please?

## ORDER LIME NOW.

### Delay May Mean No Fertilizer.

The United States department of agriculture is urging farmers who need lime for their soils this year to place their orders with the company supplying agricultural lime at the earliest possible date. The department says that with transportation difficulties, shortage of labor in their own plants and difficulties of obtaining fuel for lime burning in the companies can not make last-minute deliveries. Furthermore, the needs of increased crop production have increased the demand for lime products, and this also has added to the difficulties fo supply.

For all these reasons the department urges that the fall lime be ordered as soon as possible and that the spring needs be anticipated also. Dealers and manufacturers should have advance information as to farmers' needs, so that orders can be combined and car space used to best advantage. Delays in ordering may result in failure to obtain supplies until too late.

**Employer Must Insure Workmen.**

The New York state industrial commission, through William S. Coffey, secretary, has announced that under the 1918 amendments to the workmen's compensation law, which became effective on May 12, it is imperative for all employers of four or more workmen or operatives regularly engaged to take out compensation insurance on these employes. Employers who neglect to take out compensation insurance are liable to both civil and criminal prosecution.

## FIX ONION GRADES.

### Four Standards Are Established.

With a view to more stable conditions in the onion market, the National Onion association has adopted four standard grades for the coming season. The grades are not official in so far as the government is concerned, but are an agreement that will be respected as much as possible by the onion growers and buyers throughout the country this year. The four grades agreed upon are as follows:

Standard fancy—Perfect onions of similar varietal characteristics with a minimum diameter of 1 3-8 inches. Five per cent of these may be undersized and 4 per cent need not meet the perfection requirements as regards disease, dirt and other injury.

Standard No. 1—Same grade as above, except that high color is not required and 6 per cent may fail to meet the perfection requirements.

Standard boilers—Condition requirements are the same as for No. 1 stock, but the size may vary from a 3-4-inch diameter to 1 1-2 inches for a maximum. Five per cent by weight may vary from the prescribed grades.

Standard No. 2—Onions in this grade must have similar varietal characteristics, be free from splits or scullions and practically free from dirt. Seven per cent by weight need not meet grade requirements and 5 per cent may be of different varieties.

**Talking Movies.**

A French inventor, Eugene Lauste, who was largely responsible for the perfection of our motion pictures, is planning to bring them to a still higher standard. His latest "movie" stunt is to make his pictures talk. "This is done by making a sound record directly on the moving picture film, so that the actor's voice and movements can not help agreeing."

# Should Increase Honey Crop

## *Nationwide Movement Is Being Urged by Government*

With the necessity of sugar rationing comes the companion necessity of developing sugar substitutes and the greatest of these substitutes is honey. It is a well recognized fact that hundreds of thousands of pounds of honey go to waste annually in this country for lack of bees to harvest the nectar of flowers. It is equally well known that hundreds of thousands of pounds more could be added to the yield by a little effort on the part of farmers in handling bees and in growing nectar-producing crops.

About 250,000,000 pounds of honey are produced annually in the United States, California being the leading state in the production of this sweet. Honey production in this country could be increased largely—10 to 20 times the present yield—without an appreciable increase in the cost of production, for the raw material—the nectar in flowers—is at certain times practically unlimited. To produce more honey more colonies of bees properly managed are needed.

With a view to assisting in developing the honey industry, the U. S. department of agriculture is putting on emergency extension work in many sections of the United States for the purpose of educating leaders and demonstration workers in the essentials of honey production and the handling of bees.

Losses of bees by diseases, principally foulbrood, range during the summer from nothing to 10 per cent. Winter losses of bees range from 10 to 15 per cent, and in some states the loss was almost 50 per cent during the winter of 1916-17. Winter losses may be greatly reduced by more careful attention. The honey production business, commercially, is getting more and more in the hands of specialists, because disease and winter losses discourage many who are untrained and unable to prevent these losses by proper treatment, but there is no reason why farmers should not succeed in honey production on a small scale, and it is to the small farms that the country must look for its aggregate increase.

Honey became established some years ago as a seasonal product rather than a staple food for use throughout the year. The bulk of the honey was produced by farmers as a side line, the bees were given little attention and the honey was produced at little expense. The crop was marketed at low price during the autumn, and stocks were usually exhausted during the winter. There was little demand and practically no supply during the spring and summer. But honey is now handled in a large way as a staple food product through the influence of commercial beekeeping, which has had a rapid development in recent years.

Honey is produced in three forms: Comb honey, in 1-pound sections as commonly retailed; extracted or liquid honey, which has been removed from the comb; bulk or "chunk" honey, in which the comb is more or less mixed with the liquid honey. From 1914 to 1917 the production of liquid honey has increased in proportion to the commercial output of comb and chunk honey. The bees are able to produce a larger quantity of honey if they are not compelled to build comb for it, and when the comb is emptied and replaced in the hive the bees are able, in periods of heavy nectar secretion, to proceed immediately to the storage of more honey.

The department of agriculture has issued a new bulletin, No. 685, on "Honey Bees and Honey Production." This and other bee literature can be had by any one who will address the department of agriculture at Washington, D. C.

### Write for Information.

The readers of this paper are again reminded that a great information bureau is maintained for them at Washington, D. C., the national capital, and that it will serve them free of all charge except postage. It is maintained as one of the means this paper takes of serving its subscribers. If there is any question upon which you desire information, simply write to the address given below. If you want a personal letter in reply, enclose a 3-cent postage stamp but no other money. No pay is asked or accepted for the service. If you want any one of the bulletins or pamphlets that the bureau has on hand enclose a 2-cent stamp but no other money. Here are some of the booklets that you may receive:

Book on Canning.
"German War Practices."
Book on Colds.
Garden Book.
Book on Knitting.
War Cookbook.
Book on Navy.
Book on Drying Fruits.
Book of Recipes.
Bread Book.
"How War Came to America."
Book on Household Pests.

Don't address your inquiry to the state office of The Farmer, but be sure to address it as follows:

**THE WASHINGTON FARMER INFORMATION BUREAU, Washington, D. C.**

### A Good Thing.

Editor, Washington Farmer: Please find enclosed my check for $1 to apply on your valuable paper for 5 years' subscription. I believe I am paid in advance at present, but can not miss a good thing like this.

A. L. WILLHITE.
Stanwood, Wash.

## APPLE CROP SHORT.

### Idaho Damage Reduces Yield.

Although the apple crop for the entire United States is estimated to be about 3,500,000 barrels more than last year, figures given out by the federal agricultural bureau indicate that there will be something like 5000 cars fewer apples in the west this year than last year. The serious loss to the apple crop of Idaho through weather damage is one of the principal factors in reducing the western crop this year. The unusually heavy crop in western New York is largely responsible for the increase for the nation as a whole. Referring to the northwest, the report of the agricultural bureau reads as follows:

"Approximately 17,000 cars of apples are forecast for Washington this year as compared with 18,500 last year, a decrease of 1500 cars. Wenatchee has prospects for a splendid crop of apples, although its production may fall a little short of last year's 6,250,000 boxes on account of the June drop and shortage of water for irrigation in the upper valley.

"Conditions in the Yakima valley are somewhat uncertain. Estimates vary from 2000 cars less to 1000 cars in excess of last year's 8500 cars. Conservative reports place the crop at about 1000 cars less than 1917. The Winesap crop is good at both Wenatchee and Yakima, while Jonathans generally are light. The season in both Wenatchee and Yakima is well advanced and the size and quality are reported good.

"The Spokane district, which shows a decline over last month, is still estimated at 1000 cars, as compared with 400 last year. This increase will about offset a very marked decrease reported for the Walla Walla section.

"The Hood River production, which amounted to approximately 1300 cars in 1917, is estimated at about 1500 cars for 1918, and is almost exclusively Newtowns and Spitzenburgs.

"The Idaho crop will probably not exceed 700 cars, as compared with 3500 last year. This light production will greatly reduce the output of northwest Jonathans, since the latter is the principal variety for Idaho. Lewiston is reported with 175 cars and Twin Falls with 2000 cars. The Payette district from Weiser to New Plymouth, which last year produced 1500 cars, will not have a hundred cars this year."

## MUST REPORT WORK.

### Threshermen Must Keep Records.

Under the direction of the federal bureau of markets, the government is this year requiring that every thresherman keep a detailed record of the work that he does and file it with the county agent in his county or with the bureau of markets itself. To facilitate the making of reports, the bureau has prepared record books and blanks which the county agents are required to distribute among the threshermen. It is required that each thresherman make a report on each field threshed, showing the number of acres, the owner, and the number of bushels or sacks of grain threshed,

**$1**
For 5 Years

We are holding open our direct-to-the-reader subscription plan during the summer months. It means a real saving at a time when most things cost more.

The central idea of the plan is to deal direct with our subscribers in securing and renewing subscriptions, thus eliminating the middleman and giving our friends the benefit of every penny saved.

It is gratifying to know that the new cooperative system has had the heartiest kind of backing; and that it has been put on a successful basis. We could not have got along without the assistance of well wishers who have told their neighbors about the plan and passed along copies of the paper.

There are many things of value which your state farm paper can bring you and your neighbors during the summer months. The various departments will be full of helpful hints, instructive articles and entertainment. Send in the orders!

**THE WASHINGTON FARMER**

# Nurses Wanted

## War Conditions Increase Demands

The war has created an unprecedented demand for trained nurses, and as a result the United States government is calling for 25,000 young women to enroll themselves in the United States student nurse reserve and place themselves in readiness to take the required course in training.

Only trained nurses are accepted for service with the armies in France. As a result thousands have been taken from the hospitals in this country, and their absence is now becoming keenly felt. The call of the government is in part for the purpose of filling the places of those that have gone and partly to increase the enrolment of those available for service abroad.

Women are accepted for this kind of service between the ages of 19 and 35 years. While high school or college educations are valuable to those taking the course, neither is an absolute requirement. Reasonable education, good health and a sense of responsibility are the three principal requirements for those enrolling.

There are three ways in which a young woman may enroll for the training, as follows:

1. As engaging to hold themselves in readiness until April 1, 1919, to accept assignments to nurses' training schools. These women will be sent to the schools as fast as vacancies occur. Those of superior qualifications will be given preference, and it is, of course, possible that not every one who enrolls will be accepted.

2. As desiring to become candidates for the army nursing training school recently established by authority of the war department, with branch schools in selected military hospitals.

3. As engaging to hold themselves in readiness until April 1, 1919, to accept assignments to either a civilian training school or the army nursing school. Those who so enroll will be called where the first need arises. The government hopes that a majority of those who enroll will thus put down their names for both.

The term of training varies from two to three years, according to the requirements of the particular school to which the student nurse may be sent. No course takes less than two years nor more than three.

At present every woman who completes satisfactorily her training in any accredited school is eligible for service as an army nurse at the front and stands a chance of being assigned to duty abroad. At the same time she will be qualified to earn her living in one of the noblest professions open to women. It should be remembered, furthermore, that her usefulness will begin not when she graduates from the training school, but as soon as she enters it. Practical nursing work is a part of the work of every training school, and the student nurse is not only learning to serve but serving her country from the outset.

The student nurse gets her board, lodging and tuition free at practically every training school, and in most cases receives a small remuneration to cover the cost of books and uniforms. After graduation she has an earning capacity of $100 a month or more.

Enrolment may be made at the nearest recruiting station established by the women's committee of the council of national defense. Persons desiring more definite information on how to locate the place of enrolment can secure the needed information from their own county council of defense.

### No Halfway Measures.

Under a "sketchy little thing" exhibited by Jones there hangs a printed card which bears the words:

"Do not touch with canes or umbrellas."

An appreciative small boy added the following postscript:

"Take an ax."—Christian Register.

# SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University.)

## Why Blue Affects You Pleasantly—Other Effects

Dr. Hirshberg.

The sense of color is a great, divine gift. Colors that are gay and attractive give zest to the spirit, force to the muscles and keen action to the emotions. Most colors are pleasant and the loveliest border on true happiness. The purest and most thoughtful minds can scarcely resist a love of color. Indeed, the poet-artist Ruskin spoke as well for physiology as he did for color when he sang that color is, in brief, a type of inner feeling akin to love. It is especially connected with the blossoming of the earth, with its fruits and flowers and with morning and evening.

Psychologists have a multitude of instruments and tests whereby you may be tested as to the influence of colors upon your affections, feelings and sentiments. The transition of the average person through the stages of student, are devotee, or to artist and genius, can be traced in this way by instruments of the experimental laboratory

### From Scarlet to Gold.

The color-blind man, to be sure, by a trick of heredity which skipped his mother and all women, confuses reds and greens. He, of course, is worse off than you and I. Yet white means the good, the true and the pure to him as it does to you. Black bespeaks evil, unpleasantness, gloom, depression and mischief.

Scarlets and reds, however, appeal to those who are not color blind as something stirring; pleasant excitement, effervescent action such as that of the blood in happy motion; patriotism and the fighting spirit are associated perhaps from the childhood ideas of flags, flames, blood, pictures and the brilliancy of red itself.

Similarly, gold and yellow both arouse the emotions started by the days bright with glorious sunshine. The exaltation of the spirit produced by yellow, orange and gold is strictly physiological. As the sun energizes and makes life, motion and helpful emotions, the colors associated with it to a similar degree do likewise.

The actinic or chemical vibrations and particles of all light are also present in various strengths in the different colors. Sunburn and tan are the result of such radiations of mixed white and yellow light.

Blue and violet light are also rich in these chemical rays, but green is a calming, comforting color, because the sharpest, cutting chemical rays are diminished to a minimum. Foliage, grass, trees and vegetation generally recall so many happy summers that the associations so pleasantly mixed with green can not be separated from the soothing powers of the color itself. While the popular notion that "green rests the eyes" is not altogether correct, it has at least a modicum of truth in it, because the sharp, intensive rays are largely absent from it.

The blues of marine colors, the vast expanse of the heavens and the tints of so many eyes strike the human ego as a sweet, tender, divine spark. Blue has a pleasantly insidious influence and power over man. There is something physiological and psychological all combined in blue. Pale blues, sky blues, marine blues and Napoleon blues all impress the spirit with a vast, divine significance.

Purples, violets, deep blues and their close kin of the melancholy end of the spectrum seem to depress, frighten and subdue the vital activities both of man and many microscopic plants and animals. Just as sunshine and sorrow are linked in the human emotions, happiness and shadow are coupled verbally. As the evening shadows fall purples and violets pass before the eyes. There is in them something more melancholy than the mere onset of twilight and veiled purples.

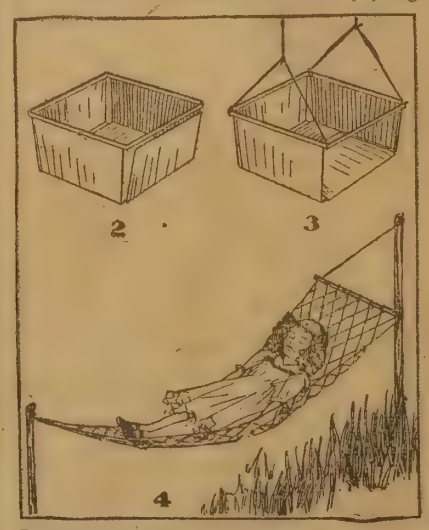
### Doll Swing and Hammock.

A swing for your jointed dollie, and a hammock for your dollie that is not jointed are two easily-made toys that you can quickly set up in the back yard.

For the doll swing (Fig. 1), you need four sticks about 24 inches long for the supports, a piece 10 inches long for the top crosspiece, a pint-size fruit box—the kind cherries are packed in—for the seat, and some string for suspending the seat.

If you can get four straight pieces of tree branches they will do nicely for the supports. Drive the lower ends of each pair into the ground, 8 inches apart, and bend over the tops to lap as shown and bind together with string. Place the supports 9 inches apart directly opposite one another. Set the top

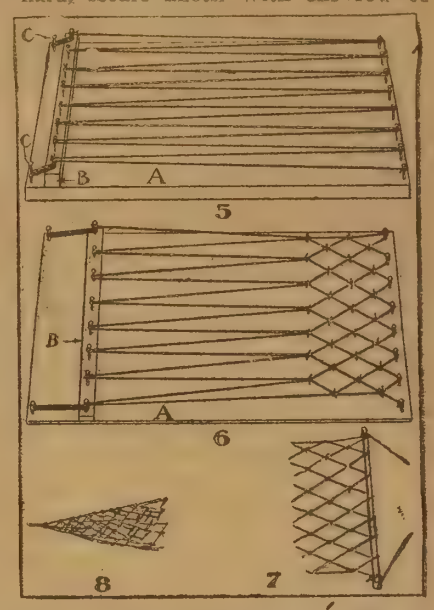


1

crosspiece in the crotches formed by the crossed ends and bind in place with string.

Figures 2 and 3 show how the cherry box is converted into the swing seat. Slip the top edge of one side of the box from the tin binding by which the box is held together (Fig. 2), fold the side over on to the inside of the box bottom, and glue or sew it to the bottom (Fig. 3). Tie the suspension threads to the corners of the box, as shown in Fig. 3.

The doll hammock (Fig. 4) is made of string. You will need a board 24 inches long and 12 inches wide on which to form the hammock network. (A, Fig.



2 3 4

5). Drive a row of nails into the board, close to one end, about one inch apart, then take a stick and drive a row of nails into it at the same distances apart (B, Fig. 5). Stick B is held to board A, by means of a pair of heavy rubber-bands looped over a pair of nails C driven into board A, and over the end nails in strip B.

With board A and strip B thus prepared, take the string, tie one end to one end nail in strip B, and loop it back and forth from one row of nails to the other, as shown in Fig. 5.

Cut up 100 or more very short pieces of string. Then, beginning about one inch from the row of nails in board A, catch the strands together, two by two, and tie with the pieces of string. Tie hard, secure knots. With one row of

knots tied, make a second row one inch away from the first, picking the pairs of strands that will make the knots come halfway between those of the first row. Then make a third row one inch from the second row, with the knots in line with those of the first row, a fourth row one inch from the third row in line with the second, and so on until stick B is reached. As the strands are tied they will become shorter, and this shortening will be taken care of by the rubber-bands, which will allow stick B to slide along board A, as shown in Fig. 6. With the strands knotted, remove the loops from one row of nails and slip them over a short stick (Fig. 7). Then tie together the opposite loops, as shown in Fig. 8. Suspend the hammock between two stakes, as indicated in Fig. 4.

# Sidelights

### Too Much Repetition.

"Bobby, have you said your prayers?"

"Oh, ma! God knows what I want. Why must I go over the same old ground night after night?"—Life.

### His Reason.

Flatbush—You don't go to church, Bensonhurst—No, I don't.

"But why are you so prejudiced against the church?"

"Why? Say, wasn't I married in one?"—Exchange.

### Crushed Possibilities.

Jones, the cub reporter, looked melancholy when he entered the city editor's office.

"Why was my story killed?" he asked gloomily.

"An act of mercy," said the editor. "You fell down on it first."—Exchange.

### An Impossible Amount.

Some negroes were discussing the death of a small darky.

The cause of the disaster was clear enough to one of the men.

"De po' chile died frum eating too much watah-million," he explained.

One of the others looked his doubts.

"Huh," he grunted scornfully, "dar ain't no sech thing as too much watah-million."

"Well, den," remarked the first, "dar wasn't enuff boy!"—Life.

### Well Pasteurized.

There is a certain dear old lady who owns a little farm and takes a few boarders in summer.

Recently an anxious young mother, who had been industriously delving into medical literature of late, inquired of the old lady whether or not the milk that was served at her table was Pasteurized.

"Of course" was the old lady's indignant reply. "Don't we keep all the cows we've got in the pasture all summer long?"—Exchange.

## CHAPTER XXVIII.

### The Loutre Island Settlement.

"What do you s'pose they want, Ben—those Indians?"

"Well, pretty safe to say they're not trotting along there just for the pleasure of our company. If it's not our scalps they're after, it's our furs; and if it's not our furs, it's our scalps."

"Don't you think they may have a canoe down the river somewhere, and may be running to get it?"

"No telling. It could easily be that way."

"What could we do if they came out in a canoe to meet us?"

"Motion them back. And if they didn't go, we'd flatten ourselves down in our canoe and fling lead at them. That's what we carry guns for, and ammunition."

The two voyagers paddled on steadily. Every few minutes they would catch a glimpse of their five Indians, trotting across open places in the woods along the south bank. The red runners were crouching low as they ran—good evidence that they were out for some evil purpose.

Once Ben remarked: "They see three canoes, and they suspect they're all loaded with furs. And furs—furs all ready for market—are what the lazy rascals are greedy for. Furs mean rifles and powder and lead and trinkets and blankets from the traders."

"And while they're taking the furs they can strip off two nice scalps—a variety of scalps—a brunette scalp and a blond one."

"Yes. And the average redskin is never quite so happy as when he's lifting a scalp—a white man's scalp or an Indian's scalp—a white man's preferred."

"What had we better do, Benoni?"

"If we were on any other stream but the Missouri, I'd say camp about sunset, stay camped till moondown, and then travel all the rest of the night. It's a risky thing to do. But we may have to take the risk—or a worse risk."

"If we struck a snag in the dark, our canoes would upset, wouldn't they?"

"They'd stand a good chance to. This has the name of being a dangerous stream."

"Those red fellows must be trotting along over there to keep us in sight till they see where we camp. Then they can fall upon us while we're asleep."

"That may be their plan. If we knew they were the only ones, we could dodge them by camping on the other side of the river."

"But we don't know they're the only ones. May be others on the north side. And those we see could swim across, or raft themselves across, if they have no canoe."

"Well, no great matter. We'll look out for ourselves. Do you see that island we're coming to? There we're going to camp."

The island, when they came close, proved to be about a hundred yards wide and a quarter of a mile long. Willows fringed most of its outer edge, but large timbers covered its interior.

At the lower end, where the ground sloped down to meet the water, the travelers landed and tied their canoes to a bush. Then, a little distance up in the woods they boldly kindled a big fire and cooked their supper. From their camp they had a good view of both banks. And a constant watch was kept up in both directions. Though they could see no Indians, they had little doubt that Indians were close by, especially on the south bank. Indeed, every time one of the campers stepped out to where he could be seen from that bank, he could almost feel savage eyes upon him.

By far the greater part of the water was between the island and the south bank. Though the travelers had seen no Indians on the north side of the river, they were careful not to expose themselves on the north side of the island, lest a bullet should come across from the mainland.

When night settled down, with its moonlight, they still kept their fire burning brightly. But they themselves took their stations, one on each side of the island, where they could watch the water. As soon as the moon had set, they put more wood on their fire, then stole down to the water's edge, untied their canoes, stepped in and crouched down, and pushed off.

At first they paddled noiselessly. But when once out in the main current, they sat still and let that sweep them along. Indeed, it carried them fully as fast as they cared to travel in the dark on such a treacherous stream. Now they gazed ahead for snags.

After drifting half an hour, they began to watch for another island, which Ben remembered. It was small, and on coming to it they passed it by, as they did a second small island not far below it. But at a third island they landed, tied their canoes under some brush, and were soon asleep on the ground near them.

They slept not very soundly, it must be admitted, and both were awake from time to time during the night. And every time they sat up and listened for suspicious sounds. But the night passed without any disturbance.

While the dawn was still dim, they ate their breakfast, cooked the night before, then got into their canoe and paddled away down stream.

Again, while they dipped their paddles, the two voyagers watched both banks for danger-signs. And scarcely had an hour passed before they caught glimpses of several Indians. As before, the warriors were hurring along through the woods, evidently for the purpose of keeping the canoes in sight. But this time they were on the north bank.

"Hot after us again, the red boogers are!" Jodo exclaimed impatiently, the moment he caught sight of the hurrying figures.

"Yes. They've no intention of letting all these furs and two white scalps go to waste. They put me in mind of that hungry wolf-pack that trailed us through the snow that frightful afternoon."

"I wonder what they did last night, those redskins."

"They must have swum across to our island, and from there on to the north bank."

"And they must have been woefully disappointed, after all their trouble, to find only an abandoned camp."

"You can be sure of that. And they probably tried another island or two before they gave up the search. That was what I guessed they'd do and that was why we passed by island number two and island number three, and stopped on island number four. After searching two or three islands without finding us, they would naturally conclude that we'd gone on down the river."

"How far do you s'pose they'll follow?"

"Till they get possession of these furs, or till we reach the Loutre Island settlement, I'd say."

"We ought to reach the settlement by noon, oughtn't we?"

Ben nodded. "By noon at the latest. And we'll spend the rest of the day there, and the night, I'm thinking just now."

"Hadn't we better camp there for two or three days, till the redskins get tired of watching for us?"

"We'll see when we arrive there. Maybe we shall have news awaiting us. If everything is all right at home, I wouldn't mind resting a day or two. But the trouble is, Jodo, things are 10 times more likely to grow worse out here than they are to grow better. If the Sacs and Foxes and other tribes break out openly, they'll be ever so much fiercer than they are now. And that's exactly what the people at Hill Without Design are expecting them to do before many days. So I'm guessing we'd better slide toward St. Louis as fast as we can paddle."

"Well, maybe we had. And we can expect to be in danger every foot of the way. Loutre island must be bigger than most of the islands in the Missouri, if it has a whole settlement on it. Or is the settlement so called because it's close to the island?"

"The settlement is on Loutre island. Yes, it's many times as large as any other island I know of in the Missouri. Loutre Slough, a fair-sized river, makes off from the north side, and doesn't come back to the main stream till seven or eight miles below. While the slough is separated from the main Missouri, Loutre river flows into the slough from the north. The slough and the river and the island were named in the olden days, all of them, by French trappers and traders. Loutre, you know, is the French word for otter. About five years ago somebody started a settlement on Loutre island, I suppose because it's not far below the mouth of the Gasconade. And a rather numerous settlement it has come to be."

It was not quite noon when the voyagers arrived at the upper end of the island. A little later, a settler's cabin appeared. They passed by the first cabin, and also by the second; but they went ashore near the third, which stood not far back from the river-bank. It was here that Robinson lived—the man they had seen on the Gasconade, and who had promised to carry a note to St. Louis for them.

Three fierce bear-dogs charged out to meet the voyagers as they approached the cabin; and both lowered their guns, half expecting to have to use them in self-defense. But Robinson, who had just come from plowing, ran out, drove the dogs back, and greeted the visitors warmly. He and they were soon sitting in the cabin, talking.

"Yes, sir, boys, I handed over them notes of yo'r'n to your kinfolks," the settler soon informed them, in reply to their eager questions. "Paddled away for St. Louis, me and some others, just a few days after I got home from that hunt. While I was there, in St. Louis I mean, I kep' inquirin' for somebody that lived neighbors to you all. And on the second day who should come drivin' into town but Mr. Henderson and his wife and daughter. So up I walked, introdooced myself, and passed over you boys' notes.

"And they was the gladdest kind to git news, I can tell you. Your two dogs had come home not many days before, both lookin' mighty thin and hungry-like, and your folks didn't know what to make of it. They just 'lowed them dogs wouldn't have come off and left you boys unless you'd happened to some powerful bad luck. I hadn't expected to tell your folks all your ups and downs with them there redskins; but I just had to, so's they'd understand how your dogs come to desert you. All your folks was well, I'm glad to tell you."

"Well, I'm certainly glad you saw Jodo's people and talked with them," Ben made answer. "Of course we'd a little rather our friends hadn't learned of our adventures with the Osages till we got home. But under the circumstances that could hardly be helped."

"We are glad everybody at home was well; and we're glad, too, that Bose and Tinker made it home all right," Jodo now said. "We hoped they'd gone home, but we didn't know but what they'd been devoured by wolves."

The two visitors asked many questions concerning their friends at home, and Robinson answered them as well as he could.

"You see, it's nearly eight months now since we set out on our trapping-trip," Ben explained, "and the news you bring us is the first word that's reached us—the very first word that's reached us from home. I'm glad you bring us only good news."

"Oh, yes!" Robinson jumped out of his chair, hurried back to a shelf and returned, handing a paper to Ben. "The young lady, Mr. Henderson's daughter, saw me later in the day, and handed me a letter for Benoni Armstrong. You see, I'd told 'em you boys had promised to stop at this settlement on your way home; and I reckon she thought you'd like to glance at some of her hand-write while you's restin'."

Ben received the letter eagerly, and after breaking the sealing-wax, read it through at once. His brown face flushed, and for a good while he left the conversation to others.

"Your pa just begged me to go out home with 'em and stay a few days," Robinson remarked to Jodo. "Said he'd haul me back to town. But my party was in a right smart hurry to git started home, and I couldn't well ask 'em to wait. Feller don't much like to travel by hisself these troublesome times."

"Better to have company if you can. Ben and I know about that. We've tramped and paddled at least a thousand miles since we left home—all by ourselves except a few miles. And we're not at home yet."

Robinson's wife now announced that dinner was ready, and they all sat down to the table.

"You boys struck this settlement just in time," the man of the house soon informed his visitors. "Sever'l of our fellers is goin' to start for St. Louis in a few days, and some of the Boone's Lick folks is comin' to go with 'em—quite a canoe-party. You two can wait and have company."

"When are they expecting to start?" Ben wanted to know.

"'Twon't be long, I don't guess. Our folks is ready whenever the Boone's Lickers shows up. They want to travel in a good-sized party, for safety."

"Shall we wait for 'em, Ben?" inquired Jodo.

Ben glanced at the letter lying near his plate. "Don't know about that. We'd like to have company. But most of these frontiersmen take their own good time for things. And besides, they'll be running empty or light, and we're loaded deep. They'd soon leave us behind. So I'm thinking we'd better push on. If they start soon they'll overtake us."

"Better wait and have company," urged the settler. "Mighty long stretch of lonesome country before you strike the next settlement. Used to be two or three families scattered along—but they've got alarmed and moved back down the river."

And soon he added, jovially, to Ben: "No need to worry about that young lady. If you fail to reach home when she thinks you ought to, she can mighty easy find some feller to take your place."

Ben laughed and his face flushed. "Yes, I know she could. And that's one reason that makes me want to get home as soon as possible."

"Well, she could find somebody else—not much doubt of that. But jedgin' from the number of questions she ast about you, I don't much 'low she's got anything of the kind in mind. So guess maybe you can rest easy."

This settlement, the travelers soon learned, was much stirred up over the expected outbreak of the Sacs and Foxes and other tribes. There was to be a meeting of the settlers this very afternoon, to discuss plans for defending themselves. The meeting-place was about a mile down the island, and the visitors were invited to attend.

Robinson and they walked down together. A good number of settlers had assembled at a farm-house. Some came on foot, some on horseback, and others in wagons with their families. And when it became known, as it very soon did, that Ben and Jodo were just out of the Indian country, and had been engaged in actual hostilities with at least three different tribes, they and what they had to tell at once became the center of interest in this armed gathering.

After much informal talk, the meeting was called to order by a leading settler. Then, when several had expressed their views as to how to meet the coming danger, Ben was called upon.

"I've never lived where redskins were troublesome since I can recollect. But my father and mother did, back in old Kentucky, and so did my partner's father, Mr. Henderson. I'd heard them talk over those troublesome times again and again. And I've heard others tell about those same times, and especially that old pioneer, Mr. Boone—Daniel Boone. From all I've gathered, I'd say that your best defense would be a block-house fort. By that I mean a stockaded square with at least two blockhouses, at opposite corners. One at each corner would be better, And don't fail to make the corner houses sure-enough blockhouses—two stories, with the upper stories overhanging the lower."

"Do you think that part is really necessary?" interrupted the chairman.

"I certainly do. I can speak from experience there, and so can my partner. We were recently in a sort of a blockhouse a long way south of here, that was attacked by Indians and burnt down. We were helpless to keep them from firing it; and we should every one have been roasted or shot to death if the place hadn't had an underground outlet, through a cave."

Numerous questions were now put to the speaker. One of them was:

"How much ground do you think we ought to enclose with the stockade?"

"That depends. The enclosure ought to be more than large enough for all your cattle and horses to be penned up in it when Indians are raiding the country. And for that purpose, and also for your own use, of course, you should have a well inside the stockade."

"We could mighty soon dig one if we needed it," spoke up a settler. "Not fur to water, here so close to the river."

"And, of course, you want to have houses enough to shelter all your people in all kinds of weather," Ben told them, in conclusion.

"That's my idy how to work the thing—my idy to a T," a settler now rose to say. And one after another stood up to indorse what Ben had suggested, or to ask questions.

When the kind of fort to build had been agreed upon, there followed a discussion as to where the fort should be located. The decision arrived at was that where the present crowd had come together would be the easiest place for all to reach. And it was here, they agreed, that the fort should be constructed.

"Men," the chairman said, just before the meeting adjourned, "there's going to be war all along the frontier. And a bloody war it will prove. You can bet your next fall's bear bacon on that. And the sooner we set about preparing for it the fewer scalps we'll lose. The other war with Great Britain lasted eight years. This one may last fully as long, or even longer. And the red skins will be on the warpath as long as the British are egging them on to fight us."

After the formal meeting, the young trappers talked with nearly everybody in the settlement. They were told of the canoe party that Robinson had mentioned, and were urged to wait for it. Ben declined, on the

## Some Canning Recipes

To the Editor: If these recipes will help out any you are welcome to them for your paper. They are all good, as I have used them all many times in my own home. I never had very good success in canning corn. I have tried different recipes with about the same success. To dry corn you must have nice weather to insure it drying well.

To can green peas: Pick and shell your peas. Have ready the jars. Scald both jars and caps, fill jars full of peas, add one level tablespoonful of salt to each part of peas, fill jar full of cold water, put on caps, have your wash boiler with enough cold water to almost cover jars, cook them steady for three and one-half hours. When cool remove to a cool place. They will keep well if the jar covers fit. If water runs from the jars when they are turned top down the cap does not fit. String beans can be canned the same way.

To can tomatoes: Scald them and remove the skin. Put into a preserving kettle, add salt the same as for table use, cook slowly one-half hour. Can them while hot. Have both caps and jars hot when tomatoes are put in. Keep in a cool place. I have kept them when put up this way for one year.

To dry sweet corn: Pick corn when ready for cooking. Cut it from the cob, then scald it in a large granite dishpan. Do not add water, but stir to insure it being thoroughly scalded. Turn it onto clean cloths on a table in the sun to dry. It takes several days to thoroughly dry. Put it in a cloth sack. Keep it in a dry place. When needed to cook, soak in cold water a short time before cooking, season when cooking the same as canned corn. When drying the corn should be covered with mosquito netting to keep insects off.

MRS. HATTIE M'CLURE.
St. Maries, Idaho.

## Learning to Save

"We are learning to save every penny nowadays. We have to make the farm pay," said Mrs. C. E. Stone. The Stones live a mile and a half northeast of Newberg and have one of those regular Yamhill county farms where they raise almost everything. The cherries bore heavily this year and the market was fair, but labor was a problem which has not been solved yet. The children sent out, or at least many of them, did not know how to pick fruit, and many a fruit spur was stripped off the trees, which doesn't affect the market this year, but will reduce the yield next season.

"We have a fine cannery at Newberg," said Mrs. Stone, "and it takes our surplus vegetables and has trouble getting enough. They have a corn machine and we have been afraid they would take it out for there is not much corn this year around Newberg."

Mrs. Stone has an extensive poultry farm, using Leghorns and Plymouth Rocks chiefly. She has been trying to secure some White Minorca stock, but has not been able to find what she wants so far.

"White Minorcas dress well and sell well dressed," she said, "and they lay an extra large egg that markets better than any other."

She is trying some Rhode Island Reds this year. They make the finest mothers of any breed she has ever tried; as to their laying qualities she has not had time enough yet to make comparisons.

## PREPARING RABBIT.

### How to Make It a Popular Dish.

By MARIELLA LADD.

When we were asked to save beef I found that rabbit was nearer to beef in food value than chicken. According to Professor Andrews, the values are as follows:

| | Heat and Energy. | Flesh and Bone Material. |
|---|---|---|
| Beef ..... | 9 per cent | 19 per cent |
| Chicken .... | 6 per cent | 20 per cent |
| Rabbit .....12 | per cent | 15 per cent |

I found, however, that nobody seemed to like the substitute very much and, as Uncle Sam declares that foods must be attractive as well as patriotic, I felt I must either give up rabbits or find some better way to cook them than I had had.

The recipe that follows was very successful:

Joint the rabbit and lay the pieces in salted water for about an hour. Wipe the pieces and roll them in a mixture of flour, salt and pepper. Peel a large onion and stick into it a dozen cloves. Cut some very thin slices of salt work and arrange them to cover the sides and bottom of a stewpan with a tight-fitting cover. Place the onion in the center of the dish and arrange pieces of rabbit around it. Lay pieces of pork over this and place more pieces of rabbit over it. Then more pork and so on, putting a layer of pork last.

Pour over the whole a teacup of rich meat stock, in the jelly form, preferably.

Cover tightly and bake in a fairly hot oven for three hours. The oven should be cooler during the two hours before the dish is removed.

The flavor is still better if force meat balls are mixed with the joints of rabbit. The balls are made as follows:

Mix a teacupful of fine bread crumbs wtih a little shortening and a teaspoonful of dried herbs or fresh parsley. Moisten with a little onion juice and the white of an egg, not beaten. Shape into balls about an inch in diameter.

On porkless days I braized the rabbit and finished it off in the oven as above, leaving out the pork. More liquid was necessary in this case and I poured the braizing liquor over the joints.

When serving I remove the bones, which fall out naturally. They will stand further boiling in the stock pot.

The gravy of a braized rabbit also makes a good foundation for a curry. To make the curry take out the meat and arrange it in the center of a large flat dish. Around the rim of the dish make a bank of well-boiled rice or of mashed potato, if preferred. Then mix a minced apple, a minced onion and a tablespoonful of minced parsley with a heaping teaspoonful of curry powder. Mix these together and stir in the gravy. Strain gravy over meat. Garnish with thin slices of lemon or tomato.

## Filet Yoke

By WINIFRED WORTH.

Yokes may come and yokes may go, but the good old filet motifs are always in demand.

Small size filet block. Follow pattern.

Edge. 3 ch. fasten, 6 t. then 3 ch. fasten between each t. tu. 2 ch. t. to other side of half ring, tu. c., p. c. back to finish rings. To finish other edge of yoke, crochet with p. between alternate space and finish with similar rings at opposite ends of block.

# Can Without Sugar

"Keep canning, sugar or no sugar," say specialists of the United States department of agriculture. If you can't get enough sugar for home canning put up your fruit without it. The products will keep perfectly until a time when more sugar is available, or until a sugar substitute program has been worked out. Fruits put up in this way are excellent for pie-filling and salads and may be used in desserts, puddings, ices and punches.

In canning fruit without sugar, can the product the day it is picked. Cull, stem, seed and clean the fruit. Pack the product carefully in hot glass jars or tin cans until full. Use a tablespoon, wooden ladle or table knife for packing purposes. Pour boiling hot water over the product in the hot jar. Place rubbers and caps in position, not tight. If using tin cans, seal completely. Place in the sterilizer vat, or canner, and sterilize for the length of time given below, according to the particular type of outfit used:

| | Minutes. |
|---|---|
| Hot-water bath, home-made or commercial | 30 |
| Water seal, 214 degrees | 20 |
| 5 pounds steam pressure | 12 |
| 10 pounds steam pressure | 10 |

After sterilizing remove the filled containers. Seal jars; invert to cool and test the joints. Wrap in paper to prevent bleaching and store in a dry, cool place. If tin cans are used it will be found advantageous to plunge them into cold water immediately after sterilization to cool them quickly.

## Corn Syrup for Canning.

Corn syrup may be used in canning and in making jellies, jams and marmalades and fruit butters, according to specialists of the United States department of agriculture. Varying amounts of corn syrup are used with sugar. The syrup gives a modified flavor to products, so it should be tried out in small quantities at first to suit the family taste. It combines most satisfactorily with strong-flavored fruits such as pineapple and cherries. The amount used must be determined by the kind of fruit and the strength of the syrup.

### Japan's Richest Woman.

The richest woman in Japan is said to be Mme. Hone Suzuki, sole head of a shipping company that has made more than $100,000,000 since the war.

NEW PERFECTION OIL COOK STOVE

**A Squirrel Eats His Breakfast.**

Dear Aunt Nellie: I told you about our country last time I wrote, and I wrote about our school, also. Now I will write about something else. One day I was on my way to school and I was stopped by hearing a queer cracking noise, as if some one was trying to crack a nut. I looked about, but could not see anything, and I suddenly discovered it was something in some bushes covered with both black and red berries. The black berries were getting old. The berries were from some wild roses. A cunning little squirrel was eating its breakfast. It looked so cheerful. I think it was happy because it was such a fine morning and he could eat his breakfast in peace. You see there are a lot of cats sneaking around to catch them. It was up very early, I suppose, gathering the berries for its young ones. It ran up the bush and gnawed a black berry. I always watched him and he always went after the black berries. I wonder why he liked the black berries best. I have seen that many cousins can knit. I like to knit. I think everybody likes to knit. Can you knit, Aunt Nellie? I am sure you know how.—Myrtle Lee, R. F. D. No. 5, Box 40, Mt. Vernon, Wash. (Yes, Myrtle, Aunt Nellie can knit and thinks it is nice to beable to do that much to help the boys who fight for us.—Aunt Nellie.)

**Hopes to Write Again.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. My father takes the Farmer and I like to read the letters. I was 11 years old April 20. Have I a twin? We live on a 160-acre farm, about one and one-half miles from Ford. We have one cow and one calf. We have one dog named Rex. He is a little puppy. We have three horses and their names are Minnie, Daisy and Nell. We have three hens setting. I hope this will not be the last time I write to the Corner. I have two sisters and four brothers. Both of my sisters are married and only one of my brothers. I think the letters are interesting. I will be in the sixth grade next year. We have about 10 acres of wheat. I know how to knit and crochet. My brother can knit and tat, but I can't tat. I can embroider. If I have a twin I will answer all letters. I hope the cousins are all well.—Edith Simons, Ford, Wash.

**Helping the Red Cross.**

Dear Aunt Nellie: This is the second time I have written to the Corner. My subject is helping the Red Cross. We organized a Junior Red Cross at our school and we have made about 3000 gunwipes, about 60 joke books for the soldiers, and about 16 little petticoats for the Belgian children. Last time I wrote I was going to Pleasant Hill school. Now I go to Cedarhome school, for we have a consolidated district. A truck comes and gets us in the morning. Our school is out, but I do not know if I passed, because I have not received my report card yet. I have one brother and two sisters. My brother's name is Richard. He is 15 years old. My sisters' names are Verna and Avis. Verna wrote to the Corner. Have I a twin? I was 13 years old last May 12.—Goldie Christensen, East Stanwood, Wash.

**Got Her Diploma This Year.**

Dear Aunt Nellie: May I enter into your Corner again, if it has been a long time since I wrote to you? I am 14 years old and have brown hair and blue eyes. I am about five feet tall. I got my diploma from the eighth grade this year. I got 100 in arithmetic and 92 in spelling. I haven't heard what I got in the other things yet. I expect most of the boys and girls that write have some relatives or brothers in the war. My brother, who is 18 years old, left a month ago last Monday. He was at Fort Lawton, Seattle, a week and then shipped across to Baltimore. He and four other boys from here joined the quartermaster corps. They are all together at Baltimore. I hope this war will soon end. My father has $50 in Liberty bonds.—Mary Weaver, Wapato, Wash. (Welcome back to the Corner, Mary. We have not forgotten you.—Aunt Nellie.)

**Delia Lives on a Fruit Ranch.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I enjoy reading the Children's Corner. I am 8 years old. I have one sister and she is 11 years old. We have three horses. Their names are Jennie, Maud and Chub. We have four pigs. I live on an 80-acre farm or fruit ranch. I like to pick fruit. My complexion is light. I have one old hen and 11 little chickens.—Delia Taylor, Almota, Wash.

**Edith Loves the Letters.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 11 years old and will be 12 July 30. Have I a twin? I have four sisters and no brother. Their names are Ethel, Blanche, Goldie and Sylvia. I enjoy reading the letters very much. Papa takes the Farmer. I am reading the Little Women now. We have three calves. Their names are Beauty, Spot and Browny. We have three cows. I have two pet pigeons, one is blue and the other is blue and white. We have two dogs. They are Bobby and Mittens. I am in the fourth grade. I have a twin. Her birthday is July 31. Her name is Christina Jasperson, St. Andrews, Wash. I will write to her tonight. I ride to school some times on my pony, named Star. I walk, too. I have one cat, three dolls, one buggy, one bed and one chair. I have three and one-half miles to go to school. I will give you a riddle to guess. As I went through the garden gate who should I meet but Dick Red Cap, a stick in his hand, a stone in his throat. If you guess this riddle I will give you a goat. It was a cherry. I have a girl friend. Her name is Vera Mccord. She wrote and got two twins, and she told me about it. If I have a twin I wish he or she would write to me. I wish you would find me a twin. I will tell some other children to write to make the Corner bigger. I love the letters.—Edith Tavis, Fruitland, Wash.

**Read the Corner at School.**

Dear Aunt Nellie: I was very glad to see my letter in print, so I thought I would write again. I like The Farmer and every time it comes I want it first of our family. Our teacher takes it, too, and she used to let the children read it when it came. So I read the Children's Corner at school a good many times. I hope the Corner will grow bigger. I have about three-fourths of a mile to go to school and our school is not very far from the schools Virginia Clark and Ethel Broyles go to. I know Virginia Clark real well. I take music lessons from her mother at Dusty every Tuesday evening and I enjoy taking them from her very much. Good old vacation is here again. Then come the good times. Don't you think so, Aunt Nellie, and all the cousins? That's the time for fun, ha, ha!—Marie Krom, Penawawa, Wash.

**Evergreen Grove on Their Farm.**

Dear Aunt Nellie: I am 9 years old. I have one sister that is 15 years old and one brother who is 12 years old. I have three uncles. One is Tom, one is Jim and one is Frank. We have an evergreen grove. We have 50 hens and 52 little chickens. We also have one dog and three cats. We have two buggies and a wagon, but don't use the buggies much, as we have a seven-passenger car. We also have two pigs and three sheep. One of our sheep had 13 pounds of wood on it this year. —James Prince, Sunset, Wash.

**Almost Found a Twin.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner, but I hope it will not be the last time. I am 10 years old and my birthday is November 25. I have four sisters. Their names are Amy, Anna, Gertrude and Margaret. I have two brothers. Their names are John and Melvin. I have almost found a twin. Her name is Effie Luddington. She is 10 years old and her birthday is November 24. I wish she would write to me.—Celia Reichel, Yelm, Wash.

**Has So Many Cousins.**

Dear Aunt Nellie: I enjoy reading the Children's Corner and I wonder how many there are in the Corner. This is the first time I have written to the Corner. May I be a cousin, too? I have a sister and three brothers. My sister's name is Ruth and my brothers' names are Raymond, Howard and Albert. Not very long ago, Cricket, our pony, died. She had the distemper. One of our little ponies has it, and I have a pony named Tricksy that has just gotten over it. I am 10 years old September 11. Have I a twin? If so I wish he or she would write to me. Will you please see how many there are in our Corner?—Mildred Heidegger, Box 72, R. F. D. 1, Rice, Wash. (Aunt Nellie doesn't know just how many cousins there are, Mildred, because so many new ones arrive every day. We surely have a lot now, haven't we, and Aunt Nellie is glad; aren't you? Aunt Nellie.)

**Cassie Enjoys the Corner.**

Dear Aunt Nellie: This is my first time to write to the Corner. I am 11 years old. My birthday is November 13. Have I a twin? I am in the sixth grade. I have one sister and no brother. I live on an 80-acre fruit ranch. We have three horses. Their names are Chub, Jennie and Maud. I have one old hen and six little chickens. We live in a large house. I enjoy reading the Corner. I am reading the story in the Farmer. I like it fine. I read it to my sister. I would have written sooner, but I did not know where to write. My teacher's name is Miss Mary Dougherty. She lives at Cheney, Wash. I can play music by note. My sister wants me to give her lessons and I think I will. I have light complexion, my hair is brown and my eyes are grayish brown. May I be a member of the Corner? Cassie Taylor, Almota, Wash.

**Nickname Is "Peggy."**

Dear Aunt Nellie: This is the second time I wrote to the Children's Corner. Have I a twin? I am 13 years old and my birthday is November 24. My school was out May 24, and I had a good time. We had a picnic. I was promoted to the eighth grade in condition in spelling so I will have to work hard. I have a pet cat and she has four kittens, and I have a pet dog, too. My chum and I are writing to the Children's Corner. I live in Washington. It is near Odessa. I am knitting for the Red Cross. I gave $1 to the Red Cross. I have seven brothers and two sisters. I would write them down, but they would take all the room up in the Children's Corner. My nickname is Peggie. I own a Liberty bond. I joined the Red Cross.—Sophia Havlicak, R. F. D. 3, Box 16, Odessa, Wash.

**The Warden School Board.**

Dear Aunt Nellie: This is the first time that I have written to the Children's Corner and I hope it is not the last time. I was 14 years old June 15. I am four feet 11 inches tall and weigh 105 pounds. I am in the eighth grade. We have a band at our school. We call it the Warden School band. There are nine players and instruments. We have one cornet, one clarinet, one saxophone, four altos, one bass and one baritone, Professor G. F. Beck is our bandmaster. He plays the baritone. I play the clarinet. I enjoy reading the letters in the Children's Corner. I have found many letters from cousins that I knew. I live on a farm two miles east and one mile south of Warden. May I be a cousin?—Ernest Suko, Warden, Wash.

**Farm Beats the City.**

Dear Aunt Nelie: I am writing for the first time to the Children's Corner. I enjoy reading the letters of the Corner very much and I am anxious to see my letter in print. On my last birthday I was 12 years old. My birthday is March 1. Have I twin? If I have I wish her to write to me. We live on a large farm. I like the farm much better than the city. If I see my letter in print I will write often.—Catherine Whalen, R. 4, Box 37, Colfax, Wash.

**Wants to Hear From the Cousins.**

Dear Aunt Nellie: How are you and all the cousins? Mother and we children are all alone. My father went to Kansas because his mother died. He is not back yet. We are looking for him any day. Higher than a house, higher than a tree, whatever can it be? Answer—star. Something that has an eye but can't see. Answer—a button. I should like to hear from some of the cousins.—Bonnie F. Coleman, Dixon, Mont.

**Fun Climbing the Hills.**

Dear Aunt Nellie: I am very interested in the children's letters. This is my second letter. There is a ditch running by our house. It is great fun climbing the hills. I have joined the garden club. Our school let out the last of May. My grandma lives a half mile from our home. This summer I will go to grandma's and eat strawberries. I will say goodby to everybody.—Esther Hellena Reimann, Box 25, Dryden, Wash.

**Reads the Letters All the Time.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. We are new subscribers to the Farmer, but I read the cousins' letters all of the time and think they are very interesting. I am 14 years old and will be 15 October 20. Have I a twin? If so I wish he or she would write to me. Love to all of the cousins and to you.—Effie Lewis, R. F. D. 1, Box 113, Colville, Wash.

**Making a Quilt at School.**

Dear Aunt Nellie: This is the second time I have written to the Corner. I hope the Corner will increase. What does it mean when they ask to join the Corner? Does it take money to join the Corner? My brother is fine and he is riding horseback tonight. My cousins and uncle and aunt are at our place tonight. I have a cousin named Ray Tuttle. He is in the army at Camp Lewis. He has been there a long time. My cousin is writing to the Corner. We are making a quilt at school and I would rather make a quilt and sew them up than to play. I told you in my other letter that I was going to join the Junior Red Cross. I have joined now.—Lorena Thomson, Goldendale, Wash. (No, dear, you do not have to send money to join the Corner. Just write a letter and then you are a cousin.—Aunt Nellie.)

**Stay in Town in Winter.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner, and I hope I will see my letter in print. I am 12 years old. My birthday is July 13. Have I a twin? We have two cats. Their names are Ted and Pap. I live on a 160-acre farm. We have five horses, Dick, Eagle, Charlie, Monty and Black Dick. We live two and one-half miles from Methow. Our teacher's name is Miss M. E. Scoville. I like her fine. I have a brother. He is in the first grade. I am in the sixth. I have two cousins in the war. Aunty has four service pins and one service flag. We have a house in town that we live in in winter. I hope my twin, if I have one, will write to me.—Christina Grant, Box 28, Methow, Wash.

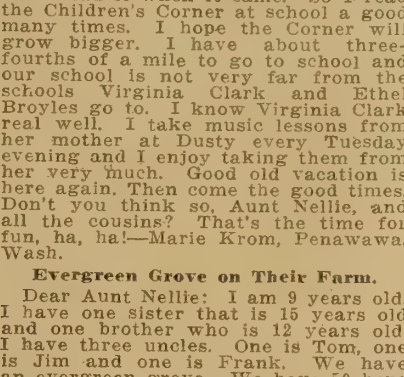
**Hopes to Get a Certificate.**

Dear Aunt Nellie: I have light brown hair. I have blue eyes. I am 9 years old and am in the fourth grade. My birthday is May 21. Have I a twin? Could I join the Children's Corner? I enjoy reading the letters and stories when they are in. I have six brothers and they all have blue eyes. They all have dark hair but the youngest boy. Their names are Ira, the oldest; Harry, the next; Clyde, Wesley, Charles and Elmer. Ira is 26 years old, Harry is 24, Clyde is 21, Wesley 19, Charles is 17, and Elmer is 15. I am 9. This is the first time I have written to the Children's Corner. I haven't missed any days nor I haven't been tardy, so I hope I get a certificate.—Cora Wilson, Box 7, Route 1, Centerville, Wash.

**Earned $250 Picking Cranberries.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I live on a farm near the bay. We can get mud clams and razor clams. We get razor clams on the beach and mud clams on the bay. I have two brothers and one sister. My sister's name is Hazel May. My brothers' names are Darrell William and Alvin Robert. I am 10 years old and in the fifth grade. My birthday is June 7. Every summer we go in bathing. This country is good for cranberries. There are hundreds of acres of cranberries on this peninsula. We got $250 picking them last year. We have four birds. Their names are Nellie, Clay, Dick and Pete.—Hattie Wade, Nahcotta, Wash.

**School Is Out Now.**



Dear Aunt Nellie: This is the first time I have written to the Corner. School is out now and I thought I would write. May I join the Corner? I have a light complexion. I have dark blue eyes and light brown hair, and my birthday is October 25, 1918. I am 10 years old. Have I a twin? If so, I wish she would write. Before school was out I was in the fourth grade. My teacher's name was Miss Stella Robinson.—Ada Jennings, Galvin, Wash.

**Sells Rabbits—Buys War Stamps.**

Dear Aunt Nellie: I wrote to the Children's Corner once before and got my letter in print, so I thought I would write again. I have a lamb and 15 rabbits. I have two war savings stamps and I am going to get another one when I sell some more rabbits. I believe it pays to raise rabbits when you have a good place to keep them. I would be very glad if some of the cousins would write to me.—Ora J. Baird, Sunnyside, Wash.

## Ouri Likes Riddles.

Dear Aunt Nellie: I am sending you a picture of my brother, Olin, and me. I have joined the Junior Red Cross. I have one war saving stamp and four thrift stamps. I know one of Leon Wood's riddles. It is an egg. I am sending some riddles: There was a little green house and in the little green house there was a little brown house and in the little brown house there was a little yellow house and in the little yellow house there was a little white house and in the little white house

Ouri and Olin Myers.

there was a heart. What was it? In marble walls as white as milk, lined with a skin as soft as silk, within a fountain crystal clear, a golden apple doth appear, no doors there are to this stronghold, yet thieves break in and steal the gold. What is it? As I was going over Westminster bridge I met a Westminster scholar. He pulled off his cap and drew off his gloves and wished me a very good morrow. What is his name? I will give the answers the next time I write.—Ouri Myers, Nampa, Idaho.

## Letters Received.

Letters from the following cousins have been received during the last two weeks, and will be published in their turn:

Walborg Brandt, Florence Swegle, Edith Templin, Irene Templin, Elizabeth Green, Lowell Eden, Ida Irmer, Eleanor Jones, Howard Quick, Signe Westman, Gunhild Sather, Thelma Green, Myrtle England, Laura O'Shaughnessy, Edna Hodges, Meldon Belknap, Melba Hughes, Mildred Gagle, Cecil Pave, Elsie Butts, Maybelle Jackson, Florence Whitney, Beulah Shaw, Velma Stark, Lucille Feenan, Mildred Heidegger, Eugene Jaques, Iva Day, Erma Broyles, Opal Cavanaugh, Margaret Vining, Edna Vining, Tessie Duffy, Agnes Jensen, Bertha Keck, Mary Brooks, Harold Ray, Ethel Copp, Pauline Roesli, Alice Graham, Hattie Hayden, Pearl Pierson, Arnold Taylor, Signe West, Frances Stewart, Elzina Rogers, Irene Powell, Goldie Miller, Ethel Strausbaugh, Clark Tyrrell, Lillian Hadford, Melvin Hadford, Hazel Land, Sophia Havlicak, Helen Mehl, Lynne Neal, Thomas Jones, Alice Gregor, Beatrice Giles, Harry Koppernan, Lena Bailey, George F. Barraford, Gerda Ekholm, Ethel Shot, Clyde Braden, Essie Nallman, Sadie L. Olin, Julia Winter, Fern Lyle, Josephine Perkins, Matilda Hilger, Alice Fredrickson, Emma La Yambe.

# Trappers of the Ozarks

(Continued from page twenty.)

ground that they, with their heavily laden canoes, could not keep up with the party.

"Don't worry about that," a settler told them. "Two or three of us that'll be running light will toss you a rope. What you cain't paddle we'll pull. We'll tow your three canoes right along."

"That would be kind of you," answered Ben. "But on our part it would be imposing on good nature. However, we'll think about the matter tonight, and we may decide to impose on you."

On their way back to Robinson's, the three walked up the south side of the island, along the bank of the main river. When near Robinson's house they noticed a man on the far bank and he was beckoning to them frantically.

Hurrying up to where their canoes were tied, they got into Robinson's canoe, with their rifles, and all paddled across to the south side, to see who the man was and what he wanted.

They found him very glad to see them. Taking him in, they were soon paddling back with him to the north bank. His home was at the lower end of the island.

Early that morning, he informed them, he had crossed over to the south side to hunt. After wandering about over the hills till a good while past noon, he had returned to the river, but only to find his canoe gone, and moccasin tracks to indicate who had taken it. Then all he could do was to wander along on the river-bank till he saw somebody on the island, and could make that somebody see him.

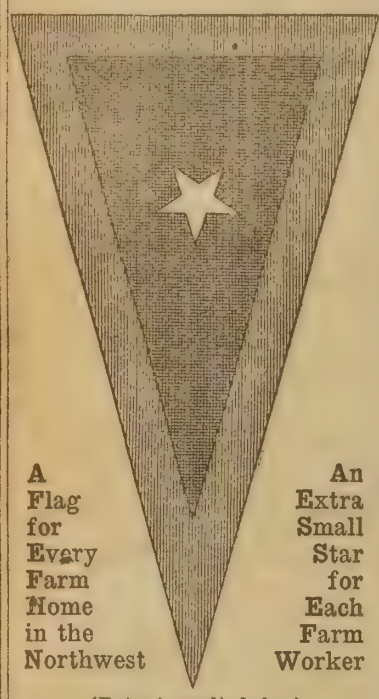
While moving along cautiously through the woods, he had caught sight of a skulking Indian—the one that had stolen his canoe, or some other. Fortunately the Indian did not see him. So the white man had stolen out of the dangerous vicinity and hurried on up the river. The three men who had gone to his rescue were the first people he had seen.

On being landed on the north bank, he shouldered his rifle and hurried away toward home.

"Now that the red boogers over there have got one canoe, they'll paddle across and try to carry off all our canoes," Robinson remarked. "Think I'll sleep by mine the next few nights."

"We expect to sleep close to ours," answered Jodo. "What we've got in 'em cost too much for us to let 'em get stolen."

"We can guard your canoe tonight," Ben told Robinson.



"Oh, I'll sleep down there with you—me and one of the dogs. I'll leave the other dogs at the house to guard that."

The three men slept on the grassy river-bank near the canoes, with a fierce bear-dog lying near them. After the moon had set, the dog kept barking out across the water, till it became evident that he saw or heard or smelt somebody out there. Robinson went down to the water's edge where, on a level with the water, he could see better. Soon he thought he could distinguish a canoe out there, with somebody in it. He sent a bullet in that direction, and the canoe was gone when the smoke cleared. After that the dog ceased to bark.

When morning came, Ben and Jodo returned to the house with Robinson for thier breakfast. By this time they had decided to delay no longer. So, after breakfast, in spite of many invitations and urgings to stay, they took leave of their hospitable friends and were soon out in mid-river, paddling away toward home.

(To be continued.)

## FARM SERVICE WAR FLAG

A Flag for Every Farm Home in the Northwest

An Extra Small Star for Each Farm Worker

(Patent applied for.)

**Designed by The Washington Farmer in connection with The Oregon Farmer and The Idaho Farmer for the farm and farm home that is increasing food production in helping to win the war.**

**OFFER NO. 1.**

A farm service war flag, 9x22, printed on heavy enamel paper, in full colors, will be postpaid to any one securing and sending in ONE NEW subscription to this paper. (One year 25c, three years 50c, five years $1.00.)

Spokane, Wash.

# Need Quota System

The Washington state council of defense decided recently that this state's quota of war funds should not exceed 1 per cent of the total to be raised in the United States. For example, if the Red Cross asked for $100,000,000 from the American people Washington's share would be $1,000,000.

No protest has been heard against that part of the state council's quota plan, but growing objection is noted to its scheme for dividing the 1 per cent between the various counties. The Spokane county council of defense adopted a resolution asking the state council to reopen the whole quota question, and the state council, at its meeting in Seattle on July 23, appointed a committee of five to weigh protests.

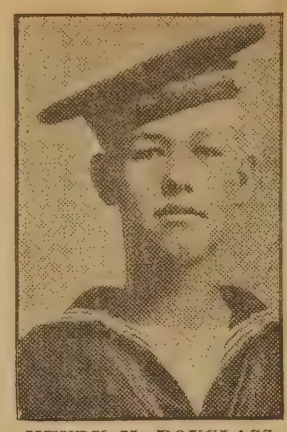
The state council's formula for determining what share of the war fund should be contributed by each county takes the three factors of equalized assessed valuation, school population and bank deposits. Objection is made that under this plan King and Pierce counties (including Seattle and Tacoma) will not contribute in proportion to their wartime benefits growing out of shipbuilding and other government manufacturing and the distribution of great sums of money at Camp Lewis.

It is pointed out that the statistics of equalized assessed valuation apply to pre-war values; that the war has added enormously to real estate values in Seattle and Tacoma, while land values in many of the other counties have been lowered by the war.

It is further pointed out that the school census is also an unjust factor for determining quotas, as schools are a liability, not an asset; that the smaller counties, in particular, have been drained of men who have taken jobs in the shipbuilding plants and other war industry factories.

The minutes of the meeting of the state council at which the county quotas were apportioned show that only six members were present and that four of the six were residents of Seattle. The farming counties had no representation.

The committee of five appointed by the state council to hear protests has not yet named a date for the hearing, but one member, A. L. Rogers, of Waterville, suggests that the hearing be held at some central point like Wenatchee.



**Values It Highly.**

I herewith enclose $.50 to renew and extend my subscription to the Washington Farmer, which I value highly, the war pictures and news especially, but all is good.

MRS. G. W. DOUGLASS.
South Prairie, Wash.

# Washington Boys in War Service

From the Twice-a-Week Spokesman-Review.

**HENRY M. DOUGLASS, Hartline, Wash.**—Enlisted in the navy August 19, 1915. He was discharged by purchase on December 15, 1915. He then reenlisted in the North Dakota National guard on June 22, 1916, and served on the border to December 22, 1916. He is now stationed at Manila, P. I.

**ALMIRON ARMSTRONG, North Yakima, Wash.**—As a member of Company E, first replacement regiment of engineers, Washington Barracks, Washington, D. C., he has received the badge which is awarded to marksmen, and expects to sail very soon for France. He is the son of Mr. and Mrs. J. H. Armstrong.

**CAPT. G. A. ROSS, Naches Valley, Wash.**—In 1912 joined the national guard, Company E, of North Yakima. He served with Company E in Calexico. Later, he tried for a commission in the regulars. He is now commander of the waterfront guard, pier 58, in New York city. His parents live in Naches Valley, Wash.

## Pastures Cut Milk Supply.

Reports from a number of districts throughout the state indicate that the extremely dry weather of the past several weeks has so cut down pastures as to reduce the milk output seriously. The reduction in pasturage has proved one of the greatest problems of the dairymen, as he has been compelled to resort to other feeds to maintain his industry. The shortage and the unusually high prices of these other feeds have made it extremely difficult for him to operate without loss. One result of this condition has been the feeling of a real milk shortage in many localities.

**Invents Folding Life Raft.**

A folding life raft that automatically opens itself when thrown into the water is an Englishman's invention.

# News for Breeders

A record of over 510 pounds of fat (600 pounds of 85 per cent butter, or 637.5 pounds if figured on an 80 per cent basis), has been made by Poppy's Grace, a Jersey heifer with first calf, owned by F. E. Lynn, Perrydale, Ore. The heifer is the first daughter of Mr. Lynn's new bull, St. Mawes' Golden Poppy, to freshen. This bull is a son of St. Mawes Poppy, that holds the Jersey butter record west of the Mississippi river. Mr. Lynn has three more of his daughters on test, and is satisfied at the fine showing they are making. Nashville Susie, grand champion at the P. P. I. E. stock show, is well along on an official test, and making a fine record.

F. A. Doerfler of Silverton, Ore., has a 15-year-old Jersey cow that has recently made a world's record for milk. Zamolia Nutwood, the cow referred to, made an official record, begun at 13 years, nine months, of 482 pounds of fat and 8788 pounds of milk. She was put on test again at 15 years 48 days. She finished in May with 578 pounds of fat, equal to 680 pounds of butter of the 85 per cent standard, or 722.5 pounds, figured on the 8 per cent basis. Her milk for the year was 10,212 pounds. This is a world's record for milk and second for fat for Jersey cows 12 years old or over. Mr. Doerfler also claims the Oregon record for butter production for senior three-year-old. Foxhall's Amelia Nancy V. made the record, with 698.4 pounds of fat. She is by Mr. Doerfler's former herd bull, now owned by his brother, Jacob Fox. Mr. Doerfler now has five Jerseys on official test. He reports a good demand for breeding stock, in spite of short crops and labor scarcity.

## SHEEP INCREASE.
### Producers See Profitable Year.

D. W. Tomlinson, secretary of the American National Live Stock association, predicts the greatest net return to sheep producers this year in the history of the industry in the United States. He says that the lamb crop, taking the country as a whole, has been unusually good and expresses the opinion that the number of sheep will soon approximate the greatest number on record in the country's history.

He points out that on January 1, 1903, there were nearly 64,000,000 head of sheep in the United States, and that on January 1, 1918, there were approximately 49,000,000. He thinks that the figures for January 1, 1919, will show a big increase over those of the present year, though it is doubtful in his mind if the number will reach the total of 1903.

Speaking of the sheep industry, Mr. Tomlinson says that even at the present high prices, sheep men are not making more than reasonable profits. "There is no profiteering in the business such as it has been charged there has been in other commodities, since the war began," he says. "The raising of sheep is precarious. A good example was shown in 1916, when there were great losses during the hard winter. That winter, because of severe weather and the lack of feed on the ranges, the sheep men had to buy at high prices. Hay or straw cost them on an average $22.50 a ton and in some instances as high as $50 a ton if the haul was long. Such things as the price of labor, herders and shearers also must be taken into consideration. Herders now demand as high as $75 a month and shearers more than $30 a day."

## Poland China Futurity.

Clymer, R. W. Hogg's Poland China senior herd boar, near Salem, Ore., will be eight years old this fall. Clymer was once grand champion at the Oregon state fair, and second at the Panama-Pacific stock show at San Francisco. Mr. Hogg has a very nice lot of spring pigs and will show in the Oregon Poland China futurity, which is assured and will be a great show at this fall's fair. H. A.

## Light Hogs Are Popular.

To acquaint hog growers of the United States with new conditions brought about by foreign demand, the food administration has outlined the present situation and possible developments. Last fall, owing to the large amount of soft corn, there was a general heavy feeding of hogs, with a consequent large increase in their weight when they arrived at market. Foreign orders were filled with fatter and heavier hogs than the European population had been accustomed to, and foreign buying agencies now request a return to the customary weights.

From the present outlook, swine producers may anticipate preference for lighter weights of hogs. This country is not likely to have to repeat any request for heavy feeding.

## Secretary Ayrshire Association.

At a meeting of the board of directors of the Ayrshire Breeders' association, held at the Manhattan hotel, New York, July 8, 1918, James G. Watson, in charge of the extension activities of the association, was elected secretary and treasurer, as successor to the late C. M. Winslow.

## British Cow's Record.

Eske Hetty, a Friesian cow, claimed to be giving 10 gallons of milk daily, was sold recently for $18,375 at Heybridge. Essex, it is reported. Eske holds the British record of 2410 gallons of milk in a year. The sum for which she was sold is the highest price ever paid for a Friesian cow. Milk in London now is selling at 14 cents a quart.

## DUROC-JERSEY SWINE

**OVER 150 SPRING PIGS.**
Sired by our grand champion Richards Defender, Richards Pathfinder and Cherry King Orion Jr., and out of our big type prize winning sows.
In the last three years at the Utah and Idaho state fairs our hogs won 76 champion and first prizes.
Can furnish unrelated pairs. Satisfaction guaranteed or money refunded. Priced very reasonable.
**Richards Live Stock Company, Virginia, Ida.**

### Ioka Farm Durocs

One excellent boar at breeding age. Bred gilts and weanling pigs of either sex.

**DOERFLER BROS.** Silverton, Oregon.
A. N. DOERFLER, Mgr.

**REGISTERED DUROC-JERSEY HOGS.**
Some good spring litters Richards Defender and Pathfinder breeding; big type. Send out nothing but high class stock. Guaranteed to please. Write me for prices on these pigs.
**ERIK W. OLSON,** Virginia, Idaho.

**OTTO'S DUROC JERSEYS.**
Get in line for a real boar pig for Sept. delivery. Also gilts and sows bred and open. The kind that is up to date.
**L. S. OTTO,** Filer, Idaho.

**AVONDALE STOCK FARM.**
Registered Duroc-Jersey hogs. Inspection invited. Correspondence solicited.
**H. C. POLLY.** Route 3, Burley, Idaho.

**DUROCS.**
Boars and open or bred gilts of excellent breeding.

## BERKSHIRE SWINE

### Berkshire Hogs for Sale

Have a number of sows, 18 months old; will farrow second litter this fall. Also young gilts and boars of all ages; all from prize winners. Write for prices.

**EARL WOOD.** Silverton, Oregon.

### Kintyre Farm Berkshires

Weanling pigs, bred sows, service boars.

**CLARK BROS.** Yakima, Wash.

### Riverby Orchard Berkshires

Riverby Orchard Berkshires won 12 out of 15 first prizes at the Washington state fair, 1916, also many prizes, including grand champion sow at the Panama-Pacific world's fair. We offer for sale a few good boars and young sows.
**D. C. BUNN,** Prosser, Wash.

# Breeders' Department

## JERSEY CATTLE

### High Producing Jersey Stock

**Golden Maid's Prince,** sire of three Register of Merit daughters. One, beginning at 1 year 10 months, produced 341.27 pounds 85 per cent butter in one year; two junior yearlings, 480.40 and 450.08 pounds. Five more, over six months on test, will average over 600 pounds. He was grand champion Oregon State fair, 1913.

**Monmouth Noble**—4 Register of Merit daughters. Three 2-year-olds produced 482.10, 401.30 and 377.07 pounds butter, and one, beginning at 1 year 10 months, 427 pounds.

**ABOUT 25 HEIFERS**
From 8 months to 2 years old. Several to freshen this fall. All daughters of above bulls and nearly all out of Register of Merit cows. Heifers are well grown, typy, best of udders and some are extra fine show animals. Write for full particulars or call and see them. Will be sold very reasonably.
**WM. SCHULMERICK,** Hillsboro, Ore.

### TWO RICHLY BRED JERSEY BULLS

Dropped August 22 and November 28, 1917, both sired by a son of St. Mawes Susie, whose official record at 10 years old is 1012 pounds 85 per cent butter in a year. One dam is out of St. Mawes Mabel (660 lbs. butter), and she by Rosaire Olga Lad, sire of over 20 register of merit daughters, including St. Mawes Beauty, 870 lbs. butter as a junior 3-year-old. The other dam is by Poppy's St. Mawes, son of St. Mawes Poppy, 1120 lbs. butter.
Both solid color, cows were bred when I bought them and they have all the productions back of them that made the Ed. Cary herd famous. Will be sold far below their value.

**R. McCormack, Florence, Ore.**

### Rose Lawn Jerseys

The Island bull (Rosy's Jolly Golden Fine 135028) at head of herd. Bulls for sale out of Register of Merit and high-testing dams. Bred right, of right type; priced right.

**S. H. KAYLER**
Twin Falls, Idaho.

## SHEEP

### SHEEP FOR SALE

Registered Shropshire, Oxfords, Lincoln, Hampshire and Cotswold rams; 50 head registered Shropshire ewes; 3000 stock ewes, Lincoln, Cotswold and Shropshire breeds; 500 ewes, lambs, Cotswold and Lincoln ram lambs. Write for prices.

**EARL WOOD.** Silverton, Oregon.

## SHROPSHIRE SHEEP

### Shropshire and Hampshire Rams

Registered stock. Spring lambs and yearlings. No ewes for sale.
**GRANT B. DIMICK, Oregon City, Ore.**

**SHROPSHIRE SHEEP.**
**SHORTHORN CATTLE.**
Choice yearling and lamb rams. A few high class young bulls.
**FELZER BROS.,** Tangent, Ore.

## HEREFORD CATTLE

### Highland Stock Farm

offers for sale Hereford bulls, 1 or 2 years old. One or a carload.
**PLATT BROS.** Genesee, Idaho.

## SHORTHORN CATTLE

**REGISTERED SHORTHORN COWS.**
Young bulls and heifers, sired by Scotch bulls; liberal terms.
**CALDWELL CATTLE CO., Caldwell, Idaho.**

## ABERDEEN ANGUS

### Aberdeen Angus Cattle

**A. H. EAGLESON & SONS.**
Boise, Idaho.

## HAMPSHIRE SWINE

### Hampshire Hogs

have won every feeding contest entered since 1914. We are booking orders for weanling pigs. Our blood lines can not be beat.
Trios our specialty.
**TUTTLE BROS.** Asotin, Wash.

## TAMWORTH SWINE

**ROUND KNOLL RANCH NO. 3.**
Herd headed by Knoll Slope Colonel, assisted by Jolly Lad IV. Correspondence solicited.
Bliss, Idaho.

### From High-Producing Ancestry

Registered Jersey bull, eight months old, light fawn, from register of merit dam. Sire St. Mawes Noble. Good straight type. Price very reasonable.
**J. C. BROWN & SONS,** Shedd, Ore.

**FOR SALE VERY REASONABLY**
or exchange, registered Jersey bull, Jonquil of Lebanon, 134649, dropped April 18, 1915. Also a yearling, Taurus of Lebanon, 155275, dropped Feb. 2, 1917. Both of these have good pedigrees.
**V. K. FROULA, R. F. D. 3, Lebanon, Oregon.**

## HOLSTEIN CATTLE

### 365-DAY HOLSTEINS

24,667 lbs. milk—1026 lbs. butter—is the S. O. advance registry, yearly, record of the dam of the yearling bull we are offering for sale. Fine individual. Good breeding. Ready for service.

THE HERD WITH YEARLY RECORDS.
**WESTERNWOLD RANCH, Prineville, Ore.**

### HOLSTEINS

Steno Farm is now offering a few high class reg. Holstein bull calves. Out of ARO cows and sired by one of the finest bulls in the west. Priced right.
**STENO FARM,** C. F. Williams, Mgr.
Mead, Wash., R. No. 2.

### Registered Holsteins

Finely bred bull calves for sale at prices that are an inducement for you to finish raising them.
**H. R. BOOMER.** New Plymouth, Idaho.

### HOLSTEINS

Well-bred young bulls for sale.
**THOS. CARMICHAEL.** Gaston, Ore.

**REGISTERED HOLSTEINS.**
Bull calves for sale, with good A. R. O. backing.
**BEEBE BROS., R. F. D. 2, Rupert, Idaho.**

## AYRSHIRE CATTLE

### Elbow Ayrshire Dairy

Young bulls out of heavy-producing dams, sired by Willowmoor Sentinel 16th, a bull with big A. R. records on both sides.
**J. R. MABEN, Reedsport, Ore.**

**EDGEWATER FARM**
Only one bull left, calved Dec. 14, 1917, with high producing dam; grand dam and great grand dam both world's record cows.
**ELBERT M. CHANDLER, Burbank, Wash.**

## GUERNSEY CATTLE

### Yearling Guernsey Bull

GOLD FINDER'S TITAN, out of imported dam; splendid milker. A sturdy, vigorous young bull, with strong individuality and splendid breed type.

**HAWLEY & SON, McCOY, Ore.**

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, Aug. 5. —Corn shot skyward today impelled by fear of crop damage due to widespread record breaking heat and to failure of expected rains. The market closed strong at the topmost level, 4 1-4c to 4 3-8c net higher, with September $1.62 3-4 to $1.63, and October $1.62. Oats gained 1-5-8c, to 2 1-8c. The outcome in provisions varied from 10c decline to a rise of 7 cents.

Excited buying rushes hoisted the corn market at the opening. Reports of scorching winds and lack of moisture were augmented by forecasts that indicated that no immediate relief was in prospect. All other price making factors were temporarily ignored, including even the war news. Brief transactions caused by profit taking took place at intervals during the session, but as soon as the market showed a fresh scarcity of offerings the quotations soared again without a check until the gong cleared the pit

Oats caught the buying fever from corn

Provisions were listless. Lard responded a little to the bullish influence of corn, but pork and ribs were weakened by the nearness of the government maximums

SPOKANE, Wash., Aug. 3, 1918.—Receipts of live stock at this market for the week ended August 3 were 1371 cattle, 126 calves, 505 hogs, 1630 sheep and 31 horses and mules, totaling 70 carloads.

New Fields Opened.

Contrary to the belief of many the present run of cattle at this market is not altogether due to dry pastures and drouth. Should a falling off in the supply be affected at this time the demand here would be found wanting. We have opened new fields and are getting cattle from these districts that are new to Spokane, where good grass and abundant crops flourish, says a statement by the stock yards. In order to keep the supply here at the present degree and greater we are forced to expand our energies into territories where competition by a western market seemed impossible heretofore. Further proof of the consistency of this market is the steady prices that are invariably maintained. Were we overburdened or flooded with cattle prices would no doubt decline, but, unlike other markets, we have never met with a radical decline, and when we were forced to lower levels we stubbornly submitted to same from effect of sharp reverses on other markets.

Prices on Hogs Advance.

With a fair run of hogs on the market today prices were advanced 25 cents, reaching a new top for this time of year of $18.35. Quality fair, no strictly choice on the market. Quite a demand for feeder hogs, a goodly number selling today at $16.50. As compared with a week ago prices show an advance of 50 to 60 cents.

General hog range:

| | |
|---|---|
| Prime mixed | $18.35@18.60 |
| Medium mixed | 18.10@18.35 |
| Rough heavies | 17.00@17.40 |
| Pigs | 16.50@17.25 |
| Stockers and feeders | 14.50@16.50 |
| Bulk of sales | 18.35 |

Receipts of Cattle Light.

Cattle receipts today were light both in numbers and weight, the bulk of the arrivals being yearling steers and heifers, the thin, half-fat kinds. The market was generally steady. There has been no change in prices as compared with a week ago. The top in the steer line for the week was $13.50 for one steer weighing 1700 pounds, several loads of the good to best kinds going at $10, $11 and $12.

Range of prices:

| | |
|---|---|
| Fat steers, prime | $11.75@12.25 |
| Fat steers, good to choice | 11.00@11.75 |
| Medium to good steers | 9.25@10.00 |
| Fair to medium steers | 8.00@ 9.00 |
| Common to fair steers | 5.50@ 8.00 |
| Choice cows and heifers | 8.00@ 8.50 |
| Good cows and heifers | 6.00@ 7.00 |
| Common to medium | 4.75@ 6.00 |
| Canners | 3.00@ 4.75 |
| Bulls | 5.00@ 7.50 |
| Calves | 7.00@10.50 |
| Stockers and feeders | 6.00@ 8.00 |

Sheep Steady.

No sheep arrivals today. The market is steady at the following:

| | |
|---|---|
| Prime lambs | $14.00@14.50 |
| Good lambs | 12.50@13.00 |
| Prime yearlings | 8.75@10.00 |
| Prime wethers | 7.75 9.00 |
| Best mutton ewes | 5.00@ 8.00 |

Saturday's shippers:

Hogs—E. Oppenheimer, Arden, Wash., 1 load; W. Jain, Genesee, Idaho, 1 load

Cattle—W. T. Honeyfinger, Palkena, Wash., 2 loads.

Mixed stuff—E. Bain, Colville, Wash., cattle, calves and hogs, 1 load.

Small lots—Doust, Stradley, W. C. Powell

**Oil Meal**—$75 per ton.
**Hay**—Timothy, $38 per ton delivered, $37 by carload; alfalfa, $30 per ton delivered, $29 by carload.

## Seattle Market.

SEATTLE, Aug. 4.—The pear crop of Washington will be about normal, but the quality is over that of the five-year average and is selling here at $2.50@2.75, due to fears of price cutting in California fruit and possible oversupply. It is expected that this market will absorb about two carloads a day from now on.

The forces in the potato trade are endeavoring to extricate themselves from the mass of confusion that hangs over current and fall trade and to place themselves in a firm position to operate. It is everywhere conceded that spuds will bring $25 to $30 at digging time. Dealers do not express their real feelings when speaking of anything higher, hoping to be able to buy for less. In view of past experiences of growers, however, wholesalers again repeat that if digging time finds a $25 and $30 market holders should sell rather than to take chances of a doubtful future.

The fresh ranch egg market is firm, with an occasional undertone of advance. While receipts are fair, shrinkage due to hot weather and long holding in the country is running 10 per cent. Jobbers have been compelled to bring in California stock to maintain their trade orders.

Purchasing Prices.

Eggs—Select ranch, 47@48c per doz; Oregon, eastern Washington and Idaho, 37@40c per doz.

Butter—Fresh dairy, 30c per lb; butter fat, 56c per lb; baking, 30@35c per lb; raw milk, $2.75 per cwt.

Poultry—Broilers, live, 1918, 30c per lb; hens, 3½ to 4 lbs and up, 27c per lb; under 3½ lbs, 25c per lb; old roosters, 17@18c per lb; ducks, live, fat, 25c per lb; squabs, large, $3.50 per doz; geese, fat, live, 23c per lb; Belgian hares, 19c per lb; guineas, $7 per doz; turkeys, young toms and hens, dry picked, 10 lbs and up, 30@33c per lb; smaller birds, 25@30c per lb.

Hogs—Light, 21c per lb; heavy, 19@20c per lb.

Beef—Steers, fat, 14@15c per lb; heifers, fat, 14@15c per lb; cows and bulls, 13@14c per lb.

Veal—Fancy light, 19c per lb; do heavy, 13@18c per lb.

Mutton—Fat, 22c per lb; spring lamb, fat, dressed, 25c per lb.

Help Save the Canadian Crops

When Our Own Harvest Requirements are Completed

United States Help Badly Needed Harvest Hands Wanted

Military demands from a limited population have made such a scarcity of farm help in Canada that the appeal of the Canadian government to the United States government for

Help to Harvest the Canadian Grain Crop of 1918

meets with a request for all available sssistance to go forward as soon as our own crop is secured.

The allied armies must be fed and therefore it is necessary to save every bit of the crop of the continent—American and Canadian. Those who respond to this appeal will get a

Warm Welcome, Good Wages, Good Board and Fine, Comfortable Homes.

A card entitling the holder to a rate of 1 cent per mile from Canadian boundary points to destination and return will be given to all harvest applicants. Every facility will be afforded for admission into Canada and return to the United States. Information as to wages, railway rates and routes, may be had from the

UNITED STATES EMPLOYMENT SERVICE

Branches at Aberdeen, Bellingham, Everett, Seattle, Spokane, Tacoma, Walla Walla, Wenatchee or Yakima

## Farmers Use Automobiles.

In a report recently issued by M. O. Wilkins, registrar of automobiles for Washington and Oregon, he shows that there are 106,890 motor cars in Washington. It is estimated that 65 per cent of these cars are owned and operated by the farmers of this state. This would mean that 69,478 cars are largely used in carrying on the agricultural work of Washington, since practically all farmers' cars are purchased for use in a "service" rather than a "pleasure" capacity.

An investigation made by the Washington Farmer a short time ago shows that not only is the average farmer's car used primarily for business purposes, but that a majority of such cars are used every day in transporting farm products to market, in supervising the work of the farm or in bringing supplies from market to farm. In the evenings and on Sundays the car affords opportunity for restful diversion and relaxation which certainly has a value in the added efficiency given to the farmer and his family, a factor the economic value of which can not be denied.

## Dairy Association Formed.

With a membership of about 135 dairymen, who own approximately 2500 cows, the Grays Harbor Dairymen's association has been organized. The board of trustees is as follows: John Murphy, Satsop valley; W. J. Wharton, Satsop valley; Ransom Hinkler, Upper Satsop valley; Lee Foster, Chehalis valley; David Day, Porter; E. E. Sweitzer, Oakville; J. Porter, Porter; O. M. Gordon, Malone, and W. F. Darby, Montesano.

### Speed in Wireless Signals.

It takes but one-twentieth of a second for a wireless signal to pass from Washington to San Francisco.

**Want Ad Rates 30c Per Line**

Want ads are run at this rate in The Washington Farmer and i t s associate papers, The Oregon Farmer and The Idaho Farmer, thoroughly covering the three states.

# Want Ads

Send for card giving lower rates for ads running one month or longer.

**How to Figure Cost of Ads**

Figure four words for the first line, which is set in capital letters, and six words for each succeeding line. Multiply number of lines by 30 and you have cost each issue.

Your Local
# HOME PAPER
and
Your State
# FARM PAPER
at a Special Club Price

A special clubbing arrangement has been made with a number of newspapers throughout the northwest. We can now offer you a one-year subscription to your local home paper with a one-year subscription to your state family farm paper at a special rate for both.

**YOUR HOME PAPER** is of great value to you. It brings you all the local happenings and news of the affairs of your community and keeps you posted on the gossip of the social and commercial life. It brings you the news of the home boys at the front and prints many interesting letters from them,

**YOUR FARM PAPER** brings you each week interesting facts of the agricultural development of your state, all the farm news, features for every member of the family, including color comic pages, women's and children's pages Departments devoted to every phase of farming and farm life.

We can now send you your local home paper and your state family farm paper for one year each at the special clubbing rates as quoted below:

| | | | |
|---|---|---|---|
| The Daily Journal, Bellingham, Wash., and Washington Farmer. | $3.00 | Cashmere Valley Record, Cashmere, Wash., and Washington Farmer. | $1.50 |
| The Blaine Journal, Blaine, Wash., and Washington Farmer. | $1.15 | Twice-a-Week Spokesman-Review, Spokane, Wash., and Washington Farmer. | $1.00 |
| The Bee-Nugget, Chehalis, Wash., and Washington Farmer. | $1.50 | The Spokesman-Review, Spokane, Wash., (Daily only), and Washington Farmer. | $5.50 |
| The Spokesman-Review, Spokane, Wash., (Sunday only) and Washington Farmer. | $2.50 | | |

Take advantage of these special prices by sending in your order today to your local home paper or by mailing it direct to

Overland

TRADE MARK REG.

The Thrift Car

# Reins or Steering Wheel?

ALONG, tiresome, time-wasting drive with horses is a short, pleasant, time-saving ride with an Overland.

Let an Overland perform innumerable *work duties* for you and *in addition* be an endless source of recreation and benefit for every member of your family.

Select this beautiful, roomy Model 90 and you save money in the first costs and maintenance.

You cannot get complete satisfaction from less advantages than it gives—

And you cannot get as much *value* in any other car for the low price of this Model 90.

It has a powerful, fuel-saving motor; narrow turning radius; rear cantilever springs; 106″ wheel base; 31x4 tires, non-skid rear; electric Auto-Lite starting and lighting and vacuum fuel system.

Because this Overland Model 90 gives *every* essential for complete satisfaction, the farmer's family can *enjoy* it as much as the farmer can *employ* it.

*Five Points of Overland Superiority:*

*Appearance, Performance, Comfort, Service and Price*

Light Four Model 90 Touring Car, $895.

Willys-Overland, Inc., Toledo, Ohio.
Willys-Knight and Overland Motor Cars and Light Commercial Cars.

# Rain Saved Skagit County Oats

## Increase in Milk Price Encourages Dairymen on Puget Sound; Pasture Is Poor on the Eastern Side.

MT. VERNON, Skagit County, Wash., Aug. 5.—The hay harvest is progressing well, in fact most of the hay is in the barns. There was very little damage done hay from the recent rains, but other crops benefited immensely. The oat crop was greatly improved, I might say saved, by the rains. The straw is short, but there has been sufficient moisture recently to cause the heads to fill well. Pastures are now freshened up and prospects for after feed on the hay meadows are good. Another encouraging thing is a raise of 35 cents a hundred in the price of milk. It now sells at $2.75, which is considered good for this season of the year even with the prospects of high feed prices next winter. The aphis were causing much damage to most field crops, but the rains destroyed most of these insects. On the whole conditions are much better than a month ago. C. S. PHILLIPS.

### Crop Yield Is Satisfactory.

LA CROSSE, Whitman County, Wash., Aug. 4.—Harvest is well under way and crops are more satisfactory than was expected. While there are fields that are disappointing, most fields are giving satisfactory returns both as to yield and quality. Reports of yields are coming in from 10 to 40 bushels per acre, probably averaging 15 to 20 bushels. The quality is far in excess of 1917, grain testing 55 to over 60 pounds to the bushel. Barley is a light crop and oats almost a failure. Pasture is the poorest in years, and garden and potato crops are both light. Hot weather of early harvest is giving way to cooler weather, and another two weeks of favorable weather will see most of crops safely harvested. Labor, while scarce, has not handicapped the harvesting operations. M. E. SCHRECK.

### Hay Comes Up to Average.

DARRINGTON, Snohomish County, Wash., July 27.—The hay harvest is about over on most farms. The crop in general in this section is about up to normal. We have had electric storms and a generous amount of rain the last 10 days and a few of the farmers who did not rush haying in the fore part of the month got damaged hay. People got along fairly well with what help they could get, but less damaged hay could have been made if help had been more plentiful. The oat crop generally is somewhat light as to straw and grain; also perhaps 75 per cent crop. On some farms it won't make over one-half crop. Spring wheat is looking good, and so are roots of all kinds. Pastures are fairly good now, but they have been short most of the year. The green aphis have not done much damage in this section except on the field peas. They won't make over 25 per cent crop, maybe less. C. B. NEIDERPRUM.

### Crops Average Light.

TWISP, Okanogan County, Wash., July 26.—This section has been hard hit by the drouth this year, the hardest hit that white people have ever known, and all crops are light. Farmers that couldn't irrigate have suffered most; but some that irrigate from creeks have murmured and complained and almost lost control of their upper lip at times. More grain was sown last spring than usual; but most of it will be cut for hay. The price of hay is about 100 per cent higher than at this date last year. Grain is ready to harvest and some that has been irrigated has made a fair yield. Farmers are receiving a good price for their produce and while we are getting a set-back this year, we are not ready to be counted down and out, but will try to get some profit from our experience and use some different farming tactics next year. Fruit is small and the crop away below normal. The labor question hasn't been very serious yet. The price is about 50 per cent higher than last year. A number of young men have been called within the last 10 days, and it is likely that it will affect the labor question for the remainder of the season.
GEORGE LA RUE.

### Grain Crop Is Good.

BICKLETON, Klickitat County, Wash., Aug. 4.—Harvest operations are in full swing here at present, and grain is turning out very well, in spite of the hot winds of a few weeks ago. Fortyfold is going from 20 to 28 bushels per acre. Barley is yielding 20 to 35 bushels. This is combine reports, no stationary threshing has been done yet. I have just finished with my combine and my fall wheat went 23 bushels, and barley 30 bushels. Labor is rather scarce, but by helping each other, and buying harvesters which only require two men to operate them, the farmers are managing very well. Wages for hired help are the highest ever known here, box drivers getting $4 to $5 per day, head punchers $7 to $10, sewers on combines $6. Many small farmers whose grain is affected by hot winds are unable to pay the wages and are getting along the best they can with no help but their families. The above wages include board of course, which the average hired man does not seem to consider, and they are not in proportion to the price the wheat grower gets for his grain. Besides these abnormal wages the price of grain bags here is 28 cents, threshing 30 cents per sack, and hauling wheat to market 30 cents a sack. It costs $40 this year to buy a platform dropper for a header which used to cost $18, and yet some city people say the farmer is getting rich on $2 wheat, when the grain buyer, after slicing off for trash, smut, shrinkage, his 10 per cent margin and a few other things, left us last year $1.50 and $1.60 per bushel. The fruit situation is the poorest in years. Frosts killed nearly everything. What fruit is to be seen here is a few berries shipped in from Vancouver and Yakima. There will be very little fruit for canning and no sugar to can with, so I guess it is up to the housewives to dry what they can and drink their tea and coffee unsweetened.
BERT H. FAULKNER.

### Rain Improves Crops.

VANCOUVER, Clarke County, Wash., Aug. 6.—The crop conditions in the valleys and along the streams are looking considerably better than they did a month ago before the long prayed for shower came, and still there is a decided shortage, especially in the grain line. The early grains have been cut and shocked and in some instances threshed. Plenty of help was available to gather the crops which was done by the farmers changing work. It is a fact that this labor shortage has created a brotherly feeling among the farmers that did not exist before the war. This is a pleasant feature even though we are in the midst of an inhuman and cruel war. Early potatoes are nearly all dug and have proven to be a larger yield than was expected about a month ago. Late potato vines are green and promise to be a fair crop; in places some claim that the average will come up to past years. Threshing machines are in the fields and grain is turning out better than was expected a month ago. The aphis played havoc with the early grain and started in on the late grain, but the rain seemed to put a damper on them. The pea crop was almost a total failure. Green corn has started in to market at 50 cents per dozen and hard to get at that price; and new potatoes are selling at 4 cents per pound. Our food administrator has set a price of one-half cent per pound to be paid by the consumer above the price paid the producer. If there was something of this kind done on all vegetables it might stimulate the gardener. In the nearby sections there are good sized fields of carrots that can not be sold for more than one cent per pound. Beets are scarce, with eggs 55 cents per dozen, and butter 7 cents per pound. There is an indication of a raise in price in the prune belt. There is considerable stir getting the buildings ready for drying in town. Tin shops are turning out tanks, drums and piping and they are talking three cents per pound at the dryer, which will mean a good figure for the finished product. Through the country district there is a tendency to dry not only prunes but vegetables as well.
C. C. BROWN.

### Had Alligator Dinner.

To prove statements made in recent articles written by him that reptiles are good for food, Professor A. M. Reese of West Virginia university, gave an alligator dinner to 24 of his friends here. The dish received the warm indorsement of his guests, among whom were several professors of the university.

**Irrigation Is King**
**An Empire in the Making**

**The Jordan Valley**
**Malheur County Oregon**

Thirty thousand acres of productive soil is to become a center of profitable production, surrounded by extensive stock ranges, which means a home market for the hay, grain, and alfalfa grown on the irrigated farms.

**THE JORDAN VALLEY FARMS COMPANY** are now offering to farmers and stock growers a very attractive combination of land and water rights.

There are several very necessary qualifications to a successful irrigation project.

First—A water supply ample and reliable at all times when required.

Second—A reservoir, dam, canals, and water distributing system, honestly constructed and ample for all water conveying.

Third—Land that possesses the producing qualities to justify reclaiming.

Fourth—A management who **realize** and **know** that the **success** of the **settlers** is the **success** of the **enterprise.**

Fifth—The Jordan Valley Farms company is offering the public an opportunity to purchase a farm under a project that possesses all of the above features, "and then some."

Sixth—The state of Oregon is, by virtue of the fact that two-thirds of the land under the system is under the Carey Act, an interested party, and all construction work is in direct charge of an experienced reclamation engineer on behalf of the state and land and water company jointly. The state of Oregon is requiring a bond of $100,000 for the faithful performance of all construction contracts.

**WE WANT YOU TO INVESTIGATE**

We want you to investigate Jordan Valley, then see it. Our automobiles leave Boise, Idaho, weekly and they are at your disposal. If you want to get into a new country where land is cheap, water plentiful and climate favorable, this is the place to go. We desire to continue our policy of colonizing this land with earnest, industrious people who will make dependable, permanent settlers. If you are interested, drop us a postal card right now and we will send you detailed descriptive matter. Address all communications to

## Farmers Need Fall Seed Wheat

### *Efforts Are Made To Secure Aid From the Government*

There is great need of seed wheat for fall sowing in the Inland Empire if the increased acreage sought by the government is put in, and a strong effort is being made by leading farmers, farm organizations and commercial organizations looking toward the securing of this seed.

At a meeting of agricultural interests with the agricultural bureau of the Spokane Chamber of Commerce this week the sentiment of the farming interests of the state was expressed in the following telegram to M. H. Houser, northwestern representative of the federal grain buying corporation in the northwest:

"We urgently request your personal assistance to keep fall seed wheat in the country, and not to allow it to be milled or shipped till such time as needs of seed wheat are fully supplied. At our seed wheat meeting today 18 warehouse men expressed their willingness to assist to their entire capacity."

This telegram was signed by T. S. Lane, president Spokane Chamber of Commerce; R. Insinger, chairman agricultural bureau; E. G. Schafer, secretary Washington seed committee; A. D. Cross, state secretary farmers' union, and John C. Lawrence, overseer Washington state grange.

The following telegram, similarly signed, was sent to Senators Miles Poindexter and Wesley L. Jones in Washington, D. C.:

"At a largely attended meeting today of Washington seed committee, agricultural bureau, farmers' union and grange, farmers and country bankers and interior warehouse men, we are instructed to wire you as follows:

"Immediate and liberal assistance needed to supply fall seed wheat to both farmers with credit and farmers without means in parts of Adams, Grant, Franklin, Benton, Lincoln, Douglas and Spokane counties.

"We need binding promise from the United States grain corporation that they will not ship out seed wheat of either last year's or this year's crop until after October 15, because notwithstanding they have been warned that there is not nearly enough fall seed wheat of the necessary kinds for planting, several cars have been shipped to mills and ground. There is imminent danger of profiteering in seed wheat and we urge that grain corporation take matter in hand and buy and store necessary fall and seed wheat.

"We need permission from the railroad administration to ship less than capacity carloads of seed wheat at once to several farmers in western Adams and parts of Franklin and Grant and other counties. A maximum of $300 for a farmer allowed by the department of agriculture and administered by federal land banks is absolutely insufficient, because the farmer with only 160 acres of summer fallow will need at least $750 for seed and feed as there is no feed in that part of the country, and 160 acres in summer fallow is an exceptionally small farm.

"The district mentioned had a light crop last year and partly a failure this year, without feed of any kind, statements of the grain corporation to the contrary notwithstanding. Wherever there is moisture farmers should sow now. The department of agriculture and food administration grain corporation has paid no attention to repeated warning and need of wakening up to the emergency. The farmers of affected districts are unable to present their case in Washington and through us they depend on your well known desire and ability to get relief."

**Farmers Should Get Together.**

It is urged by those active in the movement that farmers discover their needs for seed wheat at once and let the seed wheat committee, of which E. G. Schafer of Pullman, is secretary, know their needs at once. It is almost equally important that those having fall wheat seed for sale let this committee know, so that it may be planted where most needed.

Some aid will likely be received from the government's appropriation of $5,000,000 for the purchase of seed wheat by creditless farmers, but this will serve at best only where the seed can be bought. The big question is how to find the seed needed.

The plans for distributing the government's $5,000,000 appropriation are being worked out at Helena, Mont., by a committee in session there at this writing. For the northwest the loans will be handled through the federal farm loan bank at Spokane. Secretary George C. Jewett of the farm loan bank explains the plan in general as incompletely worked out as follows:

**For Emergency Only.**

"The money has been appropriated by the president from the emergency war fund. It is purely a charity fund and is limited in amount. Districts should take local pride in getting along without it as far as possible as it is intended only for relief in the most aggravated cases. In lending this money, the government is departing from usual loan procedure. In fact, it is doing the opposite to usual banking practice—it is only lending to the man who has no unencumbered real estate, no personal property and no credit at his local bank. If he can possibly get along without this aid, he will not receive any government assistance.

"Applications must be made to Mr. Christie, through our regularly appointed agents, which will doubtless be the national farm loan associations and the commercial banks. The county agents will investigate each application, the nature of the soil and the ability of the farmer to make good his loan. If Mr. Christie approves the loan, it comes to the land bank. If the land bank approves it, a certificate of approval is sent to Mr. Christie and to the farmer. When his ground is planted, and the note is secured by a chattel mortgage or a crop lien, he gets his money. He can secure his seed on the credit afforded by the certificate of approval.

"Loans will be made on the basis of a maximum of $3 per acre, with a maximum to one man of $300. These loans will run until October 1, 1919, with interest at 6 per cent per annum. The land bank must collect. If the farmer's 1919 crop is above seven bushels to the acre he must pay into a guarantee fund to take up possible losses elsewhere a sum of 15 cents per acre."

## Protest Rates

### Would Reduce Freight on Fruits

Representing the public service commissions of Washington, Oregon and Idaho, O. O. Calderhead, rate expert for the Washington commission, has filed a complaint with the interstate commerce commission at Washington, D. C., against the recent 25 per cent advance in freight rates as it affects the freight on fruits and vegetables. The complaint charges that the advance is unjust, unreasonable and discriminatory.

Mr. Calderhead has compiled figures showing that the increase in the freight on fruits increases the cost of shipping from the northwest $2,500,000 a year. He declares that the increased rate places the fruit-growing industry of the northwest in a serious condition. He will soon file a similar complaint covering the 10 per cent advance in the express rate on carload lots of berries, fruit and fish from the northwest.

## WANT $2.46 FOR WHEAT.

### President May Be Considering It.

An unofficial dispatch from Washington, D. C., says that the food administration's advisory committee, dealing with fair prices of grains, flour, feed and other staples, has recommended that President Wilson fix the price of next season's wheat crop at $2.46 a bushel. The same unofficial report says it is understood that Food Administrator Hoover has expressed to the president opposition to the increased price. It is probable that President Wilson will before long issue a proclamation indicating the price to be paid for the 1919 crop. This likely will come early in order to influence the planting of a large acreage this fall.

## Crop Is Good

### Much Food Has Been Produced

Although the July crop report of the U. S. department of agriculture estimates the total wheat production of the U. S. this year at 13,000,000 bushels less than the estimate covering June conditions, the report taken as a whole shows a great production of the foodstuffs of the country. Notwithstanding this, the dry weather and heat combined to cause serious losses to the producer.

In round figures the loss to farmers of this prospective production is roughly estimated at almost $750,000,000, more than $450,000,000 in the principal grain and food crops and $250,000,000 in cotton.

Corn, the country's greatest crop, was the heaviest sufferer from the dry and hot weather of July, losing 171,000,000 bushels in prospective production since the first production forecast was made from June conditions. The monetary loss to corn growers is around $275,000,000. From most every part of the country there came reports that corn this year is from two to three weeks ahead of its average condition, indicating that practically all of the crop will mature before the dates of first frost. That condition should assure the minimum injury from frost damage.

Wheat, the harvesting of which is nearing completion, suffered a loss of 13,000,000 bushels, yet the crop will be much larger than last year's and also bigger than the average of the five years before that.

Drouth and heat made inroads on potatoes, causing a loss of 15,000,000 bushels in the prospective crop, and sweet potato production loss was estimated at half that quantity. A notable exception in the forecasts was that of tobacco, which showed an increase of 41,000,000 pounds in the prospective crop over the forecast made in July.

Production of winter wheat this year was announced today in its preliminary estimate at 556,000,000 bushels.

Spring wheat production was forecast at 322,000,000 bushels from August 1 conditions.

Production of all wheat was estimated at 878,000,000 bushels.

Corn production was forecast at 2,989,000,000 bushels from August 1 conditions.

Other forecasts of production, based on the August 1 canvass, were announced as follows:

Oats, 1,428,000,000 bushels; barley, 232,000,000; rye, 76,700,000 preliminary estimate). White potatoes, 391,000,000; flax, 14,800,000; rice, 41,600,000; hay, 99,300,000; sugar beets, 6,360,000 tons; apples, 199,000,000 bushels; peaches, 40,900,000 bushels.

## Milk Goes Up

### Distributors Get Nearly Half

Following a conference with the state food administrator last week, the Inland Empire Dairy association and the milk distributors of Spokane, Wash., announced an increase in the price of milk delivered in bottles from 14 cents to 15 cents a quart. The new schedule provides that where two quarts or more are delivered daily it shall be 14 cents a quart, but where only one is delivered, 15 cents. Restaurants will be required to pay 42 cents a gallon for milk in bulk.

One of the significant calculations made in connection with the charge is that where milk is delivered in quart bottles for a total of 60 cents per gallon almost half of this amount goes to the distributor. To be exact, the distributor gets 29.47 cents and the producer of the milk 30.53 cents of the 60.

The price to be paid to the producer by the distributors is $3.55 per 100 pounds for milk testing 3.6 butter fat, with a premium of 5 cents per point for milk testing above 3.6 and a deduction of 5 cents per point for milk below that test. The prices are f. o. b Spokane. The price previously paid was $3.32 per hundred for milk testing 4 per cent, or an equivalent of $3.12 per hundred for 3.6 per cent milk. This makes a total increase to the producer of about 43 cents per 100 pounds. The greater share of the increase goes to the producer, who receives 3.7 cents out of the 4 cents increase per gallon.

In connection with the announcement of the increase in milk price the state food administrator issued a statement urging the people to continue to consume milk freely, declaring that even at the advanced prices of the present time it is a cheap food compared to the other necessities.

## Fix Feed Prices

### Mill Feed and Flour Scheduled

The federal food administration has announced a revised fair-price schedule covering flour and mill feeds. The table herewith shows these prices at representative points throughout the United States, with special reference to the northwestern milling points. The prices are for carload lots in bulk. They will be higher when purchased in bags or packages, depending upon the size and character of the bags or packages. Three other factors affect the price to the consumer as follows: (1) The freight from the milling point to consumer, (2) a charge jobbers may make under certain federal limitations (50 cents maximum per barrel for flour), and (3) a charge retailers may make to cover profit and cost of handling ($1.20 maximum per barrel for flour). The charges the jobber and the retailer may make on the mill feeds corresponds to the charges allowed on flour.

The following are prices fixed at several representative milling points, and are for flour per barrel and feed per ton, in bulk, in carload lots:

| | Flour. | Bran. | Middlings, Shorts Mixed and Red Feed. | Dog. |
|---|---|---|---|---|
| New York | $10.61 | $30.26 | $31.51 | $32.26 |
| Louisville, Ky. | 10.30 | 26.86 | 28.11 | 28.86 |
| Galveston, Texas | 10.23 | 29.76 | 21.01 | 31.76 |
| Buffalo, N. Y. | 10.33 | 28.16 | 29.41 | 30.19 |
| Cleveland, Ohio | 10.33 | 27.76 | 20.01 | 29.76 |
| Duluth, Minn. | 10.05 | 23.36 | 24.61 | 25.36 |
| Minneapolis, Minn. | 10.01 | 23.36 | 24.61 | 25.36 |
| Grand Forks, N D. | 9.77 | 20.82 | 22.07 | 22 82 |
| Great Falls, Mont. | 9.33 | 16.67 | 17.92 | 18.67 |
| Aberdeen, S. D. | 9.65 | 19.95 | 21.20 | 21.95 |
| Wichita, Kan. | 9.58 | 19.41 | 20.66 | 21.41 |
| Ft. Worth, Texas | 10.12 | 28.66 | 29.91 | 30.66 |
| El Paso, Texas | 10.36 | 31.16 | 32.41 | 33.16 |
| Omaha, Neb. | 9.89 | 22.26 | 23.51 | 24.26 |
| Kansas City, Mo | 9.85 | 22.26 | 23.51 | 24.26 |
| Pocatello, Idaho | 9.02 | 24.63 | 25.88 | 26 63 |
| Moscow, Idaho | 9.52 | 19.11 | 20.36 | 21 11 |
| Colfax, Wash. | 9.52 | 19.11 | 20.36 | 21.11 |
| Odessa, Wash. | 9.57 | 19.57 | 20.82 | 21.57 |
| Kennewick, Wash. | 9.62 | 20.04 | 21.29 | 22 04 |
| Seattle, Wash. | 9.95 | 23.19 | 24.44 | 25.19 |
| Portland, Ore. | 9.96 | 23.19 | 24.44 | 25 19 |
| Pendleton, Ore. | 9.61 | 19.95 | 21.20 | 21 95 |
| The Dalles, Ore. | 9.76 | 21.37 | 22.62 | 23.37 |
| Eugene, Ore. | 9.65 | 20.33 | 21.58 | 22 33 |
| Baker, Ore. | 9.48 | 18.73 | 19.98 | 20.73 |

**Milk 18 Cents Per Quart.**

The maximum price for milk in Rome has been fixed at 18 cents per quart. In 1914 the price was from 6 to 8 cents per quart.

THE WASHINGTON FARMER

VOL. XLI. NO. 33.

Trade Mark Registered U. S. Patent Office.

PUBLISHED WEEKLY ON THURSDAY.
REVIEW BLDG., SPOKANE, WASH.
444 Yates Bldg., BOISE, IDAHO.
411 Stock Exch. Bldg., PORTLAND, ORE.
617 Central Bldg., SEATTLE, WASH.

To either of which communications can be sent, but to avoid delay address office nearest you.

ABC Member. Audit Bureau of Circulations. Associated Farm Papers. Agricultural Publishers' Association.

Eastern Representatives:

S. E. Leith, Fifth Avenue building ..... New York
Tom D. Costello, Steger building ..... Chicago
C. A. Cour, Fullerton building ..... St. Louis
R. R. Ring, Palace building ..... Minneapolis

Subscription price: One year, 25c; three years, 50c; five years, $1.00. Canadian, one year, 75c. Foreign, one year, $1.25.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on acconut of disease in stock sold through these columns.

## U. S. Bonds or Wildcats, Which?

As strange as it may appear, there are many American people trading their Liberty bonds for stock in all manner of unproved corporations. The treasury department has found it necessary to issue a warning against it. It appears a patriotic thing for a dealer in the stock of some concern to place a big colored sign in the window of his place of business: "Liberty Bonds as Good as Cash."

To be sure Liberty bonds are as good as cash. That is why the man who has worthless or doubtful stocks to sell is willing to accept them, and that is one reason why the owner should keep them. They are Uncle Sam's promise to pay, and the promise is guaranteed by all the resources of 100,000,000 people and 48 broad states. It is not amiss to repeat the old, old warning: Make sure what you are getting before you invest money or government bonds in the stocks of any company, and require double proof before you invest in those of a concern that promises exceptional returns.

Just because you are allowed to is no sign you should. Do better than is required of you. Anybody can do what he has to do.

## Drainage, Rotation, Live Stock

The ability of the soil to withstand an extreme drouth or an unusually wet season can be developed to a great extent by proper farm management, according to observations made in Whatcom county. These essential factors are good drainage, proper rotation, and the keeping of a number of live stock and conserving the manure.

Good drainage opens up the soil to a greater depth and thus liberates more plant food. The roots will consequently go deeper where there is a reserve of moisture which they can draw from during a drouth. Good drainage will drain quickly all surplus water which ordinarily stagnates during the wet seasons of the year. On the other hand, it aids capillary attraction during a drouth. It breaks up the large clods which are found on poorly drained bottom lands. These clods are sometimes impregnable to the roots of plants.

Proper rotation in Whatcom county includes a hay crop—usually clover, timothy or rye grass—a cultivated crop, including potatoes, stock roots or corn, and a light grain crop, either cut for hay or grain and sometimes planted as a nurse crop when planting the grass seed. Meadows are generally left too long in grass rather than too short time before they are plowed up. When the meadow lies too long in grass, weeds and foreign grass take possession, killing out the tame grass. Meadows produce the best yields if not left in grass over three years. It is not good farm management to plow up a meadow and then seed it down to grass again immediately. If it is left open for two years and cultivated for at least one year, the sod will have a chance to become broken up and the soil will be in a better mechanical condition.

Manure is just as valuable a product on every farm as certain products which are sold on the market for cash. However, the farmer who cares for it and returns it to the land with discretion reaps the benefit indirectly through the sale of his product. No soil can go on indefinitely producing crops without receiving something in return. C. J. M.

We must let no vegetation lie unused this year. If it is not good for feed, rot it and put it back into the soil.

## Packages Come High

When we buy flour, or substitutes for it, in sacks containing only a few pounds, a big percentage of the cost is to cover the sacks. When we buy corn meal or other meal in pound or two-pound paper packages with colored designs on the outside wrapper, from 10 to 25 per cent of the cost of the goods is to cover the package. The smaller the contents of the package the greater percentage of cost is to pay for the latter. It costs money to put things up in cotton or glazed paper, and it probably costs the purchaser twice as much as it does anybody else connected with the transaction. And one thing is as certain as a casualty list: As long as we demand or accept our purchases in fancy form, we will have to pay the price.

The boy or girl who learns to do today's job this very hour has learned a lesson that will bring success.

## Another Form of Reclamation

The United States reclamation service has succeeded in its great undertaking of redeeming large areas of arid land through irrigation. There yet remains much land to be put under water and thereby made productive, but the practicability of the undertaking has been demonstrated many times over.

There is another great field for reclamation work, namely, the stump land of the nation. Is there not in this logged-off land an opportunity scarcely second to that afforded by the one-time deserts? As barren wastes have been made productive by water, can not equally useless cut-over lands be made productive by clearing under government leadership? The problem is worth studying. The time is at hand when more people must turn to the soil for their home-making, and any movement that will convert lands now useless into productive farms and cause to be built thereon successful homes is worthy of the deepest consideration of the nation's statesmen. A beginning is about to be made in a small way. Congress has appropriated $100,000 for preliminary investigation of the logged-off land question, together with that of drainage. The work should be followed with interest by the people of the northwestern states.

What agony the ambition of a few men have brought to the world in four short years! What a terrible lesson to the ambitious!

## Nonessentials Should Pay

Wherever it is possible the luxury should bear the war tax and the necessity be relieved as greatly as possible. It is not always possible to make this division, however. One ease at point is that of the automobile. When the government places a tax on gasoline it is comparatively impossible to make the nonessential use of it pay a greater proportion of that tax than the essential use of it. If it were the gasoline for most farm automobiles it would be exempt from taxation, for by far the greater use of the farmer's machine is for business rather than for pleasure. Even when used for pleasure the auto on the farm is in fact a business asset. Too long the world has assumed that the producer requires no recreation. The evening's spin for the family or a trip to the fair isn't a luxury to the farmer's family and to himself; it is a necessary part of their efficient life. It is too bad that the taxes can not all be placed upon the motoring that is pleasure for pleasure's sake only.

Before we undertake anything let's ask ourselves: "Will it help win the war?"

## Communities Can Cooperatively

The three words in this heading may be interpreted more ways than one. Communities throughout the country have united in the conduct of canning plants for the purpose of conserving all the fruit and vegetables possible. And they have succeeded. They can can fruit by the cooperative method, and they can do almost anything else cooperatively that they set their minds to. Cooperation is this decade's big word. Civilization is relying today upon the cooperation of more than twenty nations in their warfare against a great enemy. Never was the possibility of united effort so wonderfully and irrefutably demonstrated at home and abroad. The civilized world is cooperating. The people of America are cooperating. Communities are cooperating. And communities can cooperatively do anything that should be done.

Do not figure on getting something for nothing. Something for nothing is the most costly transaction a person can make.

## Should Mill Grain in Northwest

On the grounds set forth by the bureau of agriculture of the Spokane Chamber of Commerce—namely, the disaster that will befall the live stock and dairy interests if intelligent provision is not made for feedstuffs—the national food administration should allow the mills of the Pacific northwest to grind wheat to capacity. That action would not reduce by a single barrel the quantity of flour going from this region to our armies and allies in Europe. It would simply keep here, where it is badly needed, the bran and other by-products of the milling industry.

But there is another consideration that should sway the government to favorable action. Existing conditions lay a wasteful burden on the railroads now operated by the government. When the roads carry whole wheat to the mills of the middle west they carry the bran, shorts and middlings that are in the wheat, and take them to a region that has abundant feedstuffs. Deprived of the feedstuffs from their own wheat, the farmers of the Pacific northwest are forced to bring in corn, hay and other provender for their horses, cattle and poultry.

That means a waste of railroad service at a time when the government needs every locomotive, every car, every hour of labor and every possible ton of coal for the operation of

There are people right here in the United States who, though they shout and parade and declare their patriotism, should be taken before a firing squad at sunrise.

## Get Ready to Be Brave

Already many American homes are saddened, and yet rejoiced, because of a little cable message from France. A few thousand of these messages have come telling of the fall of America's sons, young men who have won, in the words of Theodore Roosevelt, "the prize of death for a lofty ideal." Soon these messages will be coming faster. They will come by thousands, even by tens of thousands. And when they do America must be brave. When one man falls we must send a score to take his place. When one gives his life we must double our efforts to send food and munitions to save the life of his fellows. We must make every loss a gain; we must make every blow struck by the enemy of mankind rebound in double force against the striker. Come what may, let no American falter. But rather let the coming of the casulty lists, as come they must, inspire us all to greater effort, greater determination and greater dedication of our every power to the cause for which the fallen have died.

# Allies Still Make Advance

## *Marne Success Is Followed by Drive in the Somme Sector*

The week just closed has seen an advance by the allies on the northern front almost if not quite equal to that of the previous two weeks on the Marne front before Paris. Both successes are important from several points of view. The battle line between Rheims and Soissons is practically straightened out, increasing the distance of the nearest German force to Paris to at least 60 miles. Following the successful drive on that front, the British, French and Americans launched a similar drive on the front directly before Amiens, which is the strategic railroad center of the northern front so greatly menaced by the Germans last April. At this writing this drive has resulted in the driving of a wedge straight into the German lines some 15 miles, bringing the capture of the town of Chaulnes, the key point to the present German strength in that sector. This leaves a pocket to the south of this latest drive, with Montdidier near its deepest point to westward. Montdidier has fallen into the hands of the allies. Allied guns are able to command all parts of this pocket, and it appears at this time that the supplies to the Germans in this pocket are practically shut off. The capture of Chaulnes leaves them no satisfactory railroad connections by which to effect their retreat, and indications are good for the capture of a considerable portion of those still in that locality.

It is estimated that the allies have captured at least 36,000 Germans on this Amiens front in the last week. The Marne drive resulted in the capture of nearly 30,000. Reports indicate that the facts in the case are still unknown so far as accurate figures are concerned. No estimates at all are made of the casualties on either side, but it is believed that they are less heavy than those resulting from the German drives of the last several months.

It is reported that the Germans are rushing reenforcements in about Noyon, which lies about midway between Montdidier and Soissons. This is directly before the pocket in which the German troops are all but trapped. It is probable that the enemy is planning to resist as strongly as possible at this point, with a view of preventing the closing of the pocket until those near the bottom of it can work their way out.

### May Be Getting Ready for Spring.

Whatever may be the meaning of the developments on the battle fronts during the last month, it is considered probable, if not certain, that the allied leaders are preparing for a gigantic offensive against the Germans and Austrians next spring, with a view to bringing the war to a close before the winter of 1919. The certain enactment of the bill extending the draft age limits in this country seems to be in accordance with this supposition. It is expected that the American army in France will total at least 3,000,000 thoroughly trained men by the time the spring offensive could be opened, and that back of this big force would be 2,000,000 men ready to move forward as rapidly as transportation would permit and the need required. The decision of the war department to call for the extension of the draft age to include all men from 18 to 45 years of age for the purpose of rapidly increasing the size of the United States army appears to have come following the conference between allied leaders in Paris, which is another point seeming to indicate the united plan for an overwhelming campaign next spring.

### No Immediate End of the War.

Unless the recent reverses of the German armies mean that there has been a psychological breakdown somewhere within the German lines, the gains of the allies should be looked upon as of only temporary significance, though even then of much importance. It would be a great error to assume that the present drive indicates any effort on the part of the allies to end the war this year. It seems more probable that the efforts have been for the purpose of wiping out the immediate menace to Paris and the channel ports and at the same time dealing a death blow to German confidence. Reverses of this nature will render it exceedingly difficult for German leaders to maintain a fighting spirit at home and to utilize the winter months successfully preparing for the spring campaign. On the other hand, the allied successes, coupled with the rapid growth of the American forces in France, give the allied peoples courage and confidence and enable them to use the winter season for the building up not only of war material, but war spirit as well.

### American Casualties Come in Slowly.

There are no figures available to show the number of men killed, wounded or captured in the Marne drive, much less the Amiens drive. So far the total number of American casualties reported since the entrance of this country into the war is about 20,000. Of this number about 7800 are deaths, about 9800 wounded and the remainder missing or captured. Of the deaths a little less than half resulted in action, the other half being from disease or wounds. Those missing, including prisoners, total a little more than 1500. What percentage of these are prisoners in the hands of Germany is not known.

### Registration Will Be September 5.

Under the plans of the war department the men included in the provisions of the new draft act will be registered on the 5th of September. Congress is expected to take up the questions of the measure as soon as it reconvenes after its summer vacation on August 26. The committees having charge of the measure in both houses will have it in form for immediate action at that time, and it is considered probable that it will be adopted in the exact form recommended by the war department, with practically no delay. Secretary Baker has indicated that it is the desire of the war department to call the new registrants between the ages of 19 and 21 and the unmarried men between 31 and 45 as rapidly as possible if the measure becomes effective. It is planned to remove from the registered men the necessity of applying for exemption, but rather to have them give complete information concerning the points that might entitle them to exemption or deferred classification, allowing the exemption boards to exempt or defer those whom it desired to. The secretary says that he leans to the belief that married men should be placed in deferred classifications.

### Voluntary Enlistments Are Stopped.

In order to prevent disturbance of business conditions the war department, including the navy as well as the army, has stopped all voluntary enlistments until after the enactment of the new draft act. Immediately upon the announcement that the act was being planned to extend the draft ages to include boys from 19 to 21 years and men from 31 to 45 recruiting offices were flooded by those affected, who sought to enlist voluntarily in chosen branches of the service.

### Many Ships Are Put Afloat.

So far this year the United States has constructed and launched ships having a carrying capacity of 1,719,000 tons. There were 123 new ships launched in July, with a total tonnage of 631,000. Forty-one other vessels, with more than a quarter million tonnage, were completed in July but not yet launched. The total tonnage by months this year is as follows:

January, 88,507; February, 123,625; March, 172,611; April, 160,286; May, 259,241; June, 283,322; July, 631,944.

### McAdoo Would Curb Profiteers.

Secretary McAdoo of the United States treasury has declared himself in favor of the flat tax of 80 per cent on excess profits. In regard to this matter he said: "The adoption of an 80 per cent war profits tax should render unnecessary, and I believe undesirable, an increase in the existing profits tax rate."

### Persident Will Pay Big Income Tax.

If the measure being drawn up by the ways and means committee of the house of representatives in congress is enacted in full President Wilson will be required to pay an income tax of $24,000 on his $75,000 salary. Each member of the supreme court of the United States will have to pay $1000 on his $12,500 salary. It is possible that this feature of the measure will be declared unconstitutional, however, as there is a constitutional provision which may prohibit the taxing of the salaries of public officials.

### England Wants Flour, Not Wheat.

Reports that the British government desired the cessation of the shipment of flour in milled form from America to England, but wanted the unmilled wheat instead, have been vigorously denied by London. The continuance of the shipment of all flour that can be spared by this country is urged.

### Stockyards Under Government Control.

The government has taken over the control of all stockyards throughout the country. The object is to guarantee their efficient operation and prevent unfair dealings with the producers of live stock. The yards are required to take out licenses, which may be revoked in case of their failure to live up to the requirements of the regulations.

### Food Conservation Must Continue.

The food administration representatives of the allied nations, who have been in conference in London and Paris recently, urge upon the people of America the continuance of the campaign for increased food production and conservation. The conference at London adopted the following resolution:

"Resolved, That while the increased production of the United States renders it possible to relax some of the restrictions which have borne with peculiar hardship upon all our peoples, yet it is absolutely necessary that rigid economy and elimination of waste in the consumption and handling of all foodstuffs, as well as increased production, should be maintained throughout the European allied countries and in North America.

"It is only by such economy and elimination of waste that the transportation of the necessary men and supplies from North America to the European front can be accomplished, and that stocks of foodstuffs can be built up in North America as an insurance against the ever-present danger of harvest failure and the possible necessity for large and emergency drafts to Europe. We can not administer the food problem on the basis of one year's war. We must prepare for its long continuance if we are to insure absolute victory."

### Free Information Bureau.

The Washington Farmer has established an INFORMATION BUREAU at the NATIONAL CAPITAL, which is at the service of its readers and which they are asked to use freely. It is intended to be a clearing house of governmental information. Address inquiries (includingg 3-cent stamp) to THE WASHINGTON FARMER INFORMATION BUREAU,
Washington, D. C.

## *Washington Gleanings*

There were several hundred in attendance at the annual picnic of Skagit county pioneers held at Weaverling Point August 1.

Sell Ray, a former rancher near Satsop, has bought nearly 1000 acres of land at Ceres, Lewis county, which he expects to develop into a sheep ranch.

Women teamsters have made their appearance at Vancouver, Wash. A coal company and an oil company have employed women to drive their teams, and report the work satisfactory.

E. J. Crane, drainage specialist of the Washington State college, is to help the Clarke county farmers to increase the acreage under cultivation by proper drainage of soggy or marsh lands.

Frank Durrah, a dairy farmer of Wahkiakum county, has completed the building of a thousand-dollar concrete milk house. It is equipped with hot and cold water and other features designed to insure convenience and proper sanitation.

It is officially stated that the military quarters at Camp Lewis at American Lake will be increased to accommodate 75,000 or more men in the near future. Heretofore accommodations have been available for approximately 50,000 men.

A report from Vancouver, Wash., says that plans are under way for the establishment of a public market designed not only to serve the people of the city, but to afford the farmers of Clarke county a market for a portion of their produce.

Announcement is made that 41 carloads of dressed and kiln-dried spruce for airplane production have recently been shipped from Vancouver, Wash. The shipments totalled about 900,000 feet, calculated to be sufficient for 900 ordinary airplanes.

Reports from Okanogan county indicate that grasshoppers are doing considerable damage in some parts of that section. The shortage of green stuff on the hills has driven many of them to the cultivated lands in the river valley, it is believed.

Dairymen of Clarke county have recently purchased some 400 tons of alfalfa hay in the Wenatchee district for shipment to the dairy farms near Vancouver. It is reported that the price was around $25 a ton for first class hay f. o. b. shipping point.

The big 97x117-foot two-story factory and warehouse building erected by the Lewis County Canning association at Chehalis is nearing completion. An addition of 25,000 square feet of floor space is provided to the original 11,000 square feet built three years ago.

The women of Aberdeen have organized themselves into an auxiliary army corps similar to the Tommywaacs of England. The immediate aim of the corps is to develop discipline, provide a trained organization for any war service and to raise standards of womanhood.

Elaborate plans are being made for the dedication of the Riffe bridge, Lewis county, which is to be held on its completion, some time in September. Some of the speakers will be Senator Ralph Metcalf, Senator A. E. Judd, Senator Herbert Weatherspoon and Lawrence Wood of the United States employment service.

From a payroll point of view the airplane spruce operations in the Pacific northwest have suddenly leaped into the same class as the shipbuilding industry. There are 25,000 workmen in the shipyards of Oregon and southwestern Washington, and nearly that same number of soldiers and civilians getting out airplane spruce.

A report from Whatcom county tells of the installation by five farmers in the Lynden district of electric plants for various uses about their farms. Some of them will use the plants to light their poultry houses during the fall and winter, with a view to giving the hens more "daylight" in which to scratch, eat and produce eggs.

Island county, Washington, still claims the world record wheat production. The record for that county as recorded by the department of agriculture, which is convinced as to its accuracy, is 117.2 bushels per acre on a field of 18 acres. The wheat was planted on land that had been used for several years as a cattle and sheep pasture.

The women's service league of Snohomish has been gathering berries and converting them into bottled juices to be used as beverages at the base hospitals. Berry farm owners of the county have been generous in giving part of their crops to the league, and the women have succeeded in bottling more than 100 quarts of the juice.

It has been estimated that at least one slice of bread is wasted each day by the average American family. If this is true it means that about 1,500,000 barrels of flour are wasted in this manner each year in America. Since it takes four and one-half bushels wheat or thereabouts to make a barrel of flour, this means a wastage of some 7,000,000 bushels of wheat, which, at an average yield per acre, means wastage of 670,000 acres of wheat land.

It is reported that under the supervision of the state meat inspection department at Seattle horse meat is being tried out as a substitute for beef and pork needed by the allied armies. Those backing the experiment believe that this will afford not only a means of increasing the meat supply, but will also give a real value to the scrub horses found in a number of localities throughout the state.

# Terrific Indictment

## *Packers Charged With Practices Criminal in Time of Peace and All but Treasonable in Time of War.*

The five great packing concerns of the United States are put under terrific indictment in a report to President Wilson by the federal trade commission. The findings are so sensational, the remedy recommended to the president so drastic, that we give the commission's report extended space on page 15.

In brief, the commission charges that the packing interests, aided and abetted by powerful banking interests, have conspired to—

**Manipulate live stock markets.**

**Restrict interstate and international supplies of food.**

**Control the prices of dressed meats and other foods.**

**Defraud both the producers of food and the consumers.**

**Crush effective competition.**

**Secure special privileges from railroads, stockyards companies and municipalities, and**

**Profiteer.**

The high character of the commission that makes these findings will estop the packers from putting up the old plea that they are victims of "muckraking." The federal trade commission is composed of five eminent commissioners, appointed by the president and confirmed by the senate, paid $10,000 a year each, and prohibited from engaging in any other business, occupation or employment.

The report is not made on hasty or superficial inquiry, and was not given to the public until the president had carefully weighed his action. It was submitted to President Wilson on July 5, and given out from the White House August 8, with no further comment than that it had not been made public sooner because the president desired first to get full information.

Undoubtedly the government will follow up these revelations with vigor, and the American people, consumers as well as producers, will await with profound interest further developments. The gravity of the offense, if the charges are true, could hardly be exaggerated. In a perilous hour of world danger, when the nation has been admonished over and over again that food will win the war, and the most insistent appeals are made to farmers to make extraordinary effort to increase production, the United States trade commission charges the packers and their financial backers with a conspiracy that could only have the certain effect of restricting production by laying intolerable burdens upon the producers.

The practices here charged against these great interests would be criminal in time of peace. If the accusations are true, the offense would be all but treasonable in time of war.

**It Helps Out.**

I would not be without the Washington Farmer, as it helps out in lots of ways.

P. E. BALL.

Daisy, Wash.

### Get Special Rate to Fairs.

The railway administration has announced that special rates will be made to all of the state fairs and a number of the other important fairs of the northwest this season. The rates will be one and one-half the present one-way fare.

# Security League Cites Record of Congressmen on Big War Measures

The National Security league, with headquarters in New York, has been digging into votes on war measures, and has issued a chart giving the votes of members of congress on eight measures. The measures are selected, it is said, because of President Wilson's opposition to the candidacy for reelection of Congressman Slayden of Texas because he opposed these measures. Congressman Slayden withdrew because of that opposition. Mr. Slayden voted for the conscription bill and the declaration of war, "but had been a consistent opponent of preparedness," the announcement says.

Two northwestern congressmen, La Follette and Dill, both of Washington, are included among those covered by the report of the Security league, and the people of their districts are wondering what attitude the president will take toward them.

The eight measures used by the security league's committee in the compilation of the chart are:

No. 1—McLemore resolution; March 7, 1916. This resolution was to the effect that American citizens should forego their natural, legal and constitutional rights to travel on the high seas.

No. 2—Kahn amendment to the Hay army bill; March 23, 1916. This amendment sought to increase the regular army to 178,000, or more nearly approaching the recommendations of the general staff of the army.

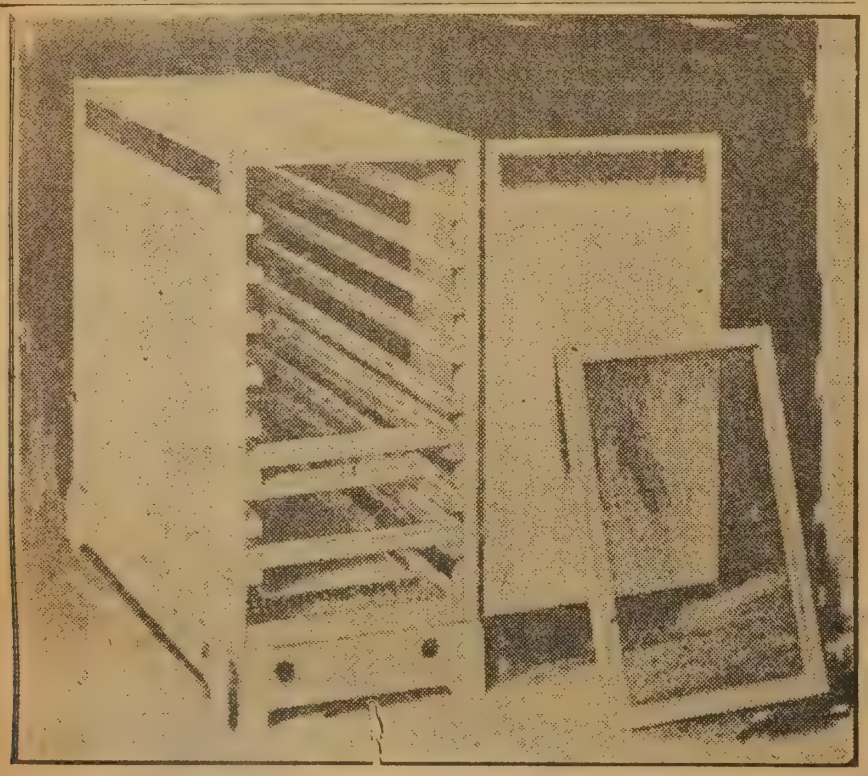
No. 3—Brandegee amendment to the Hay-Chamberlain army bill; April 18, 1916. This amendment provided for an army of 250,000 as against 140,000.

No. 4—"Section 56" providing for a volunteer reserve army wholly under federal control; April 18, 1916.

No. 5—Motion to recommit naval appropriation bill; June 2, 1916. This motion was designed to secure an increase in the navy beyond what was provided in the original bill.

No. 6—Cooper amendment; March 1, 1917. This amendment was designed to prohibit to American ships their legal right to carry arms or ammunition in their cargoes.

No. 7—Declaration of war against Germany; April 5, 1917.



No. 8—Kahn amendment to conscription act; April 23, 1917. This provided for the raising by conscription of the necessary army to give effect to the declaration of war.

"The seven congressmen who voted wrong on all eight measures are: Church of California, Hilliard of Colorado, Keating of Colorado, London of New York, McLemore of Texas, Nelson of Wisconsin, Van Dyke of Minnesota," says the league's report.

"The 22 who voted wrong on seven of the measures are: Browne of Wisconsin, Cramton of Michigan, Davis of Minnesota, Decker of Missouri, Dill of Washington, Dillon of South Dakota, Haugen of Iowa, Helgesen of North Dakota, Hensley of Missouri, Hollingsworth of Ohio, Hull of Iowa, Igoe of Missouri, La Follette of Washington, Lobeck of Nebraska, McCulloch of Ohio, Randall of California, Ramseyer of Iowa, Shackleford of Missouri, Slayden of Texas, Sloan of Nebraska, Sherwood of Ohio and Woods of Iowa."

# This Year Demands Much Drying of Foodstuffs

The United States department of agriculture recently issued a new bulletin entitled, "Farm and Home Drying of Fruits and Vegetables." It covers more than 60 pages, and is full of information that people everywhere who have any vegetables or fruits to save should possess. While any one can secure a copy of the bulletin from the department of agriculture at Washington, D. C., or through many of the county agents and chambers of commerce, the suggestions given warrant the publication of this digest of the methods given in it for some of the commonest products of the northwest.

One type of drier to be used over common stove.

A satisfactory solar drier may be made from an ordinary window sash and a packing box having a length two inches less than that of the sash, a breadth three to four inches less, and a depth of 18 to 24 inches. Remove the boards from the longer sides of the box, leaving the ends and bottom fastened together. The ends must be cut off so as to give the top the desired inclination. Measure off 10 inches from the bottom of the box along the edges of the end pieces at one side; upon the opposite side measure off 20 inches; draw a line between these points and saw off the ends along these lines. This gives a frame for a box 20 inches in height at the higher side or back and 10 inches high at the front. Select from the boards removed from the sides two straight-edged pieces, each about four inches wide; nail one of these to the two end pieces at the back, with its upper edge exactly flush with the upper edge of the end pieces. Now lay the sash in place and nail the second long strip in place at the top of the front of the box, taking care that the sash makes close contact at all points with both sides and ends. At the back of the box measure off six inches from the lower edge of the top board; leave this space open to serve as a ventilator and board up the remaining distance solidly. There is a similar six-inch open space at the front between the top board and the floor of the box which is also to serve as a ventilator. Cover both ventilating openings with close-meshed wire cloth, such as one of the better grades of mosquito-proof netting, turning in the free edges so as to give a smooth surface which will not catch the clothing of the operator. Attach the window sash by two light hinges to the strip forming the top of the back of the drier, so that it may be easily raised and lowered to get at the contents. With a plane, go over all surfaces upon which the sash rests, smoothing them down so that the sash fits closely, to exclude insects, and the drier is complete. For convenience in handling the material a tray fitting into the bottom of the box may be made, or the products to be dried may be spread upon papers or canvas placed upon the bottom boards.

Owing to the uncertainty of the sun's shining just when it is needed, it is often advisable to use artificial heat. In last week's issue of the Farmer a dryer designed by the Oregon Agricultural college was described. Something in the nature of it might be utilized by those needing to conserve large quantities of fruit and vegetables, but for the average household a smaller dryer for use in connection with the kitchen stove is advisable. There are any number of possibilities along this line, the illustration on this page being but one of many that might be utilized.

The process of blanching with hot water or steam generally employed with vegetables can not be applied to apples, pears, apricots and peaches. These fruits are valuable primarily for the sugars they contain; these are present in soluble form and are in part lost by diffusion into the water in which the blanching is done, and in considerably greater amounts escape later in the dripping of juice which follows the application of heat to the scalded or steamed fruit. For this reason such fruits are treated with the fumes of sulphur for a short time before drying begins. In fruits so treated, chemical changes are arrested, discoloration and blackening due to the oxidation of tannin does not occur, and the dried product has practically the color of the freshly exposed flesh of the fruit from which it was made. While sulphuring is sometimes called bleaching, the use of this term is misleading, since sulphur fumes do not bleach or whiten the fruit, but merely prevent darkening after the treatment. As the purchasing pub-

### PEA YIELD FAIR.

### Nearly One-Half Million Bushels.

O. E. Moss of Fairfield, in southern Spokane county, estimates the yield of peas in the Fairfield district between 400,000 and 500,000 bushels this season. Notwithstanding the fact that the drouth and hot weather have greatly reduced the output, the acreage in that vicitnity, which is the leading pea district in the state, is nearly 30,000 acres this year. Mr. Moss says that the yield will average 20 bushels to the acre, with some fields going as high as 40 bushels. He says there are 21 threshing machines in that section threshing peas alone.

The growers are receiving from four to six cents a pound for their peas, delivered to the warehouses. Most of them are contracted to seed companies before being planted. The companies furnishing the seed and the sacks in which to store the crop. Some of these seed companies have established, or are establishing warehouses at shipping points in the vicity of Fairfield.

### Walla Walla Has Good Crop.

County Agent H. H. Boone of Walla Walla estimates the wheat crop of that county this year at 4,000,000 bushels. He believes that about one-fourth of this yield will be handled by the bulk method.

# Plan Club Fair

## Clarke County Workers Succeed

By HORACE ADDIS.

The Industrial club workers and members of Clarke county, are rejoicing because the county commissioners have appropriated $500 for premiums for their county school fair, which is all the money they asked.

W. E. Dudley, county school superintendent, is emergency county club leader—for he has them designated emergency clubs. He has paid club leaders and has the most comprehensive plan of club work I have met with. He seems to have originated the plan of paid workers and the U. S. department at Washington has written for details of the plan.

Mr. Dudley has Clarke county divided into eight community districts, each composed of from two to four school districts. Each community district has a paid club leader. Minutes are kept of each club meeting, no matter how small, and every month the leaders make a summarized report to Mr. Dudley, enabling him to keep in the closest touch with the work being done. No matter how small the district, each one holds a fair. Premiums are given for garden and domestic science work and all the usual industrial club activities. Following this comes the community fair, at which only those who exhibited at the district fair are permitted to make an exhibit, and the identity of the exhibit of every boys' and girls' exhibit is retained. Then comes the county school fair, at which only pupils who made exhibits at the district or community fairs may be represented. Again each child's exhibit is displayed as a unit in the district's exhibit, each district exhibit as a unit in the community exhibit as a unit in the county exhibit.

Last year every dollar for the fairs was raised by voluntary contributions and La Center, where the county fair was held, financed it. This year, after meeting with Professor Dudley and with County Agriculturist Newhouse, on Auguse 5, the commissioners granted the $500 asked for. The success of the county school fair is thus assured in advance and those who have worked so hard for it heretofore will see that a display worthy of Clarke county and her schools is made, even in this dry year.

# Girl Harvesters

## Do the Work of Drafted Brothers

By J. E. NESSLY.

How two California girls, Grace and Anna Anderson, cut several hundred acres with a "two-man" combined harvester, Grace driving 12 horses and Anna sewing sacks, is an interesting story brought to Moscow by M. C. Priddy, a traveling salesman, who has been in California since early last spring. The two girls are daughters of John Anderson, an extensive farmer in the Sacramento valley. Their two brothers were called by the draft and harvest help was hard to obtain. Mr. Anderson did not know what to do about saving his grain crop.

the two girls, who had just finished school and had helped with horses on the farm before their brothers went to war, offered to harvest the crop. At first Mr. Anderson hesitated, but the girls insisted and they took the machine, hitched 12 horses to it and cut several hundred acres of wheat which yielded well. Anna sewed the sacks and did as good a job as any professional. After the grain was harvested the girls took teams and gathered up several thousand bushels of wheat and are now engaged in hauling it to market.

Mr. Priddy says the wheat crop was fairly good in California, probably averaging from 60 to 75 per cent of a normal crop for the entire state. In the southern part much of the grain was damaged by hot, dry weather, but in the Sacramento and San Joaquin valleys the yield was good.

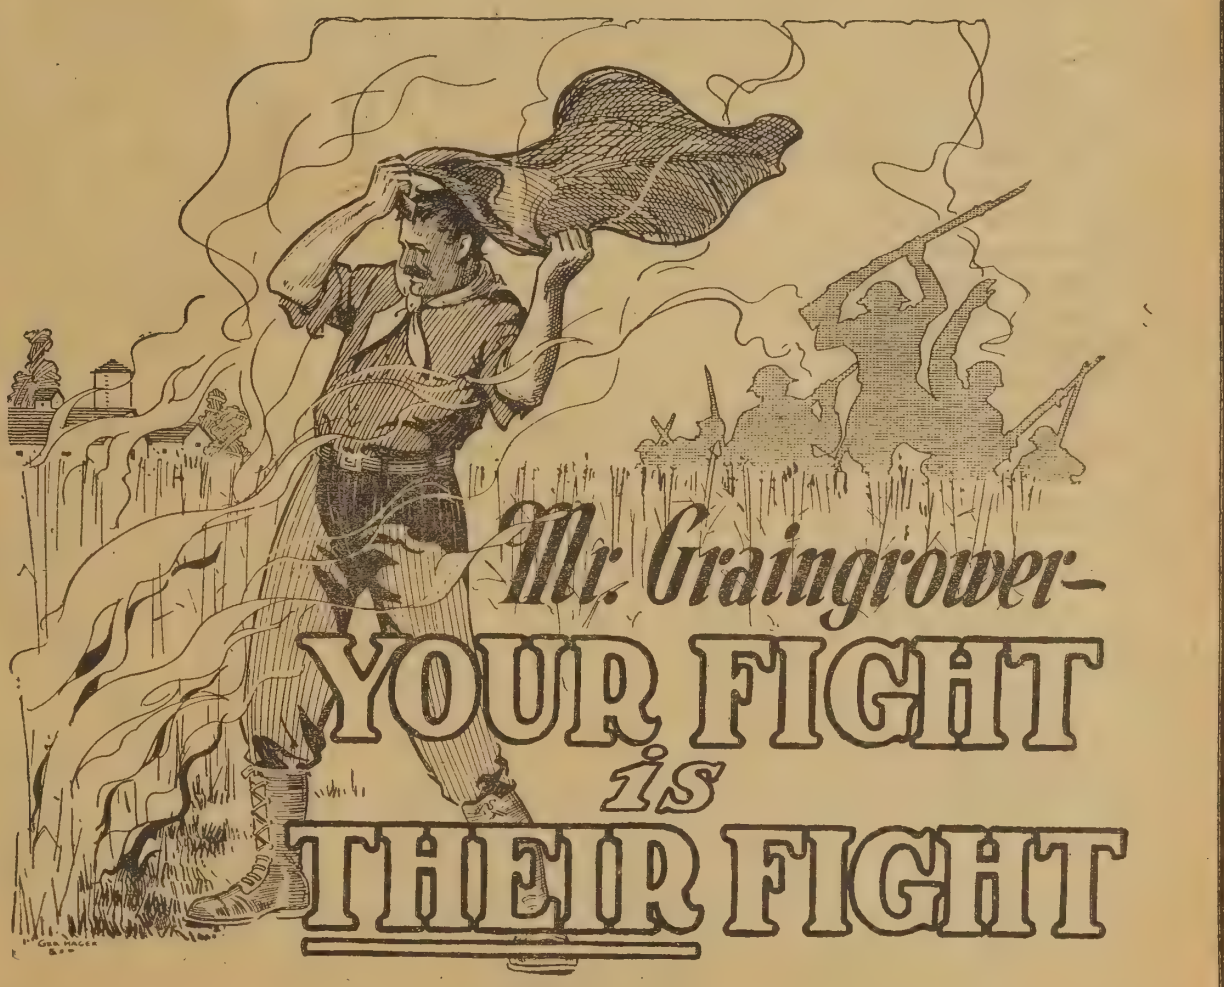
## BETWEEN MEALS.

### Grange Bans Needless Feeds.

The proverbial "groaning tables" at farmers' gatherings for between-meal eating are to be outlawed as unpatriotic, judging from sentiment recorded in the recent resolutions of Mallet Creek grange in Medina county, Ohio. This grange has resolved that, "Whereas, each and every housewife is commanded to conserve all foodstuffs:



"Resolved, That the matrons of said grange refuse to prepare bread, cake, pickles, meatsauce, chow chow and other kinds of chow for the consumption of patrons of the grange during the months from June to October, inclusive, unless such food can be served at a time to take the place of a regular meal."

### Found a Copy.

I found a copy of your paper and want it sent to me as soon as possible.
MRS. CORA E. DECKER.

### Escapes Bread Rationing.

America's self denial in saving wheat has enabled Great Britain to escape the necessity of rationing bread. With higher extraction in milling and through the addition of substitutes, the British have been able to extend the bread value of the wheat which America has sent.

Mr. Graingrower—
YOUR FIGHT
is
THEIR FIGHT

MORE PRECIOUS THAN GOLD—is the golden harvest of the grain fields.

For all the yellow metal in the world, of itself, can not feed the starving or sustain a nation in its fight for LIBERTY.

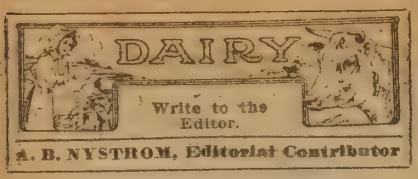
Through the wheat fields of Northern France American boys—our boys—are battling in a struggle of life and death. Here at home the grain growers of the Inland Empire must battle another foe—FIRE!

Fire would rob hungry mouths of bread—fire unchecked could defeat America.

The grain grower is the bulwark of America's battle line.

Beat out the flames while they are small! Prepare for the EMERGENCY, with all the help that is offered—state, county, community.

What ORGANIZATION and PREPAREDNESS will do was demonstrated last year—a wonderful record for fire prevention.



If the Northwestern Mutual Fire association with its corps of fire prevention workers can be of additional assistance, please call upon us. Cutting down fire losses means saving you money. That's the foundation stone of the Northwestern Mutual.

## DAIRIES AT STAKE.

### Production Is a Grave Problem.

All over the country, from east to west and from north to south, the production of milk and cream appears to be jeopardized by the feed and labor situation. This condition is probably more true in the northwest than in most other sections.

The problem is doubly serious, for it involves not only the production of milk and cream and butter for the present time, but it involves as well their production for the next decade or even generation. And in addition to the food side of the question, there is the side involving the industry itself. It has been developed to an industry employing thousands of men and millions of dollars are invested in its land, equipment and stock.

In the midst of it all there stands the one undeniable fact: The people must have milk. The problem is: How can it be provided at prices the average family can pay?

It can not be produced at an economic loss to the producer. For a brief space of time an industry will survive even though it is losing money, but this can not continue long. Profits must be made or the dairy industry will be abandoned, and once it goes down it will be hard to revive, and it will take years to do it. Once it goes down, much of the effort that has been expended during the last century to build up producing strains of stock will be lost. Hence, it behooves the entire nation to look the dairy question calmly in the face and unite in solving it.

Assuming that milk and milk products are absolute essentials, as every one is willing to do, the entire statement of the case may be summed up in the one sentence: The customer must pay the true cost of efficient production plus a living profit to the producer.

Then comes the other question that is as yet unsatisfactorily answered: What is the true cost of efficient production?

Where may the cost of production in the northwest be reduced if at all? Where can the cost of distribution be reduced if at all? How can the public be made to appreciate the value of milk and be enabled to use more of it without increasing the cost of living or disturbing the food balance? These are some questions to be given thought, and the sooner the people as a whole, not alone the dairy industry, begin to ponder them, the sooner a solution can be worked out for the problem of milk production.

## NOT TOO GREEN.

### Give Silage Corn a Real Chance.

Those who have succeeded in making good corn silage frequently issue warning to beginners and to others who have not yet learned the art of making it against cutting their corn too green. Cutting too green is said to be inadvisable for two reasons: It puts the feed up before the maximum food value has been attained and it results in silage less palatable and less well preserved.

O. E. Reed of Purdue university says that the proper time to cut corn for silage is when the ears are well dented. This, ordinarily depending somewhat on the climate and the variety of the corn, is about 10 days before the corn would be cut if intended for fodder in the shock. At this age the corn will usually have plenty of moisture in the stalks and upper leaves to make it pack well, and it will make a silage that will keep better and be more palatable. Green corn makes an acidy feed, neither as wholesome nor as much enjoyed by the stock as the sweeter feed. And, after all, there is a lot in this very feature of feed enjoyment. Just as people digest and assimilate food more successfully when eaten with pleasurable accompaniments, so do live stock make better use of feed that gives pleasure as well as calories or vitamines or what not in the scientific phraseology.

One thing must always be remembered, however, in making silage with the more mature products. It must be well packed. The air must be excluded, or poor results will inevitably follow.

## THIN CREAM.

### Big Problem When Pasteurizing.

L. B. Ziemer, creamery and cheese factory inspector for the Oregon dairy and food commissioner, recently made a trip into central Oregon. He reports crops light. Farther north along the northern tier of counties the wheat is very good in general, though it is spotted to a considerable extent. In some places the winter wheat is good and the spring grain poor, and elsewhere this condition is reversed. Mr. Ziemer has been studying creamery conditions.

"Thin cream," said he, "is one of the difficulties with which the butter maker has to deal when pasteurizing, and the objections to it are so many that it becomes almost as much of a problem as poor quality. It is impractical to pasteurize thin cream, and this is especially true when it contains from .3 to .4 per cent acid, as such cream will curdle very easily when heated, and the loss in buttermilk will be excessive. Thin cream also has a tendency to make salvy and poor-bodied butter, which often affects the flavor and keeping quality. Thin cream requires more vat capacity, more steam to heat, more water and ice to cool, more churn capacity, more time and power to churn; it does not permit the use of a large starter, as it is already too thin for good churning. The farmer also loses by producing thin cream. He first loses a lot of good skim milk, and, in addition, he has more cream to cool and more to handle and haul to the creamery. In fact, thin cream is a disadvantage from every point of view. Cream testing around 20 per cent is worth 2 cents less per pound of fat than is cream testing around 30 per cent, and why not pay less for it?"

## Farm Pasture Lands

Of the total farm land in the United States, which comprised about 879,000,000 acres in 1909, somewhat more than one-third was in crops, about one-third was in pasture, and somewhat less than one-third comprised all other kinds of farm land. The fact that there was nine-tenths as much pasture land as crop land is enormously significant in connection with the possibilities of expanding crop production to assist in winning the war. It must be noted, however, says a specialist of the department of agriculture, that a large part of the pasture land is unimproved, about 99,000,000 acres being in "woodland pasture," and 108,000,000 acres "other unimproved pasture"; but even the improved pasture alone represents over $4,000,000 acres, or nearly one-tenth of the total land in farms. This improved pasture doubtless consists largely of land that is pastured in rotation with crop production in intermediate years. It may be used for crops three years out of four, two years out of three, or one year out of two, but most of it undoubtedly is arable land; in fact the definition of this type of pasture is "improved land in pasture, but which can be plowed or mowed." Of the unused farm land, that is, land not in crops or pasture, which comprised about 269,000,000 acres, or 30.6 per cent of the total land in farms, about a third, 10.4 per cent, was in woodlots, and two-thirds, 20.2 per cent, comprised fallow land, waste land, land in farmsteads, roads, etc.

**Winnipeg Firemen Out.**

Winnipeg, Canada, was practically without a fire department recently, 160 firemen having struck because the council refused the demands o fthe electricians and waterworks men.

Purebred Registered
**HOLSTEIN CATTLE**

A Purebred HOLSTEIN for your HERD SIRE is the short cut to bigger production and better profits. Read this report from Iowa experiment station concerning recent test—and be convinced. "The average of all records made by first generation heifers sired by a purebred Holstein sire shows an increase of 3058 pounds, or 94 per cent in milk, and 100 pounds, or 62 per cent in fat, at an average age of three and one-half years, over the record of their scrub dams at an average age of six years."

# Fattening Pigs

## What Is Most Profitable Feed?

To the Editor: What is the most profitable feed for growing and fattening young pigs when prices are as follows:

Shorts, $37.50 per ton; barley, $60 to $65 per ton; corn, $4 per hundredweight; oil meal, $4 per hundredweight; buttermilk, 3 1-2 cents per gallon.

Have fed mostly shorts and buttermilk. S. S. S., Langley, Wash.

C. E. Howell of the department of animal husbandry, Washington State college, answers the above question as follows:

"Using the prices of feed which you give in your letter, I have worked out a column of figures showing the cost of the different kinds of feed and the cost of combining some of these different feeds. I have used the results of a large number of experiments that have been conducted with these feeds, and I have tried to select an amount that represents an average of the results. In figuring the value of shorts as a feed when they cost $37.50 a ton, it is found that it will cost $.097 to produce one pound of gain. This cost is secured upon the basis of using 522 pounds of shorts to produce a hundred pounds of gain.

"Of course, the amount of shorts required to produce a hundred pounds of gain will vary a good deal, depending upon the quantity of the shorts. We have just completed an experiment at the state college, and it required 620 pounds of shorts to produce 100 pounds of gain. In this experiment the pigs did exceptionally well on shorts alone during the early part of the experiment—that is, when they were weighing around 60 to 80 pounds. Shorts were just about a well-balanced ration for the pigs, having a nutritive value one to four and four-tenths. As the pigs got larger this ratio was too narrow, and it did not contain enough carbohydrates. Consequently the pigs did not fatten and make as rapid a gain on shorts alone as they did on some other combinations which we fed.

"In feeding barley alone and estimating that it requires 590 pounds of barley to produce 100 pounds of gain, the barley at $65 a ton, fed alone, should be a little better than shorts alone. Our own experiments here indicated this.

"In combining barley and shorts, and figuring at the prices which you have given, the cost of one pound of pork is a little more than 12 cents. A gain of 1.26 pounds was made per day. It is seen from this experiment that, while shorts alone is a little cheaper in producing a pound of gain, yet, when the length of the feeding period is considered and the rapidity of the gain is taken into consideration, it will be a little more advisable to combine the two feeds—that is, feed barley and shorts together.

"In figuring on this combination of barley and shorts, I took an average of the results of experiments where this has been done, and found that it required about 499 pounds of the mixture to produce 100 pounds of gain. In most of the trials the amount of barley was just a little larger than the amount of shorts.

"In the experiment which we conducted at the college we fed equal parts of barley and shorts and have secured 100 pounds of gain from 521 pounds of the mixture, and at the same time made a little more than one pound of gain per day.

"In feeding corn alone it would require 560 pounds to produce 100 pounds of gain. Figuring corn at $4 per hundredweight, it will cost 22 cents to produce one pound of pork, and the daily gain that can be expected is about nine-tenths of a pound.

"By combining corn and oil meal, the usual combination that is made, the cost may be reduced to 17 cents per pound, and a little more gain will be secured. About a pound of gain per day may be expected.

"The combination of shorts and buttermilk will perhaps be as economical as any you can make, especially when the pigs are just beginning the fattening period and are in growing condition. This combination will cost 11 cents to produce a pound of gain. As the pigs reach a hundred pounds or more in weight the combination will be a little too narrow to produce the most gain.

"I should recommend the combination which you are using, namely, shorts and buttermilk, for the growing pigs, because it will produce growth and framework. But for fattening the hogs to a marketable finish I would suggest that you add barley to the ration, or cut out the buttermilk entirely and finish them on barley and shorts."

# Veterinary

Dr. S. B. Nelson

**Can't Get With Calf**—I have a young heifer, 16 months old, which I wish to keep very much as her mother was such an extra cow, but can not get her with calf. Have bred her twice and she has just returned again for the third time. Can anything be done? She is in good condition.

E. W., Ione, Wash.

Let the heifer go three or four months and then breed her again. It will not hurt her if you let her go six months. It would be a wise thing if she were prior to breeding the next time. That may overcome the difficulty.

**Cow Had Milk Fever**—I have a fine-bred Jersey cow that was a great milk producer until she had her second calf, last April, when she had milk fever and was dried up at once, and has not been milked since. She is fat and feeling fine now, and I want your advice as to whether I should breed her again or not. One teat seems to be shriveled up. A READER, Spirit Lake, Idaho.

I believe that, with as fat a cow as you say this one is, she should be bred again and tried out once more before she is given up. You must handle her very carefully for two or three weeks prior to calving, taking her off rich food and putting her on a very good dry food for about 10 days to two weeks. In order to prevent constipation, give her, during this time, about one-fourth to one-half ounce of epsom salts in a quart of water daily. Then, when she calves, you can treat her just as though nothing were at all the matter.

**Bloat in Calves**—There seems to be a great deal of bloat among calves which are fed skimmed milk. Will you kindly tell us how this may be remedied? I noticed that the milk can be strained through a cloth and all trace of foam removed. Do you think the foam is what causes the trouble? How long after her calf is born should a cow go before cleaning? When is it dangerous if she seems well? What should be done to help her?

W. M. W., Shoshone, Idaho.

Bloat is a symptom of indigestion, which shows that the animals have eaten some food which they are not able to digest satisfactorily. Try adding an ounce or two ounces of lime water to the milk that you are feeding for a few days. See if that will help. Also be sure to scrub and scald the pail or utensils that you are feeding the calves out of. Personally, I do not believe the foam is any cause for the trouble. The cow should clean within 24 hours after she calves. It is dangerous any time after that if she is allowed to go. After that length of time the afterbirth should be removed and the organs washed out with a normal salt solution of a teaspoonful of salt to a gallon of water, and a sufficient number of gallons. The treatment should be repeated daily until she is well.

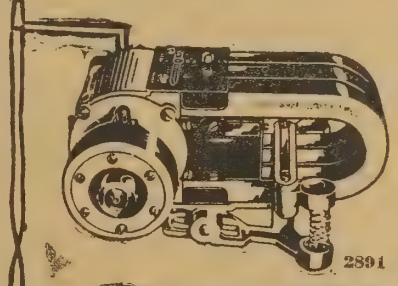
IN selecting a lighting system, you want powerful, steady light—instantly available without complicated electrical devices to maintain and give trouble.



With a K-W Lighting Outfit there is *no* storage battery to sulphate or short circuit or need weekly attention, whether you are using your lights or not. There is *no* commutator or brushes to burn out—*no* complicated cut-out to go wrong, *no* delicate ammeter or voltmeter to watch or become inaccurate through jolts and jars. The K-W *needs no* attention except for an occasional oiling. There is *no* upkeep expense.

A trouble proof, low tension K-W Magneto or generator furnishes the current. Voltage and current output is automatically regulated without governor or other device. The three bar generator furnishes current for a trouble light and two 1600 candle power headlights; the four bar generator for two 2000 candle power headlights and trouble lamp.

The K-W Lighting Outfit consists of a generator, two parabolic headlights, wire, switch, bulbs and trouble lamp. It can be belt or friction driven and is provided with mounting to fit *every* tractor.

The K-W Lighting Outfit gives a steady, powerful light, at a moment's notice, when engine is running. Should you ever require light at any other time, a hand flash lamp will give you all the light required. Surely you don't want to put up with a lot of complicated regulating devices, storage batteries, delicate meters, etc., for such an occasion. Remember, with a K-W there is no maintenance expense.

Write today for further details, prices, etc., giving make and model of your tractor.

THE TRADE K-W MARK IGNITION Co. 2891 Chester Ave CLEVELAND, OHIO, U.S.A.

# The Poultry Situation

The poultry situation is decidedly better than it was a year ago. Feed prices are no higher and eggs are 10 cents a dozen higher. With a flock of good layers the poultryman can probably do as well now as he ever could. With a flock of extra good layers he can do better than he has ever done before.

But with the poor layers there is a bigger loss than ever, and the necessity for culling out the slackers is now doubly important. The hens that stop laying in August are poor layers and should be marketed.

Consumers should not expect cheaper eggs. The chances are that the fall and winter will see record prices. Eggs never wholesaled in July and August at about 50 cents as they are now doing. The rigid culling out of the poorer layers will mean fewer eggs going to market and prices will be high. Poultrymen, on the other hand, need not expect fabulous prices, because when eggs reach a certain point consumption drops. If consumers can buy other foods of equal value at less price they will do it.

The last few weeks have witnessed a heavy marketing of hens and prices of hens have dropped 3 to 5 cents a pound live weight. If these hens are the slacker hens there will be little effect on egg receipts, but if they are shipped off to market promiscuously good and bad, it will mean a considerable loss of eggs. This should not be. There is no excuse now for killing off the good layers at this time of the year.

The grain crops have again suffered from the drouth, and the resulting shortage of of good oats and barley will handicap the poultryman. But it was the same proposition last year and they lived through it. J. D.

## SAVE THE HENS.

### Market None but the Slackers.

The hens are being sent to market in unusual numbers at the present time. The high cost of feed is, of course, the cause. If this movement continues there is likely to be a serious shortage of eggs in the coming fall and winter and prices will be high, so high as to curtail consumption.

It is a mistake, for two reasons: First, the poultry-keeper can aid in winning the war by keeping hens that produce eggs. Eggs are a substitute for meat, and the more that are eaten the more meats will be available for export to our soldiers and the soldiers of the allies. That is a patriotic reason for keeping laying hens. The second reason, which is a selfish one, is that there is likely to be good profit in egg production a little later. If not before, after the war feed will take a drop, while eggs are likely to continue high for several years.

Eggs are very high in price now, and there is really at the present time fair profit for fair to good layers. Twenty-five to 30 cents will pay for the feed of a hen for a month, and it is a poor hen that will not lay 40 cents' worth of eggs a month at this time. On the general farm under free range conditions the cost of feed will be less and the profit correspondingly higher.

If only the slacker hens were going to market it would be well and good. Hens that are so old that they have lost their "teeth" should be marketed, unless they have special value for breeding.

If some hens have to be marketed, pick out those any time between now and the end of September that are molting and have stopped laying. There will be some in the flock that are now molting and not laying and there will be no loss in eggs if they are sent to market. The early molters, or early quitters, are the poor layers. J. D.

## Storrs Laying Contest.

The following are some of the salient facts of the international egg-laying contest at Storrs, Conn., for the first eight months:

Seventh contest began November 1, 1917.

Seventh contest ends October 31, 1918.

100 pens competing, 10 hens in each.

Average per pen for June 177.7 eggs

Average per pen for eight months, 1069.5 eggs.

Highest pen for June, O. A. C., Oregons, 245 eggs.

Highest pen for eight months, O. G. Knight's Wyandottes, 1462 eggs.

Second highest pen, Oregons, 1458 eggs.

Highest hen, Knight, 208 eggs.

3 hens of Oregon's pen among 11 best hens.

Since June 1 the Oregons have taken first place, and at the end of the 37th week were 26 eggs ahead of Knight's. For the week the Oregons were first, with 60 eggs, and the Hollywood farm, Washington, second. J. D.

## Broiler Turkeys.

In the effort to stop the wasteful practice of slaughtering broiler turkeys—those weighing from two to four pounds—the food administration is approaching the problem through three different channels.

Farmers are requested to raise their turkeys to maturity, thereby adding to the nation's meat supply; dealers have been notified of the food administration's desire that they refrain from purchasing the immature birds; hotels, clubs and restaurants, where most of the broiler turkeys are consumed, have been asked to discontinue serving them.

It is pointed out that turkeys, unlike chickens, do not become plump and well-meated until nearly full grown.

## Feed Cost of Eggs.

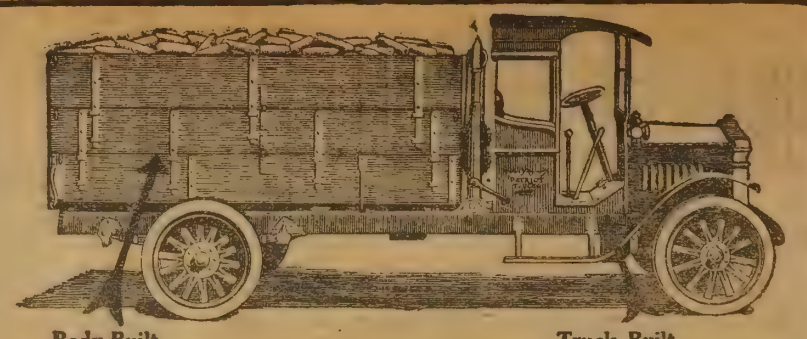
From the Storrs' June report we find that the 1000 hens in the contest consumed 91.6 pounds of food. This would cost about $2.75. The eggs produced numbered 178. The cost of feed for a dozen eggs for the month at that rate would be 18 to 20 cents. The eggs would be worth about 60 cents. This shows a good margin of profit. Of the total food the grain weighed 38 pounds and the mash 53.6 pounds. This is heavy mash feeding. The more mash that is fed the cheaper is the ration. J. D.

## FARMER NEEDS AUTO

### As Well as a House to Live In.

To the Editor: There are several reasons why every farmer should have an automobile on his farm as well as a house to live in.

Farm life is not real life without one. If you have an automobile on your ranch, and have a trip to make to town, you do not have to take a team from the field and drag the poor animals over the long, dusty, hot road. You can go to town and back on one-third the time it would take a team to go on the same trip, besides the automobile runs so swiftly it stirs up a breeze and makes the trip a pleasure to the driver. When you arrive home you have no tired horses to take care of.



When you come in of a night from a hard day's work in the field, all tired out and roasting from the heat of the day, it is restful and cooling to take your family on a little spin. If you want to take a vacation and go to the mountains, you have your automobile, which will take you there in a day, where with a team it would have taken weeks. If you keep a team for no other use but driving and making your hurry-up trips, it costs more than an automobile would.

Taking it all around, I think every farmer should have an automobile.

**Ten Acres of Ground Supports Family.**

A family of four, whose ages total 341 years, supports itself comfortably on 10 acres of ground in Coshocton county, Ohio. Henry Johnson, who is past 91, is the senior member. A brother, Silas, is 87. Mary Anne, 84, does the housework and milks the cows. George Wilson, a brother-in-law, just past 79, raises the crops, chief among which is the little tobacco patch that annually furnishes "dog leg" for solace on the long winter evenings.

Body Built for Country Loads
Truck Built for Country Roads
PATRIOT FARM TRUCK
Built for Country Roads—Built for Country Loads
There is real need for motor trucks on the farm—to speed up transportation—
To bring better markets nearer—
To master bad roads—
To save high-priced horses—
But—the farmers have not bought them to any great extent. Why? The reason is, there has never before been a real Farm Motor Truck on the market.
Those that have been sold were built for the paved streets of the cities—not the soft roads and fields of the country.
The Patriot Is the First Motor Truck Built for Farm Work
Or—they have been mere cheap units to combine with worn-out, low-priced, low-powered cars—forming makeshift trucks that never were expected to deliver real farm service.
But now—the farmer has a real truck—built in the center of Agricultural America—by experienced truck and body makers, in a new, complete and modern factory—and built for farm service.
Every farmer with 160 acres or more should find out what a Patriot Farm Truck will save. Write for information.

# Orchard Troubles

## Diseases, Pests and the Remedies

By Granville Lowther.

This is the third instalment in this series of articles. The subject of pests and their remedies will follow the conclusion of the catalog of the diseases.

**Rust:** There are two forms of this disease so similar as to create the impression that they are the same, except that they exist under different conditions of climate. One is prevalent in the east, the other in the west. One is called, technically, gymnosporangium, the other gymnosporangium blasdeleanum. It attacks the apple, pear and several varieties of shrub and wild plants. It is particularly severe on pears of the Winter Nellis varieties. Orchards planted near to junipers and cedars are likely to be badly infected, because the foliage of these trees are often covered with the rust and it is transmitted from one to the other. The remedy is to burn the leaves or plow them under and spray the trees with Bordeaux or lime sulphur.

**Scab:** This disease attacks both foliage and fruit, and must not be confounded with any form of rust. On the foliage the spots are at first more or less circular in outline, olive green or brown in color, becoming darker and more irregular in shape as they become maturer. On the fruit they develop under the cuticle, not on it, as do most forms of rust. The treatment is the same as in rust.

**Shot-Hole Fungus:** See "Leaf Spot."

**Silver Leaf:** Not prevalent in this country.

**Soft Rot:** See "Brown Rot."

**Sooty Blotch and Fly Speck:** Are technically the same, being two aspects or forms of the same fungus. They give the apple a speckled, sooty appearance, and injure the market value without materially injuring its nutritive value, because the specks are on the surface. Treatment: Spray with lime sulphur or Bordeaux, and prune the tree so as to let in the sunlight.

**Spray Injuries:** These injuries are found where Bordeaux or lime sulphur are too strong or where they are applied at the wrong time. In such cases they injure both the foliage and the fruit. It is a little hazardous to use fungicides after the leaves and blossoms appear unless it is done by one who knows what he is doing and how to do it. There is more loss than gain, upon the whole, by using fungicides after the blossoms arrive.

**Stag Horn:** This disease gets its name because it is manifest in dead branches at the tops and they present the appearance of antlers, projecting above the foliage. I have examined this disease in the east and find that some of it is what we in the west call apple rosette. Other forms of it are due to lack of proper care in spraying, pruning, fertilizing and cultivation.

**Stigmonose:** Is caused by insect punctures. There is no remedy in so far as we know, but the trouble is not serious.

**Storage Rots:** The diseases growing out of storage rots are most generally the effects of infections before storage, which develop during storage. Also bruises and punctures of the skin give dead tissues in which saprophytic organisms work and hasten decay. The remedy is to keep the temperature of the storage room as nearly to the freezing point as possible without freezing. The warmer temperature hastens the multiplication and development of these diseases.

**Sun Scald:** This is the effect of injury to the bark, caused in some climates by the hot sun shining on the south side or the southwest side of the tree with sufficient force to injure the protoplasm in the cambium layer and impede the circulation. In winter the freezing and thawing of the bark, if the changes from heat to cold are sudden, will have a similar effect, and is often called winter injury. These injuries sometimes result in what is called collar rot, or the decay of the bark at or below the ground. Sun scald on fruit is the hardening of the skin and tissues caused by excessive heat or by spraying when the sun is hot.

**Water Core:** This disease is manifest by hard watery areas extending from the seed cavity outward. In the advanced stages the seed cavity contains liquid and the hard intermembrane of the carpels is cracked, the fruit has a somewhat sweetish flavor and the watery parts contain more sugar and less acid than the normal or unaffected parts. The causes seem to be: First, excessive water in irrigation or excessive rain just before the ripening of the fruit. Second, excessive wood growth, where the trees are strong and vigorous. Third, excessive pruning just before the ripening period. Fourth, high temperatures during the day and low temperatures at night. Fifth, exposure to extremes of temperature. The philosophy seems to be that certain chemical activities are set up by rapid growth which are disturbed by heavy prunings, frost, sudden changes from heat to cold, by the rearrangement of converting the starch into sugar. The rapid absorption of water by sugar may also be a cause, and very likely from other causes we do not understand. In fact, some of the reasons suggested are not definitely determined, but have been believed by experts to be probable. Remedy: Put the apples in common storage, not cold storage, but common storage for three or four weeks and there will be no water core, except the very worst specimens, say from 1 to 3 per cent of the whole.

### Diseases in General.

It must be borne in mind that the normal condition of all living organisms is health. This is seen in the tendency of any form of living organism, when injured or diseased, to react toward the normal and to repair the injury. Examples are found in the wounding of the flesh of animals or the wounding of any form of plant life, as the bark of a tree. A notable example is the cutting of certain grasses, like alfalfa, which sends up new stalks, and from two to four cuttings may be taken from the same ground in the same year without killing the plant. The following year the process may be repeated. Disease in plants is defined as any morbid condition resulting in the checking or stopping of growth and resulting sometimes in death. Also it is defined as one of the parasitic organisms attacking plant life. I do not believe the second definition is strictly correct, because the bacterium or fungus is a living thing as actual as a horse or a tree, but not so large. We would not call a horse or a tree a disease, although either one is subject to disease. However, fungi and bacteria are called diseases and we will have to follow the established usage or we will not be understood.

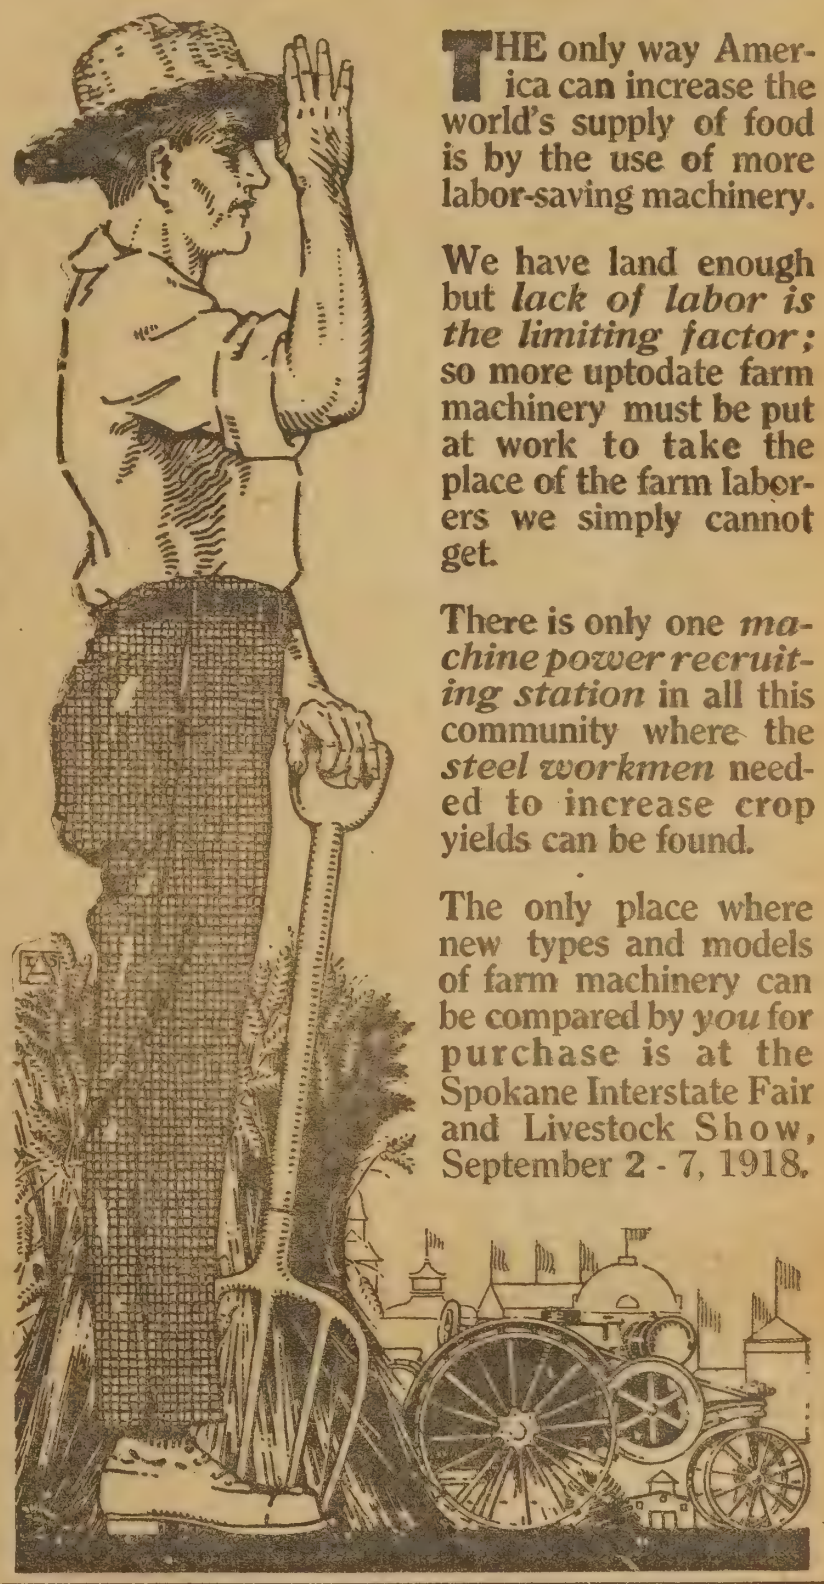
### Diseases Classified.

We give herewith a general outline under which diseases may be classified:

1. Secretional diseases, in which cellulose is transformed into gum, resin or manna. This effect is produced by over-action of the normal functions.
2. Diseases produced by fungi and other vegetable parasites.
3. Diseases produced by decomposition, as gangrene, or canker. These are processes of decay in which the cellulose is transformed into a muddy fluid, a brown powder or a carbonaceous mass.
4. Diseases produced by the attack of insects or animals.
5. Atmospheric conditions.
6. Soil and moisture conditions.
7. Light, electricity, winds and storms.
8. Crowding, so that the food supply is cut off.
9. Isolation, and consequent lack of fertilization.
10. Unknown causes.

The next article will be on the subject of pests, more especially of the apple.

(To be continued next week.)



# Device to Unload Hay

C. E. Ricker of Reedsport, Ore., has a most ingenious arrangement for unloading hay into his barn loft. It consists of a platform 12x16 feet, hung at each corner on a pulley and placed about half way below the fork full of hay as it is drawn into the barn and the floor of the mow or level of the hay already in.

It is large enough to hold a big fork of hay, but is hung on a slant, so that the hay slides off to one side. This breaks the fall and lands the fork full of hay at almost any place in the barn desired, as the platform can be slanted in either direction, by a change of the length of ropes holding it. Its location can also be changed by changing the location of the pulleys.

The advantages are evident. While the loft is nearly empty a fork full of hay drops so far it packs very tightly and the middle of the barn is packed full, while two men can scarcely keep the hay spread to the sides. The platform or "slide" eliminates the work of at least one man and makes a much better job of filling the barn and, best of all, when the hay is to be fed out it is found to be not so tightly packed, is thus more easily moved and is not so apt to "burn" or mould if slightly damp when put in the barn.

THE only way America can increase the world's supply of food is by the use of more labor-saving machinery.

We have land enough but *lack of labor is the limiting factor;* so more uptodate farm machinery must be put at work to take the place of the farm laborers we simply cannot get.

There is only one *machine power recruiting station* in all this community where the *steel workmen* needed to increase crop yields can be found.

The only place where new types and models of farm machinery can be compared by *you* for purchase is at the Spokane Interstate Fair and Livestock Show, September 2 - 7, 1918.

# Much Drying of Foodstuffs This Year

(Continued from page six.)

lic demands such fruit, the entire commercial output for many years has been so treated. Unsulphured fruit will darken to an extent directly dependent upon the time required in drying and is subject to souring and to insect attacks in drying, while sulphured fruit is not. There is neither gain nor loss in palatability or in food value as a result of sulphuring, and while the practice has been subjected to severe criticism it has never been shown that it is injurious to persons consuming the products. Consequently, the decision as to whether fruits dried for home use shall be sulphured or not is a matter to be left to individual preference. The sulphuring may be done by any convenient method that will confine the fruit in a box or cabinet with the sulphur fumes for the length of time required for various fruits as hereafter indicated.

### Apples.

The fruit intended for drying should be reasonably mature, but not soft, and should be handled with proper care in picking and hauling so as to avoid bruising, as bruised spots which have become discolored must be trimmed out in order to make a good-looking product. In preparing apples the working force must be so divided that the fruit is trimmed and sliced as rapidly as it is pared, as peeled fruit must not be allowed to remain standing in the air while awaiting its turn at the hands of the trimmers and slicers. After paring and coring, the apples should be trimmed immediately, to remove all bits of peel, discolored or decayed spots, and fragments of core, and at once sliced. Apples are usually cut by means of an attachment on the parer or by a special slicing machine into slices or rings at right angles to the core hole and one-fourth inch thick, but a few individuals will prefer to cut them in quarters. Quartered apples, by reason of their greater thickness and the varying size of the pieces, dry more slowly and unevenly than slices and hence reduce the daily capacity of the drier and require a greater expenditure of fuel per dry pound, for which reasons they are now rarely made in a commercial way.

If the fruit is to be sulphured, it should be spread upon the trays to a uniform depth of one to one and one-half inches as rapidly as it is sliced, and immediately placed in the sulphuring box for 20 or 30 minutes, after which it is transferred to the evaporator. If it is not to be sulphured darkening can be prevented only by providing pails of water into which the fruit is dropped after paring. Trimmers and slicers are also provided with such pails, so that the fruit is exposed to the air only while actually being handled by the workers until it is spread on trays and placed in the warm evaporator. Drying is begun at 130 degrees F., and the temperature gradually increased to 175 degrees. The trays of drying apples should be examined from time to time and, if necessary, stirred with the fingers to correct any tendency to unevenness in drying. The fruit is sufficiently dry when a handful of slices gripped firmly in the hand has an elastic, springy feel, separates promptly when the pressure is released, and leaves no visible moisture upon the hand. It should be removed when this condition is attained and before the slices become crisp and hard.

### Pears.

Pears intended for drying are picked when the fruit is still quite firm, but is readily loosened from the tree when slightly lifted with the hand. They are then stored in boxes or crates beneath a shed for a week or more until ripe, but still firm. They are prepared for drying by removing stem and calyx, splitting lengthwise into halves without removing either core or peel, and spreading on trays in a single layer, cut surface uppermost. In order to make a product having an attractive appearance it is necessary to continue the sulphur treatment for three or four hours, or even a longer time. If the fruit is not sulphured it is necessary to keep it under water after cutting, in the fashion described for apples, until it can be spread and placed in the drier. Half pears dry more slowly than apples and, if preferred, the fruit may be peeled and cored and put into quarters or eighths, which will facilitate drying and also reduce the time necessary for sulphuring. The temperatures to be employed in drying are those recommended for apples. The properly dried product is elastic and rubberlike, and it is impossible to press water out of the freshly cut surface of the pieces.

### Peaches.

Peeled evaporated peaches are comparatively unknown in the markets, practically all commercial dried peaches being dried without peeling. For home use the fruit may be pared by hand, or preferably by a hot lye bath, as no entirely satisfactory machine for peeling peaches has as yet been placed on the market. After paring and subsequent washing the fruits are cut in half, the stones removed, and the halves are immediately spread in a single layer, with the stone cavity uppermost, upon the trays. If the fruit is pared, sulphuring for 20 to 25 minutes will be sufficient; if unpared the time must be increased to one or two hours. These periods can not be considered as definitely fixed, however, as the time needed will vary with the degree of maturity of the fruit used, and even more widely with varieties, a variety of high water content, open texture, and soft flesh, such as the Elberta, requiring little more than half the time needed for such firm, dry-flesh varieties as the Lovell and Muir. The sulphuring is completed when juice begins to collect in the stone cavity. This necessitates careful handling in transferring the fruit from the sulphuring box to the drier, as this juice is rich in sugar and must not be lost by carelessly tipping the trays. Great differences will be observed in the time required for drying. The criterion for sufficiently dried fruit is the attainment of the pliable, leathery character described for apples.

### Apricots.

The fruit intended for drying should be picked from the tree before it becomes ripe enough to drop. The handling of apricots in preparation for drying is like that given peaches, with the difference that the fruit is never peeled, but is halved, stoned, and sulphured for one and one-half to two hours. In apricots, as in peaches, a rich sirup collects in the stone cavities after sulphuring, and careful handling to avoid its loss in transferring to the drier is necessary. With both apricots and peaches drying should be begun at a temperature of 130 degrees to 145 degrees and gradually increased to 165 degrees F. toward the end of the drying process.

### Prunes.

Prunes intended for drying should be allowed to become fully ripe and fall from the trees of their own accord, as such tree-ripened fruit is considerably richer in sugar than that obtained by shaking the trees. Three or four pickings will usually suffice to gather the crop. The fruit should be gathered into crates or boxes holding not more than a bushel and should not be allowed to stand in the crates more than 12 hours after it reaches the drier. In gathering, all partially decayed, overripe, or fermenting, or soft fruit should be discarded.

The term "prune" is applied to several varieties of plums which are alike in that they may be successfully dried without the previous removal of the

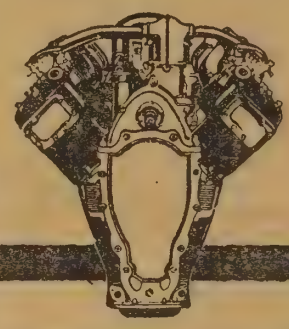
**The Choice of Those Who Know**

Manufacturers and leading motor car distributors *recommend* ZEROLENE. The majority of motorists use ZEROLENE. ZEROLENE reduces wear and gives more power because it keeps its lubricating body at cylinder heat. Gives less carbon because, being refined from selected California asphalt-base crude, it burns clean and goes out with exhaust. ZEROLENE is the correct oil for *all types* of automobile engines. It is the correct oil for your automobile. Get our lubrication chart showing the correct consistency for your car.



*At dealers everywhere and Standard Oil Service Stations.*

STANDARD OIL COMPANY
(California)

**ZEROLENE**
*The Standard Oil for Motor Cars*

**Correct Lubrication for the "V"-Type Engine**

This, the "V"-Type of automobile engine, like all internal combustion engines, requires an oil that holds its lubricating qualities at cylinder heat, burns clean in the combustion chambers and goes out with exhaust. Zerolene fills these requirements perfectly, *because it is correctly refined from selected California asphalt-base crude.*

stones, but which differ in other respects. All those varieties which are commonly dried require a short immersion in boiling lye to remove the thick waxy coating and to check or crack the skin and permit the contained moisture to escape. The exact time for dipping will vary with the variety and also with the degree of maturity of the fruit, but will be about 35 to 45 seconds for immature fruit and not more than half that time for that which is fully ripe. The dipping is properly done when the fruit shows a few very fine checks over the surface and particularly near the point of attachment of the stem, but must not be continued until the skin is actually split or begins to peel off. The lye should be boiling, and the dipping basket should be moved about in the liquid to aid in bringing all the fruit into contact with the solution. The basket should then be quickly transferred to a large vessel of cold water and thoroughly rinsed to remove the lye, after which the fruit is spread in a single layer upon the trays. With the dark-fleshed prunes, such as the Italian or Fellenburg and the Prune d'Agen (also known as the Petite or French prune), which, with the Imperial prune, constitute the principal varieties used for drying, no further treatment is given. Light-fleshed varieties, such as the Silver prune or Golden Drop, require a short treatment in the sulphuring box immediately after the lye dip, in order to preserve the color. Prunes are sufficiently dry when the flesh shows no moisture when torn across and pressed vigorously between the fingers.

It is possible to dry plums quite successfully by cutting the fruit into halves, removing the stones, and placing the fruits in trays in a single layer, stone cavities uppermost. Lye dipping is unnecessary with plums, but a short treatment with sulphur fumes, 20 to 25 minutes, will be required to preserve the color. The treatment of plums cut into halves is that given apricots and peaches, and the criteria for determining when the fruit is sufficiently dried are the same. By reason of their thick, waterproof skins, prunes are especially liable to be burst by overheating at the beginning of drying. Consequently, fresh trays should always be placed in the coolest portion of the evaporator, and the temperature should never be allowed to exceed 140 degrees F., and should preferably be 10 degrees lower for the first three or four hours. As wrinkling of the surface begins, the temperature may be gradually increased and may rise to 175 degrees F. without danger of injury as the fruit becomes nearly dry.

### VEGETABLES.

Practically all vegetables, after being sliced or otherwise made ready for the drier, undergo blanching. It is just here that the final quality of the product is largely determined, since the best material will be spoiled by careless or improper blanching. The word blanching is a canner's term and is applied to a brief treatment of the material with boiling water or steam. The purposes of the treatment are several. It stops destructive chemical changes by destroying the agents which produce them and consequently prevents darkening or discoloration, it preserves or "sets" the natural color, it coagulates some of the soluble constituents, and it kills the protoplasm and consequently accelerates the escape of moisture in drying. Blanching must not be confused with cooking; it in no sense takes the place of the subsequent cooking in preparation for the table. If too long continued it does harm by dissolving out some of the valuable constituents, by breaking down the pigments which give color to the material, or by converting the starch present into a partially cooked paste. For these reasons blanching, whether accomplished by dipping into hot water or by exposure to steam, must be carefully and intelligently done.

#### Potatoes.

Potatoes must first be thoroughly washed to remove dirt and stones. If they are to be peeled in one of the rotary peelers they should be roughly graded for size, as the percentage of waste is greatly increased when potatoes of different sizes are placed together in the machine. Whether the paring is done by machine or by hand, the operators must be cautioned against removing a needlessly thick peel, as the layer immediately beneath the outer skin of the potato contains a considerable percentage of valuable nitrogenous material which is lost by deep paring. When machines are used the eyes must be removed by hand and the workers at the same time must remove all bits of peel and diseased or discolored portions. If the women intrusted with this tedious work can not keep up with the paring, the tubers must be dropped into cold water immediately after paring. Slicing may be done either with a rotary slicer, an apple slicer, or by hand, but in any case the slices should be uniform in thickness to insure even drying. Three-sixteenths to one-fourth inch is the best thickness. As rapidly as the potatoes are sliced they must be dipped or steamed. If to be dipped, they are placed in a wire-bottomed basket or box to a depth of not more than four or five inches and plunged into the water, which should be eight or nine inches deep, and should be boiling so vigorously as to stir and separate the slices. They should remain in the water two or three minutes, and should then be withdrawn, drained, spread upon the trays to a depth of about an inch, and immediately placed in the drier. If steaming is the process employed, the trays are spread directly from the slicer and placed in the steamer. The steam box must be left open after the steam has been turned on until the air is displaced as completely as possible. The door is then tightly closed and the potatoes allowed to remain one to three minutes. The exact time necessary for either steaming or dipping will vary with the season, the variety of potato, the thickness of the slices and the depth to which the trays are loaded, and the efficiency of the steaming box; hence, it must be determined by experiment. The purpose in view is the prevention of darkening, and the treatment should be continued no longer than is absolutely necessary to accomplish this, as prolonged treatment partially cooks the potato and makes it less like fresh potato when subsequently cooked. The drying should be begun at 125 degrees F. and the temperature gradually increased as drying proceeds, finishing with a temperature of 145 degrees to 150 degrees. Potatoes are sufficiently dried when they rattle sharply when stirred with the hand and when the pieces no longer show opaque, spongy white areas here and there on their surfaces.

#### Turnips.

Turnips intended for drying should be gathered before pithiness begins to appear. They are treated precisely like potatoes in so far as washing, paring, slicing, removal of diseased or discolored portions, and spreading on trays are concerned. They require a somewhat shorter treatment with steam or hot water than potatoes, and slightly higher temperature may be used in drying, 135 degrees to 140 degrees F. at the outset and 160 degrees to 165 degrees toward the end being perfectly safe.

#### Beets, Parsnips and Carrots.

Beets, parsnips and carrots should receive the same general treatment given potatoes. They may be pared in the same way, or preferably merely scraped sufficiently to remove the outer dark layer, and are sliced the same thickness. If preferred, any of these vegetables may, of course, be cut into strips by cutting across the slices. A very short treatment in boiling water or steam, not more than two minutes in duration, preserves the natural color, which will change to a grayish or yellowish brown during drying if the product is dried without blanching. The drying should be begun at 120 degrees F., and the temperature should not be allowed to rise above 145 degrees at any time. Parsnips, carrots, or beets are sufficiently dry when the pieces break when one attempts to bend them and when they show no moisture upon being pressed between the fingers.

#### Cabbage.

Cabbage is prepared for drying by

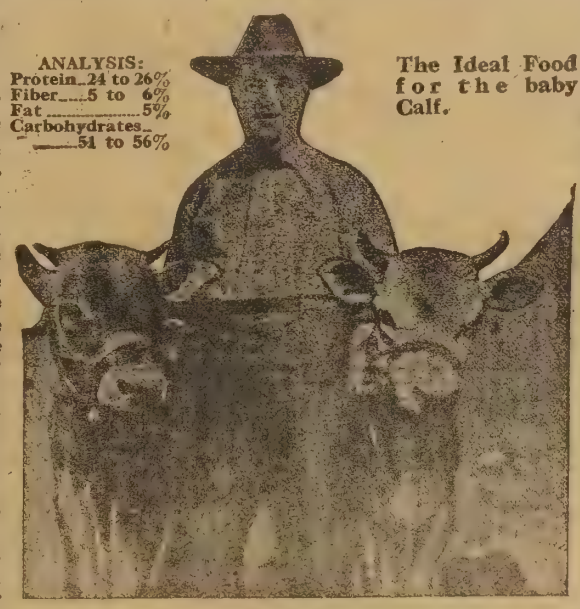
# SAVE THE CALVES AND THE MILK



## feed BLUE BAG Calf Meal

**The United States Government Experiment Stations and the Best Breeders in the country recommend calf meal in place of whole milk. It is pronounced to be the only profitable modern way in which to raise strong, healthy calves.**

**Just because the price of whole milk soars is no good reason for killing the calf to obtain an immediate turnover for the price of its hide. Sell your milk at the top price. BLUE BAG Calf Meal gives you this double opportunity to save the milk and save the calf. It is a complete substitute for whole milk. Made of locust bean meal, unpressed flax seed, wheat flour, blood flour, barley meal, ground peas and beans, rice polish, old process oil meal, hulled oats, cocoanut meal recleaned cottonseed meal, fenugreek, sugar, anise seed and salt, put together in such proportions as to make a well balanced ration.**

ANALYSIS:
Protein 24 to 26%
Fiber 5 to 6%
Fat 5%
Carbohydrates 51 to 56%

The Ideal Food for the baby Calf.

Send for our Stock and Poultry Feed Catalogue—S516

**Many farmers have in the past adopted the Mallet on the Head idea of disposing of their calves. BLUE BAG Calf Meal gives the farmer the opportunity of raising not only all the heifers, but the bull calves as well, at a mere fraction of the cost of whole milk. Think of the high prices now prevailing on beef and veal and think of what the animal will be worth after a year or so. Raise every calf you are able to, for the cost of raising is small compared with the profits.**

**Think of it. One hundred pounds of BLUE BAG Calf Meal makes one hundred gallons of very nourishing gruel and at a very reasonable cost.**

# Must Destroy Meat Monopoly

## *President Is Urged by Commission to Take Over the Big Packing Plants*

President Wilson has made public the recently filed report of the special commission appointed some time ago to investigate the alleged monopolistic control of the meat industry by the big packing companies. The commission declares that the five big packers control half of the meat supply of the allied nations and that the power of the companies has been used to manipulate the live stock market, restrict food supplies nationally and internationally, control the price of meats and meat substitutes, defraud both consumers and producers of food, destroy competition in the buying and selling of meat, secure special privileges from stockyards, railroads and municipalities and make unwarranted profits.

The five packing companies thus referred to are Swift & Co., Armour & Co., the Cudahy company, Wilson & Co., and Morris & Co.

The commission makes the following recommendations to the president:

**Government Take Charge.**

First—That the government acquire, through the railroad administration, all rolling stock used for the transportation of meat animals and that such ownership be declared a government monopoly.

Second — That the government acquire, through the railroad administration, the principal and necessary stockyards of the country, to be treated as freight depots and to be operated under such conditions as will insure open, competitive markets, with uniform scale of charges for all services performed, and the acquisition or establishment of such additional yards from time to time as the development of live stock production may require. This to include customary adjuncts to stockyards.

Third—That the government acquire, through the railroad administration, all privately owned refrigerator cars and all necessary equipment for their proper operation and that such ownership be declared a government monopoly.

Fourth—that the federal government acquire such of the branch houses, cold storage plants and warehouses as are necessary to provide facilities for competitive marketing and storage of food products in the principal centers of distribution and consumption. The same to be operated by the government as public markets and storage places under such conditions as will afford an outlet for all manufacturers and handlers of food products on equal terms. Supplementing the marketing and storage facilities thus acquired, the federal government establish, through the railroad administration, at the terminals of all principal points of distribution and consumption, central wholesale markets and storage plants with facilities open to all upon payment of just and fair charges."

"Out of the mass of information in our hands," the report continued, "one fact stands out with all possible emphasis. The small dominant group of American meat packers are now international in their activities, while remaining American in their identity. Blame which now attaches to them for their practices abroad as well as at home inevitably will attach to our country if the practices continue."

The commission says the five packing companies, either separately or jointly, own or control more than half of the export meat production of the Argentine, Brazil and Uruguay, and have investments in other surplus meat producing countries, including Australia, as well as branches in Great Britain, France, Italy, Germany, Canada, Denmark and Paraguay.

**Control Meat for Allies.**

"Under present shipping conditions," the report adds, "the big American packers control more than half of the meat upon which the allies are dependent."

Of the difficulties which the packers threw into the way of the commission's investigators, headed by Francis J. Heney, the report says:

"The commission, through Mr. Heney, had to meet deliberate falsification of returns properly required under legal authority; we had to meet schools for witnesses where employes were coached in anticipation of their being called to testify in an investigation ordered by you (the president) and by the congress of the United States."

The commission reports that the packers not only control the meat supply, but a "countless number of by-products industries" and have invaded allied industries and even unrelated ones. This control has extended now to the principal substitutes for meat, such as eggs, cheese and vegetable oil products, the commission says, and rapidly is being extended to cover fish and nearly every kind of foodstuff.

After detailing the control of the five companies over the meat and allied industries the commission says this control rests in the hands of a small group of individuals: J. Ogden Armour, the Swift brothers, Morris brothers, Thomas E. Wilson, acting under the veto of a group of bankers, including the Chase National bank, Guaranty Trust company, Kuhn, Loeb & Co., William Salomon & Co. and Hallgarten & Co., all of New York, and the Cudahys.

The commission says through the control of Wilson & Co., Inc., three of the most powerful banking groups in the country are "participating in the rapidly maturing food monopoly." This participation of the bankers in the packing industry, it says, was not at all displeasing to the big packers and J. Ogden Armour and Louis F. Swift were consulted during the negotiations looking to acquisition of an interest in the industry by the bankers.

**A Family Affair.**

"The menace of this concentrated control of the nation's food," says the report, "is increased by the fact that these five corporations and their five hundred and odd subsidiary, controlled and affiliated companies are bound together by joint ownerships, agreements, understandings, communities of interest and family relationships."

In detailing how the packers are alleged to have gained control of the meat supplies of the United States and the allies, the commission said:

"The Armour, Swift, Morris and Wilson interests have entered into a combination with certain foreign corporations by which export shipments of beef, mutton and other meats from the principal South American meat-producing countries are apportioned among the several companies on the basis of agreed percentages. In conjunction with this conspiracy meetings are held for the purpose of securing the maintenance of the agreement and making such readjustments as from time to time may be desirable. The agreements restrict South American shipments to European countries and the United States.

"Since the meat supplies of North and South America constitute practically the only sources from which the United States and her allies can satisfy their needs for the armies, navies and civil populations, these two agreements constitute a conspiracy on the part of the big five, in conjunction with certain foreign corporations, to monopolize an essential part of the food of the United States, England, France and Italy."

**Packers Object to the Plan.**

Protests against the recommendations of the federal trade commission that the government assume control of the packing industry were made by some of the heads of concerns involved.

J. Ogden Armour, president of Armour & Co., after pointing out that the government had been in control of the packing industry since November 1, 1917, said that the statement made by him at the beginning of the war, that "the United States government can have Armour & Co. and every employe and official thereof, if need be" was reiterated "a thousand times more emphatically."

Thomas E. Wilson, president of Wilson & Co., said that if any new methods for the benefit of the public can be worked out, "we will welcome them and cooperate to the fullest extent."

Edward Morris Jr., for Morris & Co., issued the following:

"I have not seen the report, but from what I can learn the idea of the federal commission is to turn the entire stockyards and packing industry over to the railroad administration.

"The main object now is the 'winning of the war' and we know of no institution that has played as important a part and with profits limited to 2 1-2 cents on the dollar of business done, or a total of not over 9 per cent for the year. On the capital invested I can not see where conditions would be improved.

"We believe that any one familiar with the situation will agree that the packing industry is the one industry that has performed its services with 100 per cent efficiency. This applies to the feeding of the army, navy and all our allies, besides taking care of the civil population.

"Food products are now being handled by the packers to the entire satisfaction of the army, navy and our allies. Why try an experiment at this critical time?"

Louis F. Swift, president of Swift & Co., issued the following statement:

"We naturally do not like to be publicly charged with unlawful methods of gaining monopoly control when we know that we are in open and honest competition with every other packer. The report apparently tries to prove that the packers have obtained a monopolistic control through the ownership of live stock and refrigerator cars, stockyards and branch houses, and advocates that the government acquire these facilities.

"Swift & Co. is perfectly willing to let the railroad administration decide whether it shall take over our live stock and refrigerator cars. The principal thing to consider is whether the present service could be improved. The only reason we ever built our own refrigerator cars was that the railroad did not furnish the equipment.

"The stockyards are already being regulated by the United States department of agriculture, and we have no objection to the government's taking them over completely if it sees fit to do so. We wish to point out, however, that our company has become interested in stockyards only for the purpose of providing proper market facilities that did not otherwise exist, and that in such stockyards there are open competitive markets with uniform and reasonable charges for services performed. It is difficult to see how the public could be benefited by such action; in fact, quite the opposite effect might occur.

"We do not believe that taking over branch houses and storage houses would be practicable, as it would destroy personal initiative in handling of a highly perishable product, where great skill, acquired only by long experience, is necessary. It would also be a risky experiment in government operation that would be of doubtful benefit, even if successful and would undoubtedly react unfavorably on live stock values.

"No one is more interested in improving conditions in the live stock and meat trades than we are, and we are willing to cooperate with the government in any practical constructive plan."

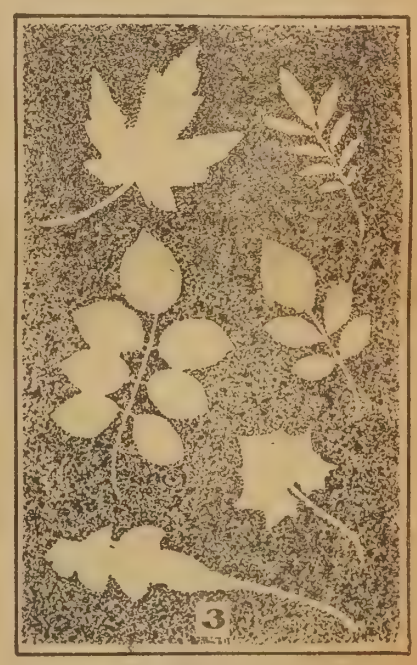
## Spatterwork Pictures.

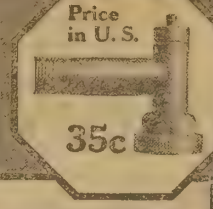
Spatterwork provides a simple means for making outline pictures of leaves and flowers, and a scrapbook of spatterwork pictures is a collection well worth the making. Now, while the leaves are still green and the flowers in bloom, is the proper time to begin



your collection. Perhaps you can find right about you varieties enough to fill a scrapbook. But it is not necessary to complete such a collection this season; in fact, after you once get it started you will wish to keep on adding new varieties as you come across them.

Before I tell you how to make the scrapbook, let us see how the spatterwork is done. There is not very much to learn and the work is easy. Besides paper upon which to make the pictures, which may be in sheet form or in the

form of a blank notebook, you need drawing ink, a penknife, and an old brush.



Place a leaf of which you wish to make a spatterwork picture flat upon a piece of paper. If its edges curl it must be pressed out by having a weight placed upon it, and it is best of course to do the pressing between sheets of paper other than those on which you are going to make spatterwork pictures, as the pressing will probably stain the paper. With the leaf in position upon the sheet of paper, dip the brush into the ink, and draw the blade of the pen-knife across the ends of the bristles, holding the brush in such position that the ink on the bristles will spatter over the edges of the leaf. Move the brush so the spattering

will be even. When the ink has dried lift the leaf from the paper and you will find a white silhouette of it upon a stippled background.

In making up pages for a scrap-book, mark off the margin that you wish to have around each page. Then cover these margins with pieces of paper, lapping the pieces at the corners and weighting them with coins, as indicated in Fig. 1, to protect the marks from the spattering. Arrange the leaves in some such order as that shown in Figs. 2 and 3, or classify them according to their species, and then proceed to spatter them. You will find the loose sheets easier to handle than a bound notebook, and if you classify the pictures extra sheets containing new varieties can be inserted at any time between the loose leaves, wherever they belong. Punch the left-hand edges of the loose sheets in three places, and bind them with shoe-laces between cardboard covers.

# Much Drying of Foodstuffs This Year

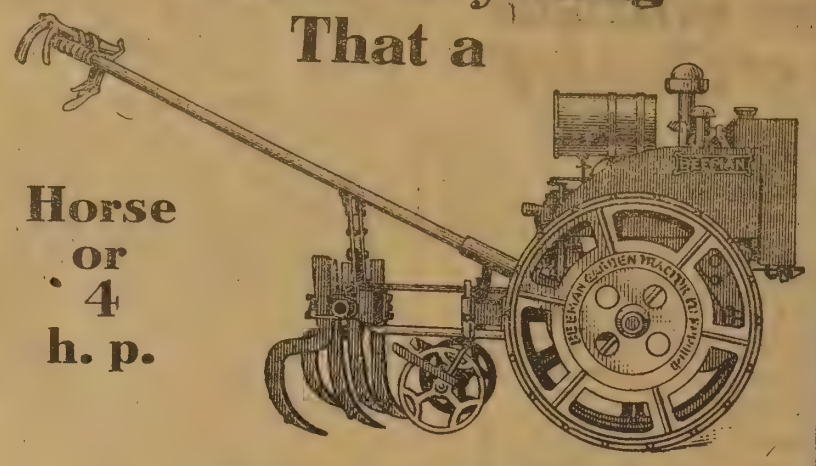
(Continued from page thirteen.)

trimming off all dead, diseased, or discolored leaves, cutting out the central stalks, and cutting the heads into slices one-third to five-eighths inch thick, which are subdivided by again slicing at right angles to the first cut. A rotary slicer of sufficient size to receive a half head of cabbage will do the work rapidly and satisfactorily, but an ordinary slaw cutter, or even a butcher knife, may be used. The sliced cabbage is blanched by exposing to steam for three minutes after spreading on the trays or by dipping into boiling water in a wire-bottomed box or basket for four minutes. The dipping vessel should not be filled to a depth of more than 6 to 8 inches and the contents should be stirred vigorously during the dipping, in order that the hot water may quickly reach all parts of the vessel. Since cabbage tends to pack together rather closely on the trays, care must be taken to spread it as evenly as possible to a depth of not more than one inch, and to stir the material frequently in the earlier hours of drying, in order that thick masses may be spread out over the thinner areas. Start the drying at 115 degrees to 125 degrees F. and increase the temperature by 10 degrees as drying nears completion. Great care must be taken to avoid scorching the product; the thin portions of the leaves dry much more quickly than the thick, fleshy ribs, and are very prone to scorch and brown upon the slightest overheating. The product is sufficiently dry when no water can be squeezed out of the thicker pieces by strong pressure between the fingers.

**Cauliflower.**

Remove diseased or discolored portions of cauliflower, wash, and cut into small pieces, either by hand or preferably in the rotary slicer. Blanch five or six minutes in steam or four minutes in boiling water. Spread rather thinly on the trays and dry with an initial temperature of 120 degrees F., which may be increased, if desired, to 130 degrees as the material becomes almost dry. Cauliflower undergoes a very considerable darkening during drying, despite the rather prolonged period of blanching here recommended, but the original color is more or less perfectly regained when the dried material is subsequently soaked and cooked. It is treated in the curing room as are other vegetables and is sufficiently dried when no moisture can be crushed out of the pieces with the fingers.

**Onions.**



As no satisfactory machine for the purpose has been devised, the outer discolored portions of onions must be removed by hand. Blanching is not necessary, and the slight improvement in color which it gives is more than offset by the loss of soluble constituents into the water used for dipping. The onions should be spread on trays as rapidly as they are sliced and immediately placed in the evaporator. The temperature in the drier should be 140 degrees F. when the onions are placed in it, and should be held at this point throughout the drying. The product must be carefully watched toward the end of the process, as thin detached pieces rapidly scorch unless mixed with the thicker compact slices. The product is dry when pieces break crisply on bending, and it should be promptly removed to guard against overdrying.

The evaporator may also be used for curing onions to prevent storage rots and to prolong their season of storage. Alternate trays of the drier are used and the onions are loosely piled upon them to a depth of four to six inches. The ventilators are wide open and a very small fire, just sufficient to maintain a temperature of 95 degrees to 100 degrees F., is started in the furnace. The drying is continued until the outer scales are quite firm and hard and the onions have lost 8 to 10 per cent of their weight, after which they are stored in the usual manner.

**Pumpkins and Squash.**

Pumpkins used for drying may be of any variety, but the firm, solid-fleshed, deep-colored varieties will give a larger yield of a more highly flavored and consequently more desirable product. Either summer squash or the later maturing varieties may be dried. In any case the vegetables should be mature and in good condition for use fresh. The treatment given pumpkin and squash is identical. The vegetable is cut into strips two inches wide and peeled, the seeds are removed, and the strips are passed through a rotary slicer set to cut pieces one-half to five-eighths inch in thickness. The pieces are immediately blanched, either in boiling water or steam, for three to six minutes. The

**THE SELF-OILING WINDMILL**

has become so popular in its first three years that thousands have been called for to replace, on their old towers, other makes of mills, and to replace, at small cost, the gearing of the earlier Aermotors, making them self-oiling. Its enclosed motor keeps in the oil and keeps out dust and rain. The Splash Oiling System constantly floods every bearing with oil preventing wear and enabling the mill to pump in the lightest breeze. The oil supply is renewed once a year. Double Gears are used, each carrying half the load
We make Gasoline Engines, Pumps, Tanks, Water Supply Goods and Steel Frame Saws.
**Write AERMOTOR CO., 2500 Twelfth St., Chicago**

When you write to advertisers be sure to state that you saw their advertisement in this paper.

different varieties which are used vary so much in the character of their flesh and the amount and depth of their coloration that the operator must necessarily learn by a little experimentation the best length of time for blanching the particular lot of material on hand. The process is completed and must be stopped as soon as the pieces have become semi-transparent.

The drying should be begun with a temperature of approximately 135 degrees F., which may be gradually increased to 160 degrees as the material dries. The trays should be looked over once or twice, in order that any moist spots may be opened up and spread out. Pumpkins and squash should not be dried until brittle; the material is in proper condition for removal from the evaporator when the pieces have become leathery in texture, but show no moisture when cut across and crushed.

**Tomatoes.**

Fruit intended for drying should be well ripened but still firm. Wash the tomatoes, place in a wire basket, and submerge in boiling water for one or two minutes, to loosen the skins. Remove and allow to cool, strip off skins, remove the hard, woody central core and any adhering skin or diseased areas, and cut the fruit into slices three-eighths to one-half inch in thickness. Spread the slices in a single layer upon the trays. Tomatoes can not be placed directly upon naked wire trays, as the acids of the fruit become so concentrated during drying that the metal is rather vigorously attacked. Trays may be protected by painting them over with a brush dipped in boiling paraffin or by laying pieces of cheesecloth over them.

The temperature at the beginning should not be more than 120 degrees F. and may be gradually increased to a maximum of 140 degrees toward the completion of the drying.

Properly dried tomatoes as taken from the drier will show no moisture on being pressed between the fingers.

**Sweet Corn.**

Corn intended for drying should be gathered when in the milk stage, before glazing and hardening have begun and when the corn is in ideal condition for immediate table use. It should be gathered only as rapidly as it can be worked up at the drier and must never be allowed to remain standing in bags or boxes in the field or at the drier. This is imperative, as no produce deteriorates more rapidly on standing in a warm place.

The ears are husked and trimmed with a knife to remove any worm injuries, but no effort to remove adhering silks need be made, as these are readily separated from the grains after drying. The ears are then placed in wire baskets or wire-bottom boxes and plunged into boiling water for 8 to 12 minutes. The cooking is complete when the milk is "set;" that is, when no fluid escapes from the grains upon cutting them across. Younger corn will require a longer period of cooking than the more mature ears, so that the corn may very well be divided in husking into older and younger lots, which are cooked separately.

After cooking, the corn is emptied upon a table, allowed to drain and cool sufficiently to be handled, and then cut from the cobs with a strong, sharp knife. The knife should be so held that none of the cob is removed with the kernels. The adhering glumes like the silks, are easily screened out after the corn becomes dry. The kernels are spread upon trays to a depth of one inch and dried at 130 degrees to 140 degrees F. The grain should be thoroughly stirred several times during the drying, to separate any adhering masses and equalize the drying. Properly dried corn is hard and semitransparent, and the kernels break with a clean, glasslike fracture when crushed.

**TREATMENT OF PRODUCTS AFTER DRYING.**

After removal from the drier, fruits or vegetables must be subjected to an after-curing or conditioning process before they are permanently stored away. Any lot of material, even that removed from a single tray, will not be uniformly dry throughout, some portions being over-dried while others contain too much moisture for safety. If such material while still warm be piled loosely upon a clean floor and subsequently thoroughly stirred at daily intervals for 10 days or two weeks, the wetter portions give up some of their water to the drier parts or to the atmosphere, the moisture content of the entire mass becomes uniform, and a condition of equilibrium with the surrounding air such that the material neither absorbs nor gives off measurable quantities of moisture is presently attained. Material so treated is said to have been "conditioned" and may be stored without danger of spoilage.

Quite frequently we hear parents asking if it is safe to allow their children to have animal pets to play with —dogs, cats, rabbits, lambs, calves, or colts.

In the stricter sense, possibly there is opportunity for differences of opinion on this question. Many parents, of course, fear that their children will catch a contagious or infectious disease from animal pets. They may even forbid their children from having pets of any kind. They may get a husky youngster with a craving for pets, a goldfish to play with.

Most of us have observed the intense, inborn desire of a child to possess for its very own, live pets—something which they can care for and which they will fight for. This instinct is, after all, not greatly different from that of the more mature person, who likewise feels the longing for something of his own which will be loved, provided for, and defended. It certainly seems that this life begins with small things which develop into greater—unless normal development is arrested—and childhood's love for living pets is only an instance to the point.

It is a fact that in the early years of life a child "grows" in other ways than in stature. It is building character. What it builds then will last a lifetime. To me it seems impossible to neglect a child at this early period when it is building character for a lifetime, and make amends for this neglect in later years, when the traits of character have become fixed. Making a practical application of this thought I say that I believe is impossible to thrust out of a child its love for living pets of its own, and still have the child develop normally in childhood and mature years. It can not be done. Blight the love of a child for its living pets or its parents or its associates, and this blighting will show forth some day, to your sorrow.

A boy, we shall say, has a dog for a pet. If he is a real boy the chances are that some day when the dog is eating the boy will pinch his tail. The dog may snap at the boy, though not once in 20 times will the boy's pets snap hard enough to draw blood. He may seize the boy's hand in his mouth, or catch him by the leg and hold him for a second without biting at all. We have all had this experience if we have had anything to do with dogs in our childhood.

Then and there the boy learns that the dog has rights which he must respect. Here begins in the boy the development of a trait. He perceives that others as well as he, have rights. How much of this understanding and the character that is formed by this understanding will be developed in the child who grows up without playmates, always has his own way and never in his life has to stand aside in respect to the rights of another?

Suppose, however, that while this dog is eating, another boy comes along and pinches his tail, or throws a stone at him. The chances are excellent for a fight between two boys, unless the other boy runs. You may rest well assured that a boy who grows up fighting for his pets now and then will know, when he arrives at manhood, what it is to fight for his own rights or the rights of those weaker than he—or the rights of his home and country. But the boy who never in his life has had to give battle for the rights of his pet, or himself, will in all human probability, develop into such a man as in these days is occasionally called "slacker." It is the same with girls. She gets precisely the same training from her kitten which will scratch if abused, and often must be protected from the dog owned by the little boy across the street.

This love of children for living pets is so great that they will risk perils and adventure to lug home a stray kitten or puppy of unknown parentage and history and share their food with it, even if they lack what they want themselves.

As to the question of diseases transmitted from animals to children, I do not believe there is a hundredth part of the chance there is for the spread of contagious ailments from child to child. In a few instances the dog may become the innocent carrier of infective material; but in such a case the dog quite invariably will have acquired this from a child. Animals, as a rule, are healthy. If children were as healthy as the dogs and cats, the rabbits, calves, lambs and colts they love to play with the conditions of childhood as affected by sickness would be marvelously different from what now obtains.

I have gone so far as to make the statement that I believe where there is no indication of a desire on the part of the child to have as his own to love, protect and abuse occasionally, a living pet, afterwards you will see a man or a woman in which there is a trait spoken of in the vernacular as "a yellow streak."

# Woman Suffrage May Become National

Although the women of the northwestern states have been voters on a par with men for several years, the question of woman suffrage is still a live issue with them. The immediate reason for this is that there is now pending in congress an amendment to the national constitution granting women in all the states the privilege of voting. If this amendment is adopted by congress it must be ratified by the legislatures of three-fourths of the 48 states of the Union before it will become effective. Hence, the nation-wide interest that is being aroused at the present time over the question.

The present status of the constitutional amendment is as follows: The house of representatives in congress immediately following the indorsement of the amendment by President Wilson approved it on January 10 last. At that date leaders of the suffrage movement knew that they lacked 11 votes of having enough favorable senators to pass the measure in the senate. They have been working since that time and report that now they need to win over only one more senator to be able to pass the amendment. It is probable that the measure will come up for vote in the senate in the near future.

In some instances those who are opposing the enactment of the amendment do so on the ground that it is a matter for the states individually to settle, and not for the nation as a whole. Others, especially in the south, where there are large numbers of negro citizens, women as well as men, argue that the enfranchisement of women would give the ballot to thousands of negro women who, they claim, are incapable of its intelligent use.

Since President Wilson's indorsement of national suffrage as provided in the amendment now pending, national organizations of many varieties have indorsed it. The national executive committees of both the republican and democratic parties have indorsed the amendment as have also various women's organizations, the American Federation of Labor, the grange, the nonpartizan league and the political organizations of several of the states.

President Wilson indicated the deeper significance of the suffrage movement when last June in a letter to the speaker of the Louisiana house of representatives he said, "I can not help regarding the settlement of this question as of world-wide significance and as affording a standard by which to judge our present interest in the complete establishment of democracy." The amendment before the senate at the present time is brief, but to the point. It reads as follows:

Article 1—The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any state on account of sex.

Article 2—Congress shall have power by appropriate legislation to enforce the provisions of this article.

# SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University.)

## What Paralysis Is—How Science Cures Some Cases

Dr. Hirshberg.

Paralysis, palsies and apoplexies are abominations to tax Job himself. Apoplexy is not, as Falstaff took it, "a kind of sleeping in the blood." It is a blood clot or a hemorrhage in the brain, which transfers movement, sensation and memory and perception.

After an "apoplectic stroke" there may occur unconsciousness or not, in accordance with the degree or severity of the clot or hemorrhage or the area involved.

Loss of sensation and movement of an arm or leg indicates that paralysis has taken place on one side and bleeding on the other. The palsied limb may or may not have loss of the common senses of touch, pain, heat or cold.

Discretion and good judgment on the part of the medical attendant are necessary. If his ability as a diagnostician is equal to his skill in treatment he must decide whether to exercise the paralyzed side at once or in the future.

Electricity, osteopathy, massage, Swedish movements, and exercises each day have their intense advocates. All, perhaps, help more or less, and contribute to the repair of the disconnected tissues and restoration of some movements.

**The Movement Aids.**

Commonly spoken of as "active" or "passive," movements of muscles are considered as possible by the person's own efforts—active—or by some outsider's activities—passive. "Free" movements are made without much work or resistance. When the osteopath or Swedish masseur interposes obstacles to check these they are called "resistance exercises."

When the palm of the hand and the thumb are used to stroke the surface of the part affected, the flesh and blood are toned and aided materially. This receives the name of effleurage or stroking. Petrissage is a movement made losely with a circular motion of the tips of the thumb and fingers.

When paralysis, stiffness and adhesions are present, petrissage is a good method to break these up. Kneading and friction also assist the palsied muscles to return to a useful state.

It is also necessary to tap and strike muscles sharp blows with the sharp edge of the palm on a line with the little fingers. This is called tapotement, and its effects are mechanical and physiological. All of these methods have a value. They loosen the muscles when shrunken or contracted, and maintain the relaxed ones in a tonic, healthy condition.

A paralyzed structure is undertoned, defectively nourished, worn, wan and wasted. This is called the atrophy of disuse. The central depot and its nerves have been cut, diminished nutrition and action are the consequences.

A paralyzed arm or leg may be flaccid, relaxed, toneless, or it may be contracted. Friction adds to the nutrition and tone of the muscles. It should, like massage, electricity, osteopathy and exercises, be used upon the muscles of the back of the arms and the fronts of the legs. This helps to overcome the tendency of the front arm and rear leg muscles to curve, flex and contract.

Each instance of paralysis, whether of one or both sides of the anatomy, or only one limb, ought to be given special treatments. Successful restoration of a useful leg and arm are the rewards obtainable.

Results of treatments carried out by Dr. Robert Ogden of Washington confirm the years of practical, physical treatments. One subject, for example, had the left side of the brain injured, resulting in much the same effects as apoplexy. The right side was paralyzed —hemplegia it is called.

The left arm was strapped across the victim's chest so it could not be used, and he was compelled to try to use the palsied arm. To help him, friction, osteopathic exercises or massage were applied to the back of the arm. In a few days he was able to draw away the hand and to grasp weakly. At the end of two weeks he was able to use the arm and leg very well, and even to walk.

# Sidelights

**Easily Won Reputation.**

Betty—What a delightful conversationalist Jack is.

Belle—What did he talk about?

Betty—Me.—Boston Transcript

**A Minor Loss.**

The observant one (to brother officer sitting at the Officers' club).—Do you know you've lost your cap badge?

The gloomy one (of the motor transport).—I'm not surprised. I've just lost a couple of caterpillars, a six-inch Mk seven, nine motor lorries and a four-wheel drive.—Galveston News.

**Who's Who in War Time.**

He—Have the car ready at the Admiralty at 4:30.

Chauffeuse—Very well.

He—I am accustomed to being addressed as "My Lord!"

She—I am accustomed to being addressed as "My Lady!"—London Opinion.

**Makeshift.**

"Those oldtimers used to inscribe their historic records on rocks with a chisel."

"Yes," replied the young man noted for sudden outbursts of wisdom; "I suppose the ancients had their troubles about white paper shortage the same as we have."—Exchange.

**Short on Information.**

A dashing lieutenant colonel, ex-member of the general staff, was approached by a recently drafted man.

"What might your name be? Do you belong to this bunch?"

"I'm the colonel in charge."

"Wal, I see the balance of 'em busy around here, and I don't see you doin' anything. How does a fellow go about gittin' your job?"—Everybody's Magazine.

**What Frightened Him.**

Betty was milking the cow when the mad bull tore over the meadow. Betty did not stir, but continued milking. Observers who had run into safety saw to their astonishment that the bull stopped dead within a few yards of the maid and cow, turned around, and went away sadly.

"Were you afraid? Why did he run away?" asked every one of Betty.

"He got scared," said Betty. "This cow is his mother-in-law."—Good Jests.

**His Alibi.**

An old negro went to the office of the commissioner of registration in a Missouri town and applied for registration papers.

"What is your name?" asked the official.

"George Washington," was the reply.

"Well, George, are you the man who cut down the cherry tree?"

"No, suh, I ain't de man. I ain't done no work for nigh onto a year."—Everybody's Magazine.

## CHAPTER XXIX.

### With the Prince of Pioneers.

"Now that the redskins have at least one canoe, they can give us a lot of trouble as we drift along down—don't you think so?" Jodo inquired, soon after the two voyagers had got well out on the river.

"Undoubtedly they can. If they're still over there, and are watching us start out, they'll be likely to follow us."

"And we'd better keep a little close to the north bank, so as to get holp if they attack us while we're opposite the settlement."

"They'll be too cautious to attack us till we're below the island. After that, look out!"

When the last cabin had been left behind, the travelers, knowing it would be many miles before they saw another human habitation, found themselves feeling both lonely and anxious.

"It might have been best, after all, for us to have waited for those other canoes," Jodo remarked.

"I'd like some company. But that's not the party for us to travel with. They'll be light, and have two or three or four men to a canoe, while we've got three heavily-loaded, deep-sunk canoes for two men. Too much—altogether too much difference."

"Maybe so. But it would have saved us a lot of worry, even if we'd had to work harder."

The voyagers now had as much as they could look after; for they seemed to be in one of the worst parts of the river. There were numerous snags, with an occasional whirlpool that tried to keep them circling instead of sending them on down stream. Also, there were many invisible sand-bars for the canoes to run aground on. But the canoemen managed to keep a cautious eye out as they paddled their way along. Sometimes, too, one of them would turn and gaze back, half expecting to discover an Indian-filled canoe following them.

It was well on in the forenoon when they caught sight of two canoes, far down the river. Whether the canoes were coming or going could not yet be told. Nor was it possible, at such a distance, to make sure as to whether the canoes carried white men or red men.

Before long, however, Ben and Jodo could make out that the canoemen were keeping near the north bank. That meant that the canoes were coming up stream, the current being feebler near the banks. Now the trappers felt not a little anxious. Were the approaching canoemen red or white? More probably they were Indians.

The trappers put fresh priming-powder into the pans of their rifles and pistols, then took up their paddles again. But it was not long till they could make out that the approaching canoes carried white men. There were three in each canoe—six in all.

Ben steered over toward the north bank to meet them. The two parties gazed at each other as they came together. The others ran in against the bank, where they could hold to bushes, and Ben did the same.

"Where are you bound for?" inquired Ben, after the two parties had exchanged greetings.

"For the Boone's Lick country," one of the up-stream canoemen replied. "Newcomers in this part of the world, we are. We've left our families there a few miles above St. Louis, close to Fort Bellefontaine, and we're makin' a little trip up to the promised land to look it over."

"Well, I suspect you're wise to go on ahead for more reasons than one," Ben answered.

"What reasons?"

"Well, for one, and the main one, there's more or less danger just now."

"Danger from who—from what?"

"From Indians. They don't seem actually to have started on the war-path yet. At least they haven't made any open attack on the upper-river settlements. But they're ready to pounce onto every straggler they can catch away from shelter, like a hawk onto a lost chicken."

"We've heard tell that the redskins have done some devilment, and might be troublesome. That's one reason we though it best to go up free-handed first and spy out the land."

"I've been hearing a lot about the Boone's Lick country for a year or two, and I'm not a little interested in it myself," Ben remarked. "First I heard of it from Daniel Boone. He put up a cabin up there a few years ago, and spent a winter there, hunting and trapping. He and I went on a hunting-trip together after that, and he told me not a little about that region. Finest country a bird ever flew over, he insisted. But any country is apt to look fine to Uncle Dan'l if there's plenty of game there. I've heard a lot about the Boone's Lick country from others, though—men that have seen it. And I rather think I'd like to settle down there myself."

"Better turn round and go back with us," one of the other party suggested.

"Don't know anything I'd like better, if matters were a little different. But we've been away from home so long. And here are all these furs and other things to get to market. But I'm likely to make a canoe-trip up there later. In fact, I'm almost sure I will if the aborigines don't go scalp-hunting."

"Are you a family man? You look rather young for that."

Ben smiled slightly. "Not yet—not just yet."

"But he's got prospects," Jodo remarked.

"Did have prospects," Ben corrected. "But two or three other fellows are ready to steal my prospects, and—and eight months is a long, long time to leave a girl without a word or a line. I'll never do such a thing again."

"'Tis a leetle mite resky," the other man agreed. "Still, girls by the thousand have waited longer than that for men to come home."

"But he's got a dead-sure chance if the one back at the settlements flickers out," Jodo explained. "Away out yonder in an Osage village, where we made a little visit last winter, there's a nice fat squaw named Watermelon that loves the very ground Ben walks on. An Osage chief has got her now, I understand. But Ben could probably buy her back for a few deer-skins. She told 'im again and again that she'd cookee his meat allee time—"

"Let up there, will you!" exclaimed the embarrassed Ben, blushing.

The other men laughed heartily. "Mighty good thing to have two strings to your bow," one of them remarked.

"Even if one does happen to be a red string," laughed another.

"Well, mighty sorry you boys cain't turn round and paddle back up the river with us," the man who had done most of the talking now said to Ben.

"So am I. Did you men notice any redskins on your way up?"

"Late yisterday evenin' we ruther guessed we caught a glimpse of a red man in the woods on the river-bank. But we couldn't tell for certain. We took some little precautions last night. Camped one place and cooked our supper, then moved up the river about a mile to sleep."

"That was only common prudence. And you'll be wise to take some such precaution every night from here on. We've had to do the same thing, and will do it again, I've no doubt."

After an exchange of experiences, the up-stream canoes started on. But before the two parties were out of hearing, one of the men called back:

"Early this mornin' we passed a canoe on its way down stream. Two fellers in it, one white and t'other black. We was passin' a little island at the time. The two men went down the main stream and we paddled up the side stream, because there wasn't much current there. We didn't talk to 'em, but we waved at 'em at a distance, and the white man took off his 'coon-skin and waved at us. You may overhaul 'em by night. They had a right smart cargo aboard—so it looked to us like."

"I'm hoping we may," Jodo called back.

The two parties now moved on their ways, the up-stream party fighting the current along the north bank, and the down-streamers making for the middle of the river again.

"I'm glad we don't have to paddle all these canoes against the current," Jodo remarked.

"We could never get anywhere."

"It would not only be harder work, but it would be more dangerous, because we'd have to hug one bank or the other."

Ben agreed with him, and they paddled on. Eager to get through the wilderness that still separated them from the settlements below, they used their paddles with a will. The heavily-laden canoes kept them from making much progress with their paddles, but the current swept them along at a good speed. Here, as elsewhere, there were numerous snags in the river. But most of those could easily be avoided in the daytime. There was, of course, some danger that the canoes might be stopped and overturned by an invisible snag.

"Ben, you know they'he running boats away back east by steam. Do you s'pose they'll ever run boats that way on this river, or on the Mississippi?"

"I haven't a doubt in the world that they'll do that very thing, and that before many years, too. In fact, I've already heard talk of building a steamboat west of the Alleghany mountains, on the Ohio river. When they once start one on the Ohio, it won't be long till they'll start another on the Mississippi and the Missouri."

"Well, I do hope I shall live to see that. I hope I shall live to see a steamboat come pushing herself right up the Mississippi to St. Louis, and even on up the upper Mississippi, and up this river."

"Jodo, boy, if the redskins don't snuff us out before we strike the settlements, you'll stand a number one chance to see that very thing."

"When dinner-time came, the travelers laid down their paddles and allowed the canoes to drift till the meal was ended. While they tried to follow the main current most of the time, when it carried them too near either bank, they were accustomed to steer back toward the middle of the river. But now, being busy with eating and talking, they let the current sweep them too far over toward the south bank.

They had just noticed the fact that they were almost within rifle-shot of that bank, and that the current was carrying them still closer, when Jodo happened to glance at the woods along the bank and saw a dark face, with fierce black eyes, watching them from behind a tree-trunk!

After a few quietly spoken words to Ben, they took up their paddles and began to guide the canoes away from the dangerous spot. Both sat low in the canoe, and both half expected to hear a rifle crack. But no sound broke the stillness. Soon they were again a safe distance out. But their narrow escape made them nervous, and made them realize that they were in the very midst of perils.

"The red rogues have got their evil eyes fastened on us," Ben observed. "Plainly they don't intend to let us slip out of their clutches if they can prevent it. I'm beginning to dread tonight."

"So am I. We shall be lucky if we can give 'em the dodge somehow. Maybe we'd better not sleep tonight. Maybe we'd better keep on the go, like we did coming down the Osage.

"I've thought of that, more than once. If it wasn't for the treacherous character of this water-course, I'd favor it. But a man takes his life in his hand when he drifts down the Missouri in the dark. Still, we may have to risk it," Ben said, and relapsed into thoughtful silence.

When the sun was low, they began to watch for a camping-place. An island seemed better than the mainland, and they put off camping in the hope of coming to an island. While still looking, they happened to glance backward, and caught sight of three canoes far up the river. The canoes, outlined against the setting sun, seemed to be crossing from one bank to the other. And there could be little doubt that the figures in them were Indians.

"Three canoes—whew!" Ben whistled. "Jodo boy, sure's your're born, we're in for a lively night of it! Yonder's an island ahead at last! But with the Indians in canoes, an island isn't particularly safer than the mainland."

"While the moon shines it ought to be. We can station ourselves on opposite sides, and make it interesting for anybody that tries to approach."

"But we can't afford to stay in any one place long. We're likely to find ourselves surrounded if we do."

"Maybe we can drift away before moondown tonight. Those clouds rising from the south will soon cover the moon and the sky, I imagine. And then we can steal away without being seen."

While nearing the island, the travelers were startled to discover a smoke rising from the lower end of it. Now they ceased paddling and eyed the campfire suspiciously. The smoke was rising from some woods, and the fire itself could not be seen.

Both sat down rather low, holding their rifles in readiness to shoot, and allowed the canoes to drift.

When opposite the fire, both caught sight of a dark face peering at them through a fringe of willows.

"Indians there!" gasped Jodo, clutching his rifle hard.

Ben return no reply. He crouched low, ready to fire at the first hostile movement. Both were waiting anxiously to see what the Indian was going to do.

But instead of opening hostilities, the figure behind the willows reached out a swarthy hand and—beckoned to the canoemen!

"Come by! Come by! We's white folks! We ain't no redskins!" called out an unmistakably African voice. And out from the bushes stepped a young black fellow.

For a few moments the voyagers hesitated. Indians might be using the negro for a decoy. Such things had been done. But Ben remembered something, and began to steer toward the island.

"Don't you recollect the two travelers the party for Boone's Lick told us they'd met? We've come up with them."

"Guess maybe we have," answered Jodo, in much relief.

Soon their three canoes were drawn up and concealed among the willows, where another canoe was already tied. The negro had returned to the camp-fire, and Ben and Jodo now parted the bushes and followed him.

By the fire, broiling some meat on a stick, sat an old man, dressed in the usual garb of a hunter. At sight of the man's face, Ben started forward eagerly.

"Well, of all men—of all men!" he exclaimed.

With surprising agility the old hunter sprang to his feet, and the two were shaking hands.

"Why, Benoni, where do you pop out from? Where have you rained down from?"

"Same place you're from, I think, Uncle Dan'l! The upper-river country—the wilderness country. Some travelers for Boone's Lick told us that they'd passed a white man and a black man in a canoe. But we didn't expect to come up with the canoe. And it didn't occur to us that the white man might be Daniel Boone. But we're certainly glad to see you!"

Both Ben and Jodo knew the famous old pioneer well. Their parents had known him and his family back in Kentucky, and had lived neighbors to them there. Ben could recollect, dimly, the morning, now 20 years ago, when Boone had made the trip on foot, with his wife on horseback, to the Spanish region known as Upper Louisiana. Since then his home had been a few miles north of the Missouri river, on Osage Woman creek, only about a day's travel from where the Armstrong and the Henderson families lived. He had visited them and they him. Every winter he went off into the wilds on a hunting trip. And it was on one of these hunting trips that Ben had accompanied him.

The two newcomers were soon cooking and eating by the same camp-fire. There was much to talk about.

"No, we didn't stop at Loutre island, nor at the French village either," Boone said, in reply to Jodo's question. "The folks there almost compel you to stay a week or two with 'em; and I was in a good big hurry to get home. Reckon you boys wouldn't have caught up with us, but Tom here has to do most of the paddling. The fact is, I've had a rather bad sick spell on this trip. Thought for a few days Tom would have to dig a hole for me. But my time hadn't come, it seems. So I'm on my way home again. But I'm not strong. The fact, is, Benoni, I'm not so young as I used to be."

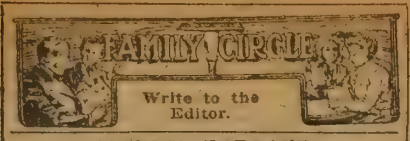
"You're looking rather vigorous, Uncle Dan'l, age or no age, sick or not sick."

"Oh, I'm feeling pretty well—about as well as ever. But my strength hasn't come back to me yet. I'm all right till I start to handle a paddle or exert myself somehow. Then I soon begin to feel all played out."

"Well, I'm the gladdest kind that we found you, Uncle Dan'l. We'll travel together from here on. If necessary you can tie on behind us and we'll tow you home. I never felt better or stronger in my life. And Jodo here can paddle as long as I can; and he can eat fully as much. But, do you know, I'm afraid we're in for a lot of trouble tonight?"

"How so, Ben? From Indians? I've been half expecting something of that kind. We thought we caught a glimpse of one on the bank today."

"We know we saw one watching us. And we just now caught sight of three canoes crossing the river a mile or two back. If they were Indian canoes, as we more than suspect, they're liable to swoop down on us some time tonight."



"Well, with four good rifles to talk for us, we ought to be able to tell 'em howdy-do when they come. Still, it might be easier to give 'em the slip. Tom and I thought we'd cook and eat a snack here, and then drop down with the current a piece and look up another place to sleep."

"Jodo and I had the same thing in mind. With three canoes, the redskins can surround this island while we're waiting for the moon to set. But with that cloud that's coming up wonder, we may not have to wait for the moon to set."

"No, I don't think we will. And I think I know a trick or two that'll fool 'em, moon or no moon."

"If the Indians in canoes come down here and don't find us, they'll be apt to follow us down the river."

**Editorial Contributor.**

# Keeping Baby Fit

**By Mrs. Max West.**

Children must be kept as cool as possible. In hot weather this is not an easy task, but it may be accomplished in some measure by clothing them suitably. Babies need only the diaper and one other garment, band or slip. Older children need only enough to cover their bodies. As far as possible children should sleep out of doors at night, if screened porches are available, or, if not, with all the windows and doors wide open. A full tub bath in cool or tepid water will do much to make sleep comfortable, and a little plain talcum powder will help to allay the irritation of prickly heat.

Children must be provided, too, with occupations suited to their age. A play pen on a cool porch, or even under the trees in the yard where the mother can watch the baby, will give much pleasure. Sand piles, swings and many other simple pieces of play apparatus which are easily made at home without any great expense will keep older children happy and out of mischief. Rainy days may be spent on the porch. Hints for mothers as to the selection of play and occupation for young children will shortly be published by the children's bureau. Very much of the annoyance of mothers and the fussiness of children would be done away with if the little hands and minds had plenty of occupation. Many a cross child is cross because he has nothing to do which interests him, and many a piece of mischief is only the result of the child's trying to find something with which to busy himself.

Children's food must be chosen with special care in summer to suit the ages, and proper food habits should be established. The nursing baby will cause the least anxiety. If a baby is nursed at regular times, preferably three or four hours part, and is clean and as cool as possible, he will not usually suffer harm even in very hot weather.

Babies newly weaned from the breast and up to the end of the second year will need special care. Properly modified cows' milk will form the principal part of the diet of all such children, and must be as clean and as fresh as possible. Detailed directions for the feeding of children will be sent free from the children's bureau of the United States department of labor to all who care to send for the bulletins on the care of children.

Older children should be taught to observe regular habits also and mothers must guard against the dangers of over or underfeeding. And especially against poor food materials, such as overripe fruit. Young children need to be taught to chew their food thoroughly and to eat slowly. Cleanliness of the body is necessary for health and comfort at all times, but is demanded in the summer time. These fundamental rules for health should be in effect in every family, and where carried out faithfully sickness should be largely done away with.

## WATER SYSTEM.

### A Great Blessing in Farm Work.

To the Editor: A little over two years ago as I stood in the front yard and watched the hungry flames consume my home with all its contents for want of a convenient and adequate water supply, I resolved that before the foundation of a new home was laid a water system should be established.

Having a living spring of excellent water near and at a sufficient elevation to enable us to use gravity we have now installed a water system in our new farm bungalow. In the back yard we have a hydrant with a hose which is a safeguard against fire, waters the horses, washes the automobile and keeps the lawn and flowers fresh and beautiful.

There is no one to whom a water system is a greater blessing than a tired farmer, who has for years been confronted by an empty water pail, or the weary mother of several small children who looks forward with dread to the Saturday night baths. There is no convenience to compare with a water system and fixtures and I would not be without mine for any consideration.

MRS. F. L. SHAW.

Durkee, Ore.

### Time Saver for Farm Women.

To the Editor: I would like to say a word to those who have had bad luck canning string beans and peas. The first year I lost nearly all of mine, so the next year I tried an experiment of my own. The first year when I canned my beans and peas I salted them when canning, but the last year I cooked them without any salt at all and when sealing up my jars I added a tablespoonful of vinegar to each quart of beans or peas, and I never lost a jar. When I opened them to use I put them on to cook for 25 minutes, adding the salt then. That is a very simple way to can beans, corn or peas and also a great time saver for farm women.

MRS. O. ALLENBAUGH.

Malaga, Wash.

### Sugar Saving Hints.

Bottle fruit juice without sugar and save it for jelly until sugar is more plentiful.

Many fruits can be dried. This will save sugar.

Some fruits can be stored, such as apples or winter pears.

# A Little Bit of Spice

**By Mariella Ladd.**

One of my best friends in my efforts to carry out Uncle Sam's injunction to "make the new foods appetizing and attractive" is my spicebox. In learning to use it, however, I made a few discoveries which may be interesting.

Spice is a great economizer of sugar. A dash of cassia or cinnamon in a milk pudding lessens the amount of sugar needed to sweeten it, but too much of the spice is apt to offend some critical taste, so I have found it best to use just enough to give flavor and not enough to advertise what the flavor is. A little mystery is as good in the kitchen as elsewhere.

When I found that "substitute breads" were going slowly I made the substitutes into gingerbread. In making the gingerbread I used ginger, cinnamon and clove, but only used about half the quantity of each that I formerly used. I varied the gingerbread often by adding raisins or chopped nuts. This makes it quite as popular as the richer and more heavily spiced kind, of prewar days.

When I have very acid fruit to serve I add to it when stewed a little baking soda, skim it carefully when it boils up, then sweeten and add a little cinnamon or cassia. On no account must enough spice be used to destroy the flavor of the fruit. Just enough to balance and accentuate it is all that is needed.

In savory dishes the use of spice is of twofold value. It increases the aroma of a dish and so excites the psychic juice which physiologists tell us is an important element in digestion. It also balances strongly flavored foods and so prevents the "rising" which follows some meals.

In flavoring soups I find it best to tie peppers, allspice and cloves (sometimes a little pimento) in a little bag. Then they do not float about in the soup and tell tales. This is unimportant in clear soup which is going to be strained.

On meatless days I always make a good gravy, and for this I find the spicebox a help. One of these gravies, which I think is the most popular, is made by frying lightly a shredded onion in dripping, sprinkling flour, salt and pepper with a few grains of clove into the pan, and, when brown, adding cold water. When the gravy is thickened it is strained and served with vegetables or other meat substitutes.

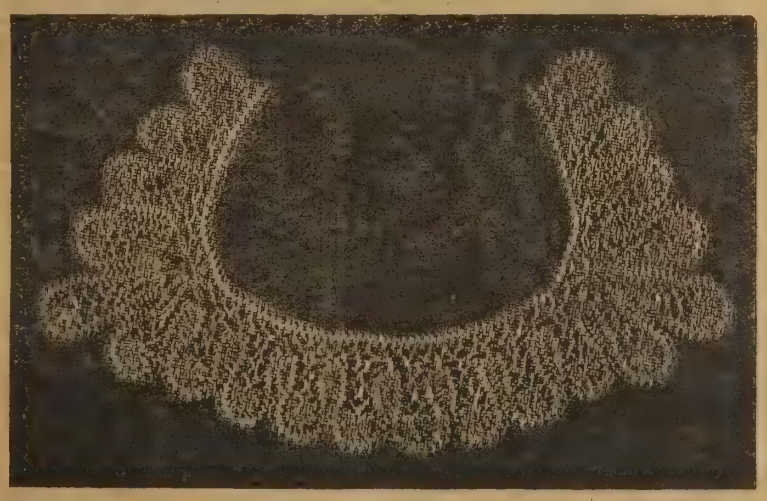
# In Place of Lemons

The government is asking us to use as much as possible the things at hand, so that the railroads will not be so much burdened with shipping of all kinds of commodities from distant points. When housewives of the northwest are putting up their fruit this season, if they will add a considerable quantity of gooseberries and rhubarb, which grow so easily here, to their supplies, even though they may not have sugar for much of any sweetening, they will find that these two very acid juices can be made to take the place of lemons in all sorts of ways—in summer drinks, pie seasonings, sauce and pudding flavors, in jellies and jams, syrups and cakes. Simply strain the juice when wanted through a thin, clean cotton cloth and use in the same quantity as though it were lemon juice. Many people will find the rhubarb or gooseberry flavor more agreeable in some of the combinations than the lemon they have been accustomed to. L. C. F.

**It All Depends.**

A playwright and an actor were in conversation when the former, who has been none too successful of late, exclaimed gloomily:

"People will praise my work after I am dead."



"Well," said the actor, in a consoling tone, "perhaps you are right, but don't you think it's a great deal of sacrifice to make for a little praise?"—Everybody's Magazine.

# Maltese Lace Collar

**By WINNIFRED WORTH.**

Collar designs are always popular. This one is beautiful and at the same time very easy to make if you follow the concise instructions given here.

Fasten thread in 2 loops, ch. 7, dc., drawn out to 1, 7 times. Fasten to chain, chain 5, join to side, put needle on underside in next loop, fold braid, take up 3 loops. Draw thread through then and stitch. Draw thread through next, and next, keeping all on needle. Draw thread through 1 at time, back chain. 3, take up 2 loops at top, ch. 7, join (5 join twice) every scallop. 1 row of chains more than the corner; 2 chains of 5 more for point.

For front. Work across top 5 ch., 1 dc., 1 ch., 1 dc. in each space and 1 tight at end of scallop.

For corner. Ch. 5, 1 t. back in same, 2 t. in middle of scallop. So on until 7 bunches, then around as started in first scallop. Next row take up 2 loops, ch. 3, join to other side until corner, make as bottom.

Player Music Rolls

Send for Our Catalogs

We carry the largest stocks of Player Music Rolls on the Pacific Coast. We have in stock all the new music. We get the hits as fast as the manufacturers make them into player rolls.

We issue a Monthly Bulletin listing only the real hits and the prices—the Bulletin is sent free and without obligation to purchase. We will gladly add the name of any Player Piano owner, upon request.

Write and ask us about our "On Approval" plan of buying Player Music.

When writing please state whether your Player Piano is a 65 note or an 88 note instrument.

We invite you to call at any of our stores—or write us asking for illustrated catalogues and prices.

*We are dealers in Steinway and other Pianos, Pianola Pianos, Aeolian Player Pianos, Player Music, etc.*

# Patterns

2261—Ladies' dress. Cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Size 38 requires 5 1-8 yards of 46-inch material. The dress measures about 2 3-8 yards at the foot. Price, 10 cents.

2574-2575—Ladies' costume. Waist 2574, cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Skirt, 2575, cut in seven sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. A medium size will require 3 1-2 yards for the skirt, 3 yards for the tunic and 3 3-4 yards for the waist, of 27-inch material. The skirt measures 2 yards at the foot. Two separate patterns, 10 cents for each pattern.

2346—A simple set of coat and cap. Cut in four sizes; 6 months, 1, 2 and 4 years. Size 2 will require 3 3-4 yards of 27-inch material for the coat and 3-4 yard for the cap. Price, 10 cents.

2353—Ladies' house dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 requires 7 3-4 yards of 36-inch material. The skirt measures about 2 1-2 yards at the foot. Price, 10 cents.

2566—Boys' blouse suit. Cut in five sizes: 6, 8, 10, 12 and 14 years. Size 12 requires 2 yards for the blouse and 1 1-2 yards for the trousers, of 36-inch material. Price, 10 cents.

2415—Girls' dress. Cut in three sizes: 12, 14 and 16 years. Size 14 requires 4 5-8 yards of 44-inch material. Price, 10 cents.

2417—Ladies' waist. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 requires 2 3-8 yards of 44-inch material. Price, 10 cents.

1247—Ladies' dressing sacque, boudoir cap and slipper. Cut in three sizes: Small, medium and large. It requires 5-8 yard for the cap, 1 yard for the slippers and 2 5-8 yards for the sacque, of 27-inch material, for a medium size. Price, 10 cents.

2576—Ladies' apron. Cut in four sizes: Small, 32-34; medium, 36-38; large, 40-42, and extra large, 44-46 inches bust measure. Size medium will require 4 1-4 yards of 36-inch material. Price, 10 cents.

2554—Child's dress. Cut in four sizes: 2, 4, 6 and 8 years. Size 6 will require 2 3-4 yards of 36-inch material. Price, 10 cents.

2376—Girls' dress. Cut in four sizes: 4, 6, 8 and 10 years. Size 8 requires 3 1-2 yards of 44-inch material. Price, 10 cents.

2563—A simple undergarment. Cut in four sizes: Small, 32-34; medium, 36-38; large, 40-42, and extra large, 44-46 inches bust measure. Size medium requires 2 7-8 yards of 36-inch material. Price, 10 cents.

## To Dry Corn a New Way.

A new method of drying corn was given to women of the Canyon county farm bureau on their recent trip through the county by Miss Louise Riddle, home demonstrator. Here it is:

To five quarts of corn cut from the cob add one cup of sugar and one-half cup of salt. Mix well and place in a double boiler or in a pan set inside of another pan of water and cook for three-quarters of an hour to an hour. Dry in oven or in drier for one-half day. This method holds the milk in the corn and gives it a much fresher flavor.

L. P. F.

### He Knew Why.

"What is Professor Diggs doing these days?"

"He is studying the causes which underlie revolutions."

"He is, eh? Well, I suspect he has a great deal to learn about such things. He got tangled up the other day in a revolving door."

## Canning Without Sugar

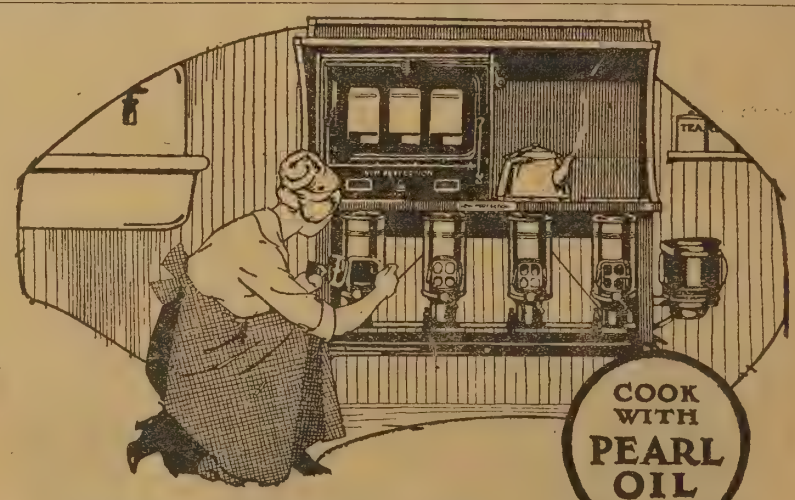
The United States food administration is asking every one to buy for household use no more sugar than is absolutely necessary. This is asked in order that there will be some for canning. But fruits should be canned without sugar if possible. Here are some suggestions:

**Make Fruit Leather.**

Mash ripe fruit (berries, cherries, figs, apricots, peaches and blue plums may be used) to a pulp, spread on lightly oiled platters and dry in the sun or dryer. When dry, sprinkle with sugar and pack away in jars or very tight boxes lined with wax paper.

Peaches, or half and half peaches and figs, make delicious leather and need only a sprinkling of sugar.

Serve this leather in winter instead of candy, or with cream cheese and nuts for dessert. Fruit leather may be soaked in water and used for pies, shortcakes, puddings and sauces. When intended for this purpose, omit the sugar.



## Easy Way to Dry Vegetables.

To the Editor: Believing that my way of drying corn, peas and snap beans is a little better and a lot easier than any I have seen advocated in any of the farm papers we take, I gladly pass it on.

Gather the peas and beans when in their best condition for cooking and prepare the same as if you were going to cook them. Throw them into boiling water with a little salt added, and let them boil about three minutes, then drain as dry as possible. Have ready some sacks made of cheesecloth about six inches wide and a yard or more long, if you need so much room. Put the drained beans or peas into these sacks, shake them out evenly along the length of it and pin them out in the sunniest and breeziest place on your clothesline. You will be surprised to see how soon they are thoroughly dry and can be put away for winter in sacks. There is no danger of it spoiling.

It is best to boil the corn a few minutes on the cob. Just enough to set the milk. Then cut it off not too deep, scrape the cobs with the back of the knife and proceed the same as with the peas and beans. Pumpkin can be dried the same way, but without boiling, simply slice in very thin strips.

MRS. WINNIE ASHLEY.
Westmond, Idaho.

COOK WITH PEARL OIL

Ready to Cook in a Jiffy

Just the touch of a match and your New Perfection Oil Cook Stove is ready for cooking. No waiting for the fire to burn up.

Easier to operate than a coal or wood stove: No smoke or odor; no dust or dirt. Bakes, broils, roasts, toasts,—all the year round. All the convenience of gas. And a cool kitchen in summer.

In 1, 2, 3 and 4 burner sizes, with or without ovens or cabinets. Ask your dealer today.

A New Perfection Oil Cook Stove means kitchen comfort and convenience. Ask your friend who has one. Used in 3,000,000 homes. Inexpensive, easy to operate. See them at your dealer's today.

STANDARD OIL COMPANY
(California)

NEW PERFECTION OIL COOK STOVE

Dear Corner Cousins: A few days ago somebody told me about a very wealthy banker here in the northwest, who has everything he needs and who is very generous in his living and his giving and yet he saves every old circular letter and even the old envelopes to use for scratch paper. This, he said, is not because he can not afford to buy scratch tablets, but because he thinks it is right to save whenever possible, and partially, I think, because he wants to set a good example to those around him.

If a great banker can do that, we should do every bit as much, saving every place we can.

Tell me of different ways you can save with little things. Thrift is right and will help not only win the war and save the lives of soldiers, but it will give us a good habit through life.

AUNT NELLIE.

### Joke Books for Soldiers.

Dear Aunt Nellie: The topic I am going to write on is "Helping My Country." I am the president of the garden club for the La Center grammar school. We have meetings once a week and have topics to talk on such as beans, tomatoes, onions and carrots. Each member has a war garden and takes care of his or her own garden. I have signed the pledge not to eat any more candy during the war and have joined the Junior Red Cross. I have made several bunches of gun wipes, 100 in a bunch, for the soldiers up at Vancouver, Wash. Our school has made a great many bunches. I have made five joke books for the convalescent soldiers and sailors. I am saving up my money for war saving stamps. Now as school is out I am going to peel cascara bark this summer. We get quite a bit of money for a sack. I am going to sell sacks and bottles, too. Sacks are from 5 to 10 cents apiece and bottles 1 cent each. I am going to buy thrift stamps with the money. I eat dark bread, too. I hope that everyone will do their bit and put it together and make a big bit. Then we'll take it and hit the kaiser on the bean with it. My motto is W. S. S.—We Shan't Starve and War Saving Stamps.—Margaret M. Kane, 13 years, LaCenter, Wash.

### Won a Garden Club Pin Last Year.

Dear Aunt Nellie: I thought I would join the Cousin's Corner. How are you all and the cousins? I am fine. I am 13 years old and in the seventh grade. My birthday is March 4. I have light curly hair. Have I a twin? If so I wish she would write to me and I would answer. I have two sisters and one brother. My sisters' names are Olga, 4 years old, and Cora, 11 years old. My brother's name is Elmer. He is 16 years old. I live on a 32-acre farm; across the road is the Stillaguamish river, and we have lots of fun in the summer. We have six cows, Cherry, Star, Rose, Beauty, Lady and Queen. We have four calves, Sammy, Sally, Fanny and May. We have two horses named Rocksey and Dolly, one pig, a number of chickens, two big cats and five kittens. School closed May 24 and I am very glad because I do not like school. There were 35 children in my grade and 10 rooms in the school building. I have joined the Junior Red Cross and the garden club. Last year I won a pin and I am going to try to get one this year also. I planted potatoes, tomatoes, carrots, beets and onions. This is all I have to tell you this time, so good-by.—Elvis Helen Kenseth, Granite Falls, Wash.

### Find Fresh Water Clams.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner, and I hope it won't be my last time. I was 12 years old July 27. Have I a twin? If so, I wish they would write to me. I am in the sixth grade at school. My teacher's name is Mrs. Ward. I am helping my country by raising beans, peas, cucumbers, carrots, kale, flax and pumpkins. I have joined the Junior Red Cross. I have knitted three wash rags and am knitting a baby hood now. I go to Bethel school. My sister and I went to the creek and found some fresh-water clams, yesterday. I have two sisters and one brother. My sisters' names are Edna, 9 years old, and Emma, aged 7. Edna is in the third grade. Emma is in the second grade. My brother's name is Hilton. He does not go to school yet. I live on a 22-acre farm. I have one cousin that lives in Raymond, Wash. On the farm there is one dog named Bob, two horses named Nellie and Billy, and two cows, named Blackie and Daisy.—Hazel Morris, R. F. D. 1, Box 242, Port Orchard, Wash.

### Raising Beans and Chickens.

Dear Aunt Nellie: It has been a long time since I wrote to the Children's Corner. For the last three or four months the Corner has been growing big. I like to read the letters, and there are just a few that I haven't read. I have joined the Junior Red Cross. I have hemmed some handkerchiefs and knitted one pair of wristlets. My oldest sister has learned how to knit and she is knitting a pair of wristlets, too. I like to knit and I think I will knit some more. I am going to join the Red Cross next year, too. Our school was out May 24, 1918. We had a picnic in Utsaladdy on Camano island, in Snohomish county. I have joined the Agricultural Achievement club. I am raising beans and chickens. I have 16 chickens. My brother has graduated from public school. My sister that is 9 years old has passed into the fifth grade. I have passed into the seventh grade. I was 12 years old July 2, 1918.—Selma Lillquist, Mt. Vernon, Wash.

### One Rooster Brings $1300.

Dear Aunt Nellie: This is the third time I have written to the Children's Corner. I hope the Corner will grow three times as big as it is now. I will be 12 years old June 24. Have I a twin? If so I would like to hear from her or him. I hope, Aunt Nellie, I have not made any mistakes in spelling in my writing. I have a brother-in-law in the war. His name is W. D. Scott. My sister is staying at home with us now while he is in the war. He had to go May 22. I wish the war would stop. I am afraid my brothers, Jack and Gib, will have to go yet before it is over. I have three little kittens and some more around the place, but have not found them yet. I would like to buy war saving stamps. We had a Red Cross parade and sold stuff for the Red Cross. One rooster sold for $1300 for the town. In the last week they made over $2600 for the Red Cross. I think that was just fine. I think, Aunt Nellie, it would be a good plan to help win this war for all the little girls and boys to raise rabbits, chickens and hogs. I can knit. I have knitted three wash rags and pieced quilt blocks and made handkerchiefs for the Red Cross. Don't you think it is a very good plan? With love to all the cousins and dear Aunt Nellie, I will close.—Eunice Martin, Box 124, Riverside, Wash. (Yes, dear, it is a good plan to do everything we possibly can do to help our country.—Aunt Nellie.)

### Nothing Better Than Outdoor Life.

Dear Aunt Nellie: I have not written to you and my cousins for so long that I guess you nearly forgot me. I am out of school now and I am sorry of it for I do love to go to school. I passed this year and next year I will be in the seventh grade. Before school was out our teacher and we children planted a lot of lovely trees all along the fence. We also planted flowers around the porch and schoolhouse. I am helping my mother do the work a lot. The thing that I love best to do in life is to go out in the sunshine on a nice warm day and play with every little thing that I come to. To make little discoveries of probably a large bed of daisies or some sort of flower. We have 12 cows. Once in a while I go to the barn to milk a cow. I named her Buttercup. Her milk is rich. There is never anything better than outdoor life to me. These days now that we are having are the kind that anyone likes. Some people do not like rain, but when you come to think about it rain is your choice. I have corresponded with Alice Case. I like her letters very much. She seems to be a very pleasing kind of a girl. I enjoy her letters even if they aren't very large. She tells them so interestingly.—Winnie E. Jones, Box 61, R. R. 1, Auburn, Wash.

### Making Hairpin Lace.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 10 years old. My birthday is May 10. I am in the sixth grade. My teacher is Miss Anderson. She is my sister. I have three brothers and two sisters. Their names are Leonard, 14 years old; Russell, 6 years old, and Ernest Anderson, 21 years old. My sisters are Judith, 20 years old, and Ellen, 18 years old. Judith is a teacher. I go to the school she teaches. My home is in Spokane, but we moved from there to go to our farm. There were no schoolhouses near our farm, so my brother Leonard and I came out to Wauconda. We live in a cottage close by the schoolhouse. My chums are Violet Gray and Mildred Long. I can crochet. I am making hairpin lace. Have I a twin? If so would they please write to me.—Florence Anderson, Wauconda, Wash.

### Always Room for More Cousins.

Dear Aunt Nellie: The Farmer came this morning and my mother had to take it away from me or I wouldn't have done my work; I wanted to read it so badly. I will be 13 years old December 20. Have I a twin? If I have I wish that they would write to me. I would like any of the cousins to write to me. I would like to be a cousin if you haven't got too many now. I have two brothers and three sisters. Their names are Elliott, David, Lucile, Evelyn and Edith. It is rather peculiar, but there is just two years between all of us, so we are 2, 4, 6, 8, 10 and 12. We have about 75 head of cattle, nine horses and a dog.—Helen Elizabeth Munroe, R. F. D. 1, Hazelwood Farm, Spokane, Wash.

### Elna Takes Singing Lessons.

Dear Aunt Nellie: I am playing on the Victrola and now I am writing between time. I have joined the Red Cross and am knitting a wash cloth. We have Red Cross every Tuesday and Friday afternoon. We had an Easter program at Sunday school. I had to sing a song in Swedish. I take music and singing lessons from Professor Edgren of Mount Vernon. He is a fine teacher. I have two sisters, Elsa, 13, and Edna, 9, and I would like to correspond with Isola Starks, Washtucna, Wash. If she writes I will gladly answer. I am 12 and so is she. My birthday is January 12. Oh! I wish it would be summer now, for I will have so much fun when I can go away and stay with my best friends. One I like very well is Adelia Westlund. She lives in Box, Wash. I suppose some cousins know her. Elva Green, is the answer t othis riddle an egg? Within a marble dome confined, whose walls with silk are lined, a golden apple doth appear steeped in a bath of crystal clear. No doors, no windows to behold, yet thieves break through and steal the gold. Now I will send some riddles: Why is a stick of candy like a horse? I often murmur, but never weep; I lie in bed, but never sleep; my mouth is larger than my head; from my sources I am fed. I'm ever running, feet I've none, the more I fall the faster I run. Can you guess that one? My school teacher has been sick so we have had another teacher instead.—Elna Mattson, R. F. D. 5, Box 32, Mount Vernon, Wash.

### Juanita's First Corner Letter.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 9 years old. My birthday is December 12. Have I a twin? If I have I wish he or she would write to me. I am in the third grade at school. My teacher's name is Miss Della Barckey. I like her very much. I am left-handed and I have an aunt who is left-handed, too. I have three sisters and two brothers. My sisters' names are Thelma, Loretta and Mary Lea. My brothers' names are James and Verana. James is 4 years old. I have two sisters that belong to the Corner and so I thought I would, too. My mama has about 100 chickens and my papa has about 40 pigs.—Juanita Owens, R. F. D. 2, Oakesdale, Wash.

### Made a Block for a Quilt.

Dear Aunt Nellie: This is the first time I have written to the Corner. I hope it won't be the last time. I go to the Pleasant Valley school. We walk in the morning and at night the teacher brings us home in his car. I am in the fourth grade. I have three brothers and no sisters. We have four cats and four baby kittens, about two weeks old. I am 8 years old. My birthday is November 5. Have I a twin? If so, I wish he or she would write to me. The scholars have been having the measles. We have one pig, three cows, three calves and 100 or more chickens. I can knit. I have made one block for a quilt. Altogether the school has made 22 blocks. All the school has joined the Red Cross.—Ella Michael, Davenport, Wash.

### Planted a Big War Garden.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I would like to be a cousin, as I want the Corner to grow. I was 11 years old April 29. I am in the eighth grade. I go to a country school and live three and one-half miles from town. Have I a twin? If so I would like to hear from her. I have four sisters and four brothers. Their names are Helena, Ida, Ruth, Emma, William, Carl, Theodore and Frederick. None of my brothers have to go to war, because the oldest is only 17. We have planted a large war garden. I stayed out of school to help plant it. My sister Ruth Schmidt would like to find her twin. She is 9 years old and her birthday is March 15. She would like to hear from her.—Annabel Schmidt, R. F. D. 1, Box 60, Mansfield, Wash.

### Vonda Goes to High School.

Dear Aunt Nellie: This is the second time that I have written to the Children's Corner, but it has been so long ago that I will start over again. I am 12 years old and will soon be 13, June 30. Have I a twin? I have two sisters and two brothers. My sister's names are Dora and Orphia Boulden. My brothers' names are Bruce and Oades Boulden.

I am in the seventh grade. Dora is in the fifth, Orphia is in the eighth grade and so is Bruce, but Oades is in the 10th grade. In my room there are about 36 children. I go to the Elma high school and walk about a mile and a half to school. We live on a 140-acre farm. We have a cow, horse, dog and three cats. I would like for some of the children to write to me and I will write to them.—Vonda Boulden, R. F. D. 1, Box 2, Elma, Wash.

### Brown-Eyed Cousin Grace.

Dear Aunt Nellie: Have been reading the Children's Corner ever since we began to take The Farmer, and I certainly enjoy their little letters. I am 10 years old and will be 11 October 5. My eyes are brown and I have dark brown hair. I was promoted to the sixth grade. We live about one-half of a quarter of a mile from the schoolhouse. Our school is out now. Our teacher's name was Buryl Clinton. We have 20 head of cattle, six head of horses, five hogs, one dog, one cat and 17 little chickens. The names of our horses are Nig, Sorrelie, Dan and Mutt. Our dog's name is Watch, and our cat's name is Dollie. If I have a twin I wish he or she would write to me.—Grace Agnes Garner, Rice, Wash.

### Puppy Uppy Is Lilly's Pet.

Dear Aunt Nellie: I enjoy reading the letters in the Farmer very much. I have one pet, a dog. Its name is Puppy Uppy. We have seven cows and three calves, Susie, Lucie and Daisy. We have two horses. Their names are Happy and Johnny. We have a Chalmers car. We also have two cats. We have sewing at school and we are sewing for the Red Cross. I made two handkerchiefs for the soldiers already. My teacher's name is Miss Jones. I am in the fourth grade. I was 10 years old April 19. I will write more next time.—Lilly Pederson, Enumclaw, Wash.

### Have a Little Sunday School.

Dear Aunt Nellie: I am writing to the Corner for the second time. I was very glad to see my first letter in print. We are all feeling fine in my home. We have a little Sunday school here. There are very few who attend. I wish we had some more children here to join our Sunday school. It would seem funny without it. I like the Farmer because the Corner is so interesting. I am going to learn how to knit.—Ruth Peterson, R. F. D. 2, Mead, Wash.

### Hopes the Corner Will Grow.

Dear Aunt Nellie: I am writing to the Corner for the first time. I am 10 years old. I am in the fourth grade. My birthday is October 25. I have two brothers. Their names are Fred and Elmer. I have two sisters, Susie and Bertha. I like to read the letters in the Corner. Have I a twin? If so, please write. I hope the Corner will grow.—Mabel Schombron, box 69, Penawawa, Wash.

Address all letters to Aunt Nellie, care of Washington Farmer, Spokane, Wash.

## ADVERTISING SCATTERS KNOWLEDGE OF HIGH GRADE ARTICLES

Advertising has such a big place in the world today that it is used by people in all walks of life.

For years farmers, fruitgrowers, poultry breeders, stock raisers and dairymen have taken advantage of advertising in securing customers. Often, too, they have branched out and advertised in other lines.

"Agricultural Advertising," the trade paper of publicity, gives some striking examples of this in a recent issue. It tells of a western dairy farmer who originated and built an improved device for his silo that filled a long felt want. Later this was extensively advertised, not only bringing profit to its inventor, but benefiting hundreds of other dairymen.

Another instance given is of a poultry raiser who perfected a number of remedies for diseased fowls and also invented improved drinking fountains, incubators, brooders and runs. Through the medium of advertising he was able to give his fellow breeders the benefit of his discoveries.

Such instances could be multiplied indefinitely. Advertising makes it possible for man's knowledge to be scattered broadcast. Look over the announcements of manufacturers in this paper for news of discoveries and inventions.

# News for Breeders

## Shorthorns Milk Well.

That the milking variety of Shorthorns are proving themselves worthy of the name is indicated by the report of 28 cows of this breed that have been under test by their managers. The report says that five of the cows make yields slightly under 30 pounds of milk per day, but only one of the five fell below 4 per cent average butterfat and one reached 5.05 per cent. Twenty-three had average daily milk yields exceeding 30 pounds, 11, 40 pounds or more per day, three, 50 pounds or more and one slightly over 60 pounds. The highest butterfat percentage shown in the list was 6.72 pounds, and 16 of the list of 28 had averaged over 4 per cent but-

## Imports Clydesdales.

M. E. Metz, well-known as a breeder of Clydesdale horses at Colfax, Wash., has been in the east for the last two months for the purpose of securing additions to his stables. A letter from Mr. Metz says that he is shiping west two carloads of purebreds of the four big breeds and that they will be exhibited shortly after their arrival at the Spokane Interstate fair. Some of them will undoubtedly be taken to other fairs to compete for honors. Mr. Metz says he believes some of the stock he is bringing back are as good as any that have ever been brought to the northwest.

## Washington Cow Brings $2500.

The auction sale of the New England Ayrshire club, this season, resulted in a new record of prices for Ayrshire cattle in America. Top price of $4200 was paid for the 3-year-old Pansy's Daughter of South Farm, sold by John Sherman of Willoughby, Ore., and purchased by G. S. Mowhinny of Chatham, N. Y. One of the high prices paid was for Willowmoor Moss Rose C., consigned by J. W. Clise of Seattle, and bought by Peter B. Bradley of Hingham, Mass., for $2500.

## Europe Already After U. S. Cattle

Professor E. B. Fitts of the Oregon Agricultural college is authority for the statement that the United States department of agriculture has received from the government of Holland an order for 5000 Holstein milch cows from this country. This is but a small beginning of what will undoubtedly be an enormous demand from Europe for cattle from the United States when the reconstruction period following the war begins.

## Shipping Show Stock.

Wayne Dinsmore, secretary-treasurer of the National Society of Record Associations, announces that shippers are entitled to ship purebred show animals at reduced valuation, but it is a part of wisdom in such cases to see that such exhibition stock is covered by insurance.

## MUST NOT CHARGE.

### Legal Help to Draft Men Free.

Reports from various sections of the northwest indicate that some lawyers are charging a fee to drafted men for helping them make out their papers. This is not only against the spirit of the draft act, but against government regulations. Some lawyers have been disbarred from practice on account of making these charges, and cases are being brought against others. All young men who are called by the draft are assured that they should not pay fees to lawyers who aid them.

## Will Exhibit Herefords.

The management of the live stock department of the Spokane Interstate fair announces that the Curtis Cattle company of Regina, Saskatchewan, Canada, will have 40 head of Hereford stock on exhibition at the fair September 2-7. It is said that these cattle have been consistent winners at a number of western Canada fairs.

## Dairymen Have a Motto.

Manager A. Jansen of the Pacific coast branch of the Mutual Creamery company says that it is up to the dairymen to adopt a motto, and that that motto should be: "There is no substitute for milk."

## Letters to Editor

The Farmer is constantly receiving interesting expressions of personal opinions from its readers which it is glad to pass on to others. Below is one such interesting article.

To the Editor of The Washington Farmer: In the July 25 issue of The Washington Farmer, Dr. Panteleoni attacks government ownership, claiming that it will "bring us near to ruin." If the government was governed by one individual, well it might, but in a government "of, by and for the people" I don't see how government ownership of the things the people use could harm any one but the profiteers. Dr. Pantaleoni thinks that government ownership would not be fair to the farmers. Why couldn't the government own the farms too?

Why not build a town in the center of a piece of government-owned land and farm it with big machinery, eliminating the fences and duplication of machinery necessary to small farming? But, you say, the farmer would just work for the pay he gets and would take no interest in improving land he does not own. But he ought to take an interest in the improvement of land that belongs to the government when he is a part of that government. Who but the government, as Mr. Elliott suggests, would use gas for the destruction of rodent and insect pests?

If, as Dr. Pantaleoni says, "the less government a nation has the better it is for the prosperity of its people," I should think the people would be better off if they were not governed at all. Holy horrors! Wouldn't that be anarchy? DELBERT PEIRCE.
Loon Lake, Wash.

## Iowa Can't Beat Yakima.

R. P. Bean, federal agricultural expert for the Tieton irrigation project, says that the corn crop in the Yakima valley this year is good, and that it offers, in part, a solution of the pork production problem. Mr. Bean is not only conducting a series of experiments in the Yakima valley in the matter of hog production, but is doing what he can to influence the growers to produce pork.

"I am especially interested in the production of pork this year," said Mr. Bean. "That is why I emphasize the value of our corn crop, which is essential to a good quality of pork. We are just beginning to grow peas for this purpose.

"Our aims are to put this industry on a more economical and profitable basis. War conditions and the high cost of feed and labor have stimulated more interest in the factors of production. We field men do not strive to introduce new methods and ideas to the people that we visit, but are satisfied to spread the best systems that are already in use in this particular community. We have emphasized this year the proper ways of using pastures and forage crops. We have urged the greatest possible use of these means and at the same time urged the necessity for using the minimum amount of grain to produce a good quality of pork."

To the Editor of the Washington Farmer: Please send me one of your farm service war flags. I have the pleasure of securing two subscriptions, each to the Washington Farmer for one year. Enclosed find 50c.

MISS LOLA SANDERS.
Davenport, Wash.

### Italy's Live Stock Decrease.

The province of Milan, Italy, shows a decrease in live stock, based on the census of 1908, of 21 per cent for horses, 18 per cent for mules and 8 per cent for swine.

### Using Corn for Fuel.

Owing to lack of markets for their corn, farmers in Argentina, South America, are in some cases disposing of it for fuel at 40 cents per bushel.

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, Aug. 12. — Pessimistic crop reports from Nebraska and Missouri together with complaints of excessive heat in the southwest had much to do today with bringing about sharp advances in the price of corn. The market closed strong, 3 to 3 1-2 net higher with September $1.62 1-8 to 1.62 3-8 and October 1.63 1-4 to 1.63 3-8. Oats gained 1-2 to 3-4@7-8. The finish in provisions ranged from 15 decline to a rise of 12.

Except just at the outset and during another brief interval an hour later, the corn market showed a decided upward tendency throughout the day. The temporary setbacks were ascribed to reports of scattered showers but opinion became general that the moisture thus supplied was inadequate. Then a leading expert went on record with a statement that owing to irreparable injury by heat and drought the government estimate of yield for Nebraska and Missouri would prove 100,000,000 bushels too large.

Large receipts depressed oats but later the strength of corn gave prices an upward swing.

In provisions the fact that hogs had touched $20.15, the topmost point on record, was a strengthening factor. Demand for pork, however, was lacking.

**Cash Quotations.**

CHICAGO, Aug. 12.—Corn, No. 2 yellow, $1.82@1.85; No. 3 yellow, $1.77@1.80; No. 4 yellow, nominal. Oats, No. 3 white, 65¾@68c; standard, 67@68c. Rye, No. 2, $1.56@1.56½. Barley, 90c@$1. Timothy, $6@9 nominal. Pork, nominal. Lard, [illegible]. Ribs $24@25.

Market strong to 25c higher; top native lambs, $17.75; western, $18.50; feeders, $17.65; range wethers, $14.60; lambs, choice and prime, $17.75@18.60; medium and good, $16@17.75; culls, $12@14; ewes, choice and prime, $13.25@13.90; medium and good, $[illegible]@13.25; culls, $4.50@9.50.

## Portland Market.

PORTLAND, Ore., Aug. 10.—A shipment of Bartlett pears from Yakima will open Monday at $2.50. This is $1 less than California Bartletts closed Saturday.

The end of the week found the potato market steady with supply and demand even, Californias selling at $3.50@3.75 and the best Oregons at 25 to 50 cents less. for immediate consumption. Buyers were offering 40 to 60 cents less.

There is a range from $1 to $3 in apples, with little demand.

Peaches moved slowly the last few days of the week, with arrivals limited to express shipments from points in the three states. Northern grown Hales sold as low as 75 cents, while the best Elbertas from California brought $1.50.

The butter market was strong today and best grades are short of the demand. Opening of the week is likely to see higher quotations.

Unless signs fail, there will be a rise in cheese prices. Supplies are inadequate and a "tilt" is looked for from Tillamook. Demand for poorer qualities, however, is slow.

Egg receipts are light and higher prices may be expected any day.

In dressed hogs the best easily brings 25 cents, without enough to supply demands. Veal is slow at 12 cents.

Butter—Cubes, extra, 48@49c; seconds, 44c; prime prints, extras, 52c; cartons, 1c extra; butterfat, No. 1, 55c, delivered.

Eggs—Oregon ranch, current receipts, 47@48c; candled, 49c; selects, 50c per dozen.

Cheese—Jobbers' buying prices, f. o. b. dock, Portland; Tillamok, triplets, 25c; Young Americas, 26c per pound; Coos and Curry, f. o.b. Myrtle Point, triplets, 24½c; longhorns, 25½c per pound; 1-4c discount to Portland trade.

Poultry—Hens, 23@24c; broilers, 27c; ducks, 23@30c; geese, 16c; turkeys, nominal.

Pork—Fancy, 24@25c.

Veal—Fancy, 18c per pound.

Potatoes—New, 3¼@3¾c per lb.

Hay—Buying prices, f. o. b. Portland; eastern Oregon timothy, $34 per ton; valley timothy, $29; alfalfa, $26 @27; valley, grain hay, $26@28; clover, $26@28; straw, $9@10.

## Seattle Wheat.

SEATTLE, Wash., Aug. 10.—Puget Sound millers will oppose any open bidding plans of eastern millers to the government for the exclusion of Washington soft wheat, and will urge that flour for the armies be bought on the zone system, that is,

The cargo of 60,000 bushels of Australian wheat which arrived at Tacoma this week was sold on the government price to Tacoma millers and will be ground and sold commercially under the new food regulations. Millers are hoping for more of this grain, as it will relieve the tension in the local millfeed situation.

## Seattle Market.

SEATTLE, Aug. 10.—A heavy movement of local new spuds is expected for next week on a steady to strong market. The buying end of the spud trade has been endeavoring to hold the market down, but efforts along that line which have for their object the closing of contracts are foredoomed to failure, according to the position taken by growers.

**Purchasing Prices.**

Eggs—Select ranch 48@49c per doz; Oregon, eastern Washington and Idaho, nominal.

Butter—Fresh dairy, 30c per lb; butter fat, 56c per lb; baking, 30@35c per lb; raw milk, $2.75 per cwt.

Poultry—Broilers, live, 1918, 30c per lb; hens, 3½ to 4 lbs and up, 27c per lb; under 3½ lbs, 25c per lb; old roosters, 17@18c per lb; ducks, live, fat, 25c per lb; squabs, large, $3.50 per doz; geese, fat, live, 23c per lb; Belgian hares, 19c per lb; guineas, $7 per doz; turkeys, young toms and hens, dry picked, 10 lbs and up, 30@33c per lb; smaller birds, 25@30c per lb.

Hogs—Light, 21c per lb; heavy, 19 @20c per lb.

Beef—Steers, fat, 14@15c per lb; heifers, fat, 14@15c per lb; cows and bulls, 13@14c per lb.

Veal—Fancy light, 19c per lb; do heavy, 13@18c per lb.

Mutton—Fat, 22c per lb; spring lamb, fat, dressed, 25c per lb.

Wool—Puget sound, clean, 50@55c per lb.

Tallow—No. 1, 12½c per lb; No. 2, 6 @8c per lb.

**Jobbing Prices to Dealers.**

Apples—Washington, $1@1.50 per 40-lb box.

Apricots—$1.75@1.85 per crate.

Pears—Washington—$2.65 box.

Peaches—Washington, $1.35 crate.

Potatoes—Local, new, 3c pound.

Hay and feed quotations, city prices, truckload delivery, are as follows:

Feed—Mill run, mill door basis. $35.60@36.60 ton; scratch feed, $83; all-grain chop, $75; oats, $72; sprouting oats, $77; rolled oats, $74; whole corn, $81; cracked corn, $83; rolled barley, $67; clipped barley, $70; alfalfa meal, $41; oil meal, $72; egg mash, $66.

Hay—Eastern Washington timothy, $27 per ton; do double compressed, $39@40; alfalfa, $33@34; straw, $16.

## Spokane Union Stockyards.

SPOKANE, Aug. 12.—The following is the record of receipts here for the last week:

| | Cattle | Calves | Hogs | Sheep |
|---|---|---|---|---|
| Monday, August 12.. | 428 | 39 | .. | .. |
| Saturday, August 10. | 28 | 2 | 14 | .. |
| Friday, August 9 .. | 24 | .. | 77 | 6650 |
| Thursday, August 8. | 30 | 4 | 75 | 194 |
| Wednesday, August 7 | 187 | 27 | 24 | 206 |
| Tuesday, August 6.. | 132 | 3 | 19 | .. |
| Week ago ..... | 303 | 26 | 10 | .. |
| Year ago ..... | 27 | .. | .. | 1964 |
| Two years ago..... | 12 | .. | 141 | .. |

Quite a heavy overSunday run of cattle in the pens Monday morning, consisting mostly of common to good stuff. The market opened a little slow, but closed very active at steady to firm prices. There were no choice steers on the market, the good to best crossing the scales at $9.50 to $10, with the common to fair butchers at $8.50 to $9 and the thin lightweight stuff at $5.50 to $7.50. No choice cows and heifers here, the best grades going at $5.50 to $6.50 and the thin kinds and canners at $4 to $5.25. Quite a few bulls among the arrivals, which sold at steady prices ranging from $4.75 for the lightweight ones to $6.25 for the heavier kinds. Calves remain steady at $9 for the best veal and from $6 to $8 for the heavier sort. Yearlings were steady at $5.25 to $5 for todays offerings.

The general cattle market is steady at following range:

| | |
|---|---|
| Prime steers | $12.00@12.75 |
| Good to choice steers | 11.25@12.00 |
| Medium to good steers | 9.50@10.25 |
| Fair to medium steers | 8.25@ 9.25 |
| Common to fair steers | 5.50@ 8.00 |
| Choice cows and heifers | 8.00@ 8.50 |
| Good cows and heifers | 6.00@ 7.10 |
| Common to medium cows and heifers | 4.75@ 6.00 |
| Canners | 3.00@ 4.75 |
| Bulls | 5.00@ 7.50 |
| Calves | 7.00@10.50 |
| Stockers and feeders | 6.00@ 8.00 |

Hog receipts were light and of very poor quality, mostly stockers and feeders. The best butchers brought $18.75, with the bulk going at $18.05@18.75. Quite a heavy demand for good feeders, the heavy kind going at $16.50 to $17 today.

General hog range:

| | |
|---|---|
| Prime mixed | $18.75@19.00 |
| Medium mixed | 18.50@18.75 |
| Rough heavy | 17.50@18.00 |
| Pigs | 17.00@17.50 |
| Stockers and feeders | 15.00@17.50 |
| Bulk of sales | 19.00 |

There were no sheep in evidence today. The market remains steady at following range of prices:

| | |
|---|---|
| Prime lambs | $14.00@15.50 |
| Good lambs | 12.50@13.00 |
| Prime yearlings | 8.75@10.00 |
| Prime wethers | 7.75@ 9.00 |
| Best mutton ewes | 5.00@ 8.00 |

Shippers:

Cattle—J. C. Gilmore, Rathdrum, Idaho, 2 loads: C. Carlson, Usk, Wash., 1 load; J. P. Helphrey, Curlew, Wash., 2 loads; R. Joslyn, Springdale, Wash., 3 loads; McInturf & Kind, Chewelah, Wash., 2 loads; J. R. Henshaw, Cam'den, Wash., 1 load.

Mixed Stuff—B. C. Baird, Wheeler, Wash., 1 load cattle and hogs; C. D. Slow, Pullman, Wash., 1 load cattle and hogs; L. R. Phillips, Molson, Wash., 2 loads cattle and hogs; J. P. Floow, Republic, Wash., 1 load cattle and hogs; J. P. Helphrey, Curlew, Wash., 1 load cattle and hogs.

Small Shippers—Doust & Stradley, hogs and cattle; L. A. Thompson, cattle; A. A. Johnson, hogs.

## Crops Are Estimated.

E. P. Marchetti of the federal market bureau of Spokane, estimated on August 1 that the wheat yield of Washing this year would be 32,355,000 bushels, a decrease of 4,736,000 from last year. He estimates a spring crop of 22,913,000 bushels, against only 4,423,000 of fall wheat. The estimated spring yield is considerably above the average, owing to the largely increased acreage, but the estimated fall yield is less than half of the average fall crop.

The corn crop is a little above normal, says the estimate. The potato crop is considerably below normal, as is also the hay crop. Barley, rye and oats are also far below the average crop.

# Fruit and Vegetables

SPOKANE, Aug. 10.—The prices quoted below are those obtained by Spokane wholesalers from retailers, hotels, mining camps and the like:

**Peaches**—Express arrivals, 232 crates Washington. Freight arrivals, 1 car Washington. Market steady. 1101-09 Railroad Ave., Spokane, Wash.

# Deduct Too Much?

## Wheat Price Rule Causes Inquiry

Whether or not the deduction of 8 cents a bushel this season by the buyers of wheat to cover storage, handling, commission, insurance, interest and the like is fair to the growers is a question that is receiving much discussion throughout the northwest, following the Farmer's treatment of the matter last week. Opinions differ, though there appears a general sentiment among growers that the charges are excessive. As reported in this paper last week, the buyers and millers are deducting 8 cents per bushel from the basic Coast price less the freight, made up as follows: Storage for 30 days, 3 cents; commission, 2.2 cents; interest, 1 cent; insurance .4 of a cent; inspection, weighing and bad-order sacks .4 of a cent; handling, approximately, 1 cent.

Statements from various authorities throughout the wheat-growing sections, including buyers and warehouse men as well as growers, indicate that the 8 cents is an increase of from 25 per cent to 100 per cent over the charges for the same matters last season, depending upon the locality and the service rendered. From Garfield, Wash., comes a statement of a 5-cent margin there last year; from Ritzville, Wash., of a 4 1-2-cent margin; from Quincy, Wash., of a 6-cent margin; from Cheney of a 4-cent margin.

President A. A. Elmore of the farmers' union of Washington and northern Idaho says he considers the 8-cent deduction reasonable. In an interview he says:

"The charge of 8 cents a bushel for handling wheat this year is not excessive. But the trouble is the charge is not placed where it belongs. As it is now arranged the charge falls on the farmer.

"Last year there was considerable confusion, as government handling of grain was an untried proposition. The farmers were told they must sell to the grain corporation, and had just as well let loose of it, because they could not possibly get more later.

"The farmers turned in their wheat, and it was only a short time until the cry went up that the terminals were full and the railroads congested. In this dilemma something was demanded, and finally the government, acting through the food administration grain corporation, agreed to pay a carrying charge of 2 cents a bushel a month. The dealers could then go out and buy the grain, and did.

"This year there was no provision made for a carrying charge. In lieu thereof the government gave us the competitive buying concession. It remains to be seen if this is any benefit. The government has put a limit on the price of flour and mill feed, so the miller can't pay a premium over the government price.

"Experience shows that wheat is carried an average of four months. The carrying charge of 2 cents a bushel a month allowed last year would amount to 8 cents a bushel.

"This year there are two ways for the farmer to dispose of wheat. If he sells to a dealer the dealer deducts 8 cents a bushel, plus the freight, and gives the farmer the balance. On the other hand, if he is not satisfied with the dealer's terms he can ship direct to the food administration grain corporation. The grain corporation charges 2 cents a bushel for commission and 3 cents a bushel for the first 30 days for storage. After the first month the storage charge is 10 cents a ton, or about one-third of a cent a bushel.

"Suppose the charges had to be maintained four months, this would amount to 5 1-3 cents a bushel. In addition the farmer has to carry his own interest and insurance. Perhaps he will not get his returns from the grain corporation for three to six months, and the interest and insurance will amount to considerable."

J. C. Lawrence, an active member of the farmers' union and the grange, disagrees with President Elmore, claiming that last year's charges of about 5 cents a bushel were more nearly reasonable than the 8 cents this year.

# Demonstrate Tractors

Another indication of the increasing interest in power farming is the announcement by the Portland Implement and Tractor association of its first big tractor and power farming demonstration next month. The demonstration will be held near Portland September 5, 6 and 7, at which time it is already assured that at least 30 tractors and power farming implements will be demonstrated under circumstances conforming as nearly as possible to actual farm conditions. The promoters of the demonstration are planning to care for a large attendance, and farmers throughout the entire state and adjoining states are being urged to be present to witness the demonstrations.

A similar demonstration, though possibly less pretentious, is being planned by the power farming people in connection with the Idaho state fair at Boise next month. Both of these demonstrations are inspired in part by the remarkable success of the demonstration staged by the State college of Washington at Pullman, Wash., three months ago, when 200 acres of real Palouse farm land were plowed and cultivated during the three days' demonstration. Eugene Smith, who had charge of the demonstration at Davis, Cal., last May, will manage the Portland event.

## Coming Events.

August 19-25—Convention National G. A. R., Portland, Ore.

August 27-29—National Farmers' conference, Washington, D. C.

**Fairs, Shows, Exhibits.**

August 26-30—Southwest Washington fair, Centralia-Chehalis.

September 2-7—Spokane Interstate fair, Spokane, Wash.

September 16-21—Washington state fair, Yakima, Wash.

September 19-21—Roundup, Pendleton, Ore.

October 1-6—Western Washington fair, Puyallup, Wash.

November 7-13—Northwest live stock show, Lewiston, Idaho.

# Trappers of the Ozarks

(Continued from page twenty.)

"Yes, I low they will, Ben. But this is a big river, and we ought to be able to dodge 'em on it."

"I hope we can, Uncle Dan'l. And of course you know more about such things than I do. Still, it seems to me they've got just the right number of canoes to sweep the river as they go down. One can follow along and search each bank, and one can keep out in mid-stream. I don't know that they'll do that. But it's safer to figure that they will."

"Yes. It's safer to figure that they'll do that very thing," Boone agreed. "And if they do, we may have to fight it out with 'em."

(To be continued.)

# Want Ads

**Want Ad Rates 30c Per Line**

Want ads are run at this rate in The Washington Farmer and 1 t s associate papers, The Oregon Farmer and The Idaho Farmer, thoroughly covering the three states.

**Want Ads**

Send for card giving lower rates for ads running one month or longer.

**How to Figure Cost of Ads**

Figure four words for the first line, which is set in capital letters, and six words for each succeeding line. Multiply number of lines by 30 and you have cost each issue.

**HELP WANTED—MALE 3**

FARMERS, FRUIT GROWERS, AND OTHers seeking profitable employment as local agents to sell our high-grade nursery stock, will please write for terms to agents. Good pay, exclusive territory and steady employment to honest, reliable men. Albany Nurseries, Albany, Ore.

**EDUCATIONAL 45**

EARN MORE. ENROLL ANY TIME, AT Behnke-Walker, Portland, northwest's biggest business college, because best. Graduates assured positions. Write for catalogue.

**TEACHERS' AGENCIES 46**

TEACHERS REGISTER WITH B. F. WESTmore, Mgr. Hazard Teachers' Agcy. $1 registers you at three offices. 911 Old Nat'l Bank bldg., Spokane, Washington.

ALBERT TEACHERS' AGENCY, PEYTON bldg., Spokane. We need more teachers.

**HONEY, BEESWAX—Wanted. 58**

SEND SAMPLES OF YOUR HONEY AND beeswax; state quantity, price. Oregon Farm Products Co., 380 Halsey st., Portland.

**FARM LANDS—FOR SALE 651**

A BIG LAND OPENING.

COWS, HOGS, AND A BANK BOOK.

Your dream of life, of ease, comfort and independence await you at

BIRMINGHAM,

On Port Susan Bay, Snohomish County; 6000 acres of the best land that lies out doors; a 2 hours' ride from Seattle places your feet on the richest, most productive soil in the whole state of Washington; rail and water transportation; near paved roads, schools, churches, cannery and condensery; 3½ miles of waterfront and finest beach on Puget Sound; 20 miles of beautiful lake shore, surrounding 8 picturesque lakes; these lakes teem with trout. Get in on the first choice for $35 per acre and up; 10 yearly payments, 6 per cent interest.

This is but the beginning of the story of Birmingham. Send to the owners for illustrated literature. BROWNELL LAND CO., 904 Third ave., Seattle, Wash.

680-ACRE IMPROVED RANCH, THREE miles from Helena, one mile from East Helena, Montana, at Four Range Ranch station of Great Northern ry.; a great wheat producer; quarter of mile from street car to state capital; electric power and lights; five-acre orchard; modern ranch house; deep well, pure water, artesian flow; over four hundred acres can be plowed; three hundred under cultivation produced good crop this year. A real ranch and suburban home combined. Easy terms. Owner going into government service for war. Write for descriptive circular. Thos. F. Mahoney, Empson bldg., Helena, Mont.

WHY RENT? BETTER OWN A FARM. MAKE MONEY BOTH WAYS—GOOD CROPS AND INCREASE IN THE VALUE OF LAND; GOOD SOIL; LOW PHICE; EASY TERMS.

New section of British Columbia just opened up by building of railroad. NO DROUGHT, NO CROP FAILURES. K. H. Blaesser, Box 2054, Spokane, Wash.

FOR SALE—440-A. WESTERN WASHINGton farm; 200 a. prairie pasture; 140 river bottom; 50 a. under cultivation, balance willow brush; 100 a. logged over; hill land; fair buildings and orchard; good roads; 3 mi. to town. Price, without stock, $12,000; $4000 cash, balance 10 years, 6 per cent. For particulars address A. Steinman, R. F. D. 1, Box 99, Tumwater, Wash.

155 ACRES; SIX MILES N. W. MT. HOPE, Wn.; 17 miles Spokane; 115 a. cultivated; 130 tillable, balance timber; orchard, 7-room house, fair barn, good water; I am going into service, will sell for $10,000, $3000 cash, balance time. Write me quick. This is a snap. Place adjoining sold for $100 per acre recently. Owner, Box 42, R. 2, Fairfield, Wn.

MONTANA IRRIGATED LANDS.

To close out two large sheep ranches, we are offering choice irrigated land in tracts of any size at bargain prices, and on very easy terms; 100 per cent tillable; best of water rights and crops. Address owners, Lewis Penwell Company, Helena, Mont.

FOR SALE—EIGHTY ACRES.

Dairy ranch; twenty acres irrigated; new buildings; good location; four miles from town; free range; all personal property included. A. C. Hoxie, Alsea, Ore.

FOR SALE—173 ACRES; ON COLUMBIA river; alfalfa, dairy and hog ranch; also 160 acres of wheat land; would consider good city property or smaller ranch as part payment. Box 76, Hanford, Wash.

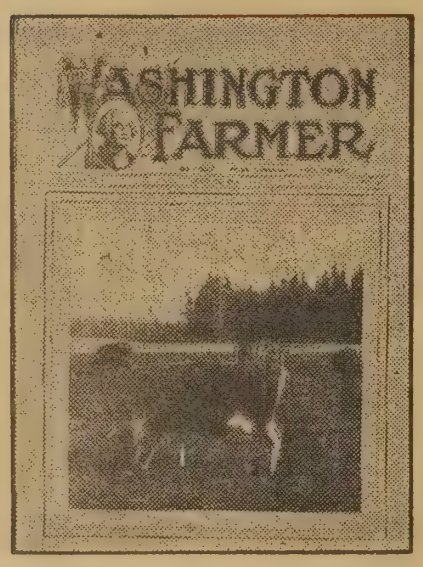
FOR SALE—900-ACRE PLANTATION; well improved; two crops easily raised; eight-room colonial home; fine fishing and hunting. White Hall Plantation, Jones, La.

STOCK AND DAIRY RANCH FOR SALE at a bargain. 1160 a. in western Oregon, in Lincoln co. For details write Emil F. Raddant, Orton, Ore.

WATER FRONT AND INLAND FARMS, Md., Del., catalogue. RUSSELL REALTY CO., 2 E. Lexington st., Baltimore, Md.

**FARM LANDS—WANTED 654**

WANTED—TO HEAR FROM OWNER OF farm or unimproved land for sale. O. K. Hawley, Baldwin, Wis.



**FARM LANDS—Wanted to Rent 660**

WANTED—TO RENT GRAIN RANCH, cash or shares; furnished, part furnished or unfurnished; all particulars first letter. D. D. Lewis, Kent, Wash., R. 1.

**FOR SALE OR EXCHANGE 702**

TURKEY RANCH—160 A.; RIVER RUNS through; outrange. D 10, Oregon Farmer, Spokane, Wash.

# These Three Farm Papers Reach 80,000 Farm Homes

## Take Advantage of the Low Combination Rate for Insertion of "Want" Ads in These State Farm Papers

The "want" ad is a method of communication which will prove helpful at various times to all of our farm folks.

Do you desire to get in touch with a reliable, experienced hired man? The "want" ad brings your need to the attention of competent workers throughout three states.

Do you wish to turn used machinery into cash? The "want" ad reaches farmers in other districts who have use for your discarded implements, and who will probably be glad to make the saving you will be able to offer them.

Have you farm products to sell, such as live stock, poultry, seeds or dried fruits? Once more, the "want" ad in the three state farm papers offers a solution for the difficulty. It reaches the very class of homes where there is a constant demand for these things..

Have you a piece of land for which you are eager to find a buyer? The "want" ad in The Washington Farmer, The Oregon Farmer and The Idaho Farmer affords a splendid method for making a sale; inasmuch as these three papers are read by tens of thousands of farm owners and farm renters, a goodly proportion of whom are considering the purchase of farms or orchards in other sections.

To sum up, our "want" ads enable you to reach the people who have what you want or who want what you have. They are easy to insert. They are low in cost. Even if there is nothing you care to advertise at this time, you will always find interesting, profitable reading in our "want" ad columns.

Rates are printed at the top of the "want" ad columns. Be sure to read the "want" ad page today!

**Send Orders and Inquiries Regarding "Want" Ads to The Washington Farmer, 617 Central Bldg., Seattle, Wash.**

THE WASHINGTON FARMER

SUCCESSOR TO
THE RANCH PACIFIC DAIRYMAN HORN AND HOOF

# Sign of the Red Triangle Bids Them Welcome

By WILLIAM H. CRAWFORD, Y. M. C. A. National War Council Headquarters, New York City.

Since the late spring of 1917, when the Y. M. C. A. overseas was represented by a tiny tent on a dock of a French port, up to the present time, with huts in almost 1500 centers in France, the "Y" has been constant companion of the American soldier. From the port of entry to the front line trenches it follows him with its comprehensive ministry. Its workers across the sea include 3500 men and women of the highest type of manhood and womanhood that America has to give.

Sometimes the "hut" is a beautiful chateau, again it may be just a small dugout behind the firing line. But to our boys it is home, college, club, church, and the stage. The best phases of each of these influences is taken to them through the medium of the Y. M. C. A.

To the boy from the farm the hut makes, perhaps, the most direct appeal. His fellow soldiers from the cities have had many outside attractions which tended to take them away from their homes, but the farm boy is primarily the home boy.

In the "Y" hut he reads, writes home, talks, smokes and enjoys the music and games. The "Over There" Theater league with its trench circuit

# Private Shipping Profitable

## More Money Is Realized by Shipping Livestock in Private Lots Than by Letting Buyers Handle Them.

COLVILLE, Stevens County, Wash., Aug. 8.—The crop outlook is a little more promising than it was some two months ago. The rains of the last few weeks have been a big help to the grain that had not fully matured, and in some places was still in the milk. The grain crop on the whole has been helped perhaps as much as 15 or 20 per cent. A second crop of alfalfa is showing up in good condition where it was thought there was very little chance of any second crop. Summer planting for fall pasturage or for soiling will mean the saving of a good many tons of hay if it is only practiced by the farmers. The winter grain is all in the stacks and a large part of the spring grain will soon be ready to cut. The farming in Stevens county is largely diversified, which means that the labor shortage is not felt as keenly as it naturally would be in other sections of the state. Some of the farmers are marketing their own live stock instead of selling to the local buyers and finding that they are money ahead. It is hoped that more of the farmers will get into this practice for it means the elimination of a middleman that can easily be spared.

E. C. DURDLE.

### Rain Benefits Crops.

SOUTH BEND, Pacific County, Wash., Aug. 12.—Recently we had our long-looked-for rain. It rained about two inches and soaked up the ground well. Many of the later garden crops will be greatly benefited, as well as root crops and kale. The farmers are harvesting oats; some are having their oats threshed while others are using oats for their silos. There have been a few more silos built this summer. There are a number of ensilage cutters scattered over the county in different communities, some are owned by individuals and others by two or three farmers together. The cannery in South Bend is running. The work is done by women and girls. They are canning fruit at present; the prices paid are five cents for loganberries and four and a half cents for blackberries and raspberries. A couple of girls near Bay Center have started a little cannery of their own. Their father has a small fruit and garden truck ranch and they can the surplus crop. They have a good-sized building for their enterprise; along the walls are racks reaching to the ceiling for the cans, in the center is a long work-table, while in one corner is a desk and telephone. Tin cans are used and the cooking done in a pressure cooker just outside of the store and work-room. They will have a ready market for all of their products. The women and girls harvested most of the cranberries. All products are high in price this year. Potatoes are 4 cents, butter, 63 cents, and milk, 10 and 12 cents a quart.

MRS. WINIFRED BUCKINGHAM.

### Harvest Good Hay Crop.

CATHLAMET, Wahkiakum County, Wash., Aug. 9.—This year the hay harvest was carried through very successfully without the importation of outside labor. Farmers cooperated to a greater extent than they have heretofore and were able to make just as good time in haying as they have ever made. By far the greater portion of the hay was well cured and went into the mows in splendid shape. The hay in this locality is mostly an orchard and rye grass mixture, with some native meadow hay. This hay is fed exclusively during the winter with very good results. At the present time a few farmers are getting ready to fill their silos with oats, while others are cutting a limited amount of oat hay. This will complete the harvest work in this county this year. Pastures have not dried up as they have in other localities, yet they have been shortened somewhat by the drouth. A rain, which has visited us, will do considerable good, and farmers generally are welcoming it. Our dairy cows have held up in their production remarkably well during the last six weeks. Wahkiakum county farmers sell cream altogether. There are two cooperative creameries in the county and one privately owned. Considerable cream is shipped to Astoria and Portland. Butterfat prices now are very satisfactory to our dairymen.

Wahkiakum county is the only county in the state of Washington which is not accessible by a road. We believe that our agricultural resources are so valuable that a road into this county would benefit the entire state, as well as the county itself. There are hundreds of acres of the best dairy land which could be improved if there were some means of getting in and out of the county except by river steamer. A road is of primary interest to the people of the county.

A. T. FLAGG.

### Crops Are Light.

RAINIER, Thurston County, Wash., Aug. 10.—Haying is mostly done. The crop was light with a few exceptions. This has been a very peculiar season; spring was cold until late and no heavy rains since the 1st of June; in fact, rains have been very light since then, except locally. For two months we have had light showers now and then to lay the dust, with lots of cloudy and cool weather, which has been a good thing on account of the dryness. This last week we had rain on several days and lots of cloudy weather, which improved field corn and vegetables. The cultivated crops are doing well, considering the dryness of the season. Pastures have dried up and cows are giving less milk. Feed is so high that many will not feed the cows on winter feed until they freshen, and some are disposing of their cattle.

L. F. DAVIS.

### Corn Prospects Are Fine.

METHOW, Okanogan County, Wash., July 27.—The 1918 crop year is the most puzzling we have had in 30 years. Owing to the ground being frozen hard, the snow water all ran off, followed by a cold freezing spring, which cut the first alfalfa crop down on the dry land half; then the thermometer went to the other extreme and mounted to 110. This wilted the potato tops so that the young potatoes stopped growing; then the rain came and the potatoes are sending new sprouts up. This makes the third growth, so with a two-inch rainfall today it is hard to say what the potato crop will be. Most of the wheat had to be cut for hay, as it was too short to bind. This is no spring wheat country anyway. Fall wheat, if it comes up in the fall, is good for from 20 to 30 bushels, but spring wheat is invariably a failure. Today's rain, while damaging the second crop of alfalfa, is a veritable God-send for the corn and bean crop, which is truly the poor man's standby. Summing the crop situation up, will say the alfalfa crop is good on irrigated land and fair on dry land; the wheat crop is all but a failure; the potato crop on irrigated land is good, but on dry land I would say it would be large in quantity but poor in quality. With today's rain the corn crop, which is the most vital crop, is going to be immense, and so is the bean crop. This rain will also improve the range.

CHARLES GRANT.

### Grain Yields Fair Crops.

CHIMACUM, Jefferson County, Wash., Aug. 2.—The haying is about over and crops are light in most sections, especially on dry land, but the oat and pea hay on the bottom land is showing up fine and will make a heavy crop. The late planting is coming along fine on account of two good rains during the month of July. Most grains yielded a fair crop. The labor situation has been somewhat of a handicap, but most of the farmers worked together. In some instances crowds got together and worked Sundays and these long evenings. Markets are good, but the feed proposition is not so good. Many of the cows have been taken from official list on account of not being able to secure suitable grains for the work.

JOHN VAN TROJEN JR.

### Crops Are Up to Standard.

PORT ANGELES, Clallam County, Wash., Aug. 6.—In regard to harvest conditions in Clallam county I may say that the prospects are exceedingly good for a normal harvest both in regard to quality and quantity. The late rains assisted materially to justify a good crop. While labor conditions are acute it appears from talking with the farmers that their misgivings in this respect have been dissipated. The hay crop is well taken care of and our county will harvest a splendid crop of peas. Probably potatoes and roots will be a trifle less than normal.

J. P. CHRSTENSEN.

"How did you learn to skate?" a little boy was asked.

"Oh," was the innocent but significant answer, "by getting up every time I fell down."—Christian Register.

# Make Fruit Juices

The Loju plant owned by Schmidt Bros., at Salem, and one at Olympia, Wash., are converted breweries, and comprise the largest fruit juice factories in the west, it is claimed. The Salem plant is working full blast on logans and it is interesting to watch the processes of converting berries into wholesome drinks. The pulp, once thrown away, is utilized for flavoring and other purposes.

Among the growers who supply the berries is Bruce Cunningham, who has one of the large loganberry yards in Marion county. About 35 acres are devoted to the logans. Mr. Cunningham also has a large prune orchard. The prune crop promises well, though some rot has appeared, due, it is believed, to the excessive dry weather. Two prune orchards side by side, with a road dividing them, offered an interesting study in commercial fertilizer. One orchard has been treated with phosphate at the rate of 400 pounds, while the other has had none. The difference in the thriftiness of the trees and the crop borne is marked in favor of the use of the fertilizer.

**Dare and Share.**

Those who dare all must share all.

# Washington Boys in War Service

From The Twice-a-Week Spokesman-Review.

**A. L. STRATTON, Rockford, Wash.**—Enlisted in the navy in May, 1917, and is now on the U. S. S. Mercy. He is the son of Mrs. J. Stratton of Rockford.

**CARL M. LARSON, Newport, Wash.**—Joined the marines on April 6, 1917, and when last heard from was at Guam Islands in the 42d company.

**EMERY S. PURDY, Revere, Wash.**—Enlisted in the U. S. service as a truck driver. Previous to his enlistment he resided in Revere, Wash.

## International Ensilage Cutters

The following table shows the sizes and capacities of the five types of **International** ensilage cutters. There is, you see, a size for every farm. The smaller sizes will easily fill a 30-ft. silo. The largest are used to fill the highest silos in the country.

| Type | Feed Throat Sizes | Capacity Tons per Hour | Power Needed | Length of Cut | Speed |
|---|---|---|---|---|---|
| A | 16″ x 6½″ | 16—25 | 20-25 H.P. | ⅜″ to 1 1/16″ | 500—700 R. P. M. |
| B | 14″ x 5½″ | 12—16 | 15-20 " | ⅜″ " 1 1/16″ | 700—800 " |
| E | 11″ x 4½″ | 10—12 | 10-15 " | ⅜″ " ⅞″ | 800—900 " |
| G | 11″ x 5 ″ | 8—10 | 8-10 " | 2/16″ " 1 ″ | 800—900 " |
| F | 9″ x 3 ″ | 3— 6 | 4—6 " | 2/16″ " 1 ″ | 800-1000 " |

All **International** cutters are of the knife on blower type—simplest and requiring least power. All are equipped with a corn chute for feeding from the wagon. Steady power feed insures even cutting, silage packs properly and keeps. The low speed at which they run, and the safety devices on the machines insure the safety of the operator. The machines are complete, there are no extra sprockets or gears.

A post card will bring you prices and full information on any of the cutters listed above. Send it to the address below.

Vol. 41. No. 34 THE RANCH PACIFIC DAIRYMAN HORN AND HOOF August 22, 1918

# How Can Wheat Grower Ship Direct?

## *Does Provision Protect Him From Unreasonable Charges by Dealers?*

A statement issued by the United States Food administration concerning the purchase of wheat contains the following paragraph: "The farmer can protect himself by the study of the primary prices, deducting intermediate charges, or he can ship to the food administration grain corporation, or he may ship to a commission merchant, or a terminal merchant and through him secure the benefit of competitive buying."

Inquiries coming to the Farmer as to just what methods must be taken by the wheat grower to ship his grain directly to the food administration grain corporation, the following letter was sent to M. H. Houser of Portland, Ore., at the head of the food administration grain corporation for the three states of Washington, Oregon and Idaho:

"Wheat growers of the three states, Washington, Idaho and Oregon, are becoming anxious to learn just what steps they must take to ship grain directly to the U. S. Grain corporation. If some of your people can give us an answer to this question we are sure it will be of service to many wheat growers.

"Will it be better that they have a minimum carload of their own production or that they cooperate with other small growers in making up that carload?"

The following reply from Mr. Houser has been received:

"To the Editor of the Farmer:

Answering yours of the 11th inst., beg to say that the information you are seeking has gone out generally to the dealers and mills of the three states comprising zone 10. To the grain dealers there has been issued Bulletins No. 1 to 3 inclusive, and to the millers and manufacturers of flour and feed has gone forth Milling Bulletins No. 1 to 9 inclusive, together with some circular letters and data of like nature.

"We feel sure that by this time the grower is fairly well versed in the procedure that is to be followed this year. In dealing in grain this year a broad latitude is allowed the dealers and there should be no reason why a producer and dealer can not get together on a sound trading basis. The grain corporation stands ready to protect the fair price basis in case the producer feels that he can not meet with fair treatment from the dealer.

"Regarding the minimum carload feature, it would be much better to have two or more small growers pool their tonnage with a view of making up a maximum car for shipment.

"FOOD ADMINISTRATION GRAIN CORPORATION.

By M. H. HOUSER, Second Vice President."

As this letter from Mr. Houser does not give any direct and detailed information to the grower as to how he can ship direct to the food administration grain corporation and as the grower will be in no mood to seek this information from the grain buyer with whose terms he may not be satisfied, a second letter on this subject was addressed to Mr. Houser by the editor of the Farmer as follows:

"We thank you for your letter of August 12 in reply to our inquiry as to just what steps growers must take to ship grain directly to the United States Grain corporation. We can not agree, however, with your belief that the growers are fairly well versed in the procedure that is to be followed this year.

"We note from your letter that you have sent out three bulletins to grain buyers and nine bulletins to millers, but so far have heard of no informative bulletins to the grain growers.

"As you say, 'in dealing in grain this year a broad latitude is allowed the dealers,' and you add, 'there should be no reason why producer and dealer can not get together on a sound trading basis.' We find, however, that a wide difference of opinion has arisen as to what constitutes a sound trading basis. A recent convention of northwestern millers and grain buyers decided that total intermediate charges of about eight cents a bushel would be such a sound trading basis, but representative growers in this region believe that the proposed charges are excessive and are anxiously waiting helpful information in detail that will point the way to direct shipments by growers to the grain corporation.

"Our purpose in seeking this information is two-fold: To aid and expedite the prompt delivery of the wheat which the United States food administration so pressingly needs for our armies and navy, and for the military and civilian requirements of our allies; and to help the growers secure the full measure of compensation that is due them under the food control law of congress."

In reply to this letter Mr. Houser says:

"Any one can ship us wheat, for which we will account to them after the car is unloaded on the basis of terminal weights and grades according to our price schedule, fully set forth in our grain bulletin No. 1, a copy of same herewith attached, with the provision that there are terminal facilities available on arrival of car in which it can be unloaded. If car should arrive during a period of congestion demurrage on it would be for account of shipper. The grain corporation also makes a charge of 1 per cent for handling consignments. We make no advances against bills of lading. All cars should be billed to the Food Administration Grain Corporation, sending bill of lading and shipping advice in ample time so that they will have a record of car before it arrives. If a farmer is dissatisfied with prices offered by his local dealers or representatives of terminal dealers he has the alternative of consigning to the grain corporation on the above terms."

The bulletin referred to covers the basic prices for various grades and varieties of wheat at various points. These prices have been previously published in this paper.

While this statement covers in a general way the question involved, it does not answer certain vital questions before the grain grower who may desire to take advantage of the food administration's provision permitting shipping direct to the grain corporation. The grower must know how to get a car, how to get his grain loaded, what it is going to cost him to load it, what charges he must pay to the warehouse or elevator company at the terminal to which it is shipped, and the like.

Further complicating the situation are the results of a conference in Seattle recently reported in the following news item from that place under date of August 17:

"Agreements and decisions which interest all dealers and wheat growers of the state were reached this week between M. H. Houser, second vice president of the grain corporation, millers and grain dealers regarding vital matters involving the handling of the 1918 crop. Carrying charges on bulk grain will be $1 per ton for the first 30 days and 15 cents per ton for every additional month thereafter. Charges of 20 to 25 cents will be made for sack grain per ton additional. Adjustment of cleaning and sacking charges has not yet been made, but satisfactory progress is reported."

As previously announced in this paper, millers and grain dealers some time ago agreed to a set of deductions totaling 8 cents per bushel, covering commission, handling, storage, interest, insurance, inspection and the like.

### To Assist Shippers.

An official document of the grain buying corporation entitled, "Plans and Policies of the Cereal Division, U. S. Food Administration," contains the following paragraph touching upon the matter in question:

"The grain corporation maintains a traffic bureau for the purpose of assisting shippers of grain and flour in securing their car supply and also in expediting the movement of shipments to destination."

The same document contains the following statement relative to the shipment of grain by the producer direct to the food administration:

**"Producers or dealers have the right to ship wheat direct to the food administration grain corporation at any of the buying points heretofore named. When the wheat is unloaded in the elevator and returns made to the grain corporation remittance will be made on the basis of weights returned and the government price basis, less 1 per cent administration charge for the service."**

Among the buying points referred to in this statement are Portland, Astoria, Seattle and Tacoma in the northwest, indicating that the grower may consign his wheat to any one of these points billed to the grain buying corporation of the government.

It is also of special significance that this statement indicates that remittance will be made, apparently in full, "when the wheat is unloaded in the elevator and returns made to the grain corporation."

### More Details of the Plan.

Among other important provisions of the government's grain buying plan as presented in the document referred to are the following:

"The grain corporation will buy warehouse receipts in approved elevators at the principal primary markets. In intermountain territory where there are no public storage facilities available an adjustment will be made to make effective the $2 minimum for the No. 1 grade f. o. b. loading stations in outgoing car available for transportation to a public terminal elevator, also some plan to protect this basis or surplus flour production as well. For information apply to your zone agent.

"At all these principal primary points there is an open market where all classes of buyers are well represented, and the producer and consumer will be amply protected through competitive activities of the several interests, the grain buying corporation being prepared to buy and protect the fair-price basis.

"There is nothing in the plan, rules or regulations to prevent any mill or elevator or dealer or any other person from reflecting their judgment in premiums for qualities and varieties of wheat or for any other reason over the fair price basis.

"All buyers are expected to pay the producer a fair price for his grain, taking into account expense of handling and a fair profit for service rendered.

"As the miller is restricted to a fair price basis for his flour, he can not, of course, pay more for wheat than the expense of milling and a reasonable profit will allow.

"There is nothing in the 1918 plan which prevents a buyer at point of origin or at any other point from using his own judgment as to the grade and quality of the grain purchased.

"The seller of grain is not restricted as to his buyer or his market, or as to the price, except that the selling price shall not be in excess of the cost to him of his grain plus expenses and a reasonable margin of profit, and except that wheat fit for milling shall not be sold for feeding purposes.

"The government does not discriminate between shippers in matters of transportation.

"Regulations require cars shall be loaded to capacity."

## FREIGHT CUT ASKED.

### Want Reduction on Seed Grain.

Following a recent conference in Spokane between various parties interested in the seed wheat problem, President T. S. Lane of the Spokane Chamber of Commerce sent the following message to Director McAdoo of the railroads:

"We recommend and urgently request that local freight rates on seed grains in car lots or less, be reduced 50 per cent for a period of 90 days, this reduced rate also to apply on local seed grain shipments in car loats already shipped and delivered."

It is stated that the efforts on the part of wheat growers and other northwestern representative railroad traffic managers have worked out a plan to obviate the capacity carload rule which makes it obligatory that a car be loaded to capacity before it will be moved. Under the new plan an order for 40,000 pounds could be loaded into an 80,000-pound car if no 40,000-pound car were available. Under the old rule, a 40,000-pound order would have to await the arrival of a 40,000-pound car or until other orders sufficient to fill an 80,000-pound car were received.

## Apple Prices Are Excellent.

What is reported to be the highest cash figure for Jonathan apples ever offered in the Spokane district was made when buyers appeared in the Spokane valley and offered as high as $42.50 a ton for Jonathans.

"We have not been buying for cash, but we have closed some deals with the growers which will net them $1.65 to $1.70 a box for Jonathans," said B. A. Perham, general manager of the Earl Fruit company. "Fancy Jonathans run 20 to 25 cents a box less. These prices are undoubtedly the highest received by the grower in several seasons.

"The cash buyers have been offering $40 to $42.50 a ton for Jonathans, which works out about $1.60 a box, an exceptionally high figure. The Jonathan crop in the valley is about 60 per cent and represents a big percentage of the total tonnage, which runs largely to Jonathans, Wageners and Rome Beauties.

"Cash buyers are out in force this year because of the short Jonathan crop and the brisk demand. Southern Idaho, which ordinarily has nearly 1000 cars of Jonathans alone, probably will not have much over 100 cars this year. The market is strong. We have already sold extra fancy Jonathans in the east for $1.85 to $1.90 a box."

## Thresher Expert Appointed.

R. J. Stevens, head of the grain-threshing division of the Washington food administration, has received word from headquarters of the appointment of R. E. Carder as grain threshing expert for Washington this season. Mr. Carder is said to have had wide experience in threshing grain in middle, western and southern states. The object of the threshing division is to assist in the prevention of loss at harvest time, it being estimated that from two to three bushels of grain is lost in the threshing of every 100 bushels.

## Many Stock Go to Market.

Figures compiled by the United States department of agriculture show that much more live stock was marketed in the United States during July of this year than July of 1917. The following figures cover cattle, hogs and sheep received at the 34 principal market cities of the country, the first figures in each case representing July, 1918, and the second figures July of last year: Cattle, 1,897,847, 1,552,573; hogs, 2,813,749, 2,395,226, and sheep, 1,409,868, 1,174,335.

# THE WASHINGTON FARMER

VOL. XLI. NO. 34.

Trade Mark Registered U. S. Patent Office.

PUBLISHED WEEKLY ON THURSDAY.
REVIEW BLDG., SPOKANE, WASH.
444 Yates Bldg., BOISE, IDAHO.
411 Stock Exch. Bldg., PORTLAND, ORE.
617 Central Bldg., SEATTLE, WASH.

To either of which communications can be sent, but to avoid delay address office nearest you.

ABC — Member, Audit Bureau of Circulations. Associated Farm Papers. Agricultural Publishers' Association.

Eastern Representatives:

S. E. Leith, Fifth Avenue building ..... New York
Tom D. Costello, Steger building ..... Chicago
C. A. Cour, Fullerton building ..... St. Louis
R. R. Ring, Palace building ..... Minneapolis

Subscription price: One year, 25c; three years, 50c; five years, $1.00. Canadian, one year, 75c. Foreign, one year, $1.25.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on acconut of disease in stock sold through these columns.

## Cooperate on Securing Seed

That there is an actual shortage of seed wheat of the standard fall varieties in the Inland Empire is well recognized. There is an active committee at work attempting to get the seed that is available distributed where it is needed, and to secure importations from other districts. The work of this committee will be only partially successful if the farmers themselves do not cooperate with it. Those who need the seed should get in touch with the secretary of the committee at Pullman, Wash., Mr. E. G. Shafer of the Washington State college. Those having seed to sell should in like manner communicate with him. The object of the committee is to get the seed and the farmer needing it together. By full cooperation on the part of all concerned much needless shipping of grain back and forth will be eliminated

Investigate right now whether or not lime should be put on your soil. Thousands of farms have been improved wonderfully by an application of this rejuvenator.

## Smile in Spite of the Clouds

To enjoy the same pleasures and comforts in the same way that we did four years ago or even one year ago is impossible. In most cases those pleasures or those comforts still are present with us, for in truth the average American citizen has as yet sacrificed little. But no one in whose heart dwells the spirit of humanity can enjoy luxurious food when conscious of the fact that hundreds of thousands of his fellow creatures in other lands are dying of starvation. Who can nestle in his bed in full comfort knowing that somewhere, bearing indescribable hardships, others are fighting his battles for him? Who is so heartless as to laugh and make merry when boys and girls are being maimed, women being ravished by demons, and thousands of men and women being driven before the lash into slavery a hundred times more inhuman than that which threatened this nation half a century ago?

Heaven forbid that any of us be so thoughtless as to live longer within our own narrow luxury and pleasure loving selves! But likewise let none of us allow the clouds that hang about the world to make our lives gloomy. A smile with the horrible picture in full view need not weaken our endeavor to destroy the picture, but will add to our power. Gloom breeds only decay; sunshine breeds life and strength. Smile! Cheer yourself and your neighbor as you put your shoulder to the task before you. Smile, well knowing that the power that your smile engenders will spread the world over until, joined by the power from other smiles, it wipes the horrors of the present day from the face of the war-sick world and paints in their place the smile of victory that will never be effaced.

Every family should begin right now to plan a greater garden and a greater poultry or rabbit yard than was had this season. These things mean more pork and beef and wheat for the boys over there.

## Utilize Every Good Container

Garden, orchard and field are full of good things to eat, but careful conservationists may find themselves faced with a shortage of containers on account of the high price of jars. This shortage may sometimes be overcome by a little planning. First, are you going to dry, can or preserve? How much are you going to put up? in what form? and when? Answer these questions first; then commandeer all available containers from attic, cellar and barn and distribute them according to your needs. Use nontin containers as much as possible. The world's tin supply has been practically stationary for some years, while the demand has grown immensely.

"Hope springs eternal in the human breast." It is good to see the farmers buckle down to another year's effort, undismayed by the hard blows of the present season.

## Boys and Girls Will Show Us

One of the most vital demonstrations at the fairs this season will be those made by the boys' and girls' clubs. In fact, there is no more significant activity in modern rural life than that represented by this club movement. It will constitute a fair within a fair throughout the northwest this season. Hundreds, even thousands of boys and girls will be camped within the fair grounds, and will have on exhibition their work. Their canned goods, their dresses, their pigs, their corn and potatoes, their poultry will be there to testify to their success. They will have their demonstration schools alongside the machinery and creamery and other "grown-up" demonstrations. These boys and girls are not only "the men and women of tomorrow," as so often described. They are the young men and young women of today, and can teach the older folks lots of valuable lessons. And in addition, they are inspiring other boys and girls to efforts along productive lines in a way that will have much to do in the development of the new agriculture and the new rural life.

Don't wait to be reminded of the pledge you made to buy a certain number of war savings stamps each month. Buy them before you have to be notified of your promise.

## Don't Be Ashamed to Ask

The federal government has set aside $5,000,000 to be used to help creditless farmers secure seed wheat. The farmers of the northwest are entitled to share in this fund, which will be administered through the federal farm loan bank located at Spokane. Secretary G. C. Jewett of the bank says that it should be a matter of pride for a community or a farmer not to have to apply for the assistance offered, and he is right. But to need the assistance need not be a matter of shame. Conditions have arisen in many sections over which the farmers have had no control, among them drouth conditions that have twice in succession brought almost total crop failures. These failures are not due to negligence on the farmer's part, and he is not to be criticized for being hard pressed for finances. Thousands of farmers, especially the small farmers, are in sore distress this fall. They need help. In this way, small though it be, the government is offering help, and no man need feel backward in applying for and accepting it if his conditions warrant.

A movement is under way throughout the beet growing sections of the United States looking toward an increased acreage the coming season for the maximum sugar production possible. The present season has been a partial failure, but producers are urged to overlook this fact and again try out a liberal acreage.

## Follow Direction of Leaders

War demands alertness, a ready response to leaders, prompt action. Food problems are constantly changing, and call for the immediate response of all America. Conservation is democratic. All may share. All may help. Three times a day every American can say when he sits down to the table, "This is my chance to serve. Directions are given me by the food administration that I should follow, and follow at once like a good soldier. If I fail, whether selfishly or ignorantly, I desert the colors of the nations fighting for democracy—I stab in the back the men we have sent to France." Follow directions—emergency orders call for immediate action.

Heaven help the mothers and wives to be brave when the casualty lists come in. Their sacrifice is even greater than that of son or husband. They, too, pay the last full measure of devotion.

## Resident Stockmen's Rights

It is a significant development in the live stock industry of the northwest for the constitutionality of the Idaho law to be upheld giving the resident live stock owner a priority right to local range over the big, transient herds and flocks. It is another step in the direction of building up the great aggregate of small productions as against the less aggregate of the few large producers.

This is right, though the man who produces cattle or hogs or sheep on a large scale is to be encouraged rather than discouraged. Where conditions will permit the business on a large scale it should be so conducted. But what will make for permanent and heavy production is the guarantee of success to the thousands of small producers. What will insure adequate supply of meat is the multitude of small farm flocks or herds, and everything that looks toward the building up of this class of production is to be commended. The range question is but one, but it is a good example. If there are a few thousand acres of open range in a certain section adjacent to farms, it is logical to allot that range to the adjacent farmers to assist them in carrying their stock. For the large flockmaster to bring his stock into the community a short time to graze off this range is, indeed, an injustice to the local stockman.

The dairy business deserves the best thought of the entire people of the nation. It faces conditions that threaten its existence, and it is one of the most vitally essential industries of the country.

## Work-or-Fight Rule Applied

The war department's admirable rule commonly referred to as the work-or-fight rule is being applied vigorously at Camp Lewis to the so-called "conscientious objectors." These persons are being given furloughs for service on the farms. They are to receive regular wages for the work they perform the same as any other hired hands, but they are allowed only $30 of it for their own use, the amount that a private soldier receives in the army service. The balance must be turned over to the Red Cross. And while they are so employed they are under military supervision. If they desert they are subject to the same vigorous treatment as a soldier.

This action is not taken by the war department as a punishment for being conscientious objectors. There are many men who really believe that it is an unpardonable sin to wage war. They are directed to the farms where they can perform a real service to the country at this critical time without violating their consciences. The conditions are not too severe. Why should not every man eligible for army service be put on a like war basis? Why should any man, whatever his moral scruples, be permitted to remain at home and amass wealth in comfort while his fellows are facing suffering and hardship at $30 a month?

It is reported that the Mormon church organization has swept its granaries clean of all stored wheat and turned over to the national food administration, as a result, something like 250,000 bushels. The grain is that which has been stored under a tithing system to protect the people against a shortage of food or seed.

# Go Through Germans Anywhere

## *This Is America's Object in Building Up a Gigantic Army*

What is undoubtedly the most significant single event of the last few months in connection with the conduct of the war was the unqualified announcement from the war department at Washington last week that the object of the proposed extension of the draft ages was the placing of an army in France within the next 10 months sufficient, in the words of General March, chief of staff, "to go through the German line whenever we please." He said that an American army of 4,000,000 men under one commander-in-chief was sufficient for this purpose, and it is apparent that it is the object of the war department to have this many trained soldiers on the battle front within a year's time. General March stated in this connection that President Wilson had committed himself flatly to the policy of concentrating the effort of American arms on the western front, with a view to defeating Germany by sheer man power. It is pointed out that there are now approximately 1,450,000 Americans in France and approximately the same number in camps in this country. Figures given out by General March for the transportation of soldiers from this country to Europe under the department's present plans are as follows:

August, 250,000; September, 200,000; October, 155,000; November, 150,000; December, 150,000; January, 100,000; February, 200,000, and 300,000 monthly thereafter until the end of next year.

The reason for the rush in the passage of the new draft act is summed up in the following words by Provost Marshal General Crowder:

"The situation is urgent because by October 1 class 1, under the age limits of the original act, will have been entirely exhausted. Unless there is to be a very serious interruption in the flow of American troops to the camps and thence across the seas to France class 1 must be replenished at the earliest possible moment by available men both below and above the present age limits of 21 to 31. There is, literally, no time to be lost. The military man-power program of the United States requires that the now nearly depleted reservoir of class 1 men shall be replenished by more than 2,000,000 men available for full military service. On the basis of actuarial figures from insurance companies, census computations and the experiences of this office in the previous registration it has been estimated that the required number of men for class 1 may be had only by including within the draft age limits men between 32 and 45 and between 18 and 20. This is to say, about 13,000,000 men must be added to the list of registrants in order that with all exemptions allowed at least 2,000,000 men will remain in class 1.

"In other words, here is the problem presented: If the bill as introduced is passed it will be necessary, between the date of its passage and October 1, to register and begin to classify 13,000,000 men not heretofore included in the draft age limits. And, when this has been done, draft calls upon the new class 1 must start to fill the places in the training camps of those men going to France.

"This office, in its preliminary instructions sent to draft executives in the states, has proceeded on the assumption that the new registration might be held early in September. If, for example, the bill is passed by August 31, or soon thereafter, it would be necessary for the president's proclamation to fix a registration date as soon as possible, allowing ample time to be given for posting this proclamation in every region of the country. Thus, registration day might be set as early as September 5, or shortly thereafter. To have the first instalment of the new class 1 ready for camp by October it would be necessary to have the registration not later than September 15. In any event, it is obvious that we can not wait until the act is passed before beginning the preliminary work in this vast undertaking."

### Allies Continue to Make Advances.

The week just past has not resulted in any spectacular advances by the allied forces, but it has been a week of success for the allied cause. No reverses have been reported, but, on the other hand, positions have been improved and the pressure on the German and Austrian armies increased until, at this writing, it appears that the enemy is certain to make further retreats to better defended positions. As far as can be gathered from reports there is no plan on the part of General Foch and other allied leaders to make any attempt at a decisive drive this fall. It is evident, however, that the offensive is to be continued in such way as to keep the advantage with the allies, so that when the American forces arrive in full power in the spring everything will be in a favorable condition for the launching of the campaign that is hoped to bring victory before the winter of 1919.

During the last week no great fighting has occurred on the Rheims-Soissons front. Considerable fighting has occurred on the Amiens front, however, advances having been made that improve the line in that important sector. At the present time all the immediate danger to important allied bases has been removed. Paris is out of danger. Soissons, Montdidier and Amiens are all in the hands of the allies, with the lines well eastward of them. These points are important as part of the line of railroad communication from Paris and other allied bases to the allied forces. Their safe possession by the allies seems to insure the ready transportation of troops and supplies to all parts of the battle line without danger of German disturbance.

### Russia May Turn Against Germany.

Reports seem to indicate the rapid development in Russia of anti-German sentiment, and it is believed by many officials in touch with the situation that within a comparatively short time the mass of the Russian people will have repudiated the bolshevik government and will be uniting as best they can under allied leaders to drive the German army out of that country. It is officially reported that American troops have been landed at Vladivostok for cooperation with British, French and Japanese forces. How extensive these forces are is not announced. It is understood that their object is to form a nucleus about which the loyalist element in Russia may rally for the ultimate overthrow of the German element. Considerable talk has been heard recently of the possibility that the leaders of the latter element would soon flee from their country and probably take refuge in Germany. It is said that the Russian people are just beginning to learn that conditions on the western front are becoming increasingly favorable to the allies. Up to this time, it is said, the German propagandists had kept them in the dark as to the real conditions, even declaring that German success on the western front was practically attained. It is expected that the discovery of the truth will do much toward uniting the Russians about the allied cause.

### I. W. W. Leaders Convicted at Chicago.

After a trial lasting nearly five months, more than 100 leaders of the Industrial Workers of the World were found guilty last week of conspiracy to disrupt the war program of this country. The jury decided the case after only about one hour's deliberation. There were four specific charges against the defendants, as follows: Violation of the espionage act, violation of the criminal code prohibiting the interference with the civil rights of citizens, violation of the selective army service act and violation of the federal conspiracy act. The court has not yet, at this writing, passed sentence, and probably will not until the attorneys for the I. W. W. present their argument for a new trial, which it is reported they plan to do. The total penalty covering the four crimes of which the defendants were found guilty is 27 years in federal prison and a fine of $10,000.

The men found guilty include a large number of well-known I. W. W. characters of the northwest and William D. Haywood, executive secretary of the national organization. During the trial much evidence was submitted from the northwest to show that the defendants were responsible for wanton destruction of property in this section, including the burning of grain and separators, the burning of timber, the malicious destruction of logs and lumber and similar acts of sabotage. It was also shown that they had carried out an organized movement to oppose the vigorous prosecution of the war and had committed numerous unpatriotic acts.

If severe sentences are passed by Judge Landis, presiding judge at the trial, to the extent that the law warrants under the convictions, it is believed that the case will prove a death blow to the I. W. W. propaganda in this country.

### Hugh Profits Made by Industries.

In spite of the efforts to prevent the making of excess profits out of industries stimulated by the war, it is admitted that many industries have made great profits. The profiteering has been most marked, it is reported, in business devoted to food production and distribution, cotton and woolen manufacturing and dealing, coal mining, iron, copper, aluminum and other metal production and oil production and distribution. In addition thousands of small concerns in a great variety of classifications have made profits ranging from 100 to 3000 per cent above their normal prewar profits, which even then were considered high.

In citing certain industries as containing the largest percentage of profiteers the treasury has made it clear that not all individual businesses in these groups have gathered in swollen earnings. This is true particularly of coal operators, some of whom made enormous profits while others made barely enough to pay justified dividends. With few exceptions manufacturers of clothing and shoes reported big profits. This was true of most concerns holding government contracts. Lumber production, stimulated by the sudden enormous demand from cantonments and other government operations, netted forest and sawmill owners, as well as distributors, profits several times above those of normal years.

Meat packers, flour mills and canners stood at the top of the list of food profit takers, according to income returns. Farmers also made money heavily last year, but not enough of their returns have been analyzed to justify a general statement of their profits, officials say.

Profiteering was by no means confined to big business. Small-scale producers, in thousands of cases, reported profits equal to the aggregate of from five to ten years' earnings before the United States entered the war.

### Food Crisis Over, but Still Must Save.

Continue to save and increase production is the appeal of the allied food administrations sent out from London through Herbert C. Hoover, United States administrator, though the message from London, where the allied food conference has just been held, says that the food crisis is past. If production is continued on as great a scale as possible and conservation is carried on as heretofore there is no danger of actual food shortage for the allied armies, it is stated. As a result all the allied peoples are to be provided with a better grade of war bread than heretofore. Up to this time there has been no war bread in this country in the same sense of the term as in England, France and the other allied countries. Administrator Hoover urges the American people, however, to continue with the utmost loyalty the conservation and production of foodstuffs to prevent any possible shortage that might follow disaster of any kind to present stocks or future production.

### Free Information Bureau.

The Washington Farmer has established an INFORMATION BUREAU at the NATIONAL CAPITAL, which is at the service of its readers and which they are asked to use freely. It is intended to be a clearing house of governmental information. Address inquiries (includingg 3-cent stamp) to THE WASHINGTON FARMER INFORMATION BUREAU,
Washington, D. C.

## *Washington Gleanings*

It is estimated that about 10,000 tons of alfalfa in the Kittitas valley have so far been contracted for by hay dealers, according to advices from Ellensburg.

The Whatcom county game warden, John Aitken, has been busy planting 68,000 cutthroat and rainbow trout fry in Ten Mile, Fishtrap and Betrand creeks.

The harvest in Chewhilliken valley is turning out better than was expected. Some of the farmers are estimating their crops at a 50 per cent of normal.

A good crop of cantaloups is assured in Franklin county this season. Some 12 or 15 carloads will be shipped from the county, besides supplying local demands.

Dewey E. Gilman, who was appointed ranger for the Baker river district, Whatcom county, has reported at the forestry office and will take up his work immediately.

The Snake river ferry is being moved down the river to Burbank, where it will be operated as a free ferry to take the place of the boat which was sunk a few days ago.

Washington's 1918 wheat crop will total 30,000,000 bushels, or an increase of 3,000,000 over last year. Chief Grain Inspector P. J. Sweeney estimated in a statement issued August 2.

The state highway board has let a contract for $65,659 for the improvement of eight and a half miles of the Sunset highway in Lincoln county between Creston and Wilbur.

Forty thousand trout fry from the Green river hatchery were planted in the North and South Newaukum rivers, Mill creek and Winston creek, Lewis county, recently, by Game Warden Beusch.

Present indications are that the Wenatchee valley will have a fair crop of the largest and best quality of apples that it has had in many years, according to the statement of P. S. Darlington, district horticulturist.

The Waterville Union Grain company has increased its capital from $26,000 to $88,000, and has three new elevators under course of construction: Waterville, 90,000 bushels; Withrow, 90,000, and Alstown, 30,000 bushels.

The women of Wenatchee valley have agreed to look after the women and girls who go there to assist with the fruit harvest, and the Wenatchee Harvesters' league has been asked to assume charge of other phases of the work and was promised the cooperation of other organizations.

An automobile trailer, fully equipped with chemical tanks and other firefighting apparatus, is being maintained by the Pullman chamber of commerce during the harvest season for fighting grain and farm fires in that vicinity. A volunteer fire-fighting force of 15 men will be organized.

The organization of a children's industrial and agricultural department in the Washington state fair in North Yakima, September 16 to 21, is announced. S. W. Ness of North Yakima is named as superintendent of the children's department and Mrs. Elizabeth Jones is in charge of the boys' and girls' club work for the state college, as supervisor.

George E. Grant of Twisp, who has just returned from Seattle, where he took seven cars of beef cattle to market, reports that $205.70 was deducted from the shipment on account of bruises on the cattle inflicted by their horns. As a shipper of beef, Mr. Grant says it would be a great thing if all stockmen would at once resolve to dehorn their cattle.

One of the best wheat crops in the Spokane district was threshed from the 20-acre wheat field planted this spring by L. W. Hutton on the property bought and now being improved by him for the future Spokane Children's home at Pasadena Park. The crop averaged better than 35 bushels to the acre.

Spokane county will harvest a $2,000,000 pea crop, the Fairfield district alone producing peas valued at more than $1,000,000, notwithstanding the dry year, according to County Agricultural Agent J. R. Shinn. He says there will be enough shattered peas to feed 10,000 hogs until Christmas; is urging farmers to save all the pea straw, and has sent 500 hogs into the pea fields on which the crop has been harvested.

The state council of defense plans an exhibit at the Washington state fair, September 16-21, in Yakima, to illustrate all the war work that is being carried on by the council. Booths will be arranged to set forth the work that is being done in the following subjects: The allied relief, Americanization, educational propaganda, food administration, food production, health and recreation, maintenance of social agencies, and women in industries.

In addition to the fourth Liberty loan, which is coming for a three weeks' campaign beginning September 28, two other loans of about the same proportions are to be floated during the ensuing 12 months, according to the treasury department. The fifth loan probably will come in January and the sixth in May or June, say those in touch with the plans. The total bonds to be floated will approximate $16,000,000,000.

In addition to this stupendous sum the revenue bill now being worked out by financial leaders in congress is expected to raise $8,000,000,000 during the year. This latter amount is to be raised by taxation of various kinds, the chief feature of which is the income and excess profits taxes.

This entire financial program is designed in all its magnitude to carry out an equally gigantic army and navy program, the object of which is to put such a force in Europe by early next summer as to defeat Germany by sheer overwhelming weight of men and arms.

# Announce Prices

## Wheat, Flour and Feed Covered

At this writing the food administrators for the three states of the northwest, M. H. Houser of the grain buying corporation and representatives of the food administration are in conference in Boise, Idaho, for the purpose of working out problems dealing with the food and feed situation. Among those attending are Charles Hebberd for Washington, W. B. Ayer for Oregon and R. F. Bicknell for Idaho.

One of the purposes of the conference is the determination of equitable margins of profit for the millers of flour and mill feed, it is reported.

Recently the national food administration issued figures covering the so-called "fair price" schedule for wheat, flour and mill feed. These figures are for these articles in bulk, in carload lots at the mills. Whenever to be shipped out the freight to the destination plus sacks should be added if it is to be handled in sacks. The following table covers the schedule for the various milling points throughout Washington and indicate what the buyer should have to pay:

| Station | Wheat Bu. | Flour Bbl. | Mixed Middlings Bran ton | Feed ton | Shorts ton |
|---|---|---|---|---|---|
| Anatone | 2.071 | 9.52 | 19.11 | 20.36 | 21.11 |
| Asotin | 2.071 | 9.52 | 19.11 | 20.36 | 21.11 |

## GRAIN ACREAGE HIGH.

### Yield Per Acre, However, Is Low.

The estimate of 32,335,000 bushels of wheat in Washington this year, compared to 29,218,000 bushels last year, does not mean that the yield per acre will be greater than last year, says E. J. Marchetti, field agent for the United States bureau of agriculture. The following figures indicate that the actual yield per acre of wheat in this state will be considerably below that of a year ago. The acreage of all wheat in Washington this year was 2,190,000, the largest acreage ever planted, compared to 1,850,000 acres last year, or an increase of 340,000 acres. The average yield of all wheat in this state, weighed in proportion to the acreage in each county, for this year, based on condition, will be approximately 14.3 bushels per acre, including four-bushel yields in the Big Bend counties and from 16 to 35 bushel yields in the more favored heavy land sections.

The increased acreage of 340,000 acres over last year will produce 4,862,000 bushels more than a year ago at 14.3 per acre. This includes over a million bushels of irrigated wheat that was not produced last year, at yields of from 35 to 40 bushels per acre. When this 4,862,000 bushels of wheat produced on the increased acreage this year is deducted from the estimated production of the state of 32,335,000 bushels there remains a production of 27,473,000 bushels. In other words, if this year's crop had been grown on last year's acreage the state would have produced 27,473,000 bushels of wheat this year, which is 1,745,000 bushels less than 29,218,000 bushels produced last year, indicating that the actual yield per acre of the state this year will be materially less even than the small yield of a year ago, and the production, had the acreage been the same, approximately 2,000,000 bushels less.

# Pure Bred Business Coming to the Front

Shorthorn owned by G. W. Cordiner of Walla Walla.

The pure bred business is coming to the front in Walla Walla county, Wash. W. G. Cordiner is laying the foundation for a fine herd of shorthorns, with stock secured from the leading breeders of the northwest. Mr. Cordiner is also making a start with sheep. W. E. Gross has some fine Holsteins from the Monroe herd. Walla Walla college has a $2500 Holstein bull at the head of its cows and heifers. Tom Copeland is raising Herefords, and Martin Hansen is trying out Guernseys. From this showing the claims of beef cattle and dairy cows seem at present about equally balanced in this part of the state, and with the vast possibilities for mixed farming which Walla Walla county presents, it is likely that both types of animals will make good.

## SELECT YOUR BUYER.

### Pays to Deal With Honest Men.

A bulletin recently issued by Director Asher Hobson of the office of farm markets urges upon the farmers who have produce to sell that they use great care in selecting the dealer to handle their products.

"The marketing of farm products in any considerable quantity generally necessitates the sale of those products to a middleman. This being the case, it is of much importanee that the farmer select honest and efficient dealers to handle his goods," says Director Hobson. "The office of farm markets receives many complaints concerning dishonest practices of unscrupulous dealers. For instance, goods are too often rejected on the grounds of quality when the real reason for rejection is that the market has fallen and the buyer does not wish to pay the contracted price. Another practice which deserves strong criticism is that of obtaining business by leading the grower to believe that he will receive a higher price than the market really justifies.

"It is largely the fault of careless shippers that firms following the above procedure are allowed to exist. Unquestionably these 'don't pay-what-they-offer' operators are in the minority. There is no need of patronizing 'crooks.' The wholesale produce trade has many honest and reliable houses, with large investments in the business and with good credit ratings. Such firms invite investigation.

"Do not consign shipments to dealers about whom you know little or nothing. Choose a firm that has an established reputation with the trade and does business in a way that has rendered satisfaction to other growers or shippers. Inquire concerning the firm's practices in such matters as:

"Prompt acknowledgment of receipt of shipment upon arrival.

"Accurate report concerning condition of goods upon arrival.

"Reliable information as to the general trend of the market.

"Prompt remittance upon sale of produce.

"If possible, write or confer with those who have transacted business with the dealer in question. Correspond with bankers or others who are in a position to know his trade practices. In short 'look up' the ones who represent you on the market.

"When a dealer has been found who gives reasonable satisfaction the grower or shipper should continue to do business with him year after year. Permanent trade connections are essential to successful marketing. Frequent changes of dealers should be avoided.

"It must not be understood, however, that the farmer should ship all of his products to one market. Trade connection might well be established with reliable representatives in a number of marketing centers. It often occurs that one market may be glutted with a particular product, and on the same day that product will be in demand on another market no great distance away. The farmer who has permanent trade connections at different markets with dealers whom he knows to have well established reputations for honesty and professional efficiency is in a good position to keep in touch with general market conditions and avoid an unreasonably low level."

## SCHOOLS FOR WORK.

### Demand for "Machine" Education

The young men who are being trained at universities and colleges for war purposes, I am told, are prohibited from receiving or from giving more than 30 minutes a day to lectures or book studies. All the rest of the day is devoted to learning by doing. American education has been developing a system of lectures or book work for a series of years first, and then doing after graduation. This theory receives a severe shock from war demands.

We have a magnificent system of public education in this country, built up at enormous cost, gladly contributed by the people in taxes, and yet, when the war requires thousands upon thousands of young people for clerical work, especially young women, "at least 90 per cent of this demand has been furnished by private schools," says M. M. Higley, president of the Northwestern Business college, of Spokane.

Mr. Higley further tells me that when the government sent out the requirements made of the schools in order to furnish the workers needed that there was only one minor point to be changed in their courses. When asked upon what features of education emphasis was laid by the government he replied that it was along the "machine" course. Machines for commercial work are coming into general use. The bookkeeper must be able to handle the adding or listing machine, the calculator or computing machine and the bookkeeping posting machine. "We had the second machine which came to Spokane," says Mr. Higley, "and that was only about two years ago." With this machine the operator, by the use of keys and levers, takes the old balance of a depositor in a bank, lists and totals the deposits for the day, lists and totals the checks drawn for the day and gives the new balance. If there is an overdraft the machine stops and can only be unlocked by supplying the figures which make up the overdraft, and then prints the overdraft in red ink.

This is only a hint of what is being done by machines in clerical work, and the government insists on this training, as it relieves probably 75 per cent of the bookkeepers and office employes whose employment was made necessary by the old hand methods.

## STICKS TO DAIRYING.

### Thinks Silage Will Be Big Help.

John Simm of King county is one of the dairymen who are going to stay with the business in spite of present apparently impossible conditions.

"I'm not going to sell my cows, but I am going to raise more of my feed," is the way Mr. Simm puts it. "Last year I bought considerable mill feed, and when I figured things up I found that this feed I bought had practically eaten up every cent of profit. I had worked for nothing. This year I am going to raise as much as possible. I think silage will be a big help in this direction."

Mr. Simm is a member of the big West Side association, and is a firm believer in associated effort among farmers. He thinks the day when the farmer can ignore selling conditions has passed, and that more and more it will devolve upon the producer to look after his own interests in this direction.

# Fall Gardens

## Some Things Can Be Grown Still

By PAUL E. TRIEM.

Kitchen garden crops can be divided into two broad classes: Those which have tissue building and energy producing values, and those which are valuable chiefly for their "salts" or chemical qualities. Beans, peas and corn are good examples of the former, and lettuce, celery and the various greens of the latter. Of course all tissue building and fuel foods have some available chemicals, and all of the salad vegetables have some proteins and carbohydrates; but the classification suggested serves a useful purpose in studying food values.

The fuel and tissue building vegetables usually require a fairly long season for their development. Beans and corn, in particular, need all of the warmth and sunlight the average northwestern summer can be expected to give them, if they are to reach maturity. The salad vegetables, on the other hand, can often be produced in a very short time, so that they can be planted in the late summer and still produce edible products during the fall. Lettuce can be planted in August for fall and early winter use, and so, too, can Chinese cabbage, onions, radishes, turnips, carrots and beets. Peas, which are tissue builders, can often be grown in the fall, particularly if a dwarf variety is planted.

In planting the fall garden, several rules should be observed. Remember, first, that if one crop has already been removed from the ground to be planted this same season, much of the available plant food has been taken out. Thoroughly rotted stable manure should be spaded in, if possible, and after the new crop is well started nitrate of soda may be used to hasten development. With vegetables valuable chiefly for their leaves, such as lettuce and cabbage, nitrate is the "dominant" fertilizer.

Another thing to remember in late summer planting is that soil moisture must be provided if the seeds are to germinate and develop rapidly. If the soil is dry and water for irrigation is available, irrigate before planting rather than while the seeds are germinating. A good method is to wet the ground thoroughly and then spade or plow and harrow as soon as the soil is in workable condition. This approximates the conditions of spring, and when added to the higher temperature of summer, the hot days and warm nights, insures rapid growth.

## GRAIN DEALER

### Can Increase Cost of Handling.

"There is a lot of misrepresentation about this question of grain handling costs, and the upshot of it will be that farmers will cut out the brokers and ship direct to the food administration grain corporation to a large extent this year," says Dan Morgan of Spokane, a wheat grower. "One would think the grain men would look at the situation in the same light as other patriotic people, and at least not boost the price.

"There are so many things whereby the grain dealer can increase the cost of handling that the farmer never knows what to expect. The dealers held a star chamber session on the Coast and got into cahoots to boost the schedule to 8 cents a bushel. There was a big howl when the farmer came to find it out, and the result is that a lot of the dealers are not now trying to put the 8-cent charge over.

"I have learned that the warehouse business is a profitable one by practical experience. I had so much trouble I decided to put up my own warehouses, and they have paid for themselves in three years.

"Up to last year the charge for handling grain and storing it 30 days was 1 1-2 cents a bushel, and this year it is jumped to 3 cents. I don't see the need for doubling this charge.

"There is a joke about advancing the money, too. All the dealer does is to go to the bank and put up the warehouse receipts and get the money. The farmer can do that as well as the dealer.

"Last year the buyer gave out the impression that the government would take all grain. They made an agreement to take the grain and ship it for the farmer, and advance him 90 per cent of the price. They held the remainder until they got the returns from the grain corporation. Some of the returns are being made recently. The dealers charged the farmer interest all the time until final settlement. The dealers then went to the grain corporation with a hue and cry, and finally got the government to allow a handling charge of 2 cents a bushel a month. All the time they were charging the farmer interest on the money advanced."

# Nonpartizan League Management

## *Prominent Members Declare the Organization Is Not a Strictly Representative Body*

"Because of our pride in this work and our realization of the vital necessity in preserving the independence, integrity and singleness of purpose of an organization which may be destined to play a tremendously important part in American history, we feel in duty bound to call to your attention, as president, certain conditions which we believe must be corrected if the National Nonpartizan league is to long survive, attain its expected strength, or to beneficially affect the mind and conscience of this country. Moreover, as co-workers in this institution, we desire to point out what in our judgment are the remedies for the conditions which we think are injurious to the league's present growth and absolutely fatal to its permanent success."

These are the opening sentences of a protest to President A. C. Townley of the Nonpartizan league, dated June 25, 1917, and signed by the following members of the national management of the league: Joseph Gilbert, Arthur Gilbert, W. W. Leggett, N. S. Randall, Murray King, J. E. M. Jauncey, W. G. Roylance, George D. Brewer, Carl Beck, Charles R. Barnes, O. J. Nelson, W. S. Shoemaker, W. H. Quist, Alf. Knutson, L. J. Duncan, Arthur Williams and O. M. Thomason.

The protest is alleged to have been prepared by Joseph Gilbert, the former manager of the organization department of the league, and is reprinted in full, with comment by Rev. S. R. Maxwell, in the Butte Miner, in an article copyrighted by the Dispatch Printing company.

Mr. Maxwell is a Unitarian minister, has been a prominent speaker in the Nonpartizan league, has made hundreds of speeches to thousands of farmers in its behalf, and personally has conducted a number of the league's conventions. He was on the stump throughout the Lindbergh campaign in Minnesota and also in North Dakota, where he campaigned with Congressman Baer and Governor Frazier. Mr. Maxwell says he quit the league because of what he calls its un-American program.

The protest continues:

"First of all, we think it self-evident that no democratic movement can ultimately succeed which rests upon an autocratic basis. The Nonpartizan league management is autocratic. This condition not only obtains in the administrative management, but in its political guidance as well. It is all very well to tell the people that its candidates are selected by pure democracy. We know that they are not. Both members and workers are under a despotism that can not survive.

"We, workers in the National Nonpartizan league, recognize your ability. We admire your qualities of leadership. You have performed an imperishable task, if the movement is guided right, and to you chiefly belongs the credit."

And again:

"But if this league is to become national in fact, as well as in name, it can not continue as it now is, essentially a one-man movement. It must be made representative as concerns both workers and members, and unless it is made representative it will certainly fail."

The recommendations are:

"That an administrative board of seven be created to serve until such time as a national executive council shall have been elected by the membership.

"That all matters of general policy must be referred to and decided by a majority vote of yourself and this board, and that no important matters of policy can be adopted unless so decided.

"That no department head, lecturer or salaried employe can be discharged, demoted or permanently transferred against his will without a hearing before this board, and not then until a majority have so decided.

"That no new departments may be created without the assent of the majority of this board.

"That not later than the first of July this board go over all salary accounts and reduce such as they think exorbitant, and increase such as they think insufficient."

The protest also recommends that the following departments be created: Finance department, national organization department, legal department, publicity department, educational department, legislative department, campaign department and public affairs.

"That such department heads hold a conference at least once every week, and oftener whenever advisable, at which matters of immediate policy shall be discussed.

"That a budget system be immediately instituted.

"That no unusual expense be undertaken without the sanction of a majority of the administrative board.

"That as early as is practicable, not later than the 15th of November, that calls be issued for state and national conventions, and that such conventions elect officials of the league and also a national executive council."

The signers of this protest are reported to have met with President Townley in conference and he promised he would take the matter under consideration and hold another conference later on. As a result, it is alleged, Joseph Gilbert was side-tracked and put into the office of the United Consumers' Store company, and Randall, another leading man in the revolt, was sent out to establish a country newspaper. Quite a number of the signers of the protest were employed in the publicity department. It is now charged that Townley abolished the entire department and that Nelson was excused and allowed to return to the state of Washington, that Carl Beck and wife resigned and went to Washington, D. C., and that John A. Currie was detailed to go out on a hundred dollar membership proposition or quit, while Arthur Williams was sent to North Dakota on a consumers' store proposition.

Mr. Maxwell adds, concerning the protest:

"What does the autocrat Townley do with this paper? Practically the same that the arch-autocrat William of Germany did with the treaty with Belgium. Tore it up and slung it into the waste basket. * * * He has refused to make the management of the league democratic, after a score of men who were loyal to the purpose of the league and who had demonstrated their loyalty at the risk of having their own reputation tarnished forever, undertook to defend the league by apologizing for the disloyalty of Townley himself, asked respectfully that it be done. He has refused to listen to the demands of these splendid men. He has refused to explain why he abolished the department of the league where the most of these men were employed. He has refused to publish to the world his connection with the absolute control of the league exchange, an affair that handles one and a half millions of dollars in good paper. He has refused to show his connection with the publication company. He has refused to show his connection with the United Stores company, another concern of his that has gathered one million from the farmers. He has refused to furnish the world a correct statement of what he did with the two millions collected from the league members. He has refused to show why he, and he alone, carries the key to the treasury of all these concerns. These facts carry their own answer with them."

---

TO the Editor of The Washington Farmer: I wish to take advantage of your big bargain rates and enclose herewith 55 cents, for which please enter my subscription to The Washington Farmer for three years and send me the farm service flag with eight small stars. THOMAS SMYTH.
Weston, Ore.

**Sugar Bowls Banished.**

Sugar bowls have been banished from American dining cars—a traveler is served his portion of sugar and no more.

---

### OPERATE OWN STORE

### Farmers Will Serve Themselves.

A report from Amsterdam, Idaho, tells of the formation of an association of 35 farmers and stockmen for the purpose of establishing and conducting a store of their own. The report says that the building has been acquired and equipped for business. The store will handle general merchandise, hardware, groceries and practically all the goods that the farmers of the community will require. It is planned also to operate in connection with the store a hotel with limited accommodations especially for farmers and their families when they are in town for the day or for longer periods.

# FORD OWNERS NO MORE ACCIDENTS FROM RUTS OR BUMPS

**You can now avoid turning turtle, leaving the road, buckling and upsetting and the many other dangerous accidents due to weak steering equipment. Get**

**THE**

**SPRAGUE WORM STEERING GEAR**
*For Fords*

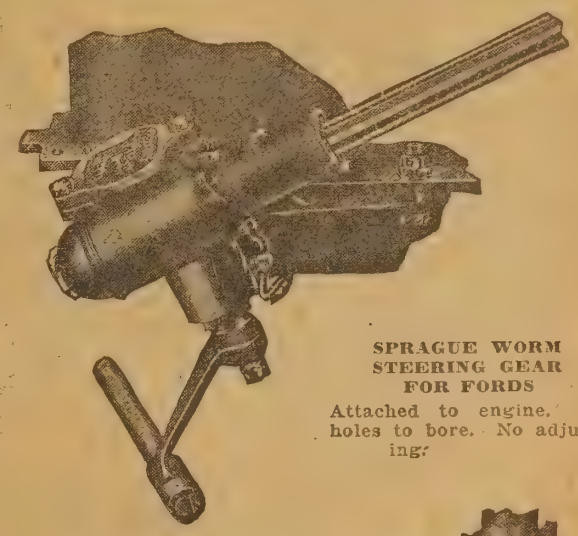
**Makes Your Ford a Safer, Better Car**

All higher priced automobiles overcome the dangers from steering by use of the worm type steering gear. With the Sprague Worm Gear you can safely and easily steer your Ford out of any rut. It also eliminates that jerky, insecure motion in the Ford; holds the car to the road; prevents locking over center; makes steering easier through mud, sand and on center-crowned roads. The worm and wheel arrangement prevents bumps or other obstacles from cramping and upsetting the car.

**Adds to Pleasure**

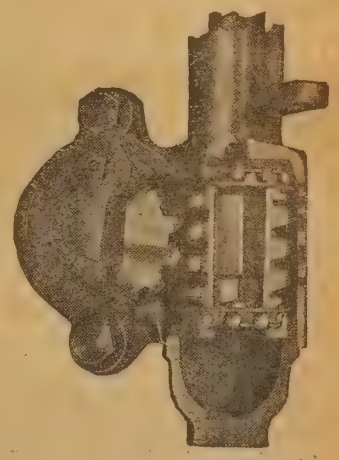
This steering gear absorbs the vibration and strain on the arms, adding greatly to the pleasure of driving.

**Easy to Attach**



Our new model (ball-bearing floating shaft) worm steering gear requires no adjusting. You can quickly attach it yourself, without special tools. Replaces old gear. Will outlast the car.

**Guaranteed to Satisfy**



The Sprague Worm Steering Gear is guaranteed to satisfy you. If you don't like it, after a ten days' trial on your Ford, return it and your money will be refunded.

Don't wait for the accident to happen. Put this safe steering gear on your Ford—enjoy driving. See your accessories dealer, or send direct to us. Price $15. Thousands in use. Illustrated literature **FREE.** Write us today.

Your money refunded if you are not satisfied with this gear. Order it NOW.

SPRAGUE WORM STEERING GEAR FOR FORDS
Attached to engine. No holes to bore. No adjusting.

SPRAGUE WORM STEERING GEAR FOR FORDS
With part of housing cut away to show worm. Note ball bearings, also ferrule on end of steering rod (floating shaft).

**FROM THOSE WHO KNOW**

We have scores of letters from users praising this gear. The following show what they write:

Knoxville, Tenn., 6-9-18.

Gentlemen:—I received the worm steering gear and have installed same on my Ford. Am highly pleased with it. Have taken orders for two the second day. I will remit for six gears shortly. You understand that I accept the agency for the device at this point. When I took the matter up with some of the Ford dealers here they tried to discourage me. **It is O. K.** Would not be without it. Consider it the best life and accident insurance policy that could be taken out on a Ford car service.
R. L. BOWMAN.

Dayton, O., 6-29-18.

Gentlemen:—We received your Worm Steering Gear and put same on one of our one-ton Ford trucks which was very hard to steer, and after trying it out we drove over a road where a new sewer was built and found that we could let the steering wheel go and light a cigar without touching the steering wheel. I, myself, have driven Ford trucks almost four years and every night my shoulders would be so sore that I could hardly move my arms after driving from forty to fifty miles every day. Today I have made the same trip with your Worm Steering Gear and my shoulders felt rested after my day's work. Your Worm Steering Gear has really made a pleasure car out of my Ford truck.
THE WOLF CREEK SOAP WORKS.

# Swat the Flies Hard

Decrease in milk production, losses of live weight, discontent, and unrest are promoted among herds during the summer months as the consequence of the activities of the common stable fly and horn fly. An average decrease in milk flow of from 25 to 40 per cent is not uncommon as the direct result of flies and the extreme heat of summer. Under existing conditions with a keen demand for dairy products and with prices at a high mark, it is highly desirable that every dairy farmer exercise a maximum of care and caution to eliminate the fly evil. Such remedies as darkened barns, stable sanitation, and spraying with fly repellents, are recommended. Thorough treatment of manure, its daily removal from the barn to a distance, the use of hanging burlap or other devices in the barn doors to brush flies from the animals, baited fly traps placed outside the barn, and closed milk pails are among the necessary requirements for keeping flies away.

The stable fly, armed with biting mouth parts, punctures the hide of cows and sucks their blood, while the horn fly locates at the base of the horns, where it irritates the skin and causes the formation of congestions which resemble mosquito bites. Both species of these flies propagate rapidly and require only from 10 to 16 days in which to hatch their eggs and produce new hordes of pests which operate for cow discomfort.

The stabling of cows during the heat of the day in cool, darkened barns is recommended as one of the best means of eliminating the fly evil, provided adequate labor is available to keep the stables clean and sanitary. As manure provides an ideal breeding material for flies, it is imperative that none of it be allowed to accumulate in or around the stable. Spraying the animals with some fly repellent, such as kerosene emulsion, is an effective remedy, but requires repeated applications. Repellents should be used with great care, as no good one has yet been devised which is not likely to slightly taint the milk. It is best to spray the cows just before milking each evening, using a hand spray pump or applying it with a brush or a sponge, says the United States department of agriculture. There are some antifly solutions on the market which are more or less effective. Most of them consist of some coal-tar product combined with either fish oil, oil of tar, or rosin. Lime sprinkled about the barn on manure is also useful in destroying flies.

To prepare kerosene emulsion—one of the cheapest and best home-made fly repellents—dissolve one-half pound of yellow soap in a gallon of soft water heated to the boiling point, and with this combine two gallons of kerosene in a barrel where the solution can be churned vigorously. Dilute this mixture with six gallons of water. This amount of emulsion is sufficient for spraying 100 cows and should be prepared only as needed. When smaller amounts are required they should be prepared in the proportions given.

## Butter Packing.

Will you please tell me how to pack butter this summer so it will keep nicely until next winter?

I. N. H., Idaho.

Butter, to be packed for winter, should be of the highest grade, made from cream of a clean acid flavor, but not too sour. The churning should be stopped when the granules are about the size of peas or smaller. At that stage the buttermilk must be drawn off and the wash water added. Two washings are necessary for the best results. Add the usual amount of salt, which must be worked in evenly. Pack the butter in a clean, cool stone jar, filling it to within three or four inches of the top. Make a saturated solution of salt brine and fill the jar to the brim. Set the jar away in a cool place where the temperature is uniform. If the butter is of a good quality when packed it will keep until winter very nicely.

A. B. N.

## Winter Feeding for Dairy Cattle.

What do you think of feeding bran and shorts mixed with cut oat straw for winter feeding of dairy and beef cattle, and particularly of young stock ranging from 8 months to 2 years?

R. L., Shelton, Wash.

I believe that a good deal of oat straw will be used for feed this winter. It will not have a great deal of feeding value, but yet I believe if it is cut and mixed with bran and shorts as you suggest it will do for wintering cattle, particularly young stock. I have always felt that oat straw has about as much feeding value as most of the native hay and we know that many dairymen winter their stock on native hay.

A. B. N.

## Boosts for Cow Testing.

The value of cow testing association work is illustrated by the experience of J. C. Strong of Myrtle Point, Ore. When Mr. Strong joined the association, in 1917, he was milking 40 cows and sold 645 pounds of butter fat the latter half of May. He sold off 17 cows during the season and bought six more. This year, with 32 cows, with conditions not so good, and not feeding any heavier, Mr. Strong sold 690 pounds of fat the latter half of May. The cow testing association, Mr. Strong says, furnishes the only means the dairyman has of positive knowledge of what his cows are doing, and he hopes the war will not take all the cow testers.

## Feeding of Artichokes.

**Will you please tell me the feeding value of root artichokes for milk cows?**

**J. G. F.**

The tuber of the artichokes has about the same feeding value as potatoes. It is claimed by many that it is excellent feed for hogs, but for dairy cows the yield is not sufficient to warrant its use. In some places silage of good quality has been made from the stems, especially when it is mixed with other green feed, such as corn or clover.

A. B. N.

### Getting Along Nicely.

A clergyman taught an old man in his parish to read. After his lessons were finished he was unable to call upon him for some time, and when at last he did, found only the wife at home.

"How is John?" said he, "and how does he progress with his reading?"

"Oh, nicely, sir."

"I suppose he can read his Bible quite comfortably now?"

"Bible, sir!" exclaimed the woman. "Lor' bless my soul; why, John was out o' the Bible and into the sporting papers long ago!"—Philadelphia Star.

### Stay on the Job.

There is no vacation on the firing line.

## GET READY NOW.

### Fill a Silo for Next Summer.

Investment in a silo now will prevent loss of milk when drouth causes a shortage of pasture next summer. It will pay in many sections to provide an extra silo and fill it this fall, using the silage next summer. In this way a means will be provided to keep up the milk flow throughout the entire season.

The drouths of late summer always result in a marked decrease in the milk flow of herds that depend chiefly on pastures. This loss can not be recovered by good feeding at a later period. The milk production for each remaining month of lactation period will be smaller than if no decrease had occurred during the dry season. It is very important, therefore, that it be prevented. This can be done best by supplying a succulent feed to supplement the pasture. In most sections the most satisfactory supplement is corn silage. It is much cheaper, requires less labor, and is just as efficient as soiling crops. With the latter, great care in planting is necessary to provide the proper succession and in addition they must be harvested as usual, which requires much time at a busy season.

Be sure that the silo is small enough in diameter so that a layer two inches deep will be fed off each day, because silage spoils quickly in warm weather. Look ahead; plan for the next year now.

## Pea Straw Good Feed.

Reports from districts where field peas have been grown this year indicate that the straw is of more than ordinary quality for feed, owing to the character of the season. It is believed that in some of these localities pea straw will be of considerable value in tiding the dairy business over the winter months.

## Destroy Flies With Poison.

The use of formaldehyde as a fly poison is recommended by the United States department of agriculture. The method used is to place on a shallow vessel of some kind ten parts of formaldehyde in 90 parts of water and two parts of sugar. Place a sponge in the solution to retard evaporation. This mixture will attract flies, which die almost immediately upon drinking it.

It Is a Patriotic Duty to Prevent Loss of Cattle.

PROTECT THEM FROM BLACKLEG

by using

Blacklegoids

Double and Single Vaccinations in pill form.

ACCURATE. EASY TO USE. EFFICIENT.

Each Blacklegoid is a dose of blackleg vaccine ready to inject under the skin of the animal.

## WOOL STOCKS.

### Decreased Holdings This Year.

Wool stocks held by dealers and manufacturers in the United States on June 30, 1918, amounted to about 466,490,000 pounds, grease equivalent, according to the quarterly stock report issued by the bureau of markets. Stocks reported on the same date in 1917 were 585,000,000 pounds, grease equivalent. The decreased holdings on June 30, 1918, compared to those of the year before, are said to be due to a slower movement of wool to markets this year than last.

Stocks of wool on June 30, 1918 by classes, in pounds, were: Grease, 320,046,655; scoured, 29,413,208; pulled, 19,008,014; tops, 15,251,695, and noils, 15,784,791.

## PREVENTS DISEASE.

### Vaccination Proves Successful.

Two years ago C. W. Dwiggins, near Eugene, Ore., lost about $800 worth of registered Shropshire sheep with hemorrhagic sceptocemia. Since then he has vaccinated every sheep and last year and so far this year, he has lost none. While Mr. Dwiggins thinks the weather has much to do with the severity of the disease, he is now satisfied vaccination is a sure preventive. When County Agriculturist Robb first came to Lane county, Oregon, he found the disease rampant and got vaccination started. Since then hundreds of sheep are vaccinated annually, with complete success in keeping the disease out of the flocks.

## Fattening Hogs Without Grain.

Frank Welch, O. I. C. hog raiser, a few miles north of Salem, Ore., took a load of porkers to Portland recently. "It does not do to use grain on pigs now," said he. "In spite of the high price for hogs, that would be nothing but swapping dollars. I fatten on clover and slops and dairy byproducts, using potatoes to a considerable extent, and I brought in 9-month hogs weighing 260 pounds. However, I find the market prefers lighter hogs still. The days back in Indiana when we marketed 500-pound hogs haven't come back yet."

## Will Aid Montana Stockmen.

The appeal of stockmen and farmers of certain drouth-stricken districts of Montana has resulted in arrangements by the railway administration for the shipment of cattle feed into such localities with half the regular freight rates. It was declared by the stockmen that unless relief of this nature had been secured, large numbers of live stock would have been shipped out to other feeding grounds.

## Veterinary

Dr. S. B. Nelson

**May Be Ascess**—I had a small heifer calf about 4 months old and until recently seemed to be very robust and well fed. One day I noticed that she had difficulty in breathing and made a kind of snoring noise, but she still ate. The next day the snoring became more pronounced and a little more difficulty in breathing. Here I noticed a small lumb about two or three inches in front of her "Adam's apple." This lump increased in size until it was about an inch in diameter. The calf ate a little right along. She had a pronounced wheeze and also had difficulty in getting her breath. A slimy substance came out of her mouth continually and her eyes started to water. I gave her a dose of Epsom salts, but three was no improvement of the calf. Her breath came in shorter gasps, her eyes became nearly closed and watered almost continually and she was almost always grinding her teeth. Through all of her sickness she had fever, the most pronounced after the second day and from then on she also had chills. Just a few hours before she died she seemed to breathe through her mouth. I also noticed some blood on the tip of her ears, as if a small blood vessel had burst. The flies may have been responsible for this, though. The calf was run in a pasture after she was weaned and had plenty of fresh water. Could you, from the data given, give the probable disease that affected her, and if I have any more trouble with other calves, what treatment should be given? J. G. K., Eagle Creek, Ore.

From the description that you give, I would be of the opinion that the heifer was affected with the formation of an abcess in and about the throat, and because the soft tissues were in toward the pharynx, the windpipe, and the gullet, the abcess swells that way and choked her. I think that if the abcess had been opened either through the mouth or underneath the jaw, that she might have recovered. Of course, I am giving you my opinion simply from your description. There might have been other things which a personal examination would have revealed to change my diagnosis. I do not believe that the case was infectious and that the other animals would take it.

**Horse Has Lump on Breast**—I have a young horse that has a lump on his breast, probably caused by scratching, from rubbing on barbed wire fence. It has been there for two or three weeks and does not seem to go down, although the horse now has no chance to get near the wire. Can this be treated? If so, please let me know through columns of the Farmer. C. S., Davenport, Wash., R No. 2.

Your description of the lumps on the horse's breast is not very definite; but I would be led to expect that it contains pus, and therefore ought to be operated: or it is a fibroid tumor which needs taking off. The fact that it has been this way for two or three weeks indicates to me that it might be either one of these two things. Therefore, I would suggest to you that you consult your local veterinarian and have the tumor removed if such be the case. I think that it is a surgical interference that is needed.

**Trouble With Horse's Eye**—I have a horse 8 years old, a gelding, whose left eye runs and has been doing so for several months. Last fall I had his teeth floated, thinking the teeth caused the eye to run, but that did not stop it. At times he rubs the eye against the manger as though it itched; there does not seem to be any swelling. Please let me know what to do for it. C. E. M., Boyds, Wash.

It is possible that your horse is suffering from a little irritation of the mucous membrane of the eye. Try dropping into the eye two or three times daily a few drops of 2 per cent solution of protardol, or if you can not get that, a 2 per cent solution of argyrol.

**Sow Pig Has Rupture**—We have a small Duroc Jersey sow pig which we have just bought. It is spry and healthy, but has a lump on the navel, about the size of a large thimble. I believe it is a rupture as I can push it back and it will stay until it moves around. Will you please tell me what to do for it and will it outgrow the trouble? I bought it for meat next year. M. W. H.
Orient, Wash.

As you have not bought the sow pig to use as a breeder I do not believe I would bother the small rupture. If you were going to breed her it would have to be operated upon, but just for fattening, you had better leave her alone. I believe it will not give you any trouble.

**Hoofs Are Contracted**—I have an 8-year-old mare whose front hoofs are contracted. Two or three months ago I lump came on the back of each front leg between the ankle and the knee. Have blistered these and one is a little smaller. Are these lumps caused by the contraction and what would you advise to remedy the trouble?
E. M. C., Toppenish, Wash.

Your statement is not definite regarding the lumps on the mare's leg, whether they are attached to the bone on the inside, generally known as splints, or whether they are a little farther down close to the ankle and soft, and are known as wind puffs or wind galls.

## BOOST LIVE STOCK.

### Form Inland Empire Association.

For the purpose of stimulating the live stock industry of the Inland Empire, a number of stockmen are forming an organization with headquarters in Spokane. Frequent meetings of the officers and executive committee will be held for the consideration of matters of interest to the industry. The following are the officers that have been elected:

Grant Copeland, president; Dan Drumheller and E. E. McClintock, vice presidents, and E. E. Flood, secretary-treasurer.

The following executive committee was appointed:

W. T. Day, William Huntley, J. M. Van Kleeck, D. O. Leith, T. N. Conway, W. D. Roberts, D. W. Twohy, R. L. Rutter, Thomas F. Wren, James Davis, F. M. Rothrock, Peter McGregor, Roy Slater and T. H. Brewer.

**Have Overcome Space.**

"The spaces of land and sea are nothing where common purposes bind.—General Pershing.

Efficiency

The efficiency of the modern big guns is dependent upon the materials used and the precision of manufacture. The same care in the choice of materials, the same precision in construction, make the "Caterpillar" Tractor the most dependable, most efficient tractor Many parts of this tractor are not permitted to vary the fraction of a hair's breadth from fixed standards. All materials are selected especially for the work they are to do. The result is power, endurance, economy Let us send you complete information about the "Caterpillar" Tractor

CATERPILLAR
REG. U.S. PAT. OFF.

The good layer is a good eater, and a good feeder is a liberal feeder.

Cutting down on the feed will not increase the profit. It will decrease the egg yield more than it will save on the feed bill.

Because feed is high in price, is not a good reason for stinting in feeding. It is an additional reason for better feeding.

The way to get even on the high prices of feed is to furnish the hen the proper raw materials so that she may increase the output of eggs.

The hen requires a certain amount of feed to make bone, flesh, feathers and to furnish heat. The first food she eats goes to these purposes, and eggs are made from any surplus food she gets.

The farmer who pays a high price for labor does not cut down on the man's food in order to get even. Rather he feeds him better in order to get greater efficiency. The factory manager who pays high wages, plans his men's work a little better in order to get greater efficiency. It is the supreme effort that is winning the war, not curtailment in expenditure. So it is in feeding; curtailment may save some, but it loses more.

J. D.

## Alfalfa Meal Feed

We advise liberal feeding of alfalfa meal to young chickens if green succulent alfalfa is not available. Where alfalfa is growing all summer, the chickens should be given all they will eat of it, and they will eat more of it if cut fresh and fed immediately. The morning is the best time to feed it when it is cool and moist, but it is better to let them have it any time during the day of possible. Let them run in the alfalfa field if there is one nearby. Then they will get it fresh and all they want.

In sections where alfalfa is not grown and where other green feed is scarce, it will pay to buy the alfalfa meal and feed it liberally. For the small chicks it should be rather finely ground and free from mustiness. The best meal is made when the alfalfa is cut rather early, say in first bloom. At this state there is less coarse fiber. Coarse alfalfa stalks are not worth much more than straw. By far the best part of the plant are the leaves and blossoms.

In feeding it, the chickens may not eat it at first unless it is pretty well camouflaged with meal or ground grain. Soak the alfalfa meal in a bucket for half an hour or more, than mix into it an equal weight of meal, mill feed, ground corn or other meals; then feed it when the chicks are rather hungry. When they learn to eat it, the meal may be reduced in amount. This will make a good mash for them, and besides furnishing the necessary green stuff, much protein and other nutritive material will be eaten.

There is no doubt that alfalfa meal is a substitute for ground grain, but to what extent is not very well known. But feed plenty of alfalfa meal and the chickens will make a thrifty growth. It has been demonstrated that alfalfa leaves have to a considerable extent, probably more than other plants, the properties of making rapid growth in young animals. Milk, eggs and alfalfa leaves, the investigators assure us, contain the vitamines, the "unidentified chemical substances," which are responsible for proper growth.

Sack up the leaves from the alfalfa stack bottoms or from the hay mows and horse mangers and save them for the chickens. This will make the chickens grow, and it will be evidenced by greater yellow color in the legs. And it will save on the feed bill. J. D.

### Mature the Turkeys.

In the effort to stop the wasteful practice of slaughtering broiler turkeys—those weighing from two to four pounds—the food administration is approaching the problem through three different channels.

Farmers are requested to raise their turkeys to maturity, thereby adding to the nation's meat supply; dealers have been notified of the food administration's desire that they refrain from purchasing the immature birds; hotels, clubs and restaurants, where most of the broiler turkeys are consumed, have been asked to discontinue serving them.

It is pointed out that turkeys, unlike chickens, do not become plump and well-meated until nearly full grown.

### Poultry in the Stubble Fields.

Every kernel of grain, at present prices, is worth saving, and there are a great many kernels, a great many bushels, left in the stubble fields after the threshers are gone and the grain hauled to market. The chickens will pick up the waste grain and make good use of it if housed in the fields. The best plan is to use portable colony houses about 8x10 feet or 12 feet, and pull them out into the field with a team of horses. These can be moved occasionally if the field is large, so that the chickens may clean up the whole field. They will wander, however, over a considerable field. If the house is placed in the center of a five-acre field the chickens will range over the entire tract.

If colony houses are not available, cheap straw sheds may be made. All the shelter the fowls need in the fall is a roof to keep the rain off during the night and a shelter from the hot sun if no other shade is available. A roof of poles may be built on posts set in the ground and sufficient straw piled on that to keep the rain off. The straw should be built up in the center, and to keep the wind from blowing it off a few poles may be tied together at the top and let hang down over the straw. If cheap poultry netting or other wire fencing is available, this may be spread over the frame, instead of using so many poles, and the straw piled on that. If this is not done the poles will need to be placed rather close together to keep the straw from falling through, especially if the straw is short. The roof should be about six feet high to keep the chickens from flying onto the roof. Poles will do for perches two feet from the ground and set two feet apart. If there should be grasshoppers and other bugs in the field there will be no need of meat or fish scrap so long as they last, and if there is some green stuff and running water near enough, the fowls will take care of themselves until the grain is gathered up. They should, of course, have grit supplied if there is none in the field.

Chickens thus housed in the stubble fields will do much better than crowded in small houses and fed two or three times a day; then look at the conservation of food. There will be trouble in some sections from hawks and coyotes. The scheme may be impracticable on this account in some sections, unless the field is near enough the residence where a good dog or a shotgun can be used for protection. Poultry netting may be stretched around the shed to keep out coyotes. In many sections of western Oregon no protection of this kind will be necessary. J. D.

### Storrs Laying Contest.

At the end of the ninth month of the international egg-laying contest at Storrs the Oregons from the Oregon Agricultural college were first with a lead of 51 eggs over the second pen, and gaining. The Hollywood farm at Hollywood, Wash., has the best pen of Leghorns and is fourth among all breeds. The following were the best four pens:

Oregon Apricultural college, "Oregons," 1707 eggs.

O. G. Knight, Rhode Island, White Wyandottes, 1656 eggs.

Jules F. Francais, Long Island, Barred Rocks, 1559 eggs.

Hollywood farm, White Leghorns, 1556 eggs. J. D.

### Water Glass Gets Thick.

My water glass has some eggs in it, but it has turned as thick as sour milk. Shall I add more water? I made it according to directions, but it has evaporated some. Last year the liquid stayed transparent and the eggs kept excellent. MRS. G. B., Stevenson, Wash.

Evaporation will cause the water glass liquid to become thick and milky. It is the water that evaporates and the chemical remains. Evaporation may be lessened by keeping the eggs in a cool place and also by covering the receptacle. If there has been much evaporation, more water may be added.

J. D.

# SUBSCRIPTION PLAN SAVES YOU MONEY

**RATES**

For Subscription to The Washington Farmer

**25c**
**For 1 Year**

**50c**
**For 3 Years**

**$1**
**For 5 Years**

We are holding open our direct-to-the-reader subscription plan during the summer months. It means a real saving at a time when most things cost more.

The central idea of the plan is to deal direct with our subscribers in securing and renewing subscriptions, thus eliminating the middleman and giving our friends the benefit of every penny saved.

It is gratifying to know that the new cooperative system has had the heartiest kind of backing; and that it has been put on a successful basis. We could not have got along without the assistance of well wishers who have told their neighbors about the plan and passed along copies of the paper.

There are many things of value which your state farm paper can bring you and your neighbors during the summer months. The various departments will be full of helpful hints, instructive articles and entertainment. Send in the orders!

# Orchard Troubles

## Diseases, Pests and the Remedies

The word "pests" is broader in its general application than when used by horticulturists. In the larger sense it means any virulent epidemic, pestilence, plague, nuisance, mischievous person or thing. As used by horticulturists, it refers mainly to damaging insects. Apple pests would, therefore, mean pests dangerous to the apples. I will not treat the subject so as to include all the pests, but those most commonly known and most injurious, and will classify them in alphabetical order.

### APHIDS.

These pests are forms of what are commonly called plant lice, and are perhaps the most widely distributed of any of the great order, known technically as hemiptera. There are very few of the higher plants not subject to their attack. They feed by means of a stout beak, which they thrust into the bark or plant tissue, and suck the juices. In certain species this sucking method causes the plant tissue to form galls in which the lice continue to develop. Certain of them collect on the roots of the trees or plants, but mostly they live on stems, leaves or flowers.

**Apple Green Aphis**—Attack the leaves, young shoots and fruit. They reduce the size and market value of the fruit, and cause the leaves to curl. Remedy: The best remedy I have tried is black leaf forty, a preparation of tobacco. It will kill if used one to 800 or one quart to a 200-gallon tank of water. Whale oil soap, or fish oil soap, either is good and is generally used one pound to five gallons of water, with 7 per cent of kerosene emulsion added. Lime sulphur is also good. If the spraying is delayed until the leaves curl, it is hard to reach the aphis with any remedy. The lime sulphur spray will destroy some of the eggs, but is not sufficient to control the aphis because many of the eggs can not be destroyed.

**Rosy Apple Aphis**—The injury caused by this form of aphis is similar to that caused by the green aphis and the treatment is the same.

**Clover Aphis** is very similar to rosy apple aphis and is called clover aphis because it sometimes goes from the clover to the apple orchards. The treatment is the same as for green aphis.

**Woolly Aphis**—This is the most injurious aphid infecting pomaceous fruits and is found wherever apples and pears grow. It attacks the roots as well as the top and when on the root it is hard to eradicate. As a result of their injuries galls are formed and this causes decay and sometimes the death of the tree. A rosetted top is often a result or symptom of aphis on the root. They do not attack the fruit, nor to any great extent the foliage, but they feed on the tender juices of the new wood growth of the current year. They also feed on the sap exuding from wounds and often cause the formation of galls and excrescences at these points. Remedy: Use the tobacco spray the same as for green aphis and add to it four pounds of fish oil soap for every 100 gallons of water. The lime sulphur spray will reach some of those hibernating in the bark and trunk during the winter, and is efficient but not sufficient. To reach the root form it is necessary to dig away the dirt and apply either a strong solution of lime sulphur or of tobacco. Chickens in the orchard will destroy those at or near the base of the tree.

The following forms of aphis may be killed by any good insecticide or contact spray such as tobacco or lime sulphur. The treatment already prescribed will kill the following forms of aphis: Plum and prune aphis, hop aphis, black cherry aphis, green peach aphis, currant aphis, gooseberry aphis, black raspberry aphis, walnut aphis, chestnut aphis, citrus tree aphis, melon aphis, and many others. There are forms on the roots that can not be reached by spraying. For instance, the beet aphis attacks the small roots and later moves to the larger root, causing it to become spongy. The remedy is to discontinue for one or two years the planting of beets on infected ground and destroy the wild plants that are hosts of these insects.

**Cabbage Aphis**—Can be destroyed by spraying where they can be reached with spray, but in addition to that it will often be necessary to destroy the refuse of the crop in which they harbor and deposit their winter eggs which hatch the following spring.

All forms of plant lice multiply very rapidly. Some species will produce 20 or more generations in a single year, and one female will produce from 10 to 400 eggs or young as the case may be. Aphids would destroy most forms of vegetable life were they not held in check by natural enemies. Among those enemies are parasitic wasps, beetles, syrphus fly maggots, spiders, larvae of lace winged flies, aphis lions, ladybugs and many species of birds. Ants are the friends and protectors of aphids because they feed on the excretions which have a sweetish taste. The corn root aphis lays its eggs late in the fall in the ants' nests, where they have been carried by the ants, and where they receive protection. Some authors say that the ants carry only the females or egg depositors, thus showing economy or discrimination between productive and nonproductive labor. If this be true, it proves a higher degree of intelligence in ants than is generally believed to exist. Whether this be true or not, of this I am sure, that the ants carry the woolly aphis about, placing them where they can get food. These aphids for most of their lives can not fly and can not crawl sufficiently to place themselves in favorable positions, but the ants carry them and defend them in so far as possible from their enemies.

The apple leaf crumpler, apple leaf hopper, apple leaf sewer, apple leaf skeletonizer, may be killed by using the tobacco spray. The apple tree maggot is difficult to control, but does not attack fruit in the Pacific northwest. The apple tree measuring worm is very much like the canker worm, but they sometimes defoliage whole orchards. Being leaf feeders this pest can be controlled by arsenical sprays such as are used for coddling moth.

The apple red bug is not common in the Pacific northwest, but in case it is found it can be killed by the use of tobacco spray.

The apple tingis feeds on the under side of the leaf and can be killed by the tobacco spray if it is used about one-third stronger than usual.

The apple wilt bug and bag worm are neither of much consequence except in Kentucky, where it seems to have spread and to have done considerable damage. The remedy is arsenate of lead.

### BORERS.

This is a word which, used in its relation to insects, means a beetle, moth, or other insect that bores into the bark, wood or fruit of the tree. Usually the boring is done while in the larvae state. There are caterpillars that bore into the terminal buds and stunt their growth. There are apple twig borers that bore into the twigs just above the bud, where they find food and shelter. There are branch twig borers that attack the stems and branches. The flat head apple borer bores in the trunks and limbs of the larger trees, but is most destructive to young ones because they work under the bark and sometimes completely girdle them.

The fruit tree bark borer does not enter the wood, but works in the bark, passing the winter in a silken cocoon beneath the bark from whence it emerges late the following spring.

The round-headed apple tree borer lays its eggs on the bark near the base of the tree; when the eggs hatch the larvae immediately begin to bore into the wood in the direction of the heart of the tree. It takes three years for this form to mature and emerge into the fully developed life of an adult moth in the open air where another life cycle is begun.

The spotted apple tree borer is similar to the round-headed apple tree borer except in color. It has two white spots on each wing case, while the other is white and black striped.

The bronze apple tree weevil seems to be a native of the northwest and has done considerable damage in the Willamette valley, Oregon.

The remedy for all of these borers is to cut out the twigs which they infest and burn them, pick them out of the bark or wood with a sharp instrument and kill them, or spray for them. It is good also to scrape off the loose bark of the tree under which some of them deposit their eggs. Birds are their natural enemies and contact sprays will kill if the spray material reaches them.

(To be continued next week.)

# Strong Trees Needed

## Vigor Can Counteract the Cold

By E. F. STEPHENS, Nampa, Idaho.

Dr. Whitten of Columbia, Mo., has, by careful experimentation, demonstrated that apple trees in vigorous condition, with properly developed, strong fruit buds, will in an unfavorable spring endure five degrees lower temperature without harm than weaker trees and buds. In other words they would safely endure a temperature of 26 or 27 degrees, during the blossoming period.

To make sure that trees and fruit buds shall have that condition the following spring the care the orchard receives during July, August and September is of the utmost importance.

The soil should be kept in condition to ball in the hand. If a crop of weeds, clover or alfalfa should reduce the amount of soil moisture below this condition then fruit buds may not be developed with sufficient vigor and in abundant quantity.

If the trees were under cultivation and an effort is made to maintain suitable moisture by cultivation with water, the orchard should be cultivated at least 15 times every season. Our rapid growing period in the early life of the orchard up to 4 and 6 years of age, when it has been our habit to throw into bearing by seeding to clover or alfalfa. If the orchard is seeded to alfalfa, which is sometimes advisable where there are many gumbo spots of soil, the alfalfa should not be removed as a hay crop during any season when there is an apple crop. Alfalfa roots bore down through gumbo with greater success than clover. We have recently seeded 35 acres of our orchard with alfalfa seeding.

Apple fruit buds may begin development in late June and may continue as late as October. Personally we will make the effort to maintain a good degree of moisture in our apple orchard until the 1st of October. When there is an apple crop on the trees we water freely clear up to picking time. In absence of an apple crop, as this season, we will do all we can to develop vigorous fruit trees and plump, strong fruit buds.

Big Game Rifles
and Metallic Cartridges
*for Shooting Right*

STILL-HUNTING—stalking your game, like a sportsman—appeals as strongly as ever to the man who is all man. But to bring home venison it is necessary nowadays to shoot *right*, at the first opportunity—it may be the last.

When that well earned chance comes, be ready with a Remington UMC Big Game Rifle (either pump action repeater or the autoloading model), made to shoot *right*.

Has the speed, the accuracy and the punch to do its work quick and clean.

Easy to shoot because fit, balance and design are *right*—no lever or bolt to blindly grab and wildly yank; your hands stay *right* for shooting—handles nicely and is comfortable to carry—simple, strong and reliable.

To complete *the perfect shooting combination*, buy Remington UMC metallic cartridges, for years the *right* choice for use in all kinds of rifles all over the world. When improvements are made in metallics, Remington UMC makes them first.

# Syrup From Sugar Beets

## *Is Not Found Practicable to Make White Sugar at Home*

To the Editor: There have been several farmers here that have tried raising sugar beets. For the most part the planting was done on river valley soil, and was done exceedingly well. Will you give us the recipe for making sugar and syrup from them? Some have tried it, but can not get the beet taste out of the syrup, which makes it almost worthless.

Is it very expensive to make sugar from them on a large scale? How many tons does a factory need to make it profitable? There is quite a lot of land here that beets could be raised on profitably. Under the circumstances it might be a good move to start up a factory of this kind here. S. G. KERNS.

Yelm, Wash.

It would not be practicable to attempt to make granulated or white sugar by home processes. Intricate chemical processes are involved, and equally intricate and expensive machinery are necessary in the factory process. It is possible, however, to make, for home use, syrup, and to settle a dark sugar out of the syrup by carrying the evaporation sufficiently far. This syrup, if properly made, should, in the home, serve the purposes of syrup in general and considerably lessen the need for sugar, which now is running low in the world's market.

The process of making syrup from sugar beets begins in the gathering of the beets when their foliage is assuming a yellowish tinge. Top them by cutting deeply enough to go below any leaf scar. The upper part of the beet contains a large part of the mineral salts taken up by the beets in the process of growth, and it is desirable to have the syrup as free as possible from these substances on account of the unpalatable flavor imparted to the syrup. You mention the fact that some of you are having difficulty in getting the syrup palatably flavored, and this may be one of the causes.

Wash the beets thoroughly, using for this purpose a hand brush with stiff bristles. Otherwise, a small amount of soil is apt to get into the beet juice, which, like topping the beets too high, would not help the quality of the syrup.

After the beets are properly topped and thoroughly cleaned, slice them very thinly. One-sixteenth of an inch is good, and the thinner the slices are the more thoroughly can you extract the sugar. Put the sliced beets in a vessel and pour over the slices boiling water. Use no more water than is necessary to cover the beets. Burlap or similar material should be wrapped about the vessel to retain the heat as much as possible. Allow the sliced mass of beets to soak in the water for about an hour. Do not boil the beets—that is, cook them. Soaking in water at a temperature of 158 to 176 degrees, F., is about right, and the boiling water poured onto the beets will by the latter be cooled to about this temperature, which should, by protecting the vessel, be preserved as nearly as possible for an hour.

At the end of an hour strain the water through several thicknesses of cheese-cloth.

From now on the process is merely one of evaporation, taking necessary precautions not to scorch the liquid. While evaporation is proceeding a thin scum will keep forming on the heated liquid, and this should be promptly and carefully skimmed off as often as it forms. If left unskimmed this scum will give the syrup the strong, beet-like flavor to which you refer. As soon as the syrup has reached the desired consistency it should be bottled while hot and tightly sealed. Otherwise it is apt to mold.

By carrying this evaporating process far enough one can thicken the syrup till a dark, sugary material will settle out of it. The sugar, like the syrup, is dark, and the removal of this color would involve the use of processes too expensive and complicated for practical use in the home. The process here given is summarized from Farmers' Bulletin 823, and, when properly followed, is said to yield a syrup or sugar of a pleasing flavor, free from the beet taste to which objections are raised, and of use in making dark-colored cakes, certain kinds of home-made candy and so on.

The establishment of a sugar beet factory on the scope necessary to make it a commercial success should require a capital investment of not less than $1,000,000, with assurance of not less than 300,000 tons of beets a year. From the latter requirement you may figure how many acres you should have tributary to your sugar beet factory, the acreage varying, of course, according to the tonnage produced per acre.

## FARM ASSOCIATIONS.

### Loyalty Is the Largest Asset.

Cooperation and organization will play an increasingly important part in the future of successful farming. The basis of cooperation and organization is the same the world over. The greatest asset of a farm association is the loyalty of its members. The degree of that loyalty, or the absence of that loyalty, marks the distinction between the different kinds of farmers to be found in these organizations.

William Ford, president of the Invercargill branch of New Zealand farmers' association, has summed up the attitude of their organization, dividing it into three sections:

(1)—Those loyal to their union, who paid their subscriptions, attended the meetings, gave much of their time to the union, willingly paid out-of-pocket expenses when working in its interests, and if any in their district required their assistance they gave it; (2) those who devoted almost the whole of their time to their personal affairs, who admitted they had sympathy with the union, but said they had no time to attend the meetings, paid their subscriptions, and were prepared to help, but left the affairs of the union in the hands of the enthusiastic members; (3) those who devoted not only the whole of their time, but everything they possessed to their own selfish ends, who were quite willing to accept any benefits that might come their way as a result of the efforts by the organization, but were not prepared to pay one copper in return.

Mr. Ford made a personal application to each farmer he was addressing by asking him to examine himself to see to which of these three classes he belongs.

### Sugar Limited Everywhere.

The present household sugar ration—with little chance of increase—is two pounds a month in America, two pounds in England, one and one-half pounds in France, and one pound in Italy.

## Holding Up the Nation's Defense

The telephone played a tremendous part in this Nation's mobilization for war. It continues vital to the Government's program.

At the same time it has remained at the service of the whole people whose demands upon it grow apace with that of the Government.

The public is entitled to the best service that it is possible to render. But the public has a partnership in the responsibility for good telephone service.

It takes three to make any telephone connection: the person calling, the company, and the person called. Without the cooperation of all three the service suffers.

The telephone company can make the connection, but no words can be heard at one end of the line which are not properly spoken into the transmitter at the other. The relation between the speaker and the hearer is the same as the relation between the orator and his audience. It cannot be maintained if the orator turns his back to the listeners or if the audience is inattentive.

Telephone traffic must be kept moving. Speak distinctly—answer promptly—and release the line as quickly as possible. Don't continue reading when the bell rings.

These seem little things to ask the individual telephone subscriber, but when the individual is multiplied by millions all over this country, it is easy to see how important it is that *all* should cooperate.

## How to Make Soap

Making soap from the drippings of meat is the practical war work of Mrs. O. O. van den Berg of Washington, D. C., who is seen at her task in the uniform of the United States food administration.

The drippings of all kinds of meats are saved until six pounds have accumulated. This, with one can of lye, will make 15 cakes of hard soap, delightful for the bath, excellent for washing fine fabrics or laces, she says.

Strain the drippings before putting away and again before being combined with the lye. Empty the lye into a quart of water, which will become hot as the lye dissolves.

Heat the grease until it is melted and lukewarm, then pour in the lye and water gradually, stirring constantly. The stirring is continued until the mass is thick and smoothly pasty. Pour this mixture into a dripping pan in which paper has been spread. Before it becomes hard cut it in cakes two and a half by five inches and about one and a half inches thick.

Mrs. van den Berg trims the cakes and uses the shavings as soap powder.

## SUNFLOWERS.

### Make Most Excellent Silage.

To the Editor of The Washington Farmer: A few days ago I read in some farm publication that sunflowers made most excellent silage. I took the matter up with our college at Pullman and they referred me over to Bozeman, Mont., and I enclose you herewith copy of letter from Professor Tretsven on the subject, which I have read with interest and I think will interest you.

M. E. HAY.

Spokane, Wash.

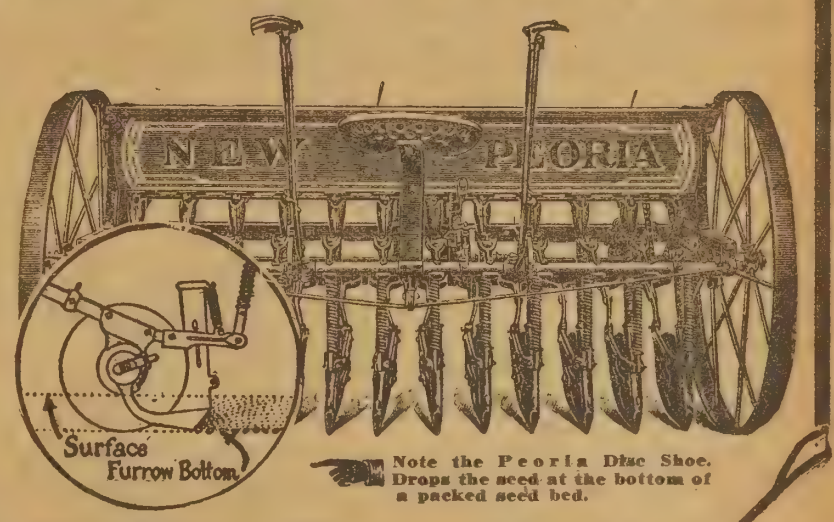
In his letter to former Governor Hay, Professor Tretsven says:

We found that one pound of good alfalfa hay was replaced in feeding value by 2.83 pounds of sunflower silage. The yield of sunflower silage last year was 24 tons per acre, against a yield of three to four tons of alfalfa hay per acre. We drilled our sunflowers in rows the same as corn is drilled in for silage purposes. The sunflowers were harvested in the same manner that corn is frequently harvested for the same purpose. We planted the Mammoth Russian sunflower.

We have compared green sunflowers with green corn for soiling dairy cows, and have found that the sunflowers give equal results to that of the green corn when fed in this way. We are very much encouraged from the results obtained here, and believe now that the sunflowers will become a staple crop throughout the northwest. Besides making a great tonnage per acre and being a suitable feed for cattle, we believe it is one of the means we have of combating noxious weeds. In our part of the state we have no staple cultivated crops, but by growing sunflowers we have a crop that can be cultivated several times during the early part of the season.

The sunflowers can be planted early in the spring and will stand hard frost until late in the fall. We harvested our sunflowers last year when about 30 per cent of the stalks were in bloom. However, we are not sure but what the sunflowers would have made better silage if the crop had been matured to the stage when the seeds were in the milk stage. I believe it would be well for you people to try sunflowers in your state. I feel sure that you will find them successful.

## CURES EAR MANGE.



### Rabbit Trouble Is Overcome.

By FREDERICK J. POMEROY, Age 11.

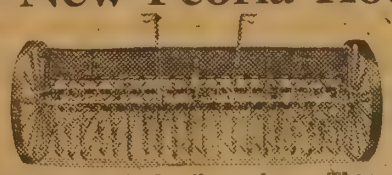
As I have had quite a little to do with rabbits, I thought it would be of interest to those who raise rabbits to know how to handle and cure ear mange. It looks like a bunch of scabs in the ear. When you try to pull it out it begins to bleed and it hurts the rabbits so that they squeal and jump. When handling rabbits with the disease you want to be careful that they do not scratch you with their hind feet, because the rabbits take their hind paws and gently rub them around in their ears. The way to cure ear mange is to mix a solution of carbolic acid water. The solution should be eight parts water to one part carbolic acid. The way to treat the rabbit is to take a clean stick and wrap absorbent cotton around it. Then soak it thoroughly. If the rabbit has the mange in both ears, after you have soaked both ears the first ear will be so that you can take the stick and roll the scabs out and then the other will be ready. After you have cleaned it all out you want to burn it.

# Make $2.49 Greater Profit Per Acre From Your Grain

CAN any farmer afford to overlook a saving like this? Think what an extra profit of $2.64 would mean on 100 acres of grain! It has been absolutely proven by farmers all over the Northwest that the Famous Peoria Disc Shoe Drill will increase your crop profits this much and even more. Here's why. The New Peoria not only saves costly seed and increases your production, but it will assure you the best quality of grain from your land. Don't think the purchase of a NEW PEORIA will be an extra expense. It is just the opposite. It will be a saving.

Note the Peoria Disc Shoe. Drops the seed at the bottom of a packed seed bed.

## 20% Less Seed—1 to 2 Bushels Greater Yield With the Famous PEORIA Disc Shoe Drill



Here is a statement that has been proven by tests made all over the country. No matter how much grain you are going to plant this year. This is a saving that you are vitally interested in.

The average seed required for Spring seeding is approximately 40 pounds to the acre, the average price of wheat is $2.20 per bushel. One-fifth or 20 per cent of this amount would mean 44c cash saved per acre.

A farmer who sows 100 acres of wheat, ordinarily would use 4000 pounds or 66 bushels and 40 pounds. 1-5 or 20 per cent of this amount saved by the famous DISC SHOE would be 800 pounds, or at 44c per bushel at the average price of $2.20 would mean $29.33 he had saved in cash on 100 acres sown.

While official tests made in every great grain producing section show that grain will yield from 2 to 3 bushels more per acre when sown with the PEORIA DISC SHOE DRILL, we will be conservative and give the estimate of one bushel per acre, which would mean 100 bushels increase crop over the ordinary seeding methods, or $220.00, together with the amount of seed saved at the time of seeding of $29.33, would mean a total sum of $249.33 saved by seeding with a PEORIA DISC SHOE DRILL. With the price of grain this year if you have 25 acres or over you can well afford to discard any other seeder you have and buy a NEW PEORIA DRILL, it will MEAN MONEY IN YOUR POCKET.

## The New Peoria Hoe and Double Disc Drills

No matter what kind of soil you have. There is a Peoria Drill that will exactly fill your needs. Write today. Let us solve your drill problems.

# Our Seattle Letter

# Farm Labor Issue

## *Women in the Fields and Orchards*

On the sixth floor of a Seattle office building, in a front office, whose regular and occasional visitors reflect the multifarious interests of a war-time city, sits the executive head—the brains, if you prefer that expression—of the Washington State Harvesters' league. The league is an organization for furnishing farmers with skilled and unskilled labor, and from the nature of the task it performs one might readily suppose that the person at its head would be a man; a big, husky, domineering sort of man, capable of putting things through by sheer will-power and masterfulness. Instead of being any such personification of the fighting spirit of the times, however, the individual who greeted me when I entered the league office was a distinctly feminine young woman, gray-eyed, slight of figure, enthusiastic as to the possibilities of the movement she is presiding over, and wonderfully sympathetic. That is the key to the success which this volunteer farm labor recruiting movement, backed and fostered by Frank Waterhouse, is achieving; it is quickened with the spirit of service and of understanding.

The Harvesters' league was organized last season, to meet the unprecedented conditions in the farm labor field. Throughout the season it did its work without much fuss or excitement, sending out city workers to spend their vacations at wholesome outdoor work in the country. At the same time something the same problem was being worked out in a little different way back in New York state, where the Women's Agricultural camp was established to utilize the spare time of city girls in doing country work. Miss Geithmann was one of these girls, and from the experiment which was worked out to a successful conclusion in Westchester county, she brought to the Coast a definitely formulated plan of campaign.

The New York experiment proved several things, probably the chief of which was that women workers without previous training could make good in the country. Another important point was the value of handling this class of workers in organized groups. There was an executive head to the Westchester camp, and the doing of camp work, cooking, dish washing, etc., was reduced to a definite schedule.

Both of these points have been kept in mind in handling the league's activities this season. Women can do more or less of farm work. There is no doubt of that, for they did it in New York last year, and they did it in this state. But they must be decently housed—all farm workers should be—and if they can be centrally grouped so as to secure the advantages of companionship and of the high ideals which radiate from workers trained for social service, the chances of success are increased. Two units of from 20 to 25 girls have been sent out, in addition to smaller groups. Each large unit has a cook and a superintendent. Its members are typically city girls — stenographers, students, social service workers, cashiers, artists, etc. At present all of the helpers sent out have gone to western Washington farms, but by the middle of August it is expected that groups or individuals will be sent into the eastern part of the state.

I asked Miss Geithmann a final question before leaving her office.

"Suppose some of our Washington Farmer subscribers need help in their fields or orchards," I said. "Could you do anything for them?"

"We certainly could, and we would be glad to," she replied. "All that is necessary is to write to us or call—648 Central building, Seattle, Wash. We're here to serve."

### Federal Labor Recruiting.

On June 17 of this year President Wilson issued his announcement on the need for federal control of labor recruiting, and in the various cities of the northwest the machinery for carrying out the federal plan is already in operation. The Seattle office is in charge of State Director Lawrence Wood, and here again I found optimism the prevailing emotion.

"What are we doing down here?" repeated Mr. Wood, in answer to my request for information. "Well, you can see for yourself that we are pretty busy," and his hand swept the circle of the big room, with its crowd of men and boys and its inquiry windows, each in charge of an executive experienced in the employment business. "And in spite of the fact that we're handling thousands where we handled hundreds last year," continued the superintendent, "we are getting along well. There has been no serious shortage of farm hands. The crops went in in good shape, and there will be plenty of men available for harvest."

These are a few of the angles in the handling of this big labor problem which come closest to the interests of the men and women on the farms; federal direction and control of employment, and the coming of women into the fields and orchards.

### More July Rain.

Twice the usual amount of rain fell in western Washington, during July of this year, measured by the average rainfall over a period of years. On August 8, the date of this writing, another rain is soaking into the ground. It is unfortunate that this break in the usual aridity of the west side could not have come early enough to keep the pasture lands and meadows green, but as it is it will undoubtedly add to the growing season and the ultimate production of most root crops. Seattle potato buyers report a diminished acreage of spuds, and the chances are that history will repeat itself; following the glut of last season a diminished acreage will bring high prices to this year's growers.

### Another Big Mill.

The Port Angeles Commercial club has recently succeeded in securing the location of a new mill, to cost approximately three quarters of a million dollars, in the city which already boasts one of the largest lumber mills in the world. With the coming of the first big mill, Port Angeles jumped to 5000 inhabitants. It is confidently predicted that the new mill, which is being built largely to handle spruce for the government, will double the present population.

### Uncle Sam a Railroad Builder.

Uncle Sam is demonstrating his ability as a railroad builder in the way he is handling the thirty odd miles of railroad extending from Port Angeles into the Olympic peninsula. Old railroad men say they have never seen a roadbed graded and rails laid more expeditiously. This railroad is being built to make available some of the wonderful timber resources of this almost unexplored part of the state of Washington. One thousand spruce division men are already on the ground, and it is rumored that there is to be a big increase in this number before long.

P. E. T.

## RAISE HORSES

### That Suit the Canadian Farmer.

By WAYNE DINSMORE.

Washington farmers, being so closely located to western Canada, will do well to first enlarge their horse breeding operations sufficiently to take care of their own needs and then try to raise a class of horses to suit the Canadian farmer. The one type, a good draft horse, with plenty of action, will satisfy the farmers on both sides of the line.

Unless present conditions are mighty misleading, northwestern Canada will, in a short time, be the greatest market for purebred draft stallions and mares to be found in North America. More than 1000 head of Percheron stallions and mares have been sold by farmers in the states to go to Canada in the last 19 months. Of this number 611 were purchased since November 1, 1917. Over 200 of these were mares. Most sections of the corn belt states report colts nearly all sold out last winter at very satisfactory prices. Between November 1, 1917, and June 24, 1918, 7646 transfer certificates were cleared through the office of the Percheron Society of America, a gain of 4 per cent over the same period last year. A report from the secretary of one of the leading county Percheron breeders' associations in Illinois indicates that there is practically no surplus of colts for sale in that district. Other counties that did not advertise so effectively have colts to sell.

It should be of unusual interest to horsemen all over the United States as well as Canada to know that the Bar U ranch, located in Alberta, has recently contracted to ship 30 head of select Percherons, principally 2 and 3 year old fillies, direct to Great Britain, shipment to be made as soon as boat space is available. Horses will be horses before very long. In 1916, according to the stallion board report, which is the latest information available, Washington was the fourteenth state in the Union in total number of purebred draft sires licensed, and eighteenth in total number of all sires enrolled. In 1916, Washington had enrolled in the state no Suffolks, 21 Clydesdales, 95 Shires, 23 French draft, 75 Belgians, and 274 Percherons—more horses of the last named breed than all the others combined. It is also interesting to note that there were 423 grade stallions enrolled—45.53 per cent of the total number of stallions licensed. No doubt this percentage has decreased rapidly during the last two seasons.

Washington farmers have only one purebred draft sire to every 631 horses and only one such stallion to every 115 farms or ranches.

### Pea Fields Need Hogs.

J. R. Shinn, agriculturist for Spokane county, reports that he is receiving many inquiries from farmers who have pea fields this fall and desire to buy hogs to glean them. Mr. Shinn says that any one having hogs to sell may communicate with him or with the Spokane union stockyards and thereby get in touch with the farmers who have the pea fields or pasture and need the hogs to utilize it.

### Saved Wheat; Save Sugar.

Out of the last harvest the American people, by abstinence, saved 140,000,000 bushels of wheat to feed the hungry allied nations; and these same people are going to stay right on the sugar job and see it through.

Your Local
HOME PAPER
and
Your State
FARM PAPER
at a Special Club Price

A special clubbing arrangement has been made with a number of newspapers throughout the northwest. We can now offer you a one-year subscription to your local home paper with a one-year subscription to your state family farm paper at a special rate for both.

YOUR HOME PAPER is of great value to you. It brings you all the local happenings and news of the affairs of your community and keeps you posted on the gossip of the social and commercial life. It brings you the news of the home boys at the front and prints many interesting letters from them.

YOUR FARM PAPER brings you each week interesting facts of the agricultural development of your state, all the farm news, features for every member of the family, including color comic pages, women's and children's pages Departments devoted to every phase of farming and farm life.

We can now send you your local home paper and your state family farm paper for one year each at the special clubbing rates as quoted below:

| | | | |
|---|---|---|---|
| The Daily Journal, Bellingham, Wash., and Washington Farmer. | $3.00 | Advocate-News, Sumas, Wash., and Washington Farmer. | $1.50 |

# Grow Your Seed Corn at Home

## *It Should Be Selected and Stored With the Greatest Care*

By B. F. SHEEHAN, Farm Crop Department, O. A. C.

The best way to secure good seed corn is to grow it at home. The best time to select seed corn is before the danger of a killing frost and the most practical method by which this may be done is to take a sack and go through the field selecting the choicest and best matured ears. Inasmuch as the growing of too large varieties and the lack of adaptation of varieties to climate and soil are the two greatest causes of immature corn, it is largely within the power of the grower to raise corn which will mature before frost year after year. There are a number of disadvantages in growing corn which is liable not to mature in a season. Some of the more important ones are: First, the corn will not sell for as much if marketed, in the case of soft corn it can only be marketed at a sacrifice. Second, immature corn is of low feeding value as compared with mature corn, pound for pound. Third, immature corn can not be stored in cribs or piled without deterioration. Fourth, it makes it difficult to secure seed for the following year.

Every well-formed, well-matured ear should be considered valuable for seed purposes, provided the stalk upon which it grew is strong. It is also a good plan to note whether the stalks about it are strong. Ears which grow very high or very low upon the stalk should be discarded as such position is undesirable. Ears carried about hip high and which have a tendency to hang with tip downward are preferred. Selected ears should be as nearly cylindrical as possible and of medium size. The rows should be straight, close together and well carried out over the butt and tip, the kernels uniform in size and shape, having a good depth and medium rough indentation, fitting close together. A slightly wedged or key-stone shaped kernel with a large clear germ is indicative of a strong vitality.

Field selections should include about twice as many ears as will be needed for planting next spring. This will allow for any culling and replanting that may be necessary. Fifteen to 20 medium-sized ears may be considered sufficient to plant one acre.

After the seed ears are husked, they should be hung immediately. An economical and convenient rack may be made at home by taking a smooth pole or two-by-four about three feet long, driving finishing nails into both sides so that they slant upward and simply slipping an ear over the head of each nail. Care must be taken not to allow any of the ears to touch one another. Driving the nails at from two and one-half to three inches apart will prevent their touching. These may then be suspended from the ceiling or rafters, lessening the danger of damage by mice because the corn can not be easily reached. The racks should be placed in a room where there is free circulation of air and heat may be applied. The farm kitchen or furnace room is a good place to store a small amount of seed. The attic, if well ventilated and heated, is a very good place.

During the winter, the corn should be sorted over, discarding the poorest ears. It should also be tested for germination. All ears that do not germinate or which show a lack of vitality should be rejected. Even when the best care in picking and drying of corn is taken, some ears are likely to be found which are dead and often some which show a decided lack of vigor.

The tests may be made either by the rag-doll or sawdust or sandbox method, both of which are simple and economical. The rag-doll is simply a strip of muslin, 10 or 12 inches wide and four or five feet long. This is marked into squares by marking crosslines every two and one-half inches. Each square is given a number. Damped the cloth, place six kernels, all of which have been taken from the same ear, germ side up, on each numbered square. Be sure that the ears from which the kernels came have the corresponding number. Roll up, tie loosely with a string or rubber band and place in a bucket of luke-warm water. Allow to remain several hours, then take the rag-doll out and place where it may drain. Be sure to see that the rag-doll is always kept moist. At the end of five to seven days, the rag-doll should be unrolled and the germination read for each square. Record must be kept and these readings checked up with the corresponding ear numbers, discarding all ears which failed to germinate or those which show lack of vitality.

The sawdust or sand-box tester. In a box of 20 inches square and four inches deep, place about two inches of clean sawdust which has been soaked in water. Pack tightly and place a cloth that has been marked off into two and one-half-inch squares, all of which have been given numbers. After all the kernels have been placed, cover with a wet cloth and fill with moist sawdust. In from five to seven days the top layer of sawdust may be removed, the cloth rolled back and the readings taken.

# Loving Cup

## For Shorthorns at Interstate Fair

The Pacific Northwest Farm Trio has posted a silver loving cup to be given at the Spokane Interstate fair September 2 to 7, for the best four Shorthorns, either sex, bred by the exhibitor and shown in the live stock show at the fair this fall.

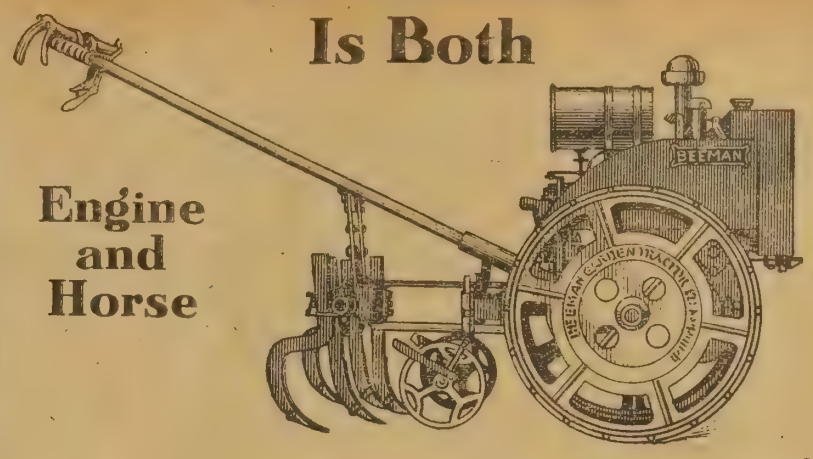
## FOURTH LOAN.

### Farmer Is Ready to Do His Share.

Dedicating the products of wheat fields to the purchase of Liberty bonds is the plan that comes west from Indiana, where O. R. Westfall of Marion, Ind., has put up a placard in his field reading, "The proceeds from the sale of this wheat go into Liberty bonds."

The idea has met with favor among the farmers and it is expected that thousands of signs will soon be found in corn fields, hog lots, chicken yards, pumpkin patches and orchards throughout the Hoosier state.

"I think it a good plan and believe the farmers of the twelfth federal reserve district will take up the idea," said D. O. Lively, director agricultural division for this district. "I find the farmers are getting ready for the fourth loan and no matter how big the sum asked by the government, the farmer will be ready to do his share."



In answering advertisements don't fail to mention this paper.

The Beeman Is Both

Engine and Horse

To the Little Lander

Here's the one-horse tractor you have been dreaming about—designed and perfected by an expert implement man who gave most of his time for 3 1-2 years to experimenting with it on farms.

BEEMAN GARDEN TRACTOR

It draws the tools you now have—plow, harrow and every kind of cultivator. It pulls a cart with low wheels. It goes anywhere on its own wheels, and as an engine runs any machine—churn, pump, jack, woodsaw, washing machine, grindstone, emery wheel, separator.

It delivers 1 1-4 horsepower at the drawbar and 4 horsepower at the belt.

Give us your address on a postal card, and we will send you an interesting folder showing the Beeman Garden Tractor doing all kinds of work.

BEEMAN TRACTOR SALES AGENCY
3 DORCHESTER BUILDING, EVERETT, WASH.
A Little Territory Still Open for Agents

MR. LIVE-STOCK MAN

If you are a producer of less than carload lots of live stock, get your neighbors to join you in a community shipment to us.

This will put you on the same basis of marketing as the carload fellow and at the same time you will be helping to build up your home markets.

Write or wire us for our prices and our weekly Market Letter.

Article 2.

The children's pet need not be a valueless animal. Indeed, it may be of great value, deserving, therefore, greater attention and consideration. It may be a purebred colt, or calf, or lamb, or pig, or dog. Such pets as these can be cared for better by the older children. Living pets for the younger children may include kittens, chickens, canaries or goldfish.

I doubt, however, if the latter call out sufficiently the emotions of the individual, and, failing in this particular, they fail to impart the character development in the child which comes through the possession and care of valuable animal pets. In the care and management of a purebred colt, calf, lamb, pig, or dog, the child gets lessons in sentiment and self-control.

In the proper caring for pets, certain general principles are involved. One is system. Teach the child to be systematic in looking after the animals that are owned by him or her. In growth and development both the child and the pets will respond to the habits of system, order and promptness thus acquired.

We may take, for example, a dog. As a puppy it should be fed three times a day. As it grows older, feed it twice a day. When it is a full grown dog, feed it once a day, and this at night.

**Boys and girls develop a sense of responsibility for the welfare of their pets, and, hence, of other animals and things.**

This system of feeding a dog from puppyhood up has advantages. Handled thus the dog is ready to work during the daytime, which is not the case when he is sluggish from a heavy morning meal. He will be wide awake and alert, ready for play, more watchful in looking out for the children. Fed a full meal in the evening, the dog sleeps at night instead of in the daytime; but always has an ear to the ground and is none the less watchful. In fact, the dog that is awake and alert during the day and has his heaviest meal in the evening, followed by his sleep, is more valuable at night as a watch-dog than the dog that sleeps all day. The latter dog, wide awake and restless during the night, is apt to get lonesome during the quiet hours and leave the place.

Sheep-herders who depend, in the management of the flocks, upon their "sheep dogs" know this very well, and always feed the dog at night. Every one who has been about sheep camps has noticed how alert the sheep dogs are during the day, and if he chanced to be about the camp at night will remember having noticed the dogs curl up and go to sleep after their heavy evening meal. But if anything goes wrong out in the flock these trained sheep dogs are on their feet in an instant.

In handling his pet dog, therefore, let the child learn from the herders of sheep, who are among the most skillful trainers of dogs that we have.

The kind of a dog to give a boy depends somewhat on the boy. There are many different breeds, sizes, types and dispositions of dogs, and which to get depends a good deal upon the surroundings, the home and the disposition of the boy and his ability to care for the animal. Dogs that are worthy of consideration may include such as the St. Bernard, the hunting dogs of nearly all breeds and description, and some of the shorter haired dogs.

There are, of course, individuals in every breed of dogs that make good pets, and there are other individuals of the same breed that would not. Quietness, steadiness, and lack of nervousness are good qualities in the dog which the children are to have as a pet.

### Two Pounds for 90 Meals.

Restaurants and hotels are restricted to two pounds of sugar for every 90 meals served. This includes sugar for kitchen as well as table use.

# SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University.)

## Be Examined if You Are Middle Aged and Ailing

Dr. Hirshberg.

The person who has reached middle age is apt, very frequently, to think himself more of a physical wreck than he is. It is indeed true that the middle-aged must be more careful and watchful of his health than a young person, for the reason that his muscles are constantly being used less, and consequently less in tune. His joints, too, are perhaps less flexible.

The fact that the individual uses his muscles in a less strenuous way than before is only part of the general health question at this age. The thought of old age with its possible infirmities is like a nightmare to the mind of the person who has lived his or her first 40 winters.

The man who sees visions and dreams dreams can actually make these visions and dreams a reality if he is disposed to repeat the thought of these things too often. In order to be free from these mental afflictions he is often advised by his physician to leave his customary surroundings and go to some sanatorium, some country place of resort, where climate, people, activities and scenery are entirely new, and lure the mind into different channels.

One of the ways a person who thinks himself nearing decrepit old age may get rid of the notion is to go regularly to a competent physician and submit to a thorough examination each time.

### Other Possible Needs.

Although evil thoughs about your physical condition had better be dispelled forcibly, if need be, sometimes you find out some unpleasant truth after a physical examination. That you feel worn out, tired, dull, unambitious and almost ready to give way to your feelings, to become inactive, may be due to one, two, three, or perhaps half a dozen, causes.

It may be due to faults of your eyes that your head frequently aches, that your mind is dull, because your eyes can not see easily, and suffer from strain or other disorders.

If it is not your eyes, your ears may probably have become infected in some way or other. You may, accidentally, at some time have injured your ear drum or the internal ear, and slowly but surely you may be developing some serious infection.

Your ears may be very slow in their process of retrogression, and perhaps in a course of time it may or may not adjust itself. In the mean time, however, your general deterioration may not be due to these things at all, but to nose, throat, tongue or teeth troubles.

If you can not breathe properly through your nose you are obliged to open your mouth and let the germs fly into your system.

When you are thus compelled to breathe through your mouth, the lining of your throat may become inflamed by the rapid passage of unheated air; your tongue perhaps becomes dry and feels uncomfortable in this breathing process, and little wonder, under some of these conditions, that you think old age is approaching.

Your lungs, your heart, your scarlet blood stream may need to be examined as to their efficiency. Perhaps you need to take deeper breaths and walk either more slowly or faster in order to make the heart beat right. In the same way the blood stream must probably be given better nourishment in food and exercise, and the skin needs to be treated.

### Repairing the Faults.

Your liver has probably become sluggish, and the juices belonging to it are perhaps not doing their full function in the process of digestion, and these may need to be brought into proper condition.

If it is not the liver that is interfering with your digestive apparatus, and through that with the whole mechanism, it is apt to be your stomach or intestines that do not churn the food fast enough.

If any or several of these impaired conditions are in your mechanism your physician can discover them for you, and whether you have a specific complaint or just a general, unambitious, weak, decrepit feeling between the years of youth and old age, a thorough physical examination will dispel undue fears from your mind, or, if needed, it will lead to immediate measures for repair.

Under a well-carried-out examination of this sort you may even discover that troubles never suspected may be at the bottom of your discomfort. There may be an undiscovered rupture in some part of the anatomy, you may have faulty posture or flat feet, your spinal column may be unduly strained, or some other deformity may be present which you have never suspected.

As a result of such an examination you may have to undergo medical treatment much against your suspicions, or you may only be advised to take certain precautions, or perform certain prescribed exercises. You will probably find yourself very pleasantly surprised after treatment with plenty of fresh air, wholesome food and good exercise that in a short time you have become fairly well regenerated. After all, if there is no one or more specific troubles, these natural methods are the best cure.

# How Much Does Drying Reduce Food Weight?

The United States department of agriculture is authority for the following table which shows the number of pounds of dried fruit and vegetables secured from 100 pounds of each in the original form:

| | Pounds. |
|---|---|
| Apples, late autumn and winter varieties | 12 to 15 |
| Apples, summer varieties | 10 to 12 |
| Apricots | 16 to 18 |
| Blackberries | 16 to 20 |
| Beans | 11 to 13 |
| Beets | 14 to 17 |
| Cabbage | 8 to 9 |
| Carrots | 10 to 12 |
| Cauliflower | 12 to 14 |
| Celery | 8 to 9 |
| Cherries, pie | 17 to 21 |
| Cherries, sweet | 22 to 26 |
| Corn, sweet | 26 to 33 |
| Figs | 18 to 23 |

| | Pounds |
|---|---|
| Loganberries | 17 to 22 |
| Okra | 10 to 11 |
| Onions | 9 to 10 |
| Parsnips | 20 to 22 |
| Peaches | 13 to 16 |
| Pears | 18 to 22 |
| Peas, garden | 22 to 25 |
| Potatoes, sweet | 30 to 35 |
| Potatoes, white | 23 to 25 |
| Prunes | 30 to 33 |
| Pumpkin | 6 to 8 |
| Raspberries | 17 to 23 |
| Spinach | 8 to 10 |
| Squash | 7 to 9 |
| Tomatoes | 6½ to 9 |
| Turnips | 7 to 8 |

# Sidelights

### Congenial Company.

She was much interested in prison reform and was visiting a large prison one day.

"Don't any of your friends come to see you on visiting days?" she asked of a big burly ruffian.

"No'm," responded the ex-burglar; "they're all here with me."—Everybody's Magazine.

### Suspicious Little Girl.

A little girl went to the grocer's and asked the salesman if he had any fresh eggs.

"Yes," answered the man. "How many do you want?"

She viewed the eggs critically.

"Please, sir," she said, "these are not regular eggs."

"Certainly they are."

"No, they aren't," she persisted. "I heard my papa tell my mama there's a corner on eggs, and these are all smooth."—Exchange.

### A Strong Cigar.

Detective John McDonough, sleuthing one afternoon in a gilded cafe, overheard the following conversation:

"Whaddye gonna have?"

"I ain't takin' anything."

"Have a bracer."

"Nope."

"Take sometin soft."

"Nope."

"Will you have a smoke?"

"Yis, I'll have a smoke."

"Will it be a light one or a strong one?"

"Gimme a strong cigar; the last one I had broke in me pocket."—Youngstown Telegram.

### Another Mollycoddle.

"Do you play football?"

"N-No—that's too rough."

"Do you play baseball?"

"N-No—that's too exciting."

"Well, mebbe you tackle lawn tennis?"

"I have a weak heart."

"Rowing?"

"Too dangerous."

"Well, for the Lord's sake, as you never play, what do you do in the way of work?"

"I—I work in a powder factory."—Florida Times-Union.

### Willie and the Goat.

"When the Germans reproach the Belgians," said Colonel House at a luncheon in New York, "when the Germans talk about guarantees against Belgian aggression, I am strongly reminded of little Willie.

"Little Willie ran howling with rage to his mama.

"'That goat butted me!' he roared. 'The bad goat butted me in the stomach.'

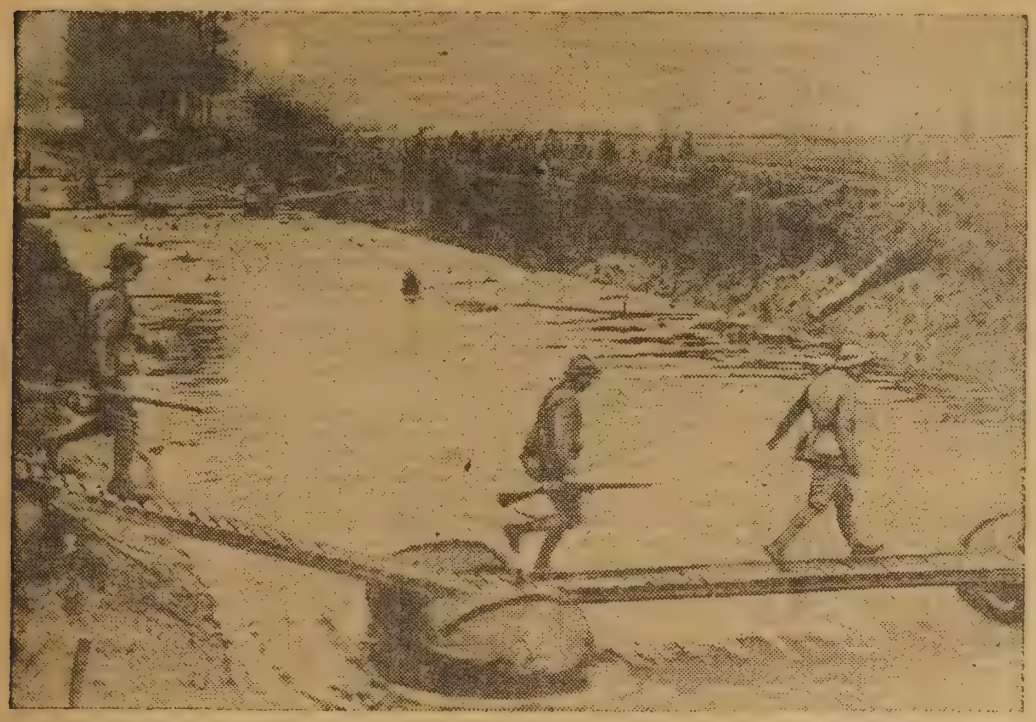
"'Are you sure you weren't teasing it?' his mama asked.

"'No, no,' wailed Willie. 'What would I tease it for? I was only just carvin' my name on its back with my new penknife.'"—Washington Star.

### Colors Can Be Heard.

Facing the station on the sidewalk in front of her home in North Chicago, several sailors came abruptly to salute and stood for a minute or more. The woman had noticed others do the same thing on several occasions, and finally she asked one of them why he was saluting.

"Colors," replied the sailor.



"But, where do you see the flag?" asked the woman.

"I can't see it, but I know the sound of the drum and now is the time," the sailor replied.

Her home is over a mile from the station and the actions of the sailors filled her with pride for the station and the respect shown by the men trained here in observing their duties, she says in a letter to the Great Lakes Bulletin.

Copyright, 1914, 1915, by Lewis B. Miller.

## CHAPTER XXX.

### "And Keep Your Powder Dry."

"Don't you think we could run up into some creek and hide from 'em till daylight?" inquired Jodo. "Ben and I did that all the time coming down the Osage. It worked to perfection, too."

"Yes, it worked well enough when the red fellows were not hunting for us, and didn't even know we were in the country. But once when they were after us it didn't work so well, you recollect, Jodo. In fact, if the cave we'd hid in hadn't happened to have a back door, we should have been caught in a trap."

"Think I know a way that will fool the red rascals," Boone remarked. And he proceeded to explain. Both Ben and Jodo believed that the plan would work.

Soon they and Tom, the black fellow, took the hatchets from their belts and went on into the thick woods, where they fell to chopping down bushes. When they came back, each was carrying an armful of bushes, which they laid at the water's edge, by the canoes. That done, Ben went to work and fastened the four canoes together, shapping them as nearly as he could like a floating tree-trunk.

"Now, Uncle Dan'l, that cloud's already in rifle-shot of the moon. If we are expecting to start as soon as the moon goes out, we'd better make ready. All of you step in and fix yourselves as low as you can, and as comfortable as you can, and I'll cover you up. Leave the bow of the front canoe for me."

So the old hunter and Tom found places in their own canoe, and Jodo crouched low in the after part of the canoe he commonly rode in. Then Ben, taking up bushes proceeded to cover the canoes over in the best way he could. When his task was completed, he stepped back and gazed at the result. The moon still shone, though not where the canoes were floating.

"That looks to me much—very much like a green tree that the current has undermined and dropped into the river," he said. "If it looks the same way to an Indian, we oughtn't to have any trouble passing ourselves off for a floating tree."

"Unless the Indians have tried this same trick themselves," remarked old Daniel. "And it's possible that they have—entirely possible that they have. Mighty hard to fix up any kind of trickery that some redskin hain't used before you. That's the main part of their lives—thinking up tricky schemes. Still, it's possible to outtrick even the tricksters, and maybe what we've done will fool 'em. At the same time it may not. And we must be ready for the worst."

The cloud was still rising, but had not yet covered the moon. While waiting, Ben took a walk around the island, listening intently, and running his eye over the water in every direction.

"If there are any red men around, I'm not sharp enough to discover them," he reported, on returning to the canoes.

He cut another bush or two and laid them on top of the brush-covered canoes. Later, just as the dark cloud was slipping over the moon, he returned to the camp-fire and piled some more wood on it. Then he came back, untied the canoes, and stepped in. After seating himself, he reached out his paddle and pushed off. As soon as the disguised canoes had begun to drift with the current, Ben drew some of the bushes over his head. But he could still see out in front and on each side. The canoes drifted slowly till they were in the main current, where the stream, split by the island, came together again. After that they moved faster.

Now Ben, in the forward end, sat looking and listening. He was looking for snags, and both looking and listening for Indians. He was glad that all the snags leaned down stream, and were not so dangerous as they would otherwise have been.

Half an hour passed, and the canoes were still drifting with the current. Ben was trying to imagine what the Indians were doing. Soon after the moon had ceased to shine, they had approached the island, he inferred. Just how long it would take them to discover that the camp-fire was deserted could only be guessed. But as soon as they had convinced themselves of that, they would paddle away down stream in pursuit of the elusive white men. When they overtook the disguised canoes, then would come the test as to whether the disguise was complete or not.

The clouds were heavy, but the moon behind them gave some light. At length a slow drizzle began to fall.

"Ben, do you and Jodo recall what Oliver Cromwell said to his men? It was 'Trust in the Lord, my boys, and keep your powder dry!'"

"That's excellent advice, especially for such a night as this, and on such a river as this," Ben answered.

"Yes. A good many men have neglected it to their sorrow," declared the old pioneer.

The rain continued to patter down slowly, lightly. The four in the canoes sometimes whispered together and sometimes drifted in listening silence. At length they began to hear the dipping of paddles. In time, gazing out through the brush, they could make out a canoe that was overtaking them. (As the canoe came nearer, they could see several Indians in it.)

Rapidly the paddled canoe gained upon the drifting ones. As it passed, only about 30 yards away, the Indians must have seen the white men's hiding-place. If so, they failed to suspect the deception, and paddled straight ahead. Gradually their canoe gained till it was lost to sight and hearing.

"Our brush-pile must look like a floating tree, all right," Ben remarked, as soon as it was safe to say anything.

"How long will they keep on down the river, do you reckon?"

"A right smart piece, Jodo—a right smart piece, I'm guessing," the old man answered.

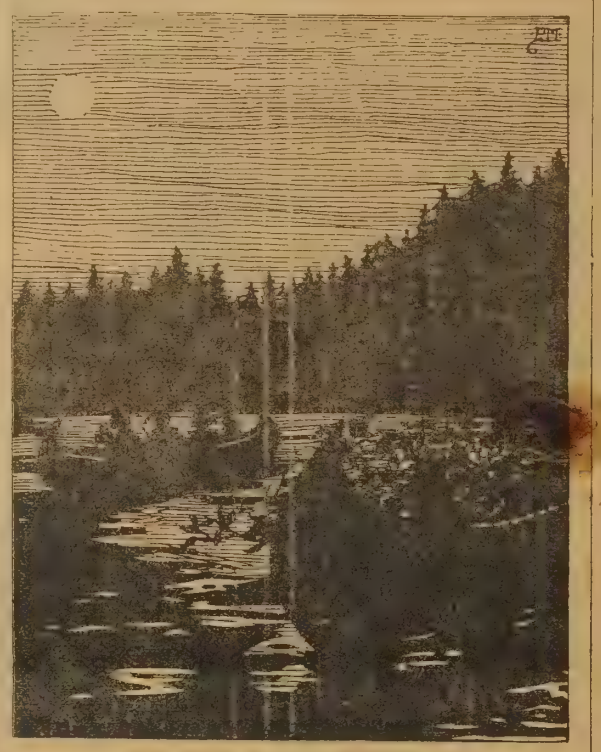
"I'm wondering if they'll come back at all," Ben said.

"They may, and then again they mayn't," was Boone's opinion. "But we'd better take it for granted that they will, and lie low and keep still."

"The rest of you can go to sleep if you want to," Ben told his fellow-travelers. "I'm keeping watch. If anything out of the ordinary occurs, I'll wake you."

"No use to tell Tom that," chuckled Boone. "He's asleep already. If there's one thing Tom can do as well as the best, it's to sleep. He can always sleep when there's half a chance."

And Ben answered: "Let him sleep as long as he doesn't snore. Snoring would be dangerous when a canoe-load of Indians is passing. He's hard to wake, I suppose.



"No, that's not the case. He falls asleep easily, and he wakes almost as easily," the black fellow's master explained. "It won't be any trouble to wake 'im if we need 'im awake. Let all sleep who can. I know this treacherous old Missouri too well to sleep on it."

For a good while they drifted on. At length Ben heard familiar sounds. Looking out through the brush and drizzle, he could dimly distinguish a canoe approaching. Gradually it grew more distinct, till he could see the paddling Indians in it. With a word of warning, little more than whispered, to the others, he awaited their coming.

This time the canoe passed almost within reach of some of the leafy branches. Ben, watching, held his breath, as did the others. The savage paddlers could be seen glancing toward the brush-covered canoes. But evidently they suspected nothing; for they paddled on up the river. When the canoe was out of hearing, all those in hiding breathed freely again.

"Our little trick is doing the work all right," whispered Boone. "Twice they've passed close enough to scent us, almost; but they're too stupid to smell a mouse. That's better for us—and for them, too."

Before long the party heard paddles, and knew that

**Disguised as a tree, they escaped.**

another canoe was moving up stream. But it was farther away and, the moon probably having set, they caught not so much as a glimpse of it. After waiting a few minutes, the old frontiersman said:

"I've been acquainted with this river long enough to feel safer anywhere else than drifting down it on a black night. So if you boys don't mind, we'll steer over to land and tie up."

"I'm certainly willing, Colonel Boone," agreed Jodo.

"All right! We'll feel our way over to land if we can," Ben said, as he put down his rifle and took up his paddle. He had to lay back some of the bushes before he could use the paddle. Even then, so dark was the night and so black the river, they found no little trouble in getting the four canoes over to the bank.

Here they made fast to bushes. Then, feeling safe for the night, they covered their canoes over and went to sleep in them.

They all fell asleep; but both Boone and Ben promised to sleep with one eye and both ears open. Some wolves came close, and by their howling waked the sleepers once or twice. But if any more red men passed up or down the river, they were not heard by the sleeping white men. The slow rain pattered down all night long.

When daylight came the rain was still falling. The party remained where they were and under shelter till it had ceased. Then the old hunter and black Tom separated their canoe from the others and paddled out into the stream. Ben and Jodo followed.

After drifting a mile or two, they noticed a sand-bar rising up from the middle of the river. It was not very large, but there was some driftwood on it. And on the bar they stopped, kindled a fire and cooked their breakfast. While cooking and eating, they talked over the events of the night before.

"What do you think, Colonel Boone? Is there any danger that the Indians will attack us today—attack us out on the river?" inquired Jodo.

"Well, such a thing is possible, of course. And we've got to be on our guard against it. That's not the redskin's way of doing things, though. He delights in tricks and stratagems. But after failing to capture us last night, and knowing that we'll reach the settlements by tonight, they may get bold enough to make an open attack. We may see several canoes putting out from the bank at any time, or bearing down on us from up the river."

"An' ef dey comes—ef dey does come, what we gwine der do, massa?" asked the slave.

"Well, we'd better get our four canoes all in a block, with the ones we're in on the inside. Then we must rest our guns across the outer canoes and do our best to fetch a redskin every time we pull trigger. If we do some pretty straight shooting, they may get out of heart and beat a retreat."

"And a very important thing, it seems to me, is not to let them take us by surprise," Ben remarked. "If some of them should be in hiding along the bank, they could paddle out to us pretty quickly. And we want to keep an eye over our shoulders. They may come down the river as fast as they can paddle."

"That's what I think they'll do—come down the river after us," said Jodo. "The last we saw and heard of the canoes, they were on the way up."

"It seems rather likely that they're somewhere up there yet," remarked old Daniel. "At any rate it will be very safe for us to keep a constant lookout to the rear."

When the meal was ended, the party, leaving their camp-fire burning, got into their canoes and paddled away down the muddy stream.

"We want to keep together—close together," the old hunter said. "And if a fight comes on, we want to make our fight together, with all our canoes in a block, so that they can't drift apart while we're using our rifles."

While the two parties were paddling along side by side, Boone narrated his experiences on the present hunting-trip. In turn Ben and Jodo related some of their own exciting experiences.

"Well, you boys certainly have been putting in some hard licks since you turned your backs on the settlements," was the old pioneer's comment. "Even been tied to the stake, eh, Benoni?"

"Tied to the stake I certainly was, Uncle Dan'l. And I got just the least bit scorced before that squaw could get the fire scattered."

"Benoni, I've been knowing Osages for a good many years; and my opinion is that that whole burning-at-the-stake business was a put-up job on you. I don't believe they meant it."

"That's exactly what I suspected at the time," Jodo now put in. "I believe the whole big show was got up to give that fat squaw, Watermelon, a chance to prove her undying love for Ben, and to tie to 'im for a husband."

Ben made a wry face. "If that's what it was all done for, it was only time wasted. Watermelon didn't get anybody for a husband by that, and certainly not Strong Arm."

"But for some things at home, I wouldn't have been surprised at Ben's getting into a love-affair with an Osage squaw. You see, Colonel, everybody in our neighborhood knows that Ben is expecting to be my brother-in-law some day. And yet, in the face of all that, and with me there looking on, he must go and trifle with the affections of a poor, unsophisticated—"

Ben turned quickly. Now look here, Jodo Henderson, you let up on all such jokes as that, or kersplash into the Missouri river you go! I know Rachel, and I know I'd have as good a chance to get her after drowning her brother as I would after engaging in a flirtation with a red Indian. You know as well as I do that I had nothing to do with that. I can take pretty nearly any kind of a joke. But if you go to joking about that, you'll make Rachel think there's something in it. And that would mean trouble for me."

Old Daniel's eyes twinkled. "Not well to stir up the women-folks that way," he declared. "Now I could tell you a little experience of mine—"

"Lawsy mussy, massa, jes' looky yanner—jes' looky back yanner!" suddenly burst out the frightened Tom, his eyes rolling in his head with terror. "Dey's a-comin'—de Injuns is a-comin', a while lot of 'em! Dey'll hab us yit! Dey's jes' nachelly boun' ter git us!"

At this startling outburst all looked up the river, and Ben leaped to his feet.

"There's somebody coming in canoes—a swarm of somebodies!" he announced.

All the others kept gazing back. "Ben, your eyes are better than mine. Can you make out for certain who they are?" questioned Boone, anxiously.

"Yes, I'm pretty sure I can—can make out that they're Indians."

"I know I can!" declared Jodo.

"Then we'd better be getting ready for a hot fight!" said the old frontiersman, glancing around in search of a suitable place to fight from. "And the Lord help us if all that bunch comes at us at once! Here's where we've got to trust in the Lord."

"Hadn't we bettah git ter lan' quick—quick as ebber we can, an' hide ou'se'v's in de braish?" asked Tom.

"Yes, it seems to me any kind of a hiding-place would be better than out here on this bald river," said Jodo.

"I see a cliff down yonder a right smart piece," Boone was gazing down stream. "Looks to me like it overhangs the river. If it overhangs enough that the redskins can't shoot down on us, or drop rocks on our heads, we'd better get under that, with the cliff to our back and the canoes in front of us, and make our fight there."

To this Ben agreed, and they all paddled on as fast as they could. On coming to the cliff, they found that its top overhung several feet. There was an eddy under the cliff, and the canoes would not have to be tied to keep them from drifting on.

The party paddled under till against the rock-wall, then they got the canoes they were in against the rock, and the other canoes in front, as a sort of breastwork.

"Fresh priming, boys! Fresh priming!" suggested the old Indian-fighter. "Little damp on the river anyhow. And we've passed through a rainy night since any of us fired a shot. Don't forget. It's 'Trust in the Lord, my boys, and keep your powder dry!'" And, suiting the action to the word, he emptied the pan of his rifle and refilled it from his horn.

# Cottage Cheese

## Expert Tells of Ways to Use It

By GRACE P. FISCHER.

Mrs. Hallie K. Davis, representing the department of agriculture of the United States government, closed a week of lecturing and demonstrating in Portland, Ore., July 27. She is a cottage cheese expert and enthusiast. She was assisted in her work by Professor E. B. Fitts of the Oregon Agricultural college and Miss Alice Joyce.

During the week she gave addresses and demonstrations before the Progressive Business Men's club, Rotary club, Ad club, Commercial club, Y. M. and Y. W. C. A., Liberty temple, Meier and Frank auditorium and at the city hall. She addressed thousands of housewives during the week.

"Why does my cheese get leathery?" This is a question asked by nearly every woman. Mrs. Davis' answer is, don't get it too warm when heating.

The campaign was for the purpose of increasing the production and consumption of cottage cheese; to use up the skim milk that is now wasted.

The Portland Demascus creamery is manufacturing cottage cheese from 4500 pounds of skim milk every day. Three other creameries have ordered machinery.

Milk left over in the homes can be made into good cottage cheese by either of the following methods:

**Sour milk method**—The milk should be set in a pail or can, preferably with straight sides, and warmed to 75 to 80 degrees Fahrenheit and held at or near this temperature until a firm curd is formed. If a little clean, sour milk is added to the milk when set, the curd will form more quickly. When this is done at night the milk will usually be curded in the morning. The milk should not be disturbed during the process of curdling. As soon as a good, firm curd is formed it should be cut into one-inch squares with a long-bladed knife and heated slowly to a temperature of 100 degrees, stirring occasionally, as the curd will have a tendency to mat together. A higher temperature will make a dry cheese that will be inclined to be tough. Temperature should be maintained for 15 to 30 minutes. The cheese should then be poured into a cheesecloth sack or into a piece of draining cloth thrown over a pail. In 15 to 20 minutes the larger part of the whey will have drained away. The draining process can be hastened by manipulation of the cloth so as to move the cheese from side to side. Do not squeeze it. When the curd is rather firm and when it has ceased to flow, it is ready for salting. This should be done to taste. A gallon of milk will make about one and a half pounds of cheese, and a teaspoon of salt to this amount will suit most tastes.

**The rennet method**—Cheese made by this method has a finer and more uniform texture and requires less time and attention in making. The milk, if sweet, should stand for five or six hours at a temperature of 80 degrees. At the end of this period dissolve about one-eighth of a junket or rennet tablet in a little cold water and add to the milk. This amount is sufficient for one gallon of milk. If the milk is sour to the taste or just on the verge of turning, the milk should not stand and the junket should be added at once. As soon as the curd is firm the process is similar to that given for sour-milk method, except that no heating is necessary and the cloth strainer must be of finer texture because of the fineness of the curd. After draining for a time, it is well to hasten the process by folding the curd in draining cloth and lay on draining board with a weight on top.

Cottage cheese is judged by flavor and texture. It should have a clean, mild acid flavor and a texture that is smooth and free from lumps. Flavor is governed largely by quality of milk and tetxure of process of making.

Cottage cheese can be kept for several days if stored in a cool place in glass or earthenware vessel. It can be used plain, with cream, or in a variety of combinations. Following are some of the receipts given by Mrs. Davis:

**Cottage cheese omelet**—Two eggs, one-half teaspoon salt, three rounded teaspoons cottage cheese, one tablespoon chopped pimentos, two tablespoons milk, one-eighth teaspoon soda. Beat the yolks and whites of the eggs separately. Add to the yolks the salt, the milk and the cheese, with which have been blended the pimentos; finally fold in the stiffly beaten whites; pour into a hot frying pan in which has been melted about one-half teaspoon fat. Cook the omelet slowly until the egg has set, place in the oven for a few moments to finish cooking and fold over the center. Garnish with parsley; other seasonings may be used, such as chopped parsley, green peppers or minced ham.

**Cottage cheese and nut loaf**—Two cups cottage cheese, one cup chopped nuts (use local nuts if possible), one cup cold left-over cereal (any kind), one cup dry bread crumbs (corn or victory bread), two teaspoons chopped onions or one-half teaspoon onion juice, one tablespoon fat, salt, pepper, one-third teaspoon soda or more to neutralize acid, poultry seasoning or mixed herbs, Worcestershire sause, or kitchen bouquet if desired. Mix all ingredients together thoroughly and bake in a buttered pan in a hot oven till top and sides are well browned over. Turn out on a hot platter. Serve with a brown or tomato sauce if desired.

**Variations**—This loaf is particularly good made with peanuts. Substitute for the cup of chopped nuts in the rule above, two tablespoons of peanut butter and one-half cup of coarsely chopped nuts and season with one-half teaspoon of ground sage or with one teaspoon of mixed poultry dressing.

Where walnuts are used pimentos make a good garnish.

**Cottage cheese pie**—One cup cottage cheese, two-thirds cup milk, two egg yolks beaten, one tablespoon melted fat, salt, one-fourth teaspoon vanilla. Mix the ingredients in the order given. Bake the pie in one crust. Cool it slightly and cover with a meringue made by adding two tablespoons of sugar and one-half teaspoon of vanilla to the beaten whites of two eggs and brown it in a slow oven.

**Cottage cheese loaf No. 2**—Two cups cottage cheese, one cup left-over cereal, one cup of bread crumbs dried in oven, four tablespoons peanut butter, one-half cup chopped peanuts, one teaspoon onion juice, a pinch of sage, salt, cayenne and paprika and liquid, if necessary to mix. Form into a loaf and bake in a hot oven 20 to 25 minutes or until brown. Turn out on a platter. The cracklings left from tried-out fat or suet may be used in place of the peanut butter.

### Veal Pot Pie.

Have the butcher cut two pounds of the scrag end of the neck into suitable pieces for stewing. Cook and just before it is done add one quart of potatoes, cut in quarters, one onion grated, two carrots, cut in dice. When done, lift the meat and potatoes to a baking dish. Thicken the gravy slightly, seasoning with salt and paprika to taste. Cover with crust of plain pastry in lattice style—crisscross. Bake in hot oven for 25 minutes.

### Breadcrumb Gingerbread.

Soak in a cupful of sour milk 1½ cupfuls of breadcrumbs. When the crumbs are soft, put them through a colander. Now add one cupful of molasses. Thoroughly mix and sift together one cupful of flour, one teaspoonful of soda, half a teaspoonful of salt and one-quarter of a teaspoonful of ground ginger. Add these to the wet mixture, stir it all thoroughly. Bake in a moderate oven.

### One and Inseparable.

Our future is vitally linked with that of the allied nations.

# Craft Yoke

## By WINIFRED WORTH

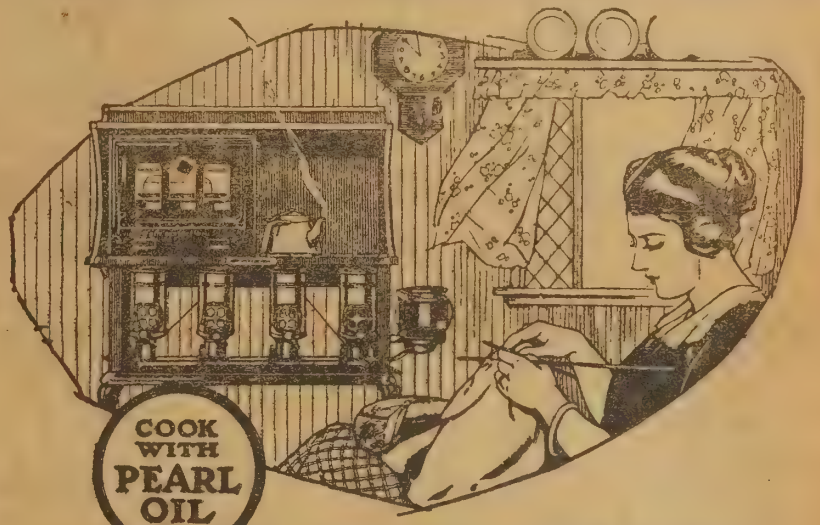
Every crochet worker will appreciate this beautiful and practical design.

**First Row**—Ch. 6, 2 dt. in 6 st. from needle leave last st. of each dt. on needle until 3 sts. are left. Take off all 3 sts. Ch. 5, 2 dt. on top of last dt. (these ch. of 5 and 2 dt. are called crafts—cft.). make 8 cft. in all.

**Second Row**—At top of 8th cft. make 3 ch., 1 dc., 4 ch., 1 dc., 3 ch., 1 dc., 1 cft. Make 1 cft. and catch with sl. st. to top of 6th cft.; repeat to end of row. Ch. 12, 1 cft. in 6th st. from needle—repeat first and second rows until yoke is desired size.

Tells You ALL About Canning and Preserving

Edition "K" (1918) of the Ball Blue Book of Canning and Preserving will help you solve the food problem. Its 82 pages contain the best, tested and chosen recipes for every fruit and vegetable. It describes the cold pack and all other canning methods—plainly and simply. Tells how to can fruit without sugar. It is the acknowledged authority—places the experience of the most successful housewives at your service.



The Ball Blue Book has never been advertised before—this will be the only announcement in this publication this season because the supply is limited. If you want your copy, better write a note or fill in the coupon below with your name and address—NOW!

**Ball Bros. Glass Mfg. Co.**

COOK WITH PEARL OIL

A New Perfection Oil Cook Stove means kitchen comfort and convenience. Ask your friend who has one. Used in 3,000,000 homes. Inexpensive, easy to operate. See them at your dealer's today.

## Keep Your Kitchen Cool

Your kitchen is always cool and comfortable even in the hottest weather if you use a New Perfection Oil Cook Stove.

No smoke or odor, no dust or dirt. None of the bother of coal or wood. All the convenience of gas. Better and more economical cooking all the year round.

In 1, 2, 3 and 4 burner sizes, with or without ovens or cabinets. Ask your dealer today.

STANDARD OIL COMPANY

# Patterns

2254—Girls' Dress: Cut in five sizes: 2, 3, 4, 5 and 6 years. Size 4 requires 3½ yards of 36-inch material. Price, 10 cents.

2247—Ladies' One-Piece Dress: Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inch bust measure. Size 36 requires 5 3-4 yards of 44-inch material. The skirt measures about 2 3-8 yards at the foot. Price, 10 cents.

2371-2570—Ladies' Costume: Waist 2371 cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 requires 3½ yards of 36-inch material. Skirt 2570 is cut in seven sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. Size 24 requires 3 1-8 yards for the tunic and 2½ yards for the skirt of 44-inch material. The skirt measures about two yards at the foot. TWO separate patterns, 10 cents FOR EACH pattern.

1521—Boys' Suit: Cut in four sizes: 3, 4, 5 and 6 years. It requires 2 3-8 yards of 36-inch material for a 4-year-size. Price, 10 cents.

2564—Girls' Dress: Cut in four sizes: 8, 10, 12 and 14 years. Size 10 will require 3 3-4 yards of 36-inch material. Price, 10 cents.

2571—Girls' Dress: Cut in four sizes: 4, 6, 8 and 10 years. It requires three yards of 44-inch material for an 8-year size. Price, 10 cents.

2405—Ladies' Blouse: Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 requires three yards of 44-inch material. Price, 10 cents.

2301—Child's Under Waist and Drawers: Cut in five sizes: 4, 6, 8, 10 and 12 years. Size 10 requires 1 5-8 yards for the waist and 2½ yards for the drawers of 27-inch material. Price, 10 cents.

2379—Girls' Dress: Cut in five sizes: 6, 8, 10, 12 and 14 years. Size 10 requires 4 3-8 yards of 36-inch material. Price, 10 cents.

2562—A Pretty Negligee: Cut in four sizes: Small, 22-34; medium, 36-38; large, 40-42, and extra large, 44-46 inches bust measure. Size medium will require 5 3-4 yards of 36-inch material. Price, 10 cents.

2408—Ladies' House Dress: Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 will require 5 3-4 yards of 44-inch material. The skirt measures about 2½ yards at the foot. Price, 10 cents.

2042—Ladies' Apron: Cut in four sizes. Small, medium, large and extra large. It requires 5½ yards of 36-inch material for a medium size. Price, 10 cents.

## TRAINING CHILDREN.

### First Learn to Conquer Yourself.

In the training of children there is nothing that will take the place of religion, nothing that will give us the high standard of the Ten Commandments. Every child should be made familiar with this moral code and its meaning explained.

Teach the child that God loves good boys and girls; that if they always obey their parents and try to do what is right they will grow up into useful men and women and be able to do lots of good in the world. Tell them the world needs good men and women to help stamp out the evil and make the world a better place to live in.

Above all, teach them to be unselfish. Selfishness is at the bottom of more misery and crime than nearly everything else put together. Selfishness results from ignorance of the sufferings and trials of others. Children can be taught unselfishness by teaching them to help others. Teach them to be kind to old people. Take them with you to visit the sick and unfortunate.

Teach children to do all their work well and to finish each job before starting others. Teach them to be clean and orderly because it pleases people to see them neat and clean.

Praise them for work well done and don't find fault with them continually. Always love them no matter what they do.

Teach children to tell you everything and do not punish them for what they tell you, no matter what it is. Tell them their mistakes kindly and ask them to do better next time. When children quarrel or fight and you are not sure who is to blame, separate them and make them play alone till you think them sufficiently punished.

Never force a child to do something against his will when in a fit of temper. Wait till he is in a better humor, then ask him kindly why he refused to do as he was told; then give him another chance to obey. If you do this in a loving spirit and with the child's best interests at heart you will be rewarded by his repentance and obedience. It is absolutely necessary for you to conquer yourself before you can expect to gain good results in training your child.

Each child should have some little, regular work after they are 5 or 6 years old. As they get older it should be gradually increased. Teach them to love to do work well. Tell them that people are useful to the world only as they can do good work. Teach them that the idlers are in people's way and a misery to themselves.

When in doubt as to how to proceed in a difficult case, ask God to guide you. Let the Bible be your daily guide and friend and you will be richly blest.

E. L. D.

### Cabbage Salad.

Scald one cup of milk in a double boiler, add one tablespoon of flour mixed to a smooth paste in a little cold milk, stir constantly until thickened, then add the beaten yolk of one egg and one large tablespoon of butter. Cook until the egg is set, add one-half cup of hot vinegar, stir until well blended and pour immediately over finely shredded cabbage sprinkled with sugar, salt and pepper. Serve cold if desired.

## Cans Juice for Jelly

To the Editor: I have found it of great advantage to can the juice of fruits for jelly and make the jelly as you want it in the cooler weather. Prepare the juices as for jelly, heat to boiling point and can in sterilized jars, just as if you were doing fruit, only do not add sugar. Any time you want a little jelly, open a jar of juice, add the required amount of sugar and you have nice, fresh jelly.

I also save the apples which drop by making into apple sauce and canning. It is a great advantage to have them to use when apples are high in the spring and will not make as good apple sauce.

Another saving is to put all parings of vegetables and fruits, with leaves of cabbage and lettuce and even carrot tops, cut up, into a pail or kettle and cook on back of stove until noon, when the mess is dried up with shorts and bran and is ready to be fed to the chickens. If there is not enough to fill the pail, I put in some oats, also all of the table scraps. This is a great saving of the high-priced wheat for every feeding.

Not a scrap of bread is wasted. Any extra crust or small piece of bread, cracker or shredded wheat is dried in the oven, then ground and placed in baking powder cans, with holes in lid, to have ready for dressing, or for top of fish pudding or other dishes where crumbs are required.

A good omelet (which is saving of eggs) is to crumb one slice of bread in a cup, fill cup with milk, let stand two or three hours, or over night if wanted for breakfast. Place a little butter in frying pan, add two beaten eggs to soaked bread and pour in pan. Set in oven for a short time, or until browned, then serve on hot platter. This is enough for four people.

A friend of mine cans beans this way: Prepare as for the table and cook until tender, then add a little salt and can in sterilized jars; just before placing cap on jar add one tablespoonful of boiling vinegar for each quart. The vinegar does not taste, when the beans are opened. I have never tried this, but have eaten the beans, and they are fine. We always can a great many beans in our cannery, but use the pack method in glass jars, which we have always found successful.

MRS. FLORENCE DICKINSON.
Oswego, Ore.

**Limit Use of Cane Sugar.**

Many of the larger hotels of the country are using no cane sugar in pastries and desserts.

**Conquering Villa.**

Dear Aunt Nellie: I am 12 years old and am in the eighth grade. My brother, George, is 10 years old. We are living with Mr. and Mrs. Roberts. Our father and brother Bill are in Alaska. Our mother is sickly and not able to take care of us. We have two sisters, one is going to school in Hoquiam and one is in Seattle. This is a beautiful place here on South bay, just across from the whaling station. We can see the whale boats bringing in whales every day during the whaling season. We often go clam digging. I dug some for the cannery and made from 50c to $3 on a tide. One can only dig when the tide is low. We gather cascara bark occasionally. Mrs. Roberts has some rabbits. She gives George and I equal interest in them if we attend to the feeding. Mrs. Roberts helped us make pens for them. We help milk the cows and bring in the sheep. We have quite a variety of work. I want to tell you how I helped to conquer Villa last summer. He had given us a lot of trouble destroying our crops and breaking our fences. One day Mr. Roberts caught him and put a rope around his neck, then we tied his feet and Mr. Roberts strapped him up to a post and put a rope on his jaw and Mrs. Roberts pulled back on the rope. I took a board and put on his head between the board as a pry. Brother George held back the rope on his legs. Mr. Roberts took some heavy wire and the pinchers and put the wire through his nose and twisted it into a ring. I tell you he kicked and squealed, but we had him fast. After Mr. Roberts got him fixed we turned him loose, and he ran for the woods and hid away and sulked for several days. He kept his nose out of our business for some time afterward. I suppose it will be hard for you to believe that Villa was captured. You will believe me though when I tell you that Villa was Mr. Roberts' Duroc boar hog. I think he was properly named, for he was always causing trouble. I enjoy reading the children's letters and Joe Ashlock's stories. Mrs. Roberts says she can tell some bigger stories of frontier life than he can. She and her brothers took a homestead on the Nez Perce Indian reservation in Idaho. Her name was Mary Finney before she married. She said if I would send this to The Farmer there would likely be lots of people read it who knew her. Give my love to Joe Ashlock.—Herbert E. Nye, Westport, Wash.

**Keep People From Killing Birds.**

Dear Aunt Nellie: May I become a cousin? This is the first time I have written to the Corner. I will be 11 years old January 9, 1919. Have I a twin? If so I wish he or she would write to me. I like to read the Children's letters. My father takes the Farmer. I have one brother. His name is Boyd. My half sister is married. Her name is Vay. We have three horses. Their names are Bob, Babe and Pet. Bob and Babe are our work horses. Pet is our pony. I like to ride her very much. My little cousin has a Shetland pony. His name is Mike. We have two cows. Their names are Maud and Sadie. I read in one girl's letter that their cow's name was Louise. That is my name. I have brown hair and brown eyes. I know how to knit and crochet. I got a crochet bag and a dress for my birthday. I have joined the Liberty Bell Bird club. The club is to keep people from killing birds. I am going to buy thrift stamps. My friend is writing, too. Her name is Helen Stanley. We have a dog named Jack. He taught me how to walk. He would take me by the arm with his teeth and I would not fall.—Louise Hannah, Box 52, R. F. D. 1, Mica, Wash.

**Play Games of All Kinds.**

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. I wrote once and I never saw my letter in print. Papa has 23 horses and six cows and five calves. We have 40 chickens. Mamma and I planted a garden. I have a brother and half brother and they are both in school. My own brother is in the eighth grade and my half brother is 7 years old and in the third grade. He is as tall as I am. I am 11 years of age. I am four feet and three inches tall. I have dark hair, blue eyes and summer freckles. I had a little schoolmate to come and stay all night with me last Saturday. Her name is Verona Faulkner. We had lots of fun playing games of all kinds. My teacher's name is Miss Larsen. She is a good teacher. I like her fine. I can knit, tat and crochet and sew on the machine. I am taking lessons on the organ.—Royaline McMurry, R. F. D. 1, Bickleton, Wash.

**Fill Penny Slips.**

Dear Aunt Nellie: This is my first time to write. I am 12 years old and my birthday is March 24. Have I a twin? If I have I would like to hear from her or him. I have some freckles, brown eyes and brown hair. I am four feet 11 inches tall. Beulah Garner is my chum at school. I have three sisters and two brothers. My sisters' names are Ethel, Lola and Sylvia. Ethel is 19 years old, Lola is 17 and Sylvia is 10. My brothers' names are Clarence and Harold. Clarence is 15 years old and Harold is 5. I live on a 160-acre farm. Papa has two horses, four cows, two calves, nine pigs and mama has 17 old chickens and 29 young ones. I have joined the junior Red Cross. Our school has knitted five afghans. We had a Red Cross sale and got over $400. This money will help the soldiers. The school also filled penny slips. Each slip was a foot long and had 16 pennies to each foot. We filled enough to amount to $4.48, which went to help the Belgian children who are suffering. There are some places not far from here that are nice to see. One place is where the people here get their electricity for their telephones. They call it the powerhouse. There is a large falls and a bridge down below it. As we crossed the bridge the water looks white, is a flume where the water pours down out of the irrigation ditch into the bridge the water looks white. There other falls and rapids, but they are not so pretty.—Goldie Smith, R. F. D. 1, Box 41, Rice, Wash.

**Will Raise a Pig.**

Dear Aunt Nellie: My mother takes the Farmer and I enjoy it very much. May I join your Corner? I am nine years old and in the fifth grade. I am sun tanned, have brown hair, blue eyes and very red lips. My eyelashes are long and brown. I have four sisters, but one is dead. My sisters' names are Rebecka, Dorothy and Sara. I will tell you the books I have head: The Lamplighter, Alice in Wonderland, Little Prudy, Grimm's Fairy Tales, Camp Fire Girls, English History, Old Testament and Jan of the Windmill. I am very fond of reading and one of the reasons I wish I lived in the city is that they have libraries. There are other reasons, too. I have 12 thrift stamps and I am going to have five or six war savings stamps this year and a $50 Liberty bond. You see, I am going to have a pig this week because I have joined the pig club and I am going to pick huckleberries and gooseberries this year. Huckleberries grow a lot in Lake Bay. I wish to be enrolled.—Anna Aronin, Lake Bay, Wash.

**George's Dog Is Cross.**

Dear Aunt Nellie: This is the first letter to the Children's Corner, and I hope it will not be the last time I write. I was 10 years old the second of June. Have I a twin? If so, I wish she or he would write to me. We have nine cows and four calves. We have four horses. Their names are Dick, Balse, Bonnie and Bessie. I have a puppy. His name is Pedro. I have a pet hen. Her name is Ruth. My brother nice. I have two brothers and one sister. Her name is Ruth. My brothers' names are Jay and George. I have a book of thrift stamps and enough money for one more stamp. My brother Jay has a bond and so has my papa. My brother George has a dog and it is cross. We have 30 chickens and two ducks. I do not go to schol. Mama teaches me at home. I am in the fourth grade. We have a car. I like to ride in it. We have a homestead. My papa and Jay work at a mill. I am trapping gophers and squirrels. For gophers I get 10 cents, and for squirrels, five cents.—Miriam Miller, Addy, Wash.

**Pretty in the Summer Time.**

Dear Aunt Nellie: I have been reading the letters right along and like them very much. This is the first time that I have written to the cousins. May I become a cousin? I am 15 years old and my birthday is June 21. Have I a twin? If so I wish she would write to me. I would gladly write to her. We live about one mile and a half from school and I am in the eighth grade. We live on a 220-acre farm. We have three horses. Their names are Dell, Fly and Muggins. I have a rabbit and her name is Fluff. She has four baby rabbits. I have a bantam hen. I have three sisters and one brother. My sisters' names are Alice, Rosie and Velma. Alice is older than I am and Rosie and Velma are younger. Dornie is my brother and he is 10 years old. We live on the foothills of the Cascade mountains. It is very pretty up here in the summer time.—Lena Nowlen, Alpha, Wash.

**Edith Joins the Cousins.**

Dear Aunt Nellie: I have never written to the Children's Corner before. I am 15 years old September 19. I have real black hair, blue eyes and a fair complexion. I am 5 feet 7½ inches tall. I am in the eighth grade. Have I a twin? If I have I would like to correspond with him or her. I have three sisters and three brothers. My sisters' names are Geneva, Frances and Esther. My brothers' names are Oscar, Edgar and Orvall. We have a great number of cows and horses. I have one horse of my own. Her name is Mollie. My father owns 1789 acres of land. I belong to the Red Cross. I have knitted eight wash cloths for the boys. My friends, Ellen Elsensohn and Mildred Riley, are writing, so I thought I would write. May I join the Children's Corner? —Edith Marie Van Ausdale, Pomeroy, Wash.

**Sacqualmie Falls Are Beautiful.**

Dear Aunt Nellie: We take the Farmer and I saw such interesting letters from the other cousins and I thought I would write. I hope this will not be my last. I am 12 years of age, my birthday is May 20. Have I a twin? If so I wish she would write to me. We are going on a picnic Saturday to the Snoqualmie Falls. It is a beautiful falls. I hope all the cousins have seen it or could that have not. I have two sisters and one brother. My oldest sister is married and has a baby girl. She is awfully cute. Her name is Elberta. My other sister's name is Elnora. She is 17 years old. My brother's name is Howard. He is 13. He is in the same grade as I am. My oldest sister's name is Elsie May. We are trying to start a junior Red Cross and I am going to join. I think this war is a terrible thing. I have no relatives in the war. We live on a small farm about 12 acres. We are milking four cows. Their names are Pansy, Daisy, Rosy and Reddy. We also have one heifer named Violet and two calves. I have three pet cats. Their names are Whitefoot, Sally and Tommy. The condensery where we were shipping milk burned the other day, so we have to separate now. It was a terrible thing. I will try and write again soon. I hope Aunt Nellie and the cousins are well.—Bessie Violet Moser, R. 1, Pleasant Hill, Tolt, Wash.

**All the Flowers She Wants.**

Dear Aunt Nellie: This is the second time I have written to the Corner and I hope it will not be the last. Papa has rented 260 acres. Papa has 260 acres to seed next fall. I was very glad to see my letter in the Farmer, so I thought I would write again. I have another little puppy dog. His name is Purel-Curle, so he has a very nice name. I have moved to another place now and I do like it better now, after I moved. There are a let of flowers here, so I can have all I want. I am very glad for that. I have lots of fun at home playing with the two dogs and the cat. I hope all the cousins are feeling fine. One day I went home and my puppy and I saw a lizard and I made my puppy chase it and so he did and the lizard went down in a hole. A snake came and it was about to bite me, but I surely did kill it. I have seen six snakes and they are all the same kind. I have planted some flowers. They are coming up fine. They are house plants. I do love house plants and outside flowers, too. I like sunflowers awfully well. I have planted candytuft and snap-dragons. They are all up and I think they are very pretty. I wish some of my cousins would write to me. I will answer their letters as soon as I get them. I hope Aunt Nellie will enjoy my letter.—Hilda Knutsen, Ringold, Wash. (Aunt Nellie did like your letter, dear. Come again soon. Aunt Nellie.)

**Brother's Fighting in the Trenches.**

Dear Aunt Nellie: We drill at our school. My brother is the captain. We have a Junior Red Cross. We meet every Friday and make gun wipes, knit and sew some times. I hope every one is helping Uncle Sam and our boys over there. My brother has been in the trenches for about three weeks now. I think all the people that are not helping this war now will be pretty soon, don't you? I have two Aunt Nellies now, counting you. My other Aunt Nellie is in Alaska. She is far away. My uncle is there, too. I did have an Uncle Sam, but he died. I am glad school will soon be out. I hope the Corner will grow bigger next time I write and I hope every one and Aunt Nellie, too, will like my letter.—Elzina Rogers, R. F. D. 2, Box 12, Arlington, Wash. (We do like it, Elzina, come again. We are proud of your brother. Aunt Nellie.)

**Knitting for the Red Cross.**

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. I enjoy reading the letters very much. I was 14 years old March 8. Have I a twin? I was in the eighth grade last term. I haven't heard from my examinations yet. I am knitting for the Red Cross. I like to knit. Do you? I own a Liberty bond. I joined the Red Cross and I gave $2 to the Red Cross. I have a pet dog whose name is Teddy. He is a big yellow dog. We have five cows and he helps chase them from the pasture. If I have a twin I would like very much to hear from her or him.—Elizabeth Anna Green, R. F. D. 3, Box 19, Odessa, Wash.

**Two Brothers in War Service.**

Dear Aunt Nellie: I hope you are well. May I become a cousin? I have two brothers in war service. One has gone to Texas and one is at Tacoma Broadway. Have I a twin? If I have I wish she or he would write to me. I am 11 years old and my birthday is December 17. I will tell you some riddles. In in round round does that thing and then sits down, what is it? I know the answer to one riddle. It is Milwaukee. My name is not Tracy but Teresa—Teresa Germont, Route 1, Greenacres, Wash. (Aunt Nellie is sorry she has been misspelling your name, Teresa. Come again. Aunt Nellie.)

**Nine Little Chicks of Her Own.**

Dear Aunt Nellie: This is my first letter to the Children's Corner. I am 7 years old. My birthday is February 17. I help mama plant garden. I have nine little chickens, all my own. Mama has 78 little chickens. I have one sister and one brother. My sister's name is Ona and my brother's name is Wallace. Sister and I belong to the Junior Red Cross.—Martha Floch, Hooper, Wash.

**Ethel Is a Red Cross Helper.**

Dear Aunt Nellie: This is the first time I have written to the Corner. May I join the Corner? I was 13 years old June 15. I have five brothers and two sisters. My brothers' names are Clyde, Ralph, Paul, Howard and Harley. My sisters' names are Lottie and Evelyn. Clyde, my oldest brother, has to go to war some time this summer. Harley is my youngest brother. He is 2 years old. I wish the war would end soon, but I don't want Germany to win. We had a Junior Red Cross as long as school lasted. It won't start until school begins again. I helped knit wash rags, piece quilt blocks, sew rags together to crochet mop cloths, and made a comfort kit for the Red Cross while school lasted. I have one little nephew. He is four months old. His name is Virgil Louis Johnson. I can tell the answer to one riddle that Ida Shaw sent. The answer is Milwaukee. I will give some riddles. What is it that is round at each end and high in the middle? What is the most bashful thing in the world? Why is a host like a riddle? Big at the bottom, little at the top, a thing in the middle goes flippity flop. What might the man who raises and lowers the windows in a bank be called? I will write again and tell the answers to my riddles. Ethel Faye Kellogg, R. F. D. 1, Baird, Wash.

**Works in the Field.**

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. Our school closed May 24. I was glad when it did because my friend and I have fun swimming at Salmon creek. We start in the morning and take lunch and stay all day. It is lots of fun. My birthday was April 27. My brother's is May 30. There is nothing to do till June. I'll have to do lots of work in the fields in the summer. I don't like to, but I have to with my brother, Clarence. He is 12 years old, but will be 13 May 30. I have a sister and brother married. I am the baby of the family. I have a sister. Her name is Rhea. She is 14 years old. Have I a twin? If I have I would like them to write to me or any of the other cousins.—Doris Decker, Toledo, Wash.

**Father and Brother in Alaska.**

Dear Aunt Nellie: I am 8 years old and my birthday is November 21. I am in the third grade. I have four sisters and one brother. My brother is in Alaska with my father. He is 16 years old. His name is Peter. My sisters' names are Martha, Gertrude, Sigred and Gladys. We have two cows, one calf and a horse. The cows' names are Molly and Beauty. The calf's name is Tussy and the horse's is Dolly. We have 21 chickens. I joined the junior Red Cross. My teacher's name is Miss Rau. We are going to Colby. We got white slippers and white stockings. Our cat has kittens, three are gray and one is black. Our dog is black.—Clara Peterson, Box 32 3-4, Colby, Wash.

**A Member of the Red Cross.**

Dear Aunt Nellie: We take The Farmer at our house and I also read the Corner. I find twins of my age. I am 12 years old. We live five miles from school. I have only one sister. I am a member of the Red Cross at school. This is the first time I have written to the Children's Corner. I have had 100 in spelling every day I went to school but two days. My teacher's name is Miss Meeker. She is the best teacher I have ever had. I have two cats of my own. Their names are Susan and Pussy. My sister's cats' names are Pearl and Kitty. We have one dog.—Anna Apold, Box 46, Milan, Wash.

**Brother Is Working in the Woods.**

Dear Aunt Nellie: This is my first letter to the Corner. I am 12 years old and will be 13 August 11. I have two sisters and four brothers. My oldest brother was drafted. He was in Camp Lewis. Now he is in South Bend. He is working in the woods. We have a car. I am a member of the Red Cross. Our daffodils and daisies are blooming. We are having fine weather. It is raining now. My father takes the Farmer and I read most of the letters. I have not read them all in the paper of today.—Anna Marie Nymeyer, R. F. D. 1, Lynden, Wash.

**Brother Is in the Navy.**

Dear Aunt Nellie: I am 8 years old and in the third grade. My teacher's name is Miss Rau. I go to the Banner school. I have a brother in the United States navy. I have 12 thrift stamps. I have four sisters. One is married. My dog's name is Sport. I have a pet sheep with two lambs.—Ole Jonsen, Box 33, Colby, Wash.

---

During the last week Aunt Nellie has received letters from the following cousins: Gena Baungart, Carl Jones, Helen Hager, Margaret Lee, Hazel Smith, Mary Feegarden, Ethel Miller, Eva Priddy, Alma Hansen, Esther Grunden, Clara Grunden, Ellen Hannus, Bertha Hannus, Martha Hannus, Ula Easterling, Sallie Garry, Dorothy Butz, Nina Fish, Zelda Northcutt, Alga Shermer, Libbie Latimer, Lydia Young, Irene Knight, Gladys Arnold, Louise Murdock, Hazel Rosengranz, Mildred Webler, Alice Christensen, George Schew, Philinde Fisk, Borghild Nelson, Ida Schmidt, Tessie Duffy, Gladys Cole, Blencha J. Pete, Elsie Ashmore, Lois Carnahart, Agnes Sals, Bertha Luther, Euphemia McPherson, Helen McGinnis, Earla Lower, Marion Turner, Hilma Anderson, Gladys Strong, Violet Sheckler, Edna Sheckler, Marion McCormick, Phyllis Curtis, Lois Chance, Sarah Sturgeon, Bernice Nourse, Esther Oestrich, Cecilia Colleary, Eddie Sash.

Address all letters to Aunt Nellie, care of The Washington Farmer, Spokane, Wash.

# Townley Urges Farmers to Talk

## *Nonpartizan League Head Opens the Campaign in Idaho*

By J. E. Nessly.

One of the first rallies of the nonpartizan league for the present campaign in Idaho, where the league has a full ticket in the field, was held at Moscow, Idaho, last week. A. C. Townley, president of the league, was the principal speaker. His address in part follows:

"Mr. Chairman, Ladies and Gentlemen: I won't keep you long. I know what you are going to do tomorrow and what time you will get up. You know who I am. I find that my name has traveled ahead of me. All over the state of Idaho they have been talking about me. I am known as the only crook in the United States who is not patriotic. All the other crooks have their reputations for patriotism established. I am going to establish mine before I go from here.

"I want to tell you what we did in North Dakota. The first thing you farmers must learn to do is to talk. It is hard at first, but you will learn it. I held a meeting recently in Missoula. The farmers there tried to secure a place for the meeting. They tried the halls, the streets, the fairgrounds, the roads in the valley. Couldn't get 'em. The farmers could not talk as fast or as well as the people in the valley. I arrived there and found that I had to go about 500 feet up a steep hill to talk, but we had a lot of farmers there and and we practiced for two hours. Then the farmers could talk as fast and as well as the people in the valley.

"In North Dakota the nonpartizan league was built on talk. We did nothing else at first. We never killed a man. We just talked. For a time I was the only man in the United States who talked nonpartizan league. It's different now. There are thousands who wish to God I was the only one that talked it. They are all talking it. If there is a man in the United States who isn't talking nonpartizan league I want to meet him. I have never seen him yet.

"The farmers of Minnesota are learning to talk. A few days ago I met an automobile parade of farmers in Minnesota. There were about 200 automobiles. The farmers have a habit of getting out on the roads together in Minnesota sometimes. Some places that is the only way they can get out on the roads, when they get together. As the parade passed me the people all seemed to know me, and from every automobile came some talk. It was just a few, simple words that any farmer can say. They said: 'We'll stick. We'll win.' That was all they said. Just simple, plain words, but it means much to those farmers. It spells success.

"In North Dakota the farmers have the language pretty well learned. There is not one farmer in ten in that state who can not talk with any banker or lawyer and tell him why the farmers should belong to the nonpartizan league. He can answer all their arguments. A North Dakota farmer came to me the other day and told me of a conversation he had had with a banker who told him I was getting all of the $16. He told the banker he was darned glad to know what was getting it, for he had been farming in that state for 27 years and was poorer and weighed 15 pounds less than when he came, and that was the first time he had ever known who got his money, and when the farmers all learn they will get together and stop the people from getting their money.

"And while we're talking about that $16 let me tell you that there is more talk about that than any other sum of money in the world. A farmer told me that he had bought $500 worth of stock in an insurance company and lost it; he paid $43 too much interest because he did not know how to figure interest, and no one offered to sympathize with him or tried to help him get it back, but he can't get in the city limits of his town without about 15 lawyers, bankers and business men offering to help him get back the $16 he paid to join the nonpartizan league.

"The farmers only get money once a year in North Dakota and other wheat-growing states, so when they join the league we have them predate their checks—that is, date them ahead, so they will come due about the time the farmer guesses he will have his money. A farmer went to a banker and asked him if he thought the farmer ought to go to the automobile show at Minneapolis, and the banker said yes, it was a good show and he ought to go. The farmer said it will cost me $18 or $20. Ought I to spend that much? And the banker asked why he came to him to ask if he could spend $18 or $20, and the farmer answered: 'Well, you made such a holler when I paid $16 to join the nonpartizan league I thought I'd better ask you before I paid out any more money."

"In North Dakota we raise 100,000,000 bushels of wheat a year. That's some wheat. The farmers found that by building elevators and mills and handling the grain at home and taking their business out of the hands of the elevator trust we could save $55,000,000 per year, about $1200 for every son-of-a-gun of a farmer in the state, so we wanted to do this. Before we had been raising the wheat. That's all we had to do with it. We raised it and then turned it over to the elevator trust to handle and sell, and they gave us just enough to keep us raising wheat the next year and the next.

"We went to the business men and the farmers and asked them to join with us and save that $1200 to every farmer. We had been sending our money away. We had to. When the elevator trust got its $55,000,000 and the beef trust got its share and the harvester trust and the banker and the lawyer got their share we had to send to a mail order house because we could save 10 cents on a pair of overalls.

"We didn't want to send our money away, but we had to do it. So we went to the merchants and we told them if they would help us save that $1200 per year we would have so much money that we would not have to send off for our overalls and they would have so much business and so much money that their wives would not have to send away for their clothes. And the merchants saw the logic and they helped us, and we elected every state officer but one and a majority of the legislature and most of the senators, and we got control of the state government.

"And the people liked it so well that last June they repeated the dose and elected every one of the state officers and 18 out of the 24 holdover senators and a majority of the legislature, and the people of North Dakota will keep control for the next 50 years. They have learned to talk. We organized 40,000 farmers and then we organized the merchants, and let me tell you that the merchant—I mean the merchant in the small town surrounded by a farming community—that does not know enough to stand with the farmers deserves to have to go out and work on a farm. How much of the war profits made by the meat trust goes over the counter of the merchant in the small town? Not a penny. He gets his money from the farmer, and the whole town gets its prosperity from the farmer, and the merchant who does not know enough to stand with the farmer deserves to lose.

"We object to the merchants not forming a nonpartizan league of their own and sending one man to where coffee grows and buying coffee for all of the merchants so they can sell it to us farmers at a reasonable price. There are 5000 highly trained high-salaried traveling men coming into Dakota to sell coffee and other things to the merchants at an expense of $15,000,000 a year for salaries and traveling expenses, and we who use coffee pay for it. Let the merchants organize a nonpartizan league and cut off this enormous expense and sell coffee at a reasonable rate to the consumers.

"When they were not satisfied with calling members of the nonpartizan league pro-German they haled them into court and tried to prove it. I know, for I was one of those haled, but they could not prove it, but they still say it and the newspapers publish that I am pro-German and they say it about all members, because we send off for our coffee."

# Sign of Red Triangle

(Continued from page one.)

including everything from the movies to grand opera, is closely allied with the hut because it also carries the home touch. No hardships or dangers have been too great for the player folk to brave that they might amuse for a little while the fighting man. Such artists as Elsie Janis, E. H. Sothern, Walter Damrosch and Margaret Mayo are among those who are entertaining the boys.

Owing to the difficulties of transportation it has been necessary to teach the soldier self-expression so that they are not wholly dependent upon the entertainers. So the "Y" has supplied baseball and other athletic equipment, trunks of musical instruments and stage properties, musical directors to teach the soldiers mass singing and dramatic directors to coach them in plays.

While the men are being made good soldiers they can, at the same time, improve their knowledge of medicine, chemistry, law, or any other profession in the "Khaki college." This is the most recent development and will reach every part of the army.

The sailors, who are constantly in the front line trenches of the sea, have not been forgotten by the Y. M. C. A. At the naval bases and the various foreign ports, the sign of the red triangle bids them welcome as they come in from their ceaseless vigils and dangerous cruises.

The "Y" secretaries cooperate with the army and navy chaplains in their religious services, which are held in the huts. But the Y. M. C. A. has a broader religious program—a program that is nonsectarian and nonpropagandistic. It is first of all the religion of service to men, who are themselves living religion.

## Coming Events.

August 19-25—Convention National G. A. R., Portland, Ore.

August 27-29—National Farmers' conference, Washington, D. C.

**Fairs, Shows, Exhibits.**

August 26-30—Southwest Washington fair, Centralia-Chehalis.

September 2-7—Spokane Interstate fair, Spokane, Wash.

September 16-21—Washington state fair, Yakima, Wash.

September 19-21—Roundup, Pendleton, Ore.

October 1-6—Western Washington fair, Puyallup, Wash.

November 7-13—Northwest live stock show, Lewiston, Idaho.

## Loans to Our Allies.

The United States treasury has extended additional credits of $100,000,000 to France, $9,000,000 to Belgium and $3,000,000 to Serbia. The total of credits advanced to our associates in the war against Germany is now $6,492,040,000.

## WM. H. BOUCK INDICTED.

### Arrested Under Espionage Act.

The following dispatch tells of the indictment and arrest of William Bouck, head of the Washington state grange, charged with the violation of the espionage act:

SEATTLE, Aug. 19.—As the result of a secret indictment returned against him by the federal grand jury last week, William Bouck of Sedro-Woolley, master of the Washington state grange and Pacific northwest organizer of the nonpartizan league, was arrested by a deputy United States marshal at Mount Vernon today.

Bouck is charged on three counts in the indictment with violation of the espionage act. The specific charges relate to a public address delivered by Bouck in Skagit county last June, in which he is charged with having said that if the war lasted three years longer it would cost America $100,000,000,000 and that the war would not end until the rich all filled their pockets.

Bouck was released on $5000 bail by United States District Judge Jeremiah Neterer in Seattle and given until September 3 to enter a formal plea.

## Reduce Crop Loan Interest.

With a view to assisting in the movement of crops this season, the federal war finance corporation is reducing the rate of interest on short-term advances to banks to cover loans made to farmers or merchants for marketing crops from 6 per cent to 5 per cent. To what extent this may be reflected in actual reduction on the interest on loans made to the farmers is a question somewhat conjectural.

# News for Breeders

This is the season when the purebred breeder has the real opportunity to show his stock to those who may wish to get a start of purebreds or add to their herds or flocks. The fair season is soon to be on when hundreds of thousands of people in the country will pass among the live stock and judge them more or less intelligently.

Here is a point that the breeders should not overlook. There is a big opportunity to give information worth while not only to those who are contemplating purchases but to all those who are interested enough to pause in the barns. What are the points that make an animal of a certain kind first class instead of second rate or even scrubby? Most people know in a general way whether an animal appeals to them or not, but only a comparatively few are actually good judges of stock. The breeder or the caretaker who takes a little pains to instruct those who stop to ask questions, or who would like to stop and ask, makes no mistake in so doing.

J. E. Finnicum of Amity, Ore., will be a contester in the Duroc Jersey futurity at the Oregon state fair this fall. While Mr. Finnicum's pigs are young, having been farrowed late in April, they have quality to make them real contenders in their class. His boar, Model Great Wonder, purchased from Waltermeier Bros., of Iowa, sired by Great Wonder, dam by Great Model, is proving himself a sire of large litters of uniformly good pigs.

C. S. Magee of McMinnville, Ore., will show both Holsteins and Durocs at the Oregon state fair this fall. His herd sire, Sir Nida Yamhill Wayne, that was grand champion at the Pacific International stock shows last winter, looks as if he might repeat the trick, when his fitting is completed. Mr. Magee's futurity Durocs are coming on well and he feels he will at least be a contester in a strong show.

O. L. Dunlap of Junction City, Ore., who has started a herd of Duroc Jersey swine, has for a herd sire Oregon Critic, a son of King of Oregon, he of Golden Rod, and out of the great sow Will Advance. He was bred by W. L. Sheard and is a typy, good young boar. Gladys L. and Marie L., Mr. Dunlap's brood sows, were purchased from J. W. Fruit. Each is raising a litter of ten. Mr. Dunlap has three registered Holstein females, also, purchased at the North Poland sale, and will build up a Holstein herd. His herd bull is by Hollywood Lilith Palmyra, and out of Cedar Lawn Mary Second, with a record of 26.06 pounds of butter in seven days.

Ed Rasher, superintendent of the Clifford Reid herd of Jerseys at McMinnville, has enlisted for training in the tank-driving corps and expects to be in France in a few months. Mr. Reid has, however, secured another herdsman and will not only continue test work but will show a full herd at the Oregon State fair this fall. All the test cows are now being milked only twice a day. Goldie's Nehalem Beauty, that produced over 100 pounds of fat in April, with the rest. It goes rather hard with her to be milked only twice a day after being milked three times for two and a half years, but there is a limit to what a man can do without help, says Mr. Rasher.

J. J. Morris of Bandor, Ore., who is the only breeder of registered Berkshires I met in Coos county, has for a herd sire Winona Laurel Masterpiece Eighth by Big Four and out of Silberfa Duchess Fifteenth, a daughter of Laurel Champion. Mr. Morris has a good little herd throughout, of which Aldora Duchess Third has made his best brood cow. H. A.

# Breeders' Department

## JERSEY CATTLE

### High Producing Jersey Stock

**Golden Maid's Prince,** sire of three Register of Merit daughters. One, beginning at 1 year 10 months, produced 341.27 pounds 85 per cent butter in one year; two junior yearlings, 480.40 and 450.08 pounds. Five more, over six months on test, will average over 600 pounds. He was grand champion Oregon State fair, 1913.

**Monmouth Noble**—4 Register of Merit daughters. Three 2-year-olds produced 482.10, 401.30 and 377.07 pounds butter, and one, beginning at 1 year 10 months, 427 pounds.

**ABOUT 25 HEIFERS**

From 8 months to 2 years old. Several to freshen this fall. All daughters of above bulls and nearly all out of Register of Merit cows. Heifers are well grown, typy, best of udders and some are extra fine show animals. Write for full particulars or call and see them. Will be sold very reasonably.
**WM. SCHULMERICK,** **Hillsboro, Ore.**

### TWO RICHLY BRED JERSEY BULLS

Dropped August 22 and November 28, 1917, both sired by a son of St. Mawes Susie, whose official record at 10 years old is 1012 pounds 85 per cent butter in a year. One dam is out of St. Mawes Mabel (660 lbs. butter), and she by Rosaire Olga Lad, sire of over 20 register of merit daughters, including St. Mawes Beauty, 870 lbs. butter as a junior 3-year-old. The other dam is by Poppy's St. Mawes, son of St. Mawes Poppy, 1120 lbs. butter.
Both solid color, cows were bred when I bought them and they have all the productions back of them that made the Ed. Cary herd famous. Will be sold far below their value.

**E. R. McCornack, Florence, Ore.**

### ROSE LAWN JERSEY FARM

Six excellent heifers ranging in age from 2 years to five months. Have a royal young bull of straight Island blood, can go with these for foundation herd. Special price for herd.
Also two register of merit cows of American breeding. Write for pedigree and prices.

**S. H. KAYLER, Twin Falls, Idaho.**

## SHEEP

### FIRST ANNUAL RAM SALE

At the Twin Falls County Fair Grounds at Filer, Idaho, August 23, 24, 1918. 2000 head imported and domestic rams and ewes. All breeds. Write for catalog.
**H. H. Schildman, Sec'y.**
**Filer, Idaho.**

### Romneys, Lincoln, Corriedale

AND HAMPSHIRE EWES AND RAMS.
All pure bred, not registered. Have especially fine lot Hampshire ewe lambs, yearlings and three-year-olds. Any size lot. Write me on any kind of sheep deal.
**H. STANLEY COFFIN,** **Yakima, Wash.**

### SHEEP FOR SALE

Registered Shropshire, Oxfords, Lincoln, Hampshire and Cotswold rams; 50 head registered Shropshire ewes; 3000 stock ewes, Lincoln, Cotswold and Shropshire breeds; 500 ewes, lambs, Cotswold and Lincoln ram lambs. Write for prices.

Young bulls and heifers, sired by Scotch bulls; liberal terms.
**CALDWELL CATTLE CO., Caldwell, Idaho.**

## ABERDEEN ANGUS

### Aberdeen Angus Cattle

**A. H. EAGLESON & SONS.**
Boise, Idaho.

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, Aug. 19.—Activity and strength of provisions were the features of board of trade business today. Pork futures registered net gains of 40@50c; lards, 15@17 1-2c and ribs, 37 1-2@40c. The trade was impressed by an advance in live hogs at the stockyards, where a $20 top was registered. Another factor was the export figures on lard and meats, which, while smaller than last week's were larger than a year ago at this period. Shorts were free buyers and the demand from packers moderately active. October lard closed at 26.82 1-2c and October ribs at $24.95.

There was nothing in corn crop reports to excite trade and although the range of prices embraced 1 1-4c the transactions were local in character and unimpressive in volume. An easy tone at the outset was eliminated for a time by the strength of oats and provisions, but the close found prices practically where they had started. September closed 3-8c lower at $1.61 7-8.

Oats were fairly active, but failed to maintain an early advance. At the opening the trade was disposed to regard oats as cheap compared with corn, but on the advance cash houses sold September. There was considerable changing, too, to the deferred delivery at about 1 1-2c difference.

Shippers were buyers on the sample market, but there was scarcely a nibble from the seaboard. September closed 1-8@1-4c higher at 70 1-8c.

**Chicago Futures.**

| | Open. | High. | Low. | Close. |

The over Sunday receipts of cattle were very light, but the quality of the few was above the average. The market opened very active at firm to stronger prices on all grades. The best steers sold at $12, with good to choice at $9.50 to $10, and the fair to medium kinds at $7 to $8. The fair killers were steady at $5 to $6. Cows and heifers were firm, the better sort selling at $8.35, a few medium grades butchers at $6 to $6.75, and canners at $4.10 to $5. Only a few bulls in the pens this morning, the best heavy bolognas going at $6.50, with the lighter sort at $5.75 and $6.25. Calves remain steady at Saturday's close, the best vealers selling readily at $10 and the poorer grades at $7 to $8. The general cattle market is firm.

General cattle range:

| | |
|---|---|
| Prime steers | $12.00@13.00 |
| Good to choice steers | 10.75@11.75 |
| Medium to good steers | 9.50@10.50 |
| Fair to medium steers | 8.25@ 9.25 |
| Common to fair steers | 5.50@ 8.00 |
| Choice cows and heifers | 8.00@ 9.00 |
| Medium to good cows and heifers | 6.00@ 7.50 |
| Common to medium cows and heifers | 5.00@ 6.00 |
| Canners | 3.00@ 5.00 |
| Bulls | 5.00@ 7.00 |
| Calves | 7.00@10.00 |
| Stockers and feeders | 6.00@ 8.00 |

The over Sunday hog run was only fair, the quality being ordinary. Best hogs brought $19.25, pigs $18.50 and feeders $18. The market is firm, with an upward tendency for best grades.

Today's range of prices:

| | |
|---|---|
| Prime mixed | $19.25@19.50 |
| Medium mixed | 18.50@19.25 |
| Rough heavy | 17.25@18.50 |
| Pigs | 17.75@18.50 |
| Stockers and feeders | 16.00@18.00 |
| Bulk of sales | 19.25 |

The sheep market was active this morning, with a heavy over Sunday run. Best fat lambs advanced a dollar to $15.50, with a slight advance on sheep. The market closed steady at the following range:

| | |
|---|---|
| Prime lambs | $14.50@15.50 |
| Fair to medium lambs | 12.00@13.00 |
| Prime yearlings | 9.00@11.00 |
| Prime wethers | 8.25@ 9.75 |
| Best mutton ewes | 6.00@ 8.50 |

Today's shippers:

Cattle—Wilson Produce company, Northport, Wash., one load; Poland & Hudsell, Wilbur, Wash., one load.

Hogs—B. C. Baird, Ephrata, Wash., one load.

Sheep—Barton & Co., Lyle, Wash., six decks; W. C. Brown, Kamiah, Idaho, ten decks.

Veal—Fancy light, 19c per lb.; do heavy, 13@18c per lb.

Mutton—Fat, 22c per lb.; spring lamb, fat, dressed, 25c per lb.

## Seattle Wheat.

SEATTLE, Aug. 17.—The Washington grain harvest has progressed to the point this week where millers can approximate quality and quantity in club wheat. All club varieties are coming into market freely, and are being used in filling government flour contracts. Millers report that the quality of winter wheat is satisfactory but the yield is below the average. Spring wheat is fair, with quality about an average excepting in late sown varieties, which is now filling well. The winter wheat yield is 23.5 per acre against 21.5 bushels for 1917.

Arrivals of wheat at this terminal during the week have averaged 4 to 5 cars a day, scarcely sufficient to encourage any heavy grinding operations by the millers. Mixed results have shown. In some districts the kernels are plump and fat, on others badly pinched, but the general average of quality is high.

## Portland Market.

PORTLAND, Aug. 19.—The following are produce quotations:

Butter—Cubes, extra, 50c; seconds, 44c; prints, extras, 52c; cartons, 1c extra; butterfat, No. 1, 55c, delivered.

Help Save the Canadian Crops

When Our Own Harvest Requirements are Completed

United States Help Badly Needed Harvest Hands Wanted

Military demands from a limited population have made such a scarcity of farm help in Canada that the appeal of the Canadian government to the United States government for

Help to Harvest the Canadian Grain Crop of 1918

meets with a request for all available assistance to go forward as soon as our own crop is secured.

The allied armies must be fed and therefore it is necessary to save every bit of the crop of the continent—American and Canadian. Those who respond to this appeal will get a

Warm Welcome, Good Wages, Good Board and Fine, Comfortable Homes.

A card entitling the holder to a rate of 1 cent per mile from Canadian boundary points to destination and return will be given to all harvest applicants. Every facility will be afforded for admission into Canada and return to the United States. Information as to wages, railway rates and routes, may be had from the

UNITED STATES EMPLOYMENT SERVICE

Branches at Aberdeen, Bellingham, Everett, Seattle, Spokane, Tacoma, Walla Walla, Wenatchee or Yakima.

# Houser Buys Mills

## Deal Involves Several Millions

M. H. Houser, second vice president of the federal grain-buying corporation, and representative of that corporation in the northwest, is the principal in probably the biggest flouring mill transaction on record in the northwest, according to advice from Portland. Mr. Houser, with several associates, has taken over the property of the Portland Flouring Mills company, the Puget Sound Flouring Mills company, the Puget Sound Warehouse company, the Pacific Coast Elevator company and the subsidiary corporations, say the reports. While the consideration has not been announced it has been estimated at something like $10,000,000.

The transaction covers a score or more of mills throughout the northwest having an aggregate daily capacity of more than 11,000 barrels of flour. The mills situated in Portland have a daily capacity of 4000 barrels alone.

The Portland Flouring Mills company was formerly under the control of the late Theodore B. Wilcox, and since his death several weeks ago, has been in charge of R. B. Wilcox.

It is stated that the transaction was made by Mr. Houser with the approval of Federal Food Administrator Hoover under whose jurisdiction the grain corporation, of which Mr. Houser is northwestern representative, is operated. It is also reported that Mr. Houser plans to place the property in trust for the duration of the war or until he is relieved of his duties with the federal grain corporation. It is said that R. B. Wilcox will sever his connection with the milling concerns when the reorganization plans are completed. J. W. Ganong, the present general manager of the Portland Flouring Mills company, will be continued in that capacity with his entire operative organization, it is said.

### He Was Right.

There were introductions all around. The big man stared in a puzzled way at the club guest.

"You look like a man I've seen somewhere, Mr. Blinger," he said. "Your face seems familiar. And a funny thing about it is that I remember I formed a strong prejudice against the man who looks like you; although, I'm quite sure, we never met before."

The little man laugher softly.

"I'm the man," he answered, "and I know why you formed the prejudice. I passed the contribution plate for two years in the church you attended."

## FARM SERVICE WAR FLAG

A Flag for Every Farm Home in the Northwest

An Extra Small Star for Each Farm Worker

(Patent applied for.)

**Get a Farm Service War Flag.**

The man, woman, boy or girl who stays at home and works hard to produce necessaries for the soldiers in Europe is entitled to real war service recognition. That is the idea back of the farm service war flag. It is pennant-shaped, made of the good old red, white and blue, and has a star representing the producing farm home. Small stars are added to represent each worker of that home.

# Trappers of the Ozarks

(Continued from page twenty.)

The others did the same. Ben and Jodo repriming both their guns and their pistols. And they also removed the flints from their locks and replaced them with others from their ammunition pouches.

From the party's present position, the canoes coming down the river were hid by a bend. But the white men could see at least a mile up stream, and sat waiting for the approaching canoes to round the bend.

"Let's hope you boys were mistaken, and that they're not red men but white men," Boone presently remarked.

"Yes, we'll hope we were mistaken, but I'm afraid we were not. Anyhow, we'll soon know for certain," Ben answered. And he rose and stood in the bow of his canoe, his gaze glued to the point where the dreaded canoes must soon appear. Minute after minute passed.

"There they come!" Jodo cried out, as the first canoe emerged into view, quickly followed by another, and that by a third. They were still rather far away.

Ben scrutinized the occupants carefully. "They're Indians! And we're in for a hot fight," he announced, in quiet tones.

(To be continued.)

# These Three Farm Papers Reach 80,000 Farm Homes

## Take Advantage of the Low Combination Rate for Insertion of "Want" Ads in These State Farm Papers

The "want" ad is a method of communication which will prove helpful at various times to all of our farm folks.

Do you desire to get in touch with a reliable, experienced hired man? The "want" ad brings your need to the attention of competent workers throughout three states.

Do you wish to turn used machinery into cash? The "want" ad reaches farmers in other districts who have use for your discarded implements, and who will probably be glad to make the saving you will be able to offer them.

Have you farm products to sell, such as live stock, poultry, seeds or dried fruits? Once more, the "want" ad in the three state farm papers offers a solution for the difficulty. It reaches the very class of homes where there is a constant demand for these things..

Have you a piece of land for which you are eager to find a buyer? The "want" ad in The Washington Farmer, The Oregon Farmer and The Idaho Farmer affords a splendid method for making a sale; inasmuch as these three papers are read by tens of thousands of farm owners and farm renters, a goodly proportion of whom are considering the purchase of farms or orchards in other sections.

To sum up, our "want" ads enable you to reach the people who have what you want or who want what you have. They are easy to insert. They are low in cost. Even if there is nothing you care to advertise at this time, you will always find interesting, profitable reading in our "want" ad columns.

Rates are printed at the top of the "want" ad columns. Be sure to read the "want" ad page today!

**Send Orders and Inquiries Regarding "Want" Ads to The Washington Farmer, Review Building, Spokane, Wash.**

AUGUST 29, 1918.

NOTICE TO READERS: When you finish reading this paper, place a U. S. 1-cent stamp on this notice, mail the paper and it will be placed in the hands of our soldiers or sailors destined to proceed overseas. NO WRAPPER. NO ADDRESS. A. S. Burleson, Postmaster Gen.

## Fairs Have Special Value This Year

*Will Demonstrate Solutions of Problems War Has Forced Upon the American People.*

Interstate Fair, Spokane
**September 2-7**

State Fair, Yakima
**September 16-21**

# Should Study Community Fairs

## Small Fairs Are Seen as a Means of Improvement. Some Crops Are Yielding Better Than Was Expected

MEAD, Spokane County, Wash., Aug. 21.—It is to be regretted that more interest is not taken in the various agricultural fairs. It is possible the management is to blame for it in a measure. It seems to me too much attention is given to useless and sometimes harmful entertainments, and not enough to the young people in the way of encouragement along useful educational lines. When they are interested the parents become interested and a two-fold effect is had. Any way, the youth will be the mature citizens in a short time, and it seems to me we should do everything possible for them. The destiny of our country will be in their hands in a few years at most. If the people of the city feel that they must have the sort of entertainment furnished in large proportion at our fairs, give it to them in some other way and at some other time. If no other way can be found to make the large fairs more useful and successful, break them up and establish smaller ones in the various smaller towns managed very largely by the people in whose interest the fairs are supposed to be—the farmers. I think it will be conceded by all who have given the matter attention that more interest and enthusiasm is shown at the small fairs, with relatively much more good resulting. Let us investigate the small community fairs and the resultant good that comes from them; it may be of service in handling the fair proposition.

This community is fairly prosperous this season as it has not been really hard hit. It is to be regretted that more stock could not be retained, but it was impossible under present feed conditions, especially as to mill feed. If something is not done to materially increase mill feeds, less stock will be kept next year than ever. There will be no hay shipped here, the prospect being that people can get their cattle through by utilizing the straw in the community. There will be a few oats to ship out, but no other feed grains. There will be sufficient amount of both wheat and oats for seed, and no necessity to ship any in; in fact there will be considerable surplus, especially of wheat. The late rains will be very beneficial to late apples and vegetables.

GEORGE HAMPTON.

### Hold Fair Despite Shortage.

OTHELLO, Adams County, Wash., Aug. 17.—The Adams County Fair association is getting busy and expects to have a fair in spite of the very short crops. We have noticed that the men who are the exhibitors at fairs are invariably the best farmers and leading citizens of their neighborhood. It's an incentive to greater efforts and adoption of later methods for a man to go and observe what these public spirited men have done. Our vicinity happened to be one of the hard hit localities and some farmers are at a standstill, undecided whether to give up or try to continue. Last year the writer paid $144 for threshing 150 acres of wheat at 10 cents a pushel. This year we cut only 80 acres out of 300 seeded, paid 40 cents per sack for threshing and the thresherman got our check for $17.60, and ours is a fair criterion to go by for this vicinity. The farmers are after federal aid to get seed. We must have that aid next spring to get feed also or the acreage will be greatly diminished.

A. O. LEE.

### Yields Are Below Normal.

COLFAX, Whitman County, Wash., Aug. 21.—Crop conditions throughout the county are approximately 50 per cent of normal. A few isolated farms are producing normal yields of wheat. Oats are very light as to yield, although quality is good. The potato acreage is small, but the yield and quality will be fair in spite of the dry weather. There will be no seed to ship out of the county, and it will be necessary to ship in mill feeds and probably hay. We have produced a sufficient amount of seed wheat for fall seeding, but it will be necessary to ship from one part of the county to another.

I have just received reports from every locality in the county and in every case the community has abandoned the idea of having a local fair. The cause, I attribute to the poor gardens, generally inferior crops and shortage of pasture and feed for live stock, bringing about conditions which make it impossible to feed them for show purposes.

F. L. KENNARD.

### Crop Conditions Are Good.

OLSON, Spokane County, Wash., Aug. 17.—Crops are generally good on the Queets river. Pasture is good and stock is in good condition. Hay is practically all in and was harvested in good condition. We have been having thunder showers, which will help gardens and potatoes. One car of beef cattle has been shipped from the Queets, and there are more to be shipped later during August and September.

M. L. DECHMAN.

### Have Good Crop Yield.

FAIRFIELD, Spokane County, Wash., Aug. 18.—Harvest is pretty well advanced and is about three-fourths done. The yields of peas and oats are much better than was expected at the beginning of harvest. The wheat crop is below the average, but of a good quality. Taking everything into consideration, this community can be considered prosperous and is. Fall wheat seeding is being done by some farmers in summer fallow and disking of pea land at an early date whether sufficient rain comes or not. Fall wheat on pea stubble this year has yielded as good as or better than the average summer fallow. Feed is plentiful, especially pea straw, and is of good quality. It will be difficult to bale the pea straw, as it was very dry when threshed, so is broken up very fine, but the feeding quality is that much better. Seed is plentiful and a local warehouse has a large re-cleaner where all seed wheat sent out is cleaned and graded.

So far nothing has been said or done towards the fall fair as every one has been too busy harvesting to think of anything else. Live stock is in good condition and should improve as the fall advances. Stubble pasture is good.

ROY G. ADAMS.

### Drouth Reduces Crops.

OLYMPIA, Thurston County, Wash., Aug. 9.—Effects of the severe drouth in the early part of the growing period are very apparent in the local crops. The majority of the oats is very short, making harvesting difficult even where the stand is sufficient to warrant harvesting. Reapers and mowers are being used for this purpose to a large extent. Wheat as a whole is looking good. This is especially true with the fall-sown and the later spring sown seed. Rhiz-octonia has caused severe damage to the wheat crop in some districts. Pea crop has suffered heavily through aphis. In some few instances where experiments in spraying the peas were carried out, the saving of approximately half the crop resulted.

C. H. BERGSTROM.

#### Oat and Pea Silage Substitute.

Cattle-feeding experiments at the Wyoming experiment station indicate that oat and pea silage can be substituted for alfalfa hay at two pounds of silage to one pound of hay. During 113 days of the winter of 1915-16 growing heifers with oat and pea silage in the ration made an average daily gain per head of two pounds, costing 8.4 cents daily. Without silage they made an average daily gain of .06 pound on a ration costing 9.4 cents per day. Ten pounds of silage more than replaces five pounds of alfalfa.

#### The World's Big Question.

What of tomorrow, is the world question of today.

# Intelligent Training---The Foundation of Success

This new building of more than twenty rooms was erected for the sole use of The Northwestern, and we make use of every room for school purposes. Ventilation, heat and light have been regulated upon scientific principles. The school is located convenient to the business district, yet sufficiently removed from the noise and rush of the main business streets.

## For Young Men of Draft Age

Men who are subject to the draft, or who will reach the draft age soon may make their advancement certain and their services valuable by training for business. The military service requires thousands of accountants, stenographers and private secretaries. You can qualify for such positions, or at least begin your training with every chance in your favor to be preferred for such work. Begin at once by enrolling with us, as others are doing, even for the time remaining. Ask for our new Nineteeth Annual Catalogue and information on this point. We can help you.

## For Men Not Subject to Draft

If you are above or below the draft age, your services are urgently needed in the business world and in the Civil Service. Business men are anxious to secure men of mature age, as well as young men, to fill those positions which demand men's services. There are thousands of such positions. Calls for men trained for business are coming to us daily. If you qualify yourself for such work permanent employment for you is certain. Now is the opportune time. Ask for our new Nineteenth Annual Catalogue, which will explain these opportunities.

## For Young Women

The demand for young ladies as bookkeepers and stenographers is so great that it should not be necessary to refer to it. Business houses and the government are in serious need of your services. Young ladies have not responded to the demand as fully as might be expected when it is considered how widely this need has been published. The demand is becoming more urgent with each succeeding month. You can qualify for one of these exeellent positions in a remarkably short time. Our new Nineteenth Annual Catalogue will explain to you how readily this can be done. Ask for it at once and begin to plan a successful business career.

# Will It Pay Wheat Grower to Ship Direct?

## *Houser Has Not Yet Answered This Question to the Satisfaction of the Grain Producer*

**Theoretically the wheat grower has the alternative, if dissatisfied with the prices and grade offered him by private buyers, to ship his wheat to the government buying agency at Seattle, Tacoma or Portland. In other words, if he is dissatisfied with the prices and grade offered him by the huge privately owned combination that has been formed by Mr. Houser, he can deal with Mr. Houser in the latter's capacity as director of the federal grain-buying corporation for the three states of Washington, Oregon and Idaho.**

The authoritative announcement is made from Portland that M. H. Houser, second vice president of the United States Grain Buying corporation, and executive representative of that governmental organization in the northwest, is the principal in probably the biggest flouring mill combination on record in the Pacific northwest. Mr. Houser, with several associates, has taken over the property of the Portland Flouring Mills company, the Puget Sound Flouring Mills company, the Puget Sound Warehouse company, the Pacific Coast Elevator company and the subsidiary corporations. While the consideration has not been announced it has been estimated at something like $10,000,000.

The transaction covers a score or more of mills throughout the northwest having an aggregate daily capacity of more than 11,000 barrels of flour. The mills situated in Portland have a daily capacity of 4000 barrels alone.

Mr. Houser's identification with this deal must be embarrassing to him in view of his public obligation, since it will require him to make it plain that if conflict of interest should arise between his corporation and the public he will serve the public and not the interests of himself and his business associates.

Here is a combination of flour millers, warehouse and elevator owners and grain buyers which will have a practical mastery of the handling of the grain crop of the Pacific northwest. It will have the power and privilege, under the new grain marketing methods of the federal food administration (subject only to such checks as Mr. Houser, as Pacific northwestern director of the federal grain buying corporation, may raise against it), of buying wheat at any prices it may be able to force upon the growers. There is nothing in the new regulations that would prohibit this great combination, or any of its individual members, buying a farmer's wheat for $1 per bushel if the grower's necessities compelled him to accept at that price.

This combination headed by Mr. Houser has the further power and privilege (subject only to such doubtful limitations as Mr. Houser, as head of the federal grain buying corporation, may place upon it) of charging unreasonable and excessive intermediate charges, such as warehouse and handling charges, interest, insurance, grading, etc.

As a matter of fact and record, the North Pacific Millers' association and the Northwestern Grain Dealers' association, at a meeting in Seattle shortly after the issuance of the food administration's new grain buying regulations, entered into a compact to charge growers intermediate charges totaling eight cents per bushel, which is about double the previous ruling charges in this region.

Theoretically the grower will have the alternative, if dissatisfied with the prices and grades offered him by private buyers, to ship his wheat to the government buying agencies at Seattle, Tacoma or Portland. On this point the official statement of the Food Administration Grain corporation says:

"The producer or dealer should always keep in mind that if he is not satisfied with the prices paid by individual buyers, or with the grading of wheat, his protection lies in his being able to ship to the Food Administration Grain corporation at the various terminal markets named above."

In other words, if he is dissatisfied with the prices and grades offered him by the huge privately owned combination that has been formed by Mr. Houser, he can deal with Mr. Houser in the latter's capacity as director of the federal grain-buying corporation.

Realizing the tremendous importance to the grain growers of vigorous, disinterested competitive buying at the terminals by the government, The Washington Farmer wrote to Mr. Houser that "wheat growers of Washington, Idaho and Oregon are becoming anxious to learn just what steps they must take to ship grain directly to the United States Grain corporation." The following correspondence then followed:

"To the Editor of the Farmer: Answering yours of the 11th inst., beg to say that the information you are seeking has gone out generally to the dealers and mills of the three states comprising zone 10. To the grain dealers there has been issued Bulletins No. 1 to 3 inclusive, and to the millers and manufacturers of flour and feed has gone forth Milling Bulletins No. 1 to 9 inclusive, together with some circular letters and data of like nature.

"We feel sure that by this time the grower is fairly well versed in the procedure that is to be followed this year. In dealing in grain this year a broad latitude is allowed the dealers and there should be no reason why a producer and dealer can not get together on a sound trading basis. The grain corporation stands ready to protect the fair price basis in case the producer feels that he can not meet with fair treatment from the dealer.

"Regarding the minimum carload feature, it would be much better to have two or more small growers pool their tonnage with a view of making up a maximum car for shipment.

"FOOD ADMINISTRATION GRAIN CORPORATION.
By M. H. HOUSER, Second Vice President."

As this letter from Mr. Houser does not give any direct and detailed information to the grower as to how he can ship direct to the food administration grain corporation, and as the grower will be in no mood to seek this information from the grain buyer with whose terms he may not be satisfied, a second letter on the subject was addressed to Mr. Houser by the editor of the Farmer as follows:

"We thank you for your letter of August 12 in reply to our inquiry as to just what steps growers must take to ship grain directly to the United States Grain corporation. We can not agree, however, with your belief that the growers are fairly well versed in the procedure that is to be followed this year.

"We note from your letter that you have sent out three bulletins to grain buyers and nine bulletins to millers, but so far have heard of no informative bulletins to the grain growers.

"As you say, 'in dealing in grain this year a broad latitude is allowed the dealers,' and you add, 'there should be no reason why producer and dealer can not get together on a sound trading basis.' We find, however, that a wide difference of opinion has arisen as to what constitutes a sound trading basis. A recent convention of northwestern dealers and grain buyers decided that total intermediate charges of about eight cents a bushel would be such a sound trading basis, but representative growers in this region believe that the proposed charges are excessive and are anxiously waiting helpful information in detail that will point the way to direct shipments by growers to the grain corporation.

"Our purpose in seeking this information is twofold: To aid and expedite the prompt delivery of the wheat which the United States food administration so pressingly needs for our armies and navy, and for the military and civilian requirements of our allies; and to help the growers secure the full measure of compensation that is due them under the food control law of congress."

In reply to this letter Mr. Houser says:

"Any one can ship us wheat, for which we will account to them after the car is unloaded on the basis of terminal weights and grades according to our price schedule, fully set forth in our grain bulletin No. 1, a copy of same herewith attached, with the provision that there are terminal facilities available on arrival of car in which it can be unloaded. If car should arrive during a period of congestion demurrage on it would be for account of shipper. The grain corporation also makes a charge of 1 per cent for handling consignments. We make no advances against bills of lading. All cars should be billed to the Food Administration Grain corporation, sending bill of lading and shipping advice in ample time so that they will have a record of car before it arrives. If a farmer is dissatisfied with prices offered by his local dealers or representatives of terminal dealers he has the alternative of consigning to the grain corporation on the above terms."

This last letter from Mr. Houser does not give as much helpful information for the farmer as might have been expected from the government official to whom the growers must look for protection in marketing their crops. In a further effort to get at the basic facts the Washington Farmer has addressed the following letter to Mr. Houser, in his capacity as director of the United States Grain Buying corporation:

"We thank you for your courteous reply to our supplemental inquiry and note your qualifying proviso that competitive buying by the government will be affected by 'terminal facilities available on arrival of car in which it can be unloaded. If car should arrive during a period of congestion, demurrage on it would be for account of shipper.' In other words, should a grower's car arrive at a coast terminal at a time when the privately owned warehouses and elevators were full, the grower would be obliged to leave his car waiting for an indefinite period on a sidetrack and pay a daily demurrage charge to the railroad company.

"It is of the highest importance, if competitive buying by the government is to be practically helpful to the growers, that assured provision be made by the federal grain buying corporation for terminal facilities. The fear that will naturally rise in the producer's mind, from your disquieting warning of probable demurrage charges, unless allayed by prompt action by the government, will practically obliterate the protective feature of its grain-buying program.

(Continued on page 44.)

## Peace Must Be of Allied Make

The following quotation from the Bache Review well expresses the great consideration to be ever borne in mind relative to peace-making:

"Now that the turn of the war has come and defeat begins to make the German staff tremble, it is of the greatest importance that the public should have its opinions stabilized against a negotiated peace and firmly set to demand only the most rigid justice meted out as a verdict against the outrageous and high-handed iniquities of Germany. Innocent blood, mercilessly spilled in torrents during four years of atrocities, cries out against any other settlement of the war. In dictating terms to the destroyers of the world's peace (after unconditional surrender) it must never be forgotten that German unity if not effectively and permanently destroyed now will inevitably crystallize for a repetition of the frightful scheme of world domination, no matter how long it may take to recover."

## Mystery of Milk Nourishment

"There is a certain mysterious property in milk which scientists have not yet been able to isolate, but it is not beyond the realm of possibility to do so," Dr. E. V. McCollum said. "If we succeed in isolating this it will undoubtedly rank among the highest achievements of chemistry. More than that, it will no doubt be one of the greatest blessings the human race has ever known."

The speaker was Dr. E. V. McCollum, of Johns Hopkins university, noted for his experiments proving the indispensable food value of milk, and now lecturing in the Pacific northwest under the auspices of the United States food administration, which is spreading the gospel of the necessity of milk in the human diet.

Dr. McCollum was speaking of the mysterious nourishing properties that are now known to lie in certain food products, notably in milk and eggs, which elude chemical analysis, and which scientists now term vitamines.

Theoretically it is possible to make up a balanced ration which, so far as chemistry can see, contains everything that is essential to human health and vigor. Yet persons or animals fed on such ration do not thrive. We then say that vitamines are lacking.

When one comes to think of it, however, is it not strange that the government must send out instructors to preach anew the doctrine of the "absolute necessity of milk as a human food"—a fact learned by the ancient thousands of years ago? The human race began its higher development with the domestication of the cow. We know, from ancient sculpture, that cattle were domesticated 4000 years ago, and that it was impossible for population to increase rapidly until tribes had access to animal milk.

The sparse Indian population in America when this continent was discovered, and the failure of the red race to advance in civilization, are undoubtedly attributable to its failure or inability to domesticate milk-giving animals. Geologists tell us that parts of the Pacific northwest are the oldest lands upon the globe, the first to be lifted by internal forces above the sea; and other scientists tell us that man was here probably before mankind had occupied the ancient valleys of the Nile, the Tigris and the Euphrates. But civilization rose there thousands of years ago, and savagery lingered here till America was discovered by the white race. Asia and Egypt had cereals and milk; the native races of America, lacking those nourishing blessings, could not multiply nor progress.

## Every One Should Be a Judge

One of the great benefits that will be derived from fair work this fall will be the training that every one will receive in learning how to judge various products at the fairs. The man and woman and the boy and girl who learn how to judge at the fair will learn how to judge for the market. The article that wins first prize at the fair will be the best seller on the market.

The power of discriminating between good stock and poor stock, good crops and poor crops is a valuable asset for any one to possess. But the ability to explain the differences is still more valuable. In training judges for fairs we are training ourselves for better farming and better living on the farm.

## Plan Liberty Investment

It can not be too often or too forcibly urged that every one plan early the investment that he or she will be able to make in bonds of the fourth Liberty loan. The campaign for this issue will be launched on September 28, and will continue for a period of three weeks. During that time the treasury department hopes to be able to sell to people of this country some six billion dollars worth of these securities.

With three Liberty loans already successfully floated, it seems unnecessary that argument be repeated. There is no better investment in the world. There is no more loyal act that a person with money can perform for his country than the purchase of a bond or bonds. It is as essential to the success of the allied cause as is the placing of American soldiers on the battle front. The question that faces every man and woman who can possibly spare money from their absolutely necessary business is not, "Shall I invest?" but rather, "How much?"

## Why Not a Fertilizer Crop?

It has been charged that farmers in the extreme west have been slow to take up the most up-to-date methods of farming. To some extent the charge is undoubtedly true. The virgin soils of the west have been fertile enough to produce crops without the special effort required in some of the older sections, and in addition the areas capable of being cropped have been large per capita. But the time is at hand when the west must put the best ideas of scientific farming into practice.

How many northwestern farmers have ever tried a fall crop designed to be plowed under in the spring for purposes of fertilization? Comparatively few. Yet this is one of the best methods known of maintaining soil fertility. Much of the soil of the west is becoming deficient in humus to an extent that often accounts for the low crop yields in unfavorable seasons. While different local conditions make different crops advisable for this purpose, rye is recognized as one of the best for general use.

In addition to the fertility put into the soil by the plowing under of the cover crop, fertility is retained by the prevention of soil-washing during the wet season. A good covering of rye during the wet season does much to prevent soil-washing and leaching.

## Brand New Hopes Not the Best

Brand new hopes are the prettiest, the most entrancing, and life is not worth while without them; yet they are not the best.

The newest hat from the milliner, the newest coat from the tailor, the newest tie or the newest shoe look the best, and to all intents and purposes are the best—but not so with hopes. Good, well tried and serviceable second-hand hopes are the ones to tie to; hopes that are founded on human experience; hopes with the glamour not quite all gone; right down, every day, serviceable hopes; hopes that plod along with you through the long hours of routine, as well as on rare occasions, give you a glimpse of the mount of transfiguration.

It is not a thankful task to prick the toy balloon of the prettiest hopes, yet a word might save many a tragedy—but it won't.

Hope is the most abiding sustainer in life's work. Good, second-hand, tried hope; "that we through patience might have hope;" yes, good, second-hand hope built upon the enduring foundation of patience.

There is good reason for the hope of many more years of happy neighborly relations if you have patience with some word or act of your neighbor which you can not quite reconcile with neighborly spirit. There is good reason for your hopes for the future of your child if you will add patience to all your other efforts. Above all, have patience with the failure, now and then, of your own best efforts, if you hope for days of sweet content.

## Must Speak German Language

It is a thing to be approved that councils of defense and other officials are continually alert to prevent in this country those things deleterious to national welfare at this critical time in our history. One action that the councils in many states have deemed it wise to take is the banishment of the study of the German language from the public schools. This action is taken for a purpose or for purposes. One object undoubtedly is the prevention of the spread of German sentiment through German literature or through familiarity with the German language. And to whatever extent this object will be obtained, to that extent at least the dropping of the study is to be approved.

But we must not be carried away by our present antipathy for Germany and things German. As the U. S. department of state says in a report recently issued, "one must understand what they (Germans) say, read what they write, and endeavor to learn what they think." The statement contains also this striking sentence: "If we are ignorant of German, we do not know Germany; we only know and see of her what she wishes to show us."

Some day the war will be over and a Germany will live to be reckoned with—not the Germany of today, to be sure, but a Germany that will continue to hold a place in the affairs of the world. In that day we must be able to understand her language in order to deal with her in diplomatic and commercial ways.

## Save Your Garden Seed Now

Some of the garden seed now growing abundantly in your garden will be needed next year when planting time comes. Better save a supply while you can. It is not hard to save seed and quite frequently the home-grown supply is better than any that can be bought from the seed man. Home-grown seeds are suited to local environment and the vigor and productiveness of the plants from which they are selected can be taken into consideration—which is an important point in selecting home-grown seed. Wait until the seed matures, then dry it thoroughly immediately after it has been harvested.

# Manpower Bill Is to Be Passed

## *Great Army Assured; Allies Continue Their Move Forward*

Probably by the time this paper reaches its readers the new manpower bill extending the draft ages to include all men from 18 to 45 years of age will have been passed by both houses of congress and signed by President Wilson. At this date the house of representatives has already passed the bill in practically the same form as recommended by the war department. The senate is taking the matter up for formal action, and it is believed will adopt it without changes in any vital point. It is expected to be ready for the signature of the president by the latter part of this week.

Complete accord is noted in congress on the main object of the bill, which is the placing of a gigantic army on the European battle field at the earliest possible date. Only two votes were cast against the measure when it was placed before the house for final action. One of these votes was by the socialist member of the house. Considerable debate, however, was entered into on certain proposed amendments, chief among which were those looking to the exemption or deferred classification of boys from 18 to 20 years of age. A strong sentiment prevails in congress favoring the keeping of this class of men out of actual army service, but the war department, backed by President Wilson, urges the inclusion of the 18-year-olds as a necessary factor in the formation of the army. The house of representatives finally receded from opposition and adopted the measure as a whole. Another interesting feature of the consideration of the measure in the house was the adoption at one time of an amendment which would include members of congress, state legislators and other public officials in the draft. This amendment, however, was later rejected by a vote of the house.

As soon as the measure is adopted by both houses and signed by the president the war department will announce its plans for registration of the men to be drafted. It is probable that the registration will occur early in September, following which those in class 1 will become immediately subject to call to service.

General March, chief of staff of the army, has officially announced that more than 1,500,000 American soldiers have embarked for foreign service, including those that have been dispatched to Russia. The number of troops will be continued as rapidly as men can be made available and ships be had for their transportation.

### Allies Continue Gains on the West.

Contrary to the opinion that had been expressed by many following the launching of the allied drive nearly seven weeks ago, the drive is being continued with no apparent evidence of early cessation. Comparatively little activity has been reported on the front between Rheims and Soissons, the battle front of which now follows practically the straight line of the Vesle river. During the last week the French, with the assistance of greater or less detachments of British and Americans, have made considerable advances just to the northwest of Soissons, resulting in an advance to Noyon, making almost a straight line from Rheims through Soissons and Noyon to a point some 10 miles east of the recently captured Montdidier. From this latter point north the British, during the last two weeks, have made advances equally great and equally important to those made by the French and Americans further south a few weeks ago. Over a front of more than 25 miles advances of from one to 10 miles have been made since August 8, practically straightening the line to the east of Amiens so that it runs about north and south from the point 10 miles east of Montdidier to the old line east of Arras. A gain of a few miles in the Lys river valley to the north of Arras and Bethune has straightened the line in that sector to correspond to the straightening further south.

It is calculated that since the allied drive began on the Marne front July 18 the battle front has been shortened approximately 50 miles. While this is an advantage to the German armies for purposes of defense, it is perhaps a corresponding advantage to the allies for purposes of offense.

### Surrender Must Be Unconditional.

In debating the new draft bill before the senate last week Senator Lodge sounded a note that should be unanimously indorsed by all American people when he said that no peace which satisfies Germany can ever satisfy America; that we can not accept a negotiated peace, but a peace dictated by the allies on the basis of their objects as repeatedly set forth by allied statesmen. Among the terms of peace which Senator Lodge outlined were included the complete restoration of Belgium, the unconditional return of Alsace-Lorraine to France and of Italian Irredenta to Italy, safety for Greece, independence for Serbia, Rumania and Poland, independence of the Slav peoples and freedom of Russia from German domination, including return of Russian territory wrested by Germany in the Brest-Litovsk treaty. In addition, he said that Constantinople must be made a free port for commerce between the inland regions of eastern Europe and western Asia and the outside world and that Palestine must never be restored to Turkish rule.

### Allies 500 Miles From Berlin.

While many people are wondering if the war may not yet be brought to a successful conclusion this year, it is not amiss to be reminded that the fighting on the western front is now some 500 miles from Berlin. It is still approximately 100 miles from the German border, and several miles even to the Belgian border. While the gains have been exceedingly noteworthy, they have been made a mile at a time, with great effort. In addition to this it must be borne in mind that the German frontier is fortified in the most effective way known to modern military science. Assuming that the allied drive might actually free all French and Belgian soil of the Germans this year or next spring, it is evident that nothing short of a collapse of the German military power could make it anything but a Herculean task to get through the fortified frontier of Germany. One report last week indicated that at one point 90 miles in front of the allied line the Germans were preparing entrenchments as if expecting to be pushed back that far in the more or less near future. This in itself may be significant only in that it indicates that Germany is preparing back of her lines to make the allied advance increasingly difficult with every mile gained.

Without minimizing the importance of the allied successes of the last several weeks, it could scarcely appear at this writing that they are other than a sort of clearing of the decks for the greater drive next spring when 3,000,000 or more American soldiers will have arrived on the scene. It is sufficient evidence of optimism to predict the end of the war a year from now.

### Big War Revenue Measure Ready.

As soon as congress has disposed of the new draft bill the new revenue bill, designed to raise $8,000,000,000 by various forms of taxation, will be ready for its consideration. The measure is so drawn that the excess profit tax will provide the largest amount of revenue, estimated at $3,000,000,000. The income tax, both individual and corporation, is expected to yield $2,400,000,000; the estate or inheritance tax $110,000,000; beverages, including liquors as well as soft drinks, $1,100,000,000; tobacco, cigars and cigarettes, $350,000,000; automobile manufacturers' tax, $125,000,000, and users of automobiles and motorcycles, $73,000,000.

### What Is Austria Going to Do?

What Austria is going to try to do as a continuation of her part in the war is a question that is being widely asked since Italy gave her enemy the severe setback of the early summer. Some critics believe that Austria is soon to make another offensive against Italy. But this is hadrly given credence, owing to the unstable condition of the Austrians, due to food troubles. She has been asking aid of Germany, but apparently has been denied it. There has been no major action of any kind reported on the Austro-Italian front for several weeks.

### How Can the Soldier Abroad Vote?

The problem of enabling the American soldiers in France to cast their votes at the election this fall is one causing the states much trouble. Owing to different state laws covering elections, the government can not prepare a set of regulations covering the vote taking. Other defficulties stand in the way, until it appears at this time that the soldiers, in most, cases, will have to lose their votes. The government, however, has agreed to cooperate with the states in every way possible to secure the soldiers' votes.

### Spain May Join the Allies.

Relations between Germany and Spain are becoming more uncertain from week to week. The Spanish government has a number of German vessels interned at Spanish ports, and has officially notified Germany that for every Spanish vessel destroyed by submarines Spain will appropriate a German interned vessel. This has brought a vigorous protest from Germany. The situation is reported to be so tense that Spain may at any moment sever diplomatic relations with Germany.

### Must Eliminate Nonessentials.

The fact that there is a shortage in war work of 1,000,000 unskilled laborers and that the reserve of skilled workers is exhausted developed at a conference of field agents of the federal employment service. Further curtailment of nonessential production is planned to release men for war work. The labor shortage is so serious that completion of a number of important war projects for the army and navy is being delayed, it was said at the conference. "The time has come for the entire nation to realize that business as usual is no longer possible," Nathan A. Smith, assistant director of the employment service, told the conference. "If we are to end the war quickly the production of luxuries and nonessentials in this country must come to an end. It is a question of ending the war quickly or having it dragged on indefinitely."

### Aircraft Money Has Been Wasted.

The committee appointed by congress some time ago to investigate the manufacture of airships in this country for use on the battlefields has reported that the $640,000,000 appropriated for the building of airships has been practically wasted. It states as the cause three things: The dominance in the manufacture of men whose knowledge was along automobile lines only; the attempt to use Liberty motors instead of tried and proven engines in all airships, and the failure to build craft that has already been proven successful in Europe. The committee reports that excellent work has been done by the aircraft board recently, and that prospects are for the rapid manufacture of serviceable planes for use by the American army.

### Free Information Bureau.

The Washington Farmer has established an INFORMATION BUREAU at the NATIONAL CAPITAL, which is at the service of its readers and which they are asked to use freely. It is intended to be a clearing house of governmental information. Address inquiries (includingg 3-cent stamp) to THE WASHINGTON FARMER INFORMATION BUREAU, Washington, D. C.

## *Washington Gleanings*

Gangs of county prisoners have been put to work on repair of the Yakima-Ellensburg highway through the Wenas.

The first annual exhibition of the Adams County Fair association will be held at the fairgrounds at Ritzville on September 26, 27 and 28.

The Columbia River Milling company is making improvements in its mill at Wilbur, Wash., that will increase the capacity to 700 barrels daily.

One day's picking from his 40-acre prune orchard netted W. W. Hurst of Freewater nearly $5000. He estimates his receipts at $27,000 this year.

A big Indian council, including members of tribes from many parts of the Pacific northwest, is to be held on October 15 at the home of Rev. George Waters, in the Yakima reservation.

District Horticultural Inspector P. S. Darlington of Wenatchee has inspected the project orchards and says he has raised his June estimate of Omak apple shipments from 85 cars to 225 cars.

The Wenatchee Northern Warehouse and Marketing company of Wenatchee has purchased about 272,000 boxes of Omak apples for cash and this amount will undoubtedly be increased materially before the pool is closed.

Wenatchee apples have scored heavily at the international apple shippers' convention at Philadelphia, according to telegraphic advices. For the fourth consecutive year a display arranged by G. M. H. Wagner & Sons has captured first prize.

Blewett pass was opened to travel May 1, in which month 223 autoists used the road. In June 1470 cars crossed the mountain at this point, and in July 2150, which breaks the record for one month. Not one fatal auto accident has yet occurred on this route.

Clay Fisher of Warner, who is interested in a large herd of sheep, has decided that he will not breed his ewes this fall. Owing to the shortage of hay and condition of the range, he fears that the loss during the winter will be much greater than usual.

By a process discovered and patented by H. C. Shepard of Chelan, the Shepard Fruit Products company, which has headquarters in Seattle, will manufacture at Wenatchee bricks of compressed fruits and vegetables, something entirely different from anything on the market.

With five stalwart sons now serving under the Stars and Stripes, and the probability that three more will go into the service during the coming year, Mr. and Mrs. Lars Erickson of Kennewick claim the honor of having more stars in their service flag than any other family in the community.

Enthusiastic indorsement of the proposed plan to give Washington a $30,000,000 highway system, covering some 2000 miles of permanent hard-surfaced roads without cost to the homeowner or the farmer, put forward by the Thurston County Good Roads association, is coming from all parts of the state.

Guy Moore, a farmer, living on the river road near Finley, was instantly killed recently by electricution in coming in contact with a wire fence over which a power wire had fallen. Mrs. Moore, his mother, also received two shocks from the current while trying to pull her son's body away from the fence.

Present indications are that the Cashmere valley will have a fair crop of the largest and best quality apples that it has had in many years. That is the estimate of the situation as it stands, made by P. S. Darlington, district horticulturist. Picking will be about 10 days or two weeks in advance of last year's date.

Secretary Lane has announced that a contract has been made by the government whereby $150,000, or as much of that sum as necessary, is to be expended in the enlargement and betterment of the Tieton main canal and distribution system of the Yakima project, which provides water for 32,000 acres of land.

The Wenatchee Northern Warehouse and Marketing company, through George A. Coburn, general manager, has signed contracts for 30,000 boxes of apples with growers in the Entiat valley. F. E. Knapp, H. M. Roys, Z. Small, J. L. Phipps, H. B. Phipps, Austin J. Byers, William Goodman and R. J. Toler were among those who signed.

The Toppenish cooperative grain elevator is in the last stages of completion. It has a capacity of 50,000 bushels of grain, is able to elevate 1500 bushels an hour in loading and unloading, and will clean 100 bushels per hour. H. C. Ham, the manager, states that there are better than 3000 acres of wheat signed to pass through it this season.

Primitive methods of preserving fruit and vegetables have given place among the Yakima Indians to the white man's fruit can, and no Indian family on the Yakima reservation is considered well provided for unless it has its stock of canned goods. The Indians are now on their annual trip after huckleberries, and have taken their fruit jars with them.

For the purpose of giving advice, instruction and encouragement to drafted men who are to enter the service, an organization has been perfected in Pasco. Heads of departments were named as follows: On military instruction, Lee C. Henderson; camp life, C. W. Johnson; insurance and allowances, E. A. Davis; character of the soldier, B. B. Johnson; medical and physical advice, Dr. H. B. O'Brien; war history, F. C. Turner; war geography, J. W. Blanton.

# Will Test Beet Byproducts

## *Possibility of Feed Value Makes Question Interesting*

Dean E. J. Iddings of the University of Idaho college of agriculture announces that the University of Idaho is going to inaugurate a series of experiments in feeding sugar beet byproducts. Both stockmen and beet growers are deeply concerned in these experiments, as they will demonstrate to considerable degree not only the possibility of securing valuable feed not heretofore utilized, but because they will indicate a possible source of revenue to the beet grower not yet secured.

"The interests of stockmen are certainly at stake, because by the use of the byproducts of the sugar beet producing industry it is hoped to reduce the cost of live stock keeping and make feeding operations far more satisfactory and profitable," says Dean Iddings. "Farmers are concerned, because entire utilization of sugar beet byproducts in animal feeding will mean additional income from beet growing. Sugar company officials lend most hearty support for the reason that success in the proposed work is certain to mean extension of sugar producing areas and more sugar to supply the needs of the allied nations.

"What is the field of promise ahead? What can be done that means real and substantial progress? That can not be definitely answered until this winter's feeding operations are completed. The apparent prospect, however, is a most alluring one.

"Large quantities of beets will go to the factory. The residue and refuse syrup and the pulp will undoubtedly be fed, since experience of feeders and the tests of agricultural experiment stations have clearly shown a considerable feeding value for the molasses and pulp, such value that both can be fed with profit.

"There will be, in addition to the molasses, and pulp, thousands of tons of tops. The tops include a portion of the beet called the crown, which it is found advisable to remove in taking off the tops.

"Here is a great mass of green stuff suitable for feed, and what is to be done with it?

"In past years the tons were piled in the field and sold to sheepmen and cattlemen at $3.50 to $5 per acre. Rain and snow and wind came, live stock tramped and scattered the piles, and the waste has always averaged far more than some of us thought. This is, however, no time for waste, particularly of roughage that might serve to cheapen the cost of live stock feeding. A way out of the situation seems to be available.

"For many years in continental Europe green stuff of all sorts has been placed in pits, where the siloing process took place and winter succulence of relatively high feeding value resulted. Colorado, with extensive sugar beet growing interests, started siloing sugar beet tops some three or four years ago, using the pit method. Last year a considerable tonnage of sugar beet tops was siloed and an excellent quality of silage was produced and fed in northwest localities.

"Experience of men who have put forth effort in the endeavor to make wise and economical use of the sugar beet top indicates the feasibility of using the pit or trench silo. So much has been done already that the siloing of sugar beet tops can be considered an unquestioned success, and unusually favorable results have been reported from feeding the trench-made sugar beet top silage.

"Just how wide the field of usefulness and the approximate value of this silage, as compared with feeds known as standard, can not be stated with accuracy. Certain it is that the total amount of feed at stake is of very great importance, particularly at this time. Feeding at the rate of 100 pounds per head daily for a period of 100 days, the sugar beet top silage from the area before indicated would provide palatable succulence for approximately 80,000 head of cattle. The same tonnage would take care of 500,000 to 800,000 head of sheep, depending on a rate of feeding that might vary from three to five pounds per head daily.

"It has been claimed that for live stock feeding a ton of sugar beet top silage is worth a ton of alfalfa hay. An acre of beets that yields well will produce from four to eight tons of tops. On that basis, and conceding the best top silage the equivalent of an equal weight of hay, the farmer will have left after selling his beets to the factory a quantity of feed on each acre equivalent to a yield of from two to four tons of alfalfa per acre. Suppose that two tons of the silage are required for the alfalfa ton equivalent. On that basis the farmer would have a feed equal to two to four tons of alfalfa per acre. Even though three tons of silage are required to equal the feeding value of a ton of alfalfa, the prospect is still attractive."

# What's This Guarantee?

One of the conditions under which a wheat grower may take advantage of the government loan of $3 per acre for securing seed this year is as follows:

"Each borrower will be required, as part of his contract, that if his yield is seven bushels per acre or more, he will pay into a guaranty fund a sum equal to 25 per cent of the amount loaned him, to cover any loss that may occur. If the amount so contributed exceeds the actual loss by the government the excess will be returned pro rata to the contributors."

Commissioner E. F. Benson of the Washington state department of agriculture has taken up with Secretary D. F. Houston of the United States department of agriculture the question of just what this may mean. Commissioner Benson expresses the fear that it might mean that a farmer instead of paying only 6 per cent interest on the money advanced to him would, if he produced a successful crop and the government lost on the lending venture as a whole throughout the country, be required to turn over the additional 25 per cent which he deposited as a guarantee. Commissioner Benson believes that this is a serious drawback to the effectiveness of the plan worked out by the government to aid farmers in securing seed.

# Handle With Care

## Hides Too Valuable to Damage

The present urgent demand for leather as a war necessity and the increase in price which hides bring on the market emphasizes the importance and even necessity of exercising the utmost care in removing skins from farm animals. By devoting a little extra time necessary in skinning animals carefully—possibly only three to five minutes in taking off the skin of a calf, or 15 minutes in the case of a beef hide—the value of the hide may be increased several times, say specialists of the United States department of agriculture. The tanner pays more for packers' hides than for those obtained from farmers or country slaughterers. This is due in part to better facilities in the large packing houses for curing and storage of hides, but principally to the fact that such hides have been taken off properly. Country hides removed by unskilled workmen are often cut and scored. When such hides come from a tannery scores show very plainly, and in many cases one-half of the thickness of the leather is lost by such defects. Imperfections can be avoided by the careful use of the skinning knife, by keeping the hides clean and free from blood and by proper storage and packing.

The use of the knife may be avoided in taking off calfskins, except on the head, neck, legs, and flanks, as the body skin may be drawn or fisted off. Where the knife is used the skin should be drawn tight with one hand while the knife is used with the other, special care being taken to hold the back of the blade close to the skin. In lieu of the knife some butchers use a wooden stick shaked like a man's thumb and employ a knife only on the portions of the body mentioned.

It is objectionable to have blood on the hides, particularly in the summer time, as it is likely to cause the hair to slip from rotting or decomposition when the hides are packed and results in the placing of otherwise good hides in the No. 2 grade on the market.

Care should be taken to avoid placing any hides in the pack until they are free from animal heat. Allow them to lie folded for from three to five hours, or sufficiently long to allow the animal heat to get out of them. If this is not done patches of decomposition may result, and such hides are often reduced in market value at least a cent or more a pound.

In building up a pack of hides the outer edges should be kept a little higher than the middle, so that the liquid or brine formed by the dissolving of the salt in the natural moisture of the hides may be absorbed by them. If the pack is low on one side, or is built slanting like a shed roof, the brine will seep out, causing the hides to shrink in weight. Use salt that has been screened and is free from large lumps of dirt. Dirty salt will stain the fresh side of hides. One pound of salt to each pound of the hide is the general rule. Hides should remain in pack from 15 to 30 days and stored in cool (60 to 65 degrees F.) cellars from which the outside air is excluded.

# Prevent Smut

## Government Offers Suggestions

There are four kinds of smut which occur on wheat and barley, according to the United States department of agriculture, two of which (bunt or stinking smut, and covered smut) are effectively controlled by soaking or dipping the seed in or spraying it with formaldehyde solution. Loose smut is controlled by treating the seed grain with hot water.

Seed to be treated for smut should be cleaned in a fanning mill. Use formaldehyde (40 per cent solution) diluted at the rate of one pint to 40 gallons of water. If the soaking method is used, allow wheat to remain in a tub of the disinfectant 10 to 20 minutes, and barley 30 minutes to two hours. To get the best germination results the grain should be sown as soon as treated. If this can not be done, it should then be spread out and dried.

Solution of the same strength mentioned should be used for the dipping and sprinkling methods. In dipping, after thorough cleaning and grading, the seed grain is placed in gunny sacks, which should be filled not more than half full and tied at the top. After dipping repeatedly in the solution the sacks of grain are put where they will drain and dry enough so the seed will run freely through the drill. If not used within two hours, spread the seed out to dry and air.

Application may be made with an ordinary sprinkling can while the seed is being shoveled over from one pile to another. One gallon is sufficient to cover a bushel of grain when this method is used. The grain must be so well stirred that every kernel is thoroughly wet. It is then covered with sacks or other cloth wet with formaldehyde solution and allowed to stand for a period before being spread out to dry or sacked for use.

There are three methods of treating seed with hot water. The short method consists of dipping the wheat or barley for from 10 to 15 minutes in water ranging from 126 to 135 degrees F. and cooling and drying it immediately. To control loose smut the seed should first be soaked four to six hours in cold water before treating with the hot, or a lower temperature than recommended for the short method should be used and the soaking prolonged. If the latter method is used, keep the water at from 111 to 115 degrees F. and soak the seed for three hours.

Disinfecting seed grain will prevent certain diseases other than smuts (but not rusts), and thus may increase the yield even more than would be indicated by simply replacing the smutted with sound grains. More complete information on cereal smuts and the disinfection of seed grain is contained in "Farmers' Bulletin 939," a copy of which can be obtained, so long as the supply lasts, by applying to the United States Department of Agriculture, Washington, D. C.

### FOLLOW CROP SYSTEM.

### At Same Time Increase Wheat.

Though still perhaps the most enthusiastic advocate of pea growing as a great industry and a part of a proper cropping system in this state, J. R. Shinn, county agent for Spokane county, is urging upon pea growers that they increase their wheat acreage this fall.

Mr. Shinn believes that growers in the pea sections should put wheat on all land that has grown peas for two successive seasons. He advocates this for two reasons: First, the need of wheat makes it the patriotic duty of the producers to increase the acreage this fall, and, second, continued growing of peas on the same land is less advantageous in the long run than the systematic alternation of crops. He believes that the present opportunity is good for the development of systematic cropping, arguing that to increase the wheat acreage in the pea growing sections at this time will, in fact, be a vital move toward a permanent system of crop rotation.

### Wenatchee Ships Much Fruit.

Reports from Wenatchee indicate that during the busy part of the present fruit season soft fruits are moving from that section at the rate of 25 to 30 cars a day. Considerably more than 500 cars were shipped up to the 20th of August.

# Seed Is Found

## Farmers Will Seed Big Acreage

It is the opinion of E. G. Schafer of the state college, secretary of the seed wheat committee, whose purpose it is to see that sufficient fall seed wheat is available where needed, that the growers of Washington will make good on the government's request for an increase of the fall wheat acreage by 80 per cent over last year. Mr. Schafer has been traveling throughout the wheat growing sections and finds the spirit of the farmers alive to the need. Only lack of moisture can prevent the seeding of a large acreage. The fall wheat in the state, if conditions of seeding will justify, will reach from 900,000 to 1,000,000 acres.

Sufficient seed wheat, with the possible exception of Jones' fife, has been located and in most cases placed where needed. The seed committee has located more than 80 cars of desirable fall seed that has been diverted to localities that need the seed. It would otherwise have gone to the mills. Through the activities of the county agricultural agents, farmers have been assisted in locating seed in their own communities. The movement has been made and is still being urged for those who have desirable fall wheat to let it be known and those who need it to let their need be known. This often results in the placing of the seed in the same locality in which it was grown, thus preventing delay and shipping costs. In other communities where insufficient seed is available, farmers are going in together to have it shipped in by carload lots, thus likewise saving much unnecessary costs. Farmers desiring wheat for seed or having some for sale should get in touch with their county agents or Mr. Schafer at Pullman.

Mr. Schafer reports a general spirit of cooperation between the grain men, warehouse men and others in securing this seed. M. H. Houser of the federal grain buying corporation for the northwest, recently issued an order to warehouse men to hold the available seed wheat in their houses until the farmers' needs could be supplied. This prevented the shipment to the mills of much of the grain needed for seed. Mr. Schafer says that only in rare cases have the holders of this grain shown any desire to make undue profits on it because of the special need for it.

# Liberty Cattle Feed

To the Editor: The problem of getting hogs into the hands of farmers having feed is an important one at the present time. Scattered around through the Inland Empire are great numbers of feeder hogs for which there is a ready demand, provided they can be placed in some central point where buyers can find them. All owners of these hogs should be brought to realize the system that should be followed in meeting the situation.

For small lots of hogs which may be in the hands of these farmers I would recommend that they be shipped to the Spokane Union stock yards. There they will find a ready sale at good prices for hogs and pigs, as most of the men seeking such stock look to this source for their supply.

In regard to stock cattle, I would advise strongly that men retain their feeders until later on, as the market is now flooded with poor stock. We have an abundance of pea straw here which has a feeding value practically equivalent to alfalfa hay. This can be had at $15 per ton f. o. b. cars, Fairfield, Wash. Straw is baled the same as alfalfa. It makes excellent horse feed, also, when used with wheat hay, timothy hay, oat straw and alfalfa hay in proportion of two parts straw to one of other roughage. I know of several parties who cut their hay bill in two by using this combination last year. They rightfully claim they never had their horses do better.

Pea straw should not be fed alone to horses, as they will gorge themselves with it and impaction result. As the use of this kind of roughage becomes better known it will be much sought after by stockmen.

My office is prepared to place parties desiring pea straw in direct communication with farmers having pea straw for sale. I firmly believe that pea straw should be regarded as a Liberty cattle feed for the winter of 1918-19.

J. R. SHINN,
County Agent, Spokane County.
Spokane, Wash.

### Will Show Power Machinery.

A national exposition of trucks, tractors and power machinery equipment has been announced for Chicago, September 12 to 21.

# A Little "Tank"—for Farm Work

The Cleveland Tractor is built on the same principle as the wonderful European battle "tanks."

*It travels on its own tracks, laying them down and picking them up as it goes along.*

This efficient type of construction makes the Cleveland *specially* valuable to farmers, as it enables them to work practically *anywhere*—over almost *any kind* of farm land.

They are being operated over gullies, ruts and ditches, through soft soil, wet clay, sand and gumbo—without sinking or floundering. *They do not pack the soil.*

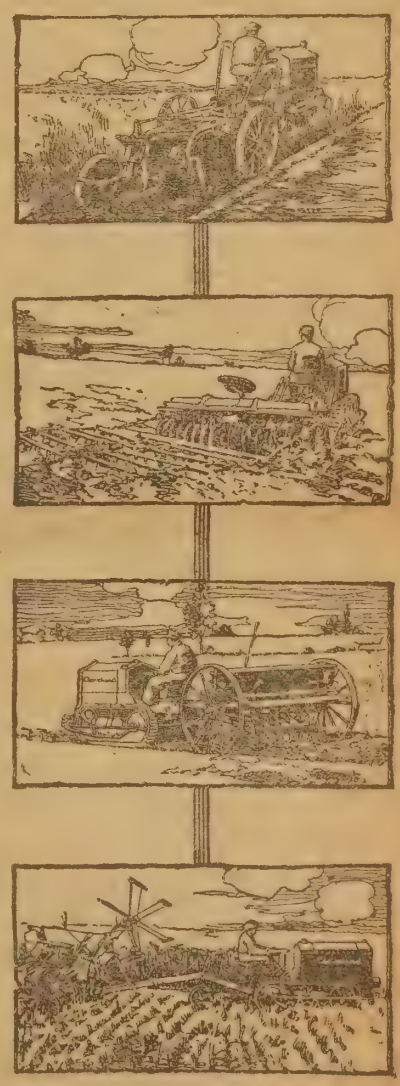
They are working under and among small trees, close up to fence corners, on hillsides and over rough ground with much better results than can be obtained with horses or with any other type of tractor.

And they are working much *faster.*

Thousands of Cleveland Tractors are helping to increase the production of food demanded by war conditions.

The Cleveland, pulling two 14 inch bottoms—which it will do under average conditions—plows 3½ miles an hour—eight to ten acres a day. This is equal to the work of *three* men and *three* good three-horse teams.

The Cleveland steers by the power of its own engine; it requires but slight effort on the part of the driver. Only one man is required to operate it. 12 horsepower is developed at the drawbar and 20 horsepower at the pulley. It is a constant source of tractive and stationary power for twelve months in the year.



It plows, harrows, plants, reaps, cuts ensilage, runs saws and pumps, drags logs, pulls road machinery, hauls manure spreaders and does practically all the work formerly done with horses or stationary engines.

*The Cleveland Tractor produces food but consumes none of it. It conserves man power, horse power, time, energy, and effort—and produces greater returns.*

The Cleveland Tractor was designed by Rollin H. White, the well-known engineer. It is manufactured under his supervision. Gears and tracks are protected from dust and dirt. Materials throughout are of the best. The whole machine weighs only about 3200 pounds. It can be housed in less space than is needed for a horse.

Take advantage of present produce prices. Raise *more* food *now*. Help the nation and incidentally make more money yourself by using one or more Cleveland Tractors.

Write for complete information and the name of the nearest Cleveland dealer.

## The Cleveland Tractor Co.

*The largest producer of Crawler-type Tractors in the World*

**19087 Euclid Avenue** **Cleveland, Ohio, U. S. A.**

# Cleveland Tractor

# All Is Ready at Yakima

## *State Fair Holds Unusual Promise This Year*

By FRANK MEREDITH, Secretary.

The 1918 Washington State fair at Yakima, September 16-21, gives every promise, through the inquiries and correspondence that are coming into the secretary's office that it will be the most important and biggest fair that has ever been held at Yakima. The recognized need of state fairs at this time is fully felt. They stimulate production by competitive exhibition and furnish the means and common ground whereby different branches of agricultural industry may be presented. Such factors are placing these great institutions on a permanent basis, the foundation for the growth of their individual states and peoples.

The Washington State fair this year will have exhibits that cover a larger field of production and industry than ever before. Anticipating this, premiums have been increased in many classes and special new prizes are offered in several departments. The largest poultry premiums in the state are offered. Increases are noted on fat cattle and horses. The best five sheaves of either winter or spring wheat accompanied by 30 pounds of threshed grain from the same field will be awarded $50, first; $30 second, and $20, third. The best general display of corn, 10 ears each variety, will receive $15, first; $10, second. The best single ear of corn from among the first prize winners will receive $15.

Stock vegetables and roots this year are distinguished in a separate class from culinary and garden vegetables. The best individual farm display will bring $25. The best bushel of Netted Gems, grown east of the Cascades, will be awarded $25. The best display of 25 one-tier boxes of apples, 5 or more varieties of commercial fruit, extending through season, will win $50, and the best general collection of fruits for family use, for entire season. will receive $15. Proportionate second and third premiums are offered in all entries.

### Hold Second Sheep Sale.

The vital importance of the sheep industry is enlarging that branch of the fair's program. Romney sheep have been added to the list in response to a demand. The first annual sheep sale was held last year with such success that another will be held at this year's fair, beginning on the first day and extending through the week. An innovation in connection with this department will be the sheep school, which will be held every morning from 10 to 12 o'clock. Men who are expert in sheep knowledge will lecture and give practical demonstrations illustrating points they bring out in their talks. The men engaged as lecturers are W. T. Ritch of Australia, now with the American Wool Improvement association; F. S. King of Cheyenne, Wyo., one of the best informed breeders in the United States; Dean Iddings of the Idaho university, who will also act as judge of sheep, and V. O. McWhorter of the U. S. bureau of animal husbandry. Mr. McWhorter has a moving picture film entitled "From Wool to Cloth," which will be exceedingly interesting to every one whether in the sheep business or not.

The judges for the live stock have been selected. W. A. Kerrow of the University of Minnesota will judge dairy cattle. W. T. McDonald, who is now connected with the Canadian department of agriculture, will judge the beef cattle breeds and draft horses. Professor C. E. Howell will judge the swine; and William Coates of Vancouver, B. C., will judge the poultry.

### Women Will Have Display.

Lines of endeavor peculiar to women will be more in evidence this year than ever. The exhibits in the woman's building will be characteristic, but will show the adaptability of woman to demands and emergencies in the use of substitutes, economies and conservation. The Red Cross, the state council of defense, and the great benefit being carried on through the child welfare work will be represented with exhibits. A great movement that would make a story in itself is the work being done by the boys' and girls' clubs throughout the land. In this state 22 counties have already signified their intention of sending champion county club members to the fair where they will compete for honors. Their motto, "To make the best better," speaks for their accomplishments.

### New Auditorium Ready.

To make the 1918 fair a better one, permanent improvements on the grounds have been made, such as the new auditorium, built at a cost of $15,000, which will fill a long-felt need. It is attached to the south side of the horticultural building, has a seating capacity of 1200, and is equipped with stage and moving picture outfit. It is planned to have a continuous program in the auditorium of educational and entertaining features.

Four-inch water pipes have been installed all over the grounds, in place of the smaller pipes, which did not give the service, which will now be adequate for every purpose. A great deal more ground has been seeded to grass and camping space has been provided so that families may camp during the week.

The thought of a fair brings to mind horse races, and the management of the state fair is particularly pleased with the lineup for the races this fair time. The longest and sturdiest string of trotters and pacers entered in years has been entered. There are 21 entries in the 2:19 pace, and other races are well filled with contenders. Running races, over-night events, will be held every day, for which more money has been set aside this year. The fastest track in the northwest is on the state fair grounds. The course covers a mile. The new grandstand has a seating capacity of 4000. The automobile races will be held on Monday and will include five events. Two will be novelties. One will be a "bug" race of five miles for cars owned and driven by residents of Kittitas, Yakima and Benton counties. The other is a five-mile free-for-all tire change race, each contestant making one change of tire in front of grandstand. The other three events will be a 10-mile race for stock cars, a 10-mile race for small cars, and a free-for-all 20-mile race. The harness and running races will begin Tuesday and continue through the week.

With everything else in connection with the Washington State fair on an increased scale, the season tickets, on the contrary, have been reduced. If they are bought before the fair opens they will be $1.50 for the week, that is, six admissions, and they are transferable.

## SEES WOOL SHORTAGE.

### Army May Take Entire Supply.

Lewis Penwell, chief of the wool division of the war industries board of Washington, D. C., expresses the fear that the wool shortage will before long assume the proportions of a famine. Already he says an order has been issued that the manufacture of yarn for hand knitting be stopped. This is expected to interfere to considerable extent with the work of the Red Cross, which will be unable, says Mr. Penwell, to get any yarn except that which can be bought on the market at this time. He points out that it is more essential to the conduct of the war that the available wool be used in the manufacture of blankets and clothing for the soldiers than for miscellaneous uses of normal times. Discussing the subject further Mr. Penwell says:

"The military needs, which amount to 900,000,000 pounds of wool a year, can be handled by our available ships, but that amount is the limit, which leaves no surplus for civilian purposes. We only produce 280,000,000 pounds of wool a year in this country, so that the vast remainder must come from Australia, New Zealand and South Africa. There is wool enough in the world for all our purposes, leaving out the central powers, but the difficulty lies in bringing this supply in.

"I feel that the route and procedure for handling wool for military needs is little understood. The grower puts the wool on the cars and ships it to one of the big wool centers such as Chicago, Philadelphia or Boston. There a dealer receives it, stores it, grades it and insures it. When this is done, we have an appraisal committee to value it, after which the quartermaster general takes the wool and pays for it. The wool is next shipped direct to the mills and every pound of it goes into clothing for soldiers. There is none given over to civilian purposes, except a very small amount for war necessities.

This is the first time in the history of the wool business that the wool grower is getting everything that can be obtained out of wool. He gets the full government price and does not have to pay a commission to a dealer. This matter is taken care of by the government. The grower not only is reaping the highest price ever paid, but enjoying the satisfaction that the middleman is getting nothing."

# Washington Boys in War Service

From the Twice-a-Week Spokesman-Review.

**ROY R. STOUT, Yakima, Wash.**—Enlisted in August, 1917, in the field artillery, and is now "somewhere in France." He is a member of battery F, 150th field artillery. His mother is Mrs. Elmer Stout.

**JOHN J. McGLADE, Sprague, Wash.**—Joined the colors on June 30, 1917, and is now a member of the Ninth field artillery, Battery D, stationed at Fort Sill, Okla. He is the son of Mr. and Mrs. James McGlade.

**CHARLES F. GOSNEY, Steptoe, Wash.**—Enlisted from Winifred, Mont., in September of 1917. He trained at Camp Lewis as a member of the 348th field artillery, Battery B. He has a brother, Archie, also in the service.

## Have You a Good Garden?

Mr. Farmer, have you a good garden? If not, why not? A good garden is one of the best-paying crops a farmer can raise. It is a great help to keep down the "high cost of living."

I have a good garden every year and this year is no exception, only it is better in some respects and we are having one of the dryest seasons on record. The aphis got my peas—we had only a few messes. We planted a lot to can, but did not can any.

We have such fine beans, and lots of them, for canning, and have had them for the table for a month.

Many can not raise onions from seed; they get three or four inches high, then turn yellow and die. We plant the black seed and now have the white pickling onion. They are nice and mild for the table as a raw onion. I also have a lot of the large red Weathersfield onions that are good size now. We raise the onions on a small piece that will give my family all they want until April, besides seling some. We have the finest lettuce, beets and sweet corn ready to use now and other vegetables that go with a good garden.

The soil of my garden is a black, gravelly loam. I keep my garden on the same ground year after year, keeping it well fertilized and cultivated. A part of it I have so I can irrigate from my water tank by means of pipe and hose. This is what many farmers can do outside of the irrigated district.

L. F. DAVIS, Rainier, Wash.

## Keep Household Accounts.

Two methods of keeping simple household farm accounts are described in a new publication from the United States department of agriculture, entitled "Farm Household Accounts," farmers' bulletin 964. The suggestions contained in it should be helpful to women who are endeavoring to keep some record of the varying income and outgo of food supplies, and especially to those who wish to keep track of household expenses as related to farm business. Those desiring the pamphlet should address the department of agriculture at Washington, D. C.

# A Simplified Tractor Operated Like an Automobile Is Entirely Practicable for a Woman to Handle

As in England, the tendency is growing in this country for women to help make up the deficiency in farm labor. They can do so to very great advantage where a machine like the Yuba tractor is employed. It is so simple and easy to operate, so seldom needs repairs, so responsive to the turn of the wheel that women are finding it suitable to their strength.

The Yuba 12-20 does the work of twelve horses. One woman can save the labor of several men, using the tractor. Farm labor decreases a half where a tractor is used instead of horses. There's less cooking, less housework, less chores to do where the tractor is used. It is a healthy occupation, and a most profitable one.

Yuba model 12-20 tractors are ready for immediate shipment. They are ready for your fall plowing, for discing, for hauling, for any work where power is needed.

Yuba 12-20 tractors are made of the qualities of steel that give long service under all kinds of conditions; all kinds of weather; 24 hours a day. They furnish the power, all you need is to direct.

The cost of construction is increasing. It may be necessary to raise the price. *Order now.*

# Fairs Will Demonstrate Power Farming

## *Study of All Makes Is Best Way to Determine Comparative Merits*

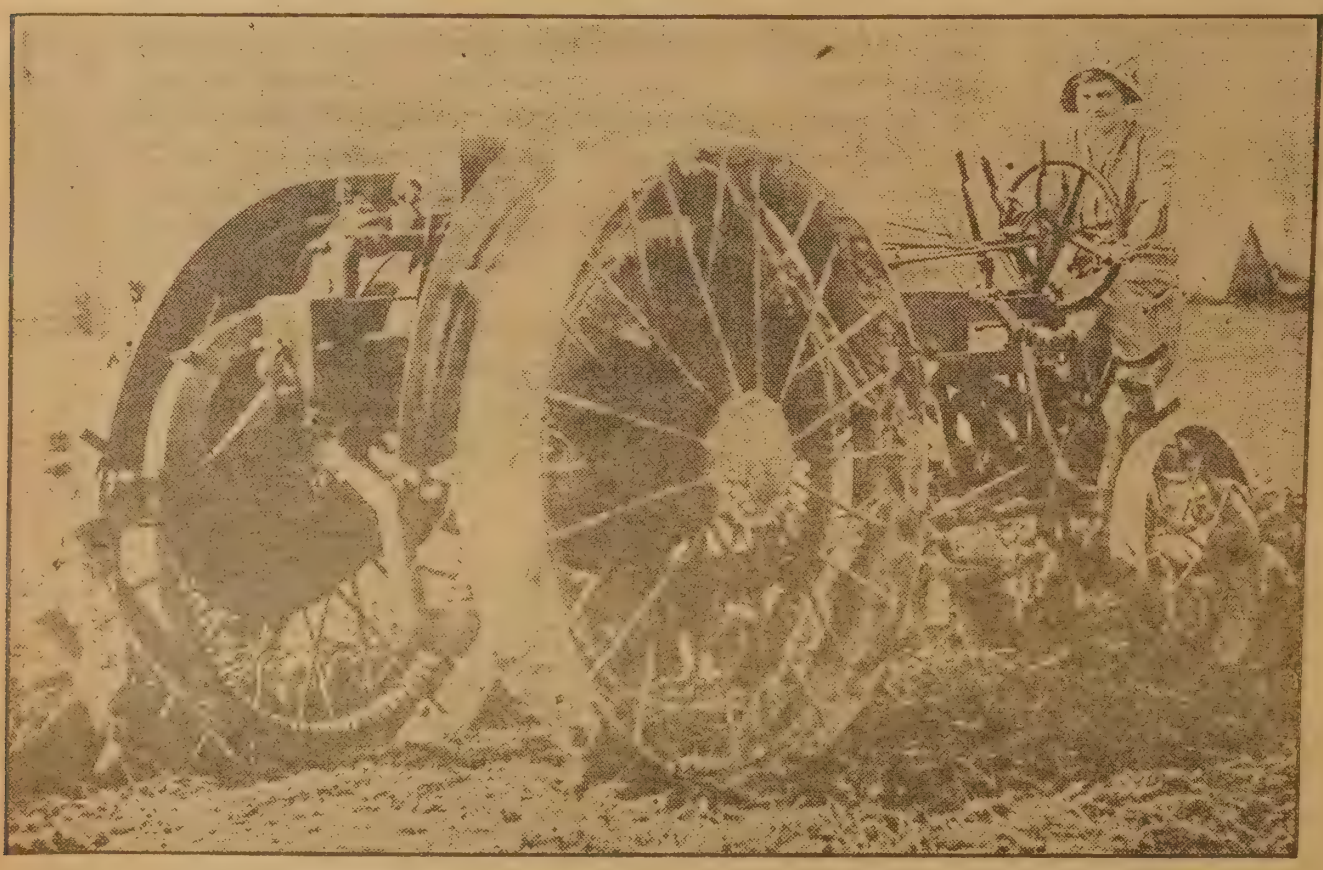
With the season of state and county fairs once more at hand and the season of fall plowing here also, there will undoubtedly be much interest shown this year in farm power machinery—especially tractors. Exhibits of power farming machinery will prove unusually attractive this fall. On the part of scores of farmers this interest will not be that of the casual looker-on, but will be the outgrowth of desire for practical information.

With the ability of the tractor to perform a wide variety of jobs, and with the fact established that the successful application of power farming is now well assured, the whole matter gets down to individual beliefs and preferences. These are times when the accomplishment of more work in less time is everywhere desired. Careful preparation of seed beds—deep plowing, thorough pulverizing, etc.—are just now important considerations. Power is called for and the tractor has been developed as the instrument to provide it.

The type and size of tractor must be decided by the individual, according to his needs. Obviously, a man with an 80-acre farm can not operate a 10-bottom plow economically and in choosing a tractor economy and need should be the governing thought in the mind of the prospective buyer. In these days of high feed, short labor and failing horse supply, a source of unfailing power supply is a need which practically all farmers recognize.

It goes without saying that no tractor is perfect nor trouble-proof. Nevertheless the fact remains that the farmer who buys a tractor today gets a much more practically constructed and much better machine than it was possible to get a few years ago. Steel has replaced castings and the finely adjusted machinery developed for the automobile has found its use on the tractor. Standard bearings, which make for smoother running and longer wear, are found. In the tractor of today is found a lubrication system as perfect as that in the automobile. Ignition systems, which work so perfectly on the touring car, are also serving on the tractor and modern radiation makes possible continuous tractor operation even in the hottest weather. Carburetion for the use of various kinds of fuel is no longer an experiment, and in buying a tractor nowadays one may with reasonable assurance look for a minimum of trouble with clutch, transmission, valves, piston rings, fuel supply, differential, etc.

There very likely will be many types of tractors on exhibit this fall and attendance at the fairs will afford a good opportunity to look them over carefully and to study the special features which each has to offer.



**A Diplomat.**

"My wife and I never argue, so we get along beautifully."

"How do you manage it?"

"When anything goes wrong I always figure that it was my fault and she never disagrees with me."—Boston Transcript.

## *Says It's Just As Easy to Run This Tractor As It Is to Run Your Auto*

Photograph from Underwood and Underwood, N. Y.

Ladies! Did you ever think how much help you can render your Uncle Sam if you know how to run an auto? Did you ever know that it is just as easy to run a farm tractor as it is to run an auto? If you don't believe us, ask Mrs. Henninger, who takes a ride in her tractor every morning to help raise Uncle Sam's crop.

## What Does It Cost?

The question of the cost of operating a truck as compared with the cost of teaming is one that is quite frequently discussed. Here is an estimate that has been made. The figures include these costs: Gasoline consumption per mile; oil, grease cost per mile; mechanical repairs, tires, depreciation, license, insurance.

Here are the cost figures: Gasoline is taken at 20 cents a gallon, the consumption varying from 4 to 10 miles per gallon; oil at 50 cents per gallon, giving 460 to 625 miles; grease costs, 11 to 3 cents per mile, varying with size of truck; repairs, from 1 1-2 to 3 cents per mile. Depreciation is figured on a basis of 150,000-mile life. Thus, if a truck averages 20,000 miles per year, its life will be about eight years. Depreciation varies from 8 to 15 per cent a year, depending on capacity of unit and the mileage covered. Insurance covering fire, theft, liability and collision varies from $185 to $270 per year. Two-ton truck, miles per day, 52. Cost per ton mile, 10.025 cents.

Much depends in economical truck operation from farm to market on the condition of the roads to be traversed. Over fairly good roads a 1 1-2-ton truck will operate to good advantage. On poorer roads a 3-4-ton truck is said to be more practical.

**Make Yourself Plain.**

Let every sentence you utter be absolutely clear.

## Mr. Miles' Daughter Operates Tractor

G. D. Miles of Fairfield, Wash., likes his tractor, and so does his daughter, who is driving it.

"I have had splendid success with my tractor," says Mr. Miles. "With three six-horse teams, three men, the tractor, my daughter and myself, I plowed, harrowed and seeded 600 acres of wheat between April 5 and May 10.

"With the tractor I have worked three eight-foot discs and a harrow at one time. In plowing I use seven 14-inch plows on land that was practically level. In the hills I used five 14-inch plows as you can see by the enclosed picture. My tractor has done the work of from 14 to 20 head of horses and reduced the help by from three to four hands on my ranch. The machine is simple and so easy to manage that my daughter has done a great deal of the work with it."

## On Easy Street

### Compare Yourself With a German

If any American finds himself inclined to be pessimistic over the great war expenditures of this country he should read the record of Germany a few minutes, according to a statement prepared by the United States treasury department. Before the war this country's resources were approximately three times those of Germany. Before the war this country's annual expenditure was only one-fourth greater than that of Germany. The country's national debt now, including the bonds of the third Liberty loan, is approximately $12,000,000,000. Germany's debt is $30,000,000,000. The following is the statement issued by the treasury department comparing the condition of the countries in these and other respects:

"The total resources of the United States are estimated at about $250,000,000,000; our annual earnings are estimated at about $50,000,000,000. Our national debt, including the third Liberty loan, may be put around $12,000,000,000. Before the war our government was spending about $1,000,000,000 a year. When the war is ended, interest charges, less the interest collected from our loans to our allies, government insurance expenses and other necessary expenditures growing out of the war may conservatively be estimated at something like $1,000,000,000. We are confronted, therefore, when peace comes, with raising only a couple of billions a year revenue, a slight task for a nation of such tremendous wealth, capacity and resources.

"The resources of Germany before the war were estimated to be $80,000,000,000. The annual expenditures then of the imperial government were about $800,000,000. Her debt now is $30,000,000,000, and her resources and man power have been severely impaired. After the war she is confronted with additional expenditures growing out of the war totaling some $4,000,000,000. The interest of her war debt, even if the debt grows no larger, will be about $1,500,000,000. Although she is niggardly in her pensions to private soldiers and their families, $1,000,000,000 a year would hardly suffice to pay even small pensions to her injured and the families of her soldiers who have been killed. Her war debt must be paid some time, and a sinking fund of 5 per cent would add $1,500,000,000 to her annual taxation. Here is a total increase of $4,000,000,000, all due to the war.

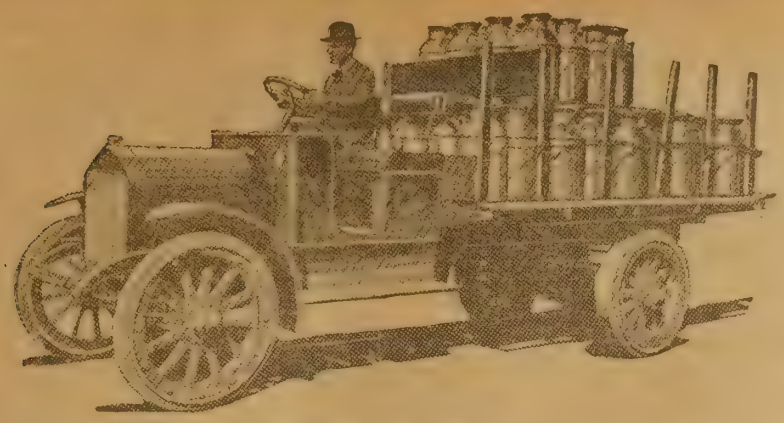
"Of course, both the United States and Germany may largely increase their debts, but the increases will not change the relative situations. The German government has drained the German people of their gold, even their jewels and heirlooms, and yet the Imperial Bank of Germany now has but little over $500,000,000 of gold in its vaults. The United States has made no special effort to obtain gold, has made no call upon the people for the precious metal, and yet today has in its treasury vaults practically $2,500,000,000 of gold coin and bullion."

### Dodging Battery Bills.

Winter is pretty generally conceded to be the hardest season on batteries. By exercising judgment, a good many battery ills and bills can be avoided.

There are two essentials that must be observed at any time of year. Keep plenty of distilled water over the plates in the jars and keep the battery fully charged. If you have a farm-lighting plant or a direct current of electricity in your house, it is easy to rig up a charging board and put "juice" into your batteries from outside source.

Automobile batteries have about the shortest life of any part of the car, but by taking good care of the battery a good deal of vexation and expense can be dodged.



### Produce Munitions Rapidly.

Hand grenades of four types are now being produced at the rate of 2,000,000 a month, it is announced by the ordnance department. Within the next four months, according to program, this rate will be more than doubled. Rifle grenades are being produced at the rate of about 1,000,000 a month. This rate will be multiplied appreciably within the next six months. Orders have been placed for more than 60,000,000 grenades of both hand and rifle type, and more than 18,000 persons are employed in various plants throughout the country engaged in making them.

**The Man Worth While.**

It is easy enough to be pleasant when life goes by like a song, bu the man worth while is the man who will smile when everything goes dead wrong.—Riley.

# Truck Is Rapidly Taking Its Place on the Road

**It used to be uncommon to see vehicles like this even on city streets. It is a common sight now on the country roads of the farming districts.**

## Demonstrate Power

Another important demonstration of power farming for the northwest will be held near Portland, Ore., September 5, 6 and 7. The demonstration will be held on the old Cotton and Ruegg farm in the vicinity of Gresham and is easily reached either by auto or electric interurban line. More than a score of concerns will have their tractors and power farming implements on the scene for demonstration. Approximately 250 acres of typical farm land will be plowed, disked and harrowed. The event is in charge of Eugene Smith, who managed the tractor demonstration at Davis, Cal., a few months ago.

## ALFALFA SUCCESS.

### Western Washington Experiments

County Agriculturist Floyd Rader of King county is a firm believer in alfalfa for western Washington.

"When I first took up the work over here, every one told me alfalfa was out of the question for this side of the mountains," says Mr. Rader. "I couldn't see why this should be the case, and after a little consideration induced some of our King county farmers to put in experimental fields of alfalfa. This year there are patches running up to six acres on about 20 farms. On some places the hay is cut twice, averaging around two and one-half tons per cutting, while other growers make three cuttings, securing probably a ton per acre from the last cutting."

Several important points have been brought out by this experimental work on the West Side. In the first place, alfalfa does not drown out as easily as has been supposed—it stood the flood conditions of last winter, even in localities where practically everything was submerged. In choosing land for alfalfa Mr. Rader favors a sandy loam, and is of the opinion that the water table should not be closer than three feet to the surface. He also favors the Grimm strain, which is comparatively shallow rooting.

The value of these successful experiments for West Side farmers can hardly be overestimated. Alfalfa is the king of leguminous forage plants, and when fed in connection with corn silage, reduces the mill feed bill to a minimum. This is the end toward which every producer must work at present.

## FARM AUTOMOBILE.

### Has Become Absolute Necessity.

By IDA C. YOUNG.

Circumstances have so arranged themselves that there is no man in our home well able to look after traveling conveniences. We live over five miles from town and seven years of weekly and bi-weekly journeying to this same town with horse and buggy has grown to be not only a bugbear but almost impossible through the cold weather of winter.

Last fall a car replaced the buggy, a car with self-starter, and the problem of travel was solved. Twice a week, all summer long, the car made its journeys with farm produce, not only for ourselves, but for a near neighbor, whose horses have had no time to be on the road. Besides the produce the car has added to its load every trip some of the children of the house who are only too glad to take their joy-ride while their elders travel for business. And after all every business trip is a joy ride even for grownups when you know that your neighbor is being made comfortable, and that the children are happy and contented and the engine purring along as you make the trip and return home in one-third the time it takes with horse and buggy. About once in every two weeks church service is attended in town and all the family take a turn at relaxing for the week and get back in time for a comfortable Sunday dinner. An automobile is indeed a necessity with us.

### American Exports.

More than a billion dollars' worth of American agricultural exports were sold during 1917 to the European nations at war with Germany.

## Cauliflower and Cabbage Lice.

To the Editor: I noticed a little inquiry in The Farmer of August 8, from C. W. Bowers of Camas, Idaho, in regard to cauliflower and cabbage lice and worms. If you will publish the following, it may help a good many gardeners who are not able to procure the spray spoken of. After the plants are set out (we begin when they are just ready to start hearting or making heads), sprinkle heavily with common wood ashes, real early in the morning, over each plant, once a week at least, and if the white butterflies are plentiful, go over the plants two or three times a week. The ashes are easily shaken out of cauliflower and cabbage when wanted to use. We burn cottonwood and have been using cauliflower all summer and have not found a louse or a worm on any of them yet. Have used this with good success

MRS. THEBOLD, Bozeman, Mont.

In commenting upon this, L. E. Longley of the University of Idaho says: "On a small scale on a home garden it will prove effective, especially if applied as often as Mrs. Thebold says is done when the cabbage worm is plentiful. It would not be as economical, when labor is considered, as a soap-nicotine-arsenical spray on a large scale."

### Know the Reason.

To understand clearly is better than to be captivated by arguments.

## "Cold Method" of Branding.

A correspondent of The Farmer, who wishes to be known as "a Friend of the Four-Footed," writes: "Will you kindly give information through the columns of your valuable journal relative to what is known as the 'cold method' of branding cattle instead of branding them with a hot iron?"

Professor E. L. Potter of the Oregon agricultural college kindly answers our correspondent as follows:

The so-called "cold method" of branding cattle is a method of making the brands with an acid instead of a hot iron. The principle of all branding of cattle is to so blister or destroy the skin as to leave a permanent scar on which the hair does not grow. It does not matter much whether the brand is made with an acid or with a red-hot iron, the pain to the cattle is the same in either case, while the acid method is complicated and very hard to handle in ordinary field work and as a result has never been used extensively, except in an experimental way. It would certainly be a splendid thing if some means of branding cattle could be devised that would be less painful than either the hot iron or the blistering with acid.

### Accept Leadership.

Don't try to chart the seas for yourself every time you make a voyage.

La Crosse
Happy Farmer
TRACTOR

IN three short years, the satisfaction of thousands of owners of Happy Farmer Tractors has built the great business and the 16 big factory buildings of the Happy Farmer Tractor organization. Every man who owns a Happy Farmer Tractor boosts for it. His own experience has shown him that the Happy Farmer is the perfect, one man, kerosene burning tractor for the farm of any size.

From start to finish the Happy Farmer Tractor is built for leadership. Every part of it is made in the Happy Farmer plant by the highest grade workmen and the most up-to-date machinery.

So many thousands of farmers want the Happy Farmer that we cannot keep pace with the demand, although we are continually increasing our manufacturing facilities.

The Right Design

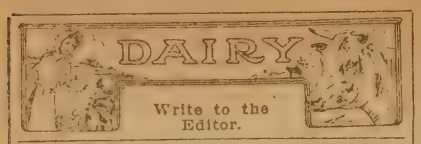
That the Happy Farmer with its wide tread and perfect balance, is the right design of tractor, is proved by its use. Experience has shown that this design delivers more power with less weight.

The Happy Farmer turns in its own tracks to right or left with equal ease. While it is rated at only 12-24 horsepower, it can always be counted upon to deliver much more than this whenever you need it.

Because the Happy Farmer is so simple and because of our great factory, big buying power, and expert organization, we can offer this master tractor for the low price of $1075.

Happy Farmer Tractor Implements

Happy Farmer Tractor Implements give the same satisfaction as the Happy Farmer Tractor. All Happy Farmer Moldboard Plows are automatically controlled by a cord from the driver's seat on the tractor. The Happy Farmer Disk Harrow is made especially for tractor work. The Happy Farmer Drill is the only proven successful one with automatic patented power-lift and power pressure.



See The Next Demonstration

Performance in the field is a tractor's only test. Watch the Happy Farmer yourself and you will see why it is America's greatest tractor. There is a Happy Farmer distributor in your locality who will be glad to let you know when the next demonstration is to be held. Write us today for his name.

## SUBSTITUTE "MILK."

### Cocoanut Oil With Skim Milk.

The chemical laboratories of a Boston firm announce the discovery of a process by which an ample supply of fresh milk can be assured to a city "without a cow in 10,000 miles." Analysis of the method, however, shows that the cow must be employed, in the background, perhaps, but none the less indispensable to the project.

The process is a blending of cocoanut oil with powdered skim milk and water. As described by the company "skimmed milk is pure milk with the fats removed. There remain behind among other things nearly all the casein, most of the milk sugar and part of the vitamines, dependent upon the method of drying. Vitamines are reported to be needful to make children grow. Casein is the most easilly assimilated of all proteid foods.

"The process was patented but not worked out to a commercial scale. The rights were bought by Chicago business men and when industrial research was necessary, they came to us. The new art consists in mixing skim milk in water and incorporating cocoanut oil with it until it becomes an emulsion just like milk or cream. It is not so simple as it looks, because one can shake up skim milk and coacoanut oil with water until the cows come home, but as soon as the mixture is allowed to stand the oil and water separate.

"The striking feature of the invention is the discovery of a stabilizer, a protective colloid, a perfectly harmless body found in raw sugar, which will make those minute particles of fat shy away from each other just as they do in milk, instead of merging together into one mass, as particles of fat will do under ordinary circumstances.

"The process fortunately lent itself to technical development, and all sorts of apparatus were tested out until finally it was ready for commercial scale manufacture. Then we found a purchaser and built a factory which is now in regular operation.

"We can get whatever type is wanted: thin milk, rich milk, half cream, full cream, or even thick, clotted Devonshire cream. It tastes like milk and cream, contains substantially the same bodies, is slightly more digestible than the original cow product, while its keeping qualities are fully as good if not better. It is already in successful use at table, in making cream caramels and ice cream, and in cooking."

Dairymen and the public will await with interest the commercial development of this scheme.

## COTTAGE CHEESE

### Made of Skimmed Milk on Farms.

Cottage cheese can be made on the farm or in the home with little labor and expense. One gallon of skim milk will make about one and one-half pounds of cheese. If the milk is sweet put it in a warm place at a temperature of about 75 degrees F. until it clabbers. As soon as the milk has thickened or firmly clabbered it should be cut into pieces two inches square, after which the curd is stirred thoroughly. Place the pan of broken curd in a vessel of hot water so as to raise the temperature to 100 degrees F. Cook at that temperature for about 30 minutes, during which time stir gently with a spoon for one minute at five-minute intervals. At the conclusion of the heating pour the curd and whey into a small cheesecloth bag and let drain. After draining sufficiently salt to taste and add any other vegetables or serve plain. Scrambled eggs and cottage cheese make a pleasing combination.

It is a palatable, nourishing product that furnished a means of utilizing skim milk to excellent advantage. It is an excellent substitute for meat. Many new ways of using it have been originated in Uncle Sam's laboratories at Washington.

The first consideration in the production of good cottage cheese is the quality of the skim milk used. Milk which is dirty or has undergone any abnormal fermentation is undesirable. The fresher the milk the more satisfactory it is for cheese making, because then it is possible to direct and control the souring. It is absolutely necessary to give the milk proper attention both at the time of its production and in all its subsequent handling. The temperature at which it is kept from the time of its production until made into cheese determines in a large measure the quality of the cheese. For best results milk should be kept cool, at 50 degrees F. or lower, if possible, until it is to be made into cheese.

The yield of cottage cheese depends upon the quality of the skim milk and the method of manufacture, says farmers' bulletin 850, "How to Make Cottage Cheese on the Farm," recently issued for free distribution by the United States department of agriculture.

Yields from 12 to 20 pounds of cheese per 100 pounds of skim milk represent the limits, while a yield of about 15 pounds produces best results.

A. B. N.

## Silage and Legume Hay.

At the Missouri experiment station in an experiment which has been under way for four years and has involved 50 heifers it has been found that heifers receiving a ration of silage and timothy hay will be maintained, but will make very little gain in weight during the winter. Gains much above the normal may be had by feeding liberally with concentrates, but this greatly increases the expense of raising the animals. Where summer pasture is relatively cheap and grain high, the economical plan is to feed the animals a ration composed largely of roughage during the winter and to keep them in a moderate condition. Under this plan of feeding, a large part of the growth is made from pasture, but the animal may be somewhat slower to mature. The most practical ration for Missouri conditions is silage and legume hay for roughage, with a grain allowance of about two pounds daily.

## Clover Silage for Cows.

At the Canadian experiment farm clover silage proved a valuable substitute for corn silage for dairy cows. Oat and barley straw, when it could be obtained cheaply, was an excellent form of roughage as compared with mixed hay. Field carrots produced good succulence for dairy cattle and are recommended for dairymen who can not successfully grow mangels.

NOTICE.

One Man Alone Pulls Any Stump

Kirstin One Man Stump Puller

operates on a wonderful leverage principle. One man alone handles and operates. Just a few pounds on the handle means tons on the stump. When stump starts throw machine into high speed and out comes the biggest stump, roots and all. Positively no other machine like it.

Send for most valuable Stump Puller Book ever published—pictures—prices—terms—and all about our Special Agents' Proposition—all FREE. Write today. [73]

Kirstin Pullers as low as $55. One-man style or HORSE POWER, all sizes. 3-year guarantee with each machine.

W. E. Morrison, 321 Riverside Ave., Spokane, Wash.

## Builds Barn and Silo According to Condition

The photo herewith shows how natural conditions were taken advantage of in building the barn of Charles Watson, Coquille, Ore. Mr. Watson's farm is bottom land and where the barn stands the valley narrows down with high ground on each side. A driveway was built well up under the eaves of the barn and a slant trestle at each end connects it with the high ground. The barn is 92x46 feet, with a ceiling eight feet above the lower floor. On the lower floor both the horses and cattle are stabled, with a wide driveway and plenty of light.

Hay is hauled from the fields, by an easy grade, in at the end next the silo. From there it is forked off the wagons, to the ceiling below, and the wagon driven out at the other end. It does not pack so tightly as when dropped by a big hay fork and can be unloaded much more quickly. Three wagons can stand at once inside the barn, so there is no wait while the other wagon unloads. Time is thus saved, both ways. The loft is estimated to hold 200 tons, but Mr. Watson thinks 150 tons is as much as he has ever put in.

He has a good little herd of grade Jerseys and plans to begin soon with a purebred foundation herd.

## Use Good Seed.

### Home Grown Varieties Are Safest

Many bushels can be added to the 1919 Liberty wheat harvest, and farmers can reap added profits from increased yields with no more than the usual labor or expense if the variety of seed sown this fall is pure and is well adapted to the locality, say grain specialists. The seed should be free from noxious weed seeds and not infested by destructive plant diseases. It should be clean, plump and heavy.

Home-grown wheat should be used for seed wherever possible. The best seed to get is that of an adapted variety which has been grown continuously in the locality for some time, provided it is pure. The idea that varieties "run out" if grown long in one section is only an expression for the fact that they are allowed to become mixed and weedy and disease-infested. Changing the kind of wheat grown should be done only for the purpose of getting a proved, better variety. It is often desirable to do this, provided it is demonstrated beyond question that the new variety is better for that locality.

So-called "new" varieties, extravagantly advertised at fancy prices, should be disregarded completely. The varieties recommended by the state experiment stations or other authorities for the several districts within a state or region are the ones which should be grown.

The best way to be sure that the seed wheat is free from mixture with other varieties and also from weeds and diseases is to inspect the growing field. Each farmer should do this in his own fields and neighborhood. When his own variety is not well adapted or otherwise of good quality he should inspect fields of adapted varieties grown by some of his neighbors and arrange to obtain seed from them after threshing. In many instances he can arrange to have special care given to this field at threshing time in order to prevent mixture. Such care is especially desirable this year when the supply of seed wheat retained on the farms probably is smaller than ever before. If the best seed available is not free from weed seeds, the best possible cleaning should be given it.

Seeding with a drill always is advisable. In general, early seeding gives better results than late seeding. Where there is danger from the Hessian fly the time for seeding should be in accordance with the best advice given on this subject for each section of the country.

# Fodder Substitutes

## Seaweed, Reeds, Horse Chestnuts

The very acute shortage of feeding stuffs in France, the central powers, and the northern neutrals has led to experiments with all sorts of wild vegetation, often resulting in their successful adoption as substitutes for ordinary fodder.

In France, where the shortage has been keenly felt, especially in the case of oats, the first experiments were made with a kind of seaweed called laminaires, common on the Breton coast. Experiments showed that, as a feeding stuff, three pounds of seaweed were equivalent to four pounds of oats. Horses which were fed on it grew fatter during the period of experimentation than those fed on oats; and animals suffering from lymphangitis, an epidemic disease which is rife among wounded horses at the front, improved under the diet, the disease eventually disappearing entirely. Grass wrack, another kind of seaweed, is also used in France with success; and in Germany, Holland and Denmark seaweed of various sorts is used extensively.

The French authorities recommend the use of fresh reeds for pigs, and a reedflour for fodder was put on the market in France this February. Reeds are also used in Germany, where the minister of agriculture recently declared that fodder obtained from reeds procured green before the blossoming period is quite equal to good meadow hay. The collection and sale of reeds is regulated in Germany by the government, and a maximum price of $1.25 per hundredweight is fixed. With acorns, horse chestnuts and seeds of forest trees the French government has made the most careful experiments, and has issued full information as to the use of these for substitutes. Acorns may be eaten by all animals, though in differing amounts. For horses, seven pints of acorns are equal to 5 1-4 pints of oats. Acorn feeding should be suspended for a week after continuous use for a month. Horses and cattle should have raw acorns crushed and the husks removed. For pigs, the acorns should be crushed into a coarse meal and mixed with cooked potatoes, or cooked with potatoes.

Horse chestnuts are especially good for sheep, one pound replacing three pounds of fodder beets.

Heather has been used extensively in Germany since 1916. It is mown, then chopped and dried. The leaves and flowers are stripped from the woody stalks, which are then ground. The use of foliage, twigs and young shoots of any trees and shrubs has been largely developed in Germany since 1916. The cuttings of all trees and shrubs may be utilized, with the exception of birdcherry, laburnum, ivy, acacia and alder. The material should be collected in the winter, before the buds burst. Sheep and goats can eat it unchopped; for other uses it should be cut fine in a chaff cutter and used wet or dry; but it must be kept dry if preserved at all, otherwise it will mildew. This year it will be collected officially in Germany.

The varieties mentioned above are the only ones which are now commonly used. There are numerous other fodder substitutes, however, some of which are most ingenious. Pine and fir needles have been used in Sweden, potato tops in Norway, hazel catkins have been dried and used as a sort of fodder flour in Germany, and in Austria-Hungary stinging nettles were being resorted to last January. Perhaps the strangest fodder substitute of all, however, is cockchafers, a kind of beetle, which are being collected throughout Germany and Austria by school children, and are reputed to be excellent food, when dried, for pigs and poultry.

## SELECT EWES NOW.

### Care Will Improve Farm Flock.

Now is the time to select the ewes for breeding, well before the mating season and after this year's lambs have been weaned, to produce next year's lamb crop. In culling ewes from the flock two types should be carefully noted: Those that are extremely fat and those that are very thin.

The fat ones, especially those carrying an excessive bunch of fat about the rump, may be barren, their high condition being due to the fact that they have not been under the strain of bearing and nursing a lamb.

On the other hand, it must not be supposed, according to the U. S. department of agriculture, that all thin ewes should be bred. If they have dull eyes, harsh fleeces, pale, dry skins, a general run-down and unthrifty condition, and poor teeth, due to old age, they should be disposed of at once. If there is a contrary good condition, the thinness may be safely attributed to the fact that the ewes have been heavy milkers and have raised pairs of strong, thrifty lambs. Such ewes should be retained, and if of approved type their ewe lambs should be selected in maintaining the flock.

As a final point in selection, a careful examination of the udders may result in further culling those likely to be unable to raise their lambs because of defective udders.

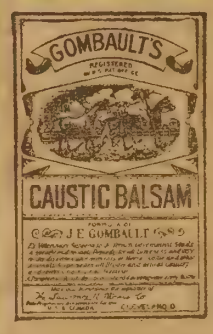
More than ever, says the department, farm flocks are being called on to contribute their full share to the food and clothing of the country. It is for this reason that the performance of each ewe in lamb and wool production must be known. All ewes must pay their way. If the flock owner will cull his stock annually, as here suggested, he will have good individuals plus regular performance. Not only will this mean greater profits, but it will be an assurance of increased supplies of mutton and wool to meet the insistent demands of wartime consumption and will help toward victory.

### New Bottle Invented.

To distinguish bottles containing poisons in the dark a sandpaper band encircles them, with an opening for their labels, has been invented.

NOTICE.

The Rhodes Harvester Co., and Colfax Mfg. Co. exhibit of wagon loaders, warehouse pilers, potato sorters, bulk grain elevators, truck loaders and combined harvesters will interest you at Spokane Interstate Fair, September 2 to 7.—Adv.



This is the Kind of Horse the Government Wants

No horse with a Spavin, Splint, Ringbone, Curb, Bony Growth, Capped Hock, Wind Puff, Strained Tendon or Sweeny can now pass the keen-eyed Inspectors of the Government Remount Stations.

Splendid-looking horses—otherwise sound—are being turned down because of some blemish that could be quickly cured with

Gombault's Caustic Balsam

Here is your chance to make money for yourself and at the same time help in the Government's great Thrift and Production movement.

Put your horse into condition with **Gombault's Caustic Balsam.** A safe and reliable remedy.

**Gombault's Caustic Balsam** if applied immediately after burns, bruises or cuts, is a perfect ant septic—soothing and healing. An absolutely safe external remedy for man or beast.

Every bottle of **Caustic Balsam** sold will surely give satisfaction. Price $1.50 per bottle. Sold by druggists, or sent by parcel post with full directions for its use. Send for descriptive circulars, testimonials, etc.

# Veterinary

Dr. S. B. Nelson

**Sheep Have Cough**—Will you kindly tell me what to do for sheep that have a cough and discharge at the nose?
Winona, Wash. MRS. L. A. P.

Try to have the sheep breathe the fumes of tar. If it is not convenient for you to do this, try and rub a little tar on their feed, and let them get it that way.

**Lumpy Milk**—We have a 2-year-old heifer, just fresh, that seems to give lumpy milk. The lumps are a creamy color. She seems perfectly healthy. J. C. M.

I think if you purge the heifer well and then cut down a little bit on the feed for a few days afterwards that she will come along all right. For the heifer, I think a pound to a pound and a quarter of epsom salts given in about three quarts of water and then mixed with a pint of syrup—a heavy, coarse syrup—will make a good purge for her. I do not believe that you need any other treatment for the heifer.

**Growth on Fetlock**—I have a valuable horse that has a growth the size of an egg located on the front part of the fetlock. It is directly over the joint and feels like a bunch of thick, tough skin. It has been this way about one month. The horse is not lame. Please answer through your paper. A Reader, Palouse, Wash.

I am of the opinion that your horse can possibly be cured by a surgical operation. Since the growth is so near the fetlock joint, it very naturally would be wise for you to consult your local veterinarian. You have a very competent graduate veterinarian in your town.

**Cow Gives Bloody Milk**—I have a grade Holstein, a good milker, six years old. She is on pasture and has no other feed. Last year, about four months after she came fresh, she gave a small quantity of bloody milk, and kept it up for about four months and for the rest of her milking period she seemed to be all right. This year she has done practically the same thing, after four months she gives bloody milk out of the same teat. Apparently that quarter of her is in perfect condition otherwise. Can you please give me a remedy? F. R.
Stevensville, Mont.

Give your cow one and one-half ounces of epsom salts in two quarts of water. A few days later, begin giving her one teaspoonful of sodium hyposulphites in one quart of water morning and evening for a few days and then one teaspoonful daily for a week or ten days.

**To Kill a Ringbone**—Will you kindly tell me how I can kill a ringbone on a 2-year-old colt? F. B.
Enterprise.

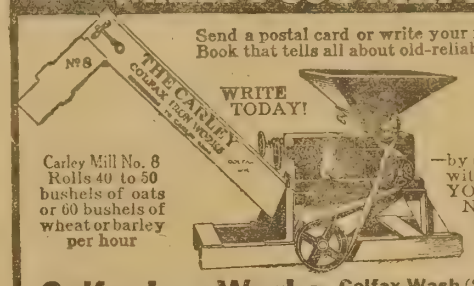
The ringbone is a very difficult thing to kill, but on a 2-year-old colt it may be much easier. I would suggest to you that you have the colt fired by the actal cautery by a local veterinarian, and then a blister put on afterwards. This is the best treatment for the trouble. If you do not have a veterinarian in the neighborhood that is available, you might personally blister the colt. There are a number of blisters that are available, and the following is frequently used: Red iodine of mercury, one part; powdered contharites, one part; beeswax, two parts; lard, six parts.

Have your druggist mix this thoroughly. Then clip the hair off the bone, rub the part thoroughly with the hand and then rub in the ointment, taking 10 to 15 minutes to rub it in. Afterwards, apply the ointment about as thick as the back of a knife blade. Tie the colt up for 12 hours, so he can not get his head to the blistered part. Later, in two or three days, it should be washed and a little lard or vaseline applied on the blistered part.

**Cow Gives Bloody Milk**—I have a cow that gives bloody milk out of her left hind teat. She is a heifer, two years old in July. She came fresh in April. She has no calf sucking and is in good condition otherwise. Has alfalfa hay and green alfalfa to eat. Could you tell me what would be good to give her or do, and would the milk out of the other teats be good to use?
Yakima, Wash. C. B. G.

Whether or not the milk would be good would depend entirely upon what is causing the bloody milk from the one teat. As a general rule, the milk from the other teats may be used with safety. At other times, it can not. I think it would be wise for you to consult your local veterinarian and let him see the cow, make a personal examination, and determine what the trouble is and give you advice. In the meantime, you might try giving your cow a teaspoonful of hyposulphite of soda in one quart of water morning and evening for a week. This sometimes gives good results.

**Pig Has Piles**—I have a pig, two months old that has piles, anyway, the rectum protrudes the size of a half walnut. I fed her skimmed milk with dish water and vegetable trimmings, also alfalfa hay. She seems perfectly healthy and is always hungry. Someone told me that skimmed milk will cause this trouble in a young pig. Is it true, and is there anything I can do now to cure her? I am feeding her a mixture of feed mixed in water and the alfalfa hay. W. S. R.
Sunnyside, Wash.



In the inquiry which I received regarding piles affecting pigs, in nearly all cases they have been fed skimmed milk with or without shorts; generally with. I believe that this is too heavy a feed for pigs and they should have a much broader diet than this, feeding roots and pasture—alfalfa or clover. I would therefore suggest to you that you take the skimmed milk away for a while and see if you can not give the pigs green alfalfa or clover for a few days. I would suggest that you give the pigs one ounce of castor oil in a mixture of slop feed mornings. If this does not give you good results, I will give you a prescription which you might use, but it is very expensive at the present time. It includes: Fluid extract of belladonna, one part; fluid extract of ergot, one part. Apply that to the piles with a little cotton two or three times daily.

**Don't Judge Harshly.**

Nine times out of 10 there is an explanation for what seems unreasonable upon first notice. Wait a while before passing judgment.

ELDRIDGE BUICK CO.

SEATTLE Distributors SPOKANE

**JAMES DRYDEN,**
**Editorial Contributor.**

The Oregon Agricultural college pen of Oregons were again first for month of July at the International egg-laying contest at Storrs, Conn. Their record was 249 eggs for 10 hens. They are also first for the full term of nine months. The O. A. C. has also the leading pens for the same period at the contest at Pullman, Wash., and Victoria, B. C.

The pullets that will lay the most eggs next fall and winter are the ones that have the best care now. Give them liberal range or exercise, liberal feeding, plenty of green feed, and do not crowd them in poorly ventilated houses. Then another thing, kill the mighty mites.

The mills are now turning out mill feed. The bran and shorts will be mixed. This will be all right for the poultry-keepers. Shorts and bran do not vary greatly in composition. There is slightly more mineral matter in the latter, but the protein content is about the same. A little alfalfa meal may be added to the bran and shorts if it can be obtained of good quality and at less than $40 a ton. Ten to 15 per cent of cocoanut meal or linseed oil meal may also be added to advantage. A mash made of 100 pounds of bran and shorts and 15 pounds each of alfalfa meal and cocoanut oil meal will make a good mash, and will be reasonable in cost.

The nice, slick, fat hen at this season of the year is a camouflageur; she is a poor layer. Kill her. J. D.

# Must Ventilate Well

The latter part of May and the first part of June we bought 250 baby chicks (White Leghorns). But we have lost about 200 of them. We didn't have any brooder for them, but we had them boxed up over night. Besides we had them locked up in the house all day long. Their wings seemed to grow, but not their bodies. It looked rather as if the body became smaller. After they became older they started to have trouble with their feet so they were not able to walk. J. A.

Hay, Wash.

**Answer.**

With the information given, a positive answer could not be given to this correspondent. The chicks, however, were not brooded well. Boxing them up at night and keeping them locked up in the house all day is pretty likely to kill them off by slow stages. Small chicks just hatched can be boxed up without much ventilation of air, but after a few days 250 pairs of lungs in bodies that are developing at a rapid rate need a liberal supply of fresh air or oxygen. This is just as necessary as food. Their need for oxygen becomes greater every day as they grow, and they can not be shut up in a box all night with very little air and have them grow and live.

But in a cold or fireless brooder, it is difficult to keep them sufficiently warm and furnish sufficient air at the same time. It is possible, however, to raise them successfully in a fireless brooder, especially in the warm season, but the ventilation must be elastic; it must be increased as the chicks grow.

Another unfavorable condition mentioned is the locking of the chicks in the house all the day for several weeks. Very few chicks are raised successfully this way. By the time they are a week old, or sooner, they should have a run outside on clean, fresh ground. They are sure to develop leg weakness if shut in the house all the time, especially if heavily fed and given little exercise. Do not let the chicks get chilled, but give them fresh air, exercise, and a variety of food.

It is possible there may have been other troubles, but the letter does not give information enough to judge.

J. D.

**Military Strategy.**

One of the boys who enlisted in the navy reserve, both for home and foreign service, tells this:

"A few days after I got to the barracks at ——, the commandant ordered all hands to assemble and stand in line with our backs touching the wall of the barracks. Then he said he understood a few of the boys had enlisted for home service only.

"'Let those who have,' he continued, 'take three paces to the rear. Adjutant you will check off the names of all those who remain in line as willing to do foreign service.'

"Strangely enough, the vote was unanimous."—New York Mail.

## National Poultry Organization.

The National War Emergency Poultry Federation, which was organized at Chicago, March 31, is now ready for business. Officers have been elected, bylaws printed, headquarters opened at Washington, a budget has been made by the advisory committee, and a national drive is now to be made for membership at a dollar. A membership of 25,000 is needed, and it is expected that every progressive poultryman will be a member within a month. This organization takes in all existing poultry organizations of whatever nature, and its purpose is to safeguard the poultry industry and help win the war. It is a critical time in the history of the industry, and it is felt that a strong national organization was needed during the period of the war, besides its influence will be felt for years after the war. Poultrymen are slow to organize and cooperate. They should get together now when the need is great and make their influence felt for the good of the nation and for the good of the industry. J. D.

## PREPARE FOR SHOW.

### Poor Preparation Loses Prize.

With a view to improving the poultry shows of the country, and thereby stimulating the poultry industry, the U. S. department of agriculture has issued the following recommendations covering the preparation of poultry for the show:

"The first thing after selecting the birds nearest the standard requirements in shape, color, and size is to look for disqualifications, the most common of which are side sprigs, stubs, wry tails, squirrel tails, crooked backs, etc.

The birds should be placed in training cages or pens similar to those used at the poultry shows. The bottoms of the cages should be covered with a litter of shavings or cut straw which can be removed frequently.

"Begin a few weeks before the show and take the birds from their roosts every evening and place them in the seperate training pens for the night. At first leave them quiet for an hour or two and then, by lantern light, stroke each bird quietly over the back and from the throat to the thighs. After it is accustomed to the hand, use a small thin stick and teach it to pose in the desired position. With patience and kind treatment it is surprising how quickly birds learn to do what is expected of them. This training is really the most important part of conditioning, as nothing is more discouraging to a judge than to have a bird dash about the cage in a frightened manner and stick its head in a corner.

"All white birds should be washed; in fact, washing improves any of the long-feathered varieties.

"Feeding is also a very important point to consider. For the small-combed varieties a feed of oats, corn and feed wheat, with a light feed of wet mash at midday, is very good. For some of the large-combed breeds, such as Leghorns and Orpingtons, do not use meat, as it forces the comb to grow too large and may cause it to turn over. A feed of bread, soaked in milk once a day helps the plumage wonderfully. All birds should have plenty of grit and a little green feed. Chopped onions help to keep them in good condition.

"Just before sending the birds to the show their combs, legs, and feet should be sponged with clean water and dried with a soft cloth. A little vaseline on the combs and faces greatly improves their appearance.

"Another point that many breeders do not understand is the proper shipping and tagging of their birds in suitable carriers. Some use entirely too small crates or coops, and others use large, heavy boxes that can not be handled by one man. The express employes handle them rather roughly and the birds come to the show with feathers broken and in bad condition. Always be sure that the tags with your name and that of the poultry show and the destination are securely fastened on the crates. It is well to have a number on the tag to correspond to the leg band on your fowl. In that way you will be reasonably sure to have your birds returned in the coops in which you ship them."

**Horrors of War.**

From a newspaper—"A shell from our forward gun landed squarely on her and she varnished."

That polished her off, what! Certainly in effectiveness that shellac-d nothing.

**Good at Visiting.**

Miss Anna Anderie of Sheboygan is visiting with friends in this city for several years.—Manitowoc News.

# Improve Quality; Increase Quantity

## *This Is the Motto of the Interstate Fair at Spokane*

The 25th anniversary of the Spokane Interstate fair and live stock show will be made the occasion for giving the greatest cooperative service possible to Uncle Sam's food conservation program.

"Improving the quality and increasing the quantity of cereals and live stock" in the Inland Empire will be the slogan for the 1918 fair.

The show will be open Labor day, September 2, and a program covering six busy days has been outlined by President Thomas S. Griffith of the fair association and his staff.

A big feature of the fair will be the encampment, on the grounds, of 550 United States sailors from the naval training station at Seattle. The contingent will be accompanied by a 60-piece band and corps of buglers, and consists of five companies of naval reserves, who will live in a tent city pitched in the center of the race track on the fair grounds. On Thursday of fair week, 70 yeomanettes, the women of the navy, will arrive for a three days' encampment.

A significant demand for exhibit space indicates already that the available space in the permanent exhibition buildings will be filled.

The advance entries for harness races, to be featured every afternoon before the grandstand, are greater this year than at any time in the history of the speed department.

Fourteen carnival exhibitions will fill the midway, and the annual Indian village will be a part of this display.

Inquiries for stall space for horses, cattle, sheep and hogs are being received from many sections of the Inland Empire, and it is expected that all available stall space will be assigned.

Machinery row has been sold out to exhibitors who will demonstrate tractors, threshing machines, trucks and other important new farm machinery.

Several entries have been received for the relay races, both for men and women, in which purses of $1500 each have been hung up for the fastest time in the daily two-mile dash of the men and women riders.

The special days assigned for the fair, briefly, are as follows:

Monday, September 2, opening day, labor day and everybody's day.

Tuesday, September 3, navy day, pioneer day and mining men's day.

Wednesday, September 4, democracy day, fraternal day, Ad club day and Spokane valley day.

Thursday, September 5, derby day, in which the derby will be the feature of the race program; grange and Farmers' union day and Rotary club day.

Friday, September 6, Spokane day, Lafayette day, Gun club day and automobile day.

Saturday, September 7, children's day, Inland Empire day and fun day on the midway.

The newly organized United Naval circle, which has a charter membership of over 100 matrons in the Inland Empire, will conduct a hostess house on the fair grounds. A register will be open to visiting friends and relatives of the sailors and soldiers who spend their week on the fair grounds. Accommodations have been provided for these visitors to meet with their relatives who may be in the United States army or navy service, and postcards have been sent by the boys who will be at Spokane to their friends throughout the Inland Empire, inviting them to meet them at the fair during the week.

Under the direction of the United States food administration a comprehensive exhibit illustrating graphically practical short-cuts on food conservation and its importance in ending the war will be maintained at a central place on the grounds.

## War and Farming

The cutting off of cheese imports has greatly stimulated the market for foreign styles of domestic manufacture, particularly Swiss and Italian.

Seventy-two pounds raw wool is required for a soldier's outfit. The clean and scoured weight of this outfit, however is found to be only 31 pounds. The articles of clothing which are included in the soldier's equipment are wool uniform, overcoat, blankets, overseas cap, flannel shirts, wool gloves and mittens, winter underwear, spiral puttees, stockings, lining for leather jerkin and several smaller items.

Uncle Sam paid 23 1-2 cents a pound for army beef to feed American soldiers during July. Hams were purchased for 31 cents a pound, delivered at camps, and bacon cost 43 1-2 cents a pound. Flour was purchased at $11.10 a barrel. The average price for army sugar was $7.30 per 100 pounds. The government also paid $2.97 per 100 pounds for onions delivered at the camps.

And now the lowly peanut is coming into its own—not as a food for squirrels in the parks and elephants in circuses, but as a means of producing oils; because it can be used in the place of wheat, thus saving a large amount of this cereal for war needs; and being rich in protein and in fat it may also serve as a meat substitute. According to the last census (1909) 869,887 acres were planted to peanuts, and the yield was 19,415,000 bushels, valued at $18,271,000. Since 1910 the acreage planted to peanuts has increased at an even more rapid rate than in the preceding 10 years. From figures secured by the bureau of crop estimates it is evident that over 2,000,000 acres of land were planted to this crop last year. J. H. B.

### Prevents Snoring.

One of the simplest of many new devices to prevent snoring consists of a pair of tubes to be inserted into the nostrils to keep them open.

### Let the Hogs Growl.

If men had been expected to growl about conditions they would have been furnished by nature with growlers like dogs have.

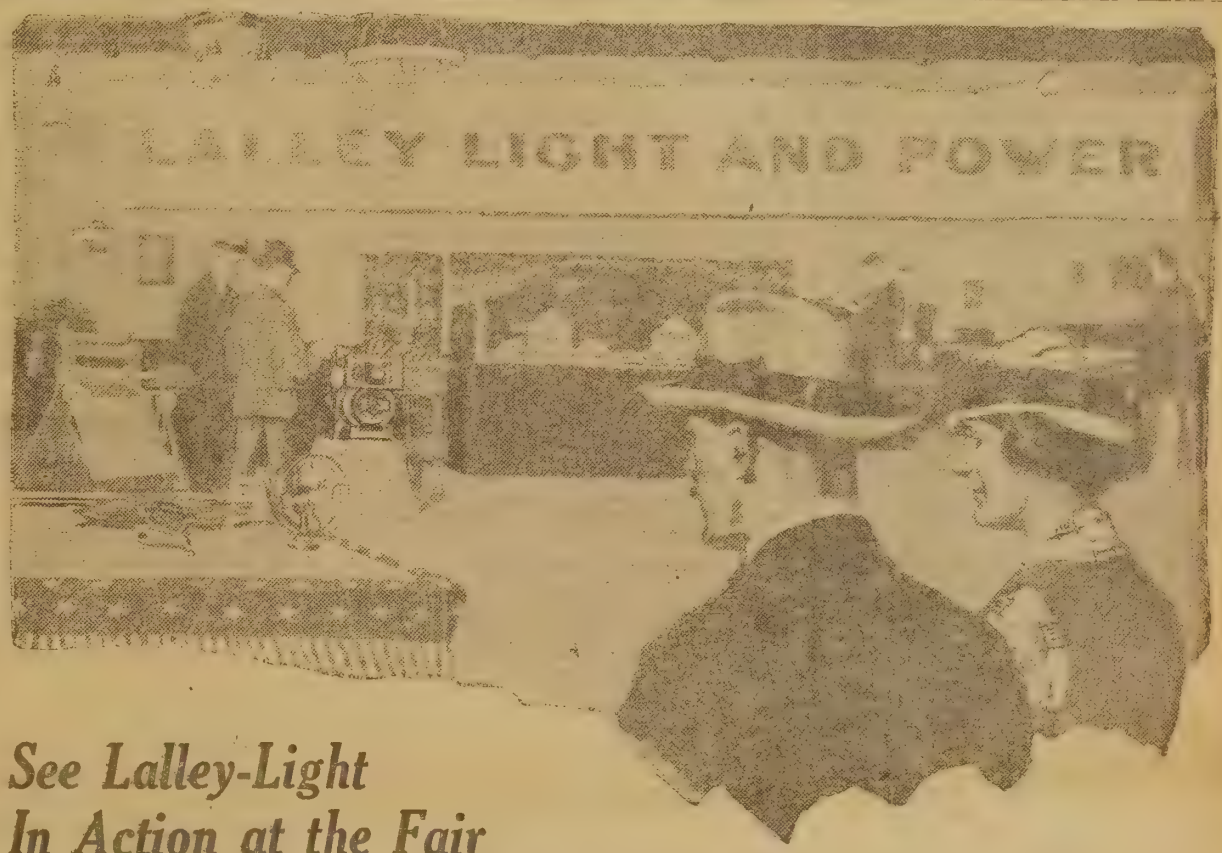
## FRUIT PESTS

### Standardize Laws in Northwest.

"There are many pests in the east which have not reached California yet," said G. H. Hecke, state commissioner of horticulture for California, to the Farmer representative. "California spends a large sum annually fighting pests and keeping new ones out. It is cheaper and easier to prevent them from coming than to combat them after they are here.

"We have been quite fortunate west of the Rockies. Each state makes its own quarantine laws and works absolutely independently of all the rest, though Washington, Oregon, Idaho, Montana, Utah and California are isolated in a way by desert and mountain from the rest of the country. It would be better if we could standardize those laws which affect all these states.

"Looking toward that possible end a convention of quarantine officials of all these states and including those of British Columbia has been called to meet at Riverside, Cal., November 11 to 16 of this year. We hope to form a permanent association at that time, and we look for a very large attendance, probably several hundred officials. Professor Marlatt, chairman of the federal board of horticulture, whose business it is to protect the United States from the entire world of pests, expects to be present. He is very much in favor of the convention.



"Few people realize the danger of extinction our fruit interests confront all the time. Suppose the Mediterranean fruit fly should secure a foothold in this country. This fly lays its eggs on the surface of fruit and the maggots work into the pulp. Break open the fruit and you find it alive with maggots. This fly exists unchecked in swarms all over southern Europe, northern Africa, South Africa, in fact everywhere but America. It could and would ruin our fruit industry. Constant vigilance has kept it out. How easily it could gain admittance. Some visitor to the orient might bring back a mango or other fruit infested with it, and speedily it would spread all over this country as well.

"Here in the northwest we are in a strategic position to combat fruit pests and disease, but one weak place might admit them to all. Say, some eastern nurseryman might send infected trees into one state which might be lax in its quarantine laws; from this state it might gain access to others. Many laws need no change, some might need slight modification. The meetings would be of immense benefit to the officials themselves and enable them to understand what is going on elsewhere in the same line. Such conferences usually show weak spots in one's own system and are correspondingly valuable.

"If we could save what is spent in fighting fruit pests and diseases we would have enough to pay all taxes, even in war times. We can not save it all, but we can save a large part of it by working together."

### Light and Darkness.

Night is only day shut off.

## *See Lalley-Light In Action at the Fair*

Lalley-Light will be exhibited, and in operation, at most of the county and state fairs this fall.

We ask you to note particularly the way it runs, and the character of the electric light and power it produces.

If you will do this, we count on the plant itself to convince you of the superiority it has proven in eight years of every day farm use. You probably will be impressed, first, with its extremely smooth running; and the fact that a low hum is all you hear when it is running.

You will see that the electric lights are strong and steady all the time—without even a suggestion of a flicker.

You will observe, also, the same steady flow of power to the electrical machines which may be exhibited.

The men in charge will explain that Lalley-Light furnishes light and power from two sources—the storage battery; and the generator, independently of the battery.

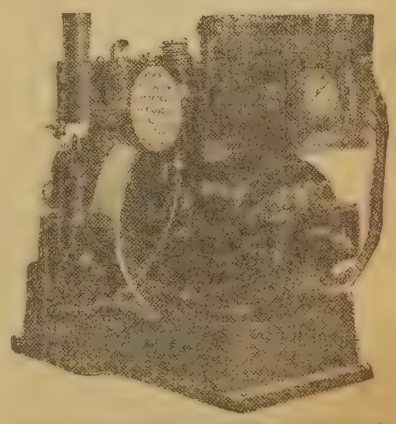
That means with Lalley-Light you are doubly sure of having light and power.

Even if you are not of a mechanical turn, you can't help admiring the unusual simplicity of the plant, and its very compact design.

We urge you to study Lalley-Light, because it points the way to a great saving of farm labor and an equal increase of comforts and conveniences on the farm.

Next year the farmer's need for Lalley-Light's reliable, economical power and light will be even greater than this year.

You should prepare now to meet that need.



If Lalley-Light should not be displayed at your home fair, write to us for details and name of the nearest Lalley-Light merchant.

# Orchard Troubles

## Pests, Diseases and the Remedies

By GRANVILLE LOWTHER.

Because the codling moth is one of the worst pests, I will give it more elaborate treatment than some of less importance. There are four stages in its life history. The first is the egg stage, second the larval, third the pupa, fourth the adult moth.

The eggs are laid singly and are minute little objects about one-twentieth of an inch in diameter, perfectly white in color and somewhat transparent. They look like trout's eggs glued to the surface of the leaf or fruit. The surface is finely wrinkled and so reflects the light that it appears as a fine glistening speck, if the fruit or leaf to which it is attached is held at the correct angle before the eye. After two or three days from the trees the eggs are deposited, the developing larva becomes visible as a black spot near the center of the circle and the outline of the whole body is discernible for a day or two before the egg hatches. The eggs hatch in from 7 to 10 days.

The larva when first hatched is scarcely one-sixteenth of an inch long. The head is large, black and shining; the body is slender, translucent, white in color and marked with distinct black spots, each of which has a minute bristle. Owing to their minute size and the fact that they enter the fruit soon after hatching these young larvas are rarely seen. As they develop they molt five times; the color of the head and the thoracic and anal shields turn black to brown and the body acquires a pinkish tinge. The full grown larva is about 3-4 of an inch long and 1-20 of an inch broad. The duration of the larval stage is from 16 to 24 days.

The pupa leaves the apple and seeks some protected spot in which to hide while passing through its transformation from larva to pupa. Having found a suitable place, it hollows out a suitable cavity with its jaws and proceeds to envelop itself in a thin, tough cocoon of silken threads intermingled with particles of excavated materials. When completed, the cocoon is usually oval in form and about 3-4 of an inch long. When the pupal stage is reached the insect remains in that state for about three weeks and emerges as an adult moth.

The body of the moth is about 3-8 of an inch long and of a modest greyish brown color.

The remedy is to spray with arsenate of lead, two to four times during the season. The first spray is most important after petals fall and before the calyx cup closes. The aim is to fill the calyx cup with poison.

The curculio is not very important in the Pacific northwest, but in the central states it does more injury than any pest except perhaps the codling moth. The snout is long and slender and may be folded under the body. The beetle winters under the rubbish or in the soil and in the early spring begins to feed on the opening leaves. After fruit sets it may gnaw holes in the fruit, but it does most of its damage by laying its eggs in the fruit, cutting a crescent flap in the place where the egg is laid.

This insect affects the plum, cherry, peach and apple, but develops most freely on plum and sweet cherry.

Remedy, same as for codling moth.

The ermine moth is small, with snowy white, black dotted wings. The hind wings are leaden in color. They feed upon the foliage and are easily controlled by arsenical poisons. They attack the apples, cherry and various other plants.

### European Fruit Scale.

This pest is much larger than the San Jose scale, being about 1-18 of an inch in diameter. They do not multiply so rapidly as the San Jose scale, in some northern climates producing only one brood in a year. They affect the apple, pear, peach, plum, cherry, birch, poplar, horse chestnut, basswood, alder, haw, maple, aspen, oak and others.

Remedy: Spray with lime-sulphur, late in winter or early spring.

### Eye Spotted Bird Moth.

When fully grown the larvas are about 1-2 inch long and of a dirty gray color. They feed upon the blossoms during the blossoming period and mat the blossoms and leaf clusters with their silken threads within which they feed, making it difficult to reach them with spray. The young larva feed upon the underside of the leaves and skeletonize them.

Remedy: There are two remedies recommended. First, to spray the trees before the buds start in the spring in order to destroy the overwise-teving largae. This spray may be of lime, sulphur, crude oil emulsion, or tobacco. The second is a poison and arsenate of lead may be used in connection with the codling moth spray. One is a contact spray, the other a poison.

### Fall Web Worm.

The moth producing this caterpillar is white and sometimes has a few black spots on the wings. The larvae hatching from masses of eggs laid on different parts of the tree spin their webs which extend over quite an area. The caterpillars will first eat all the leaves within the web, then those nearest by, then extend their injuries until they have often defoliated a whole tree. Two broods are reported in one season, the last one worse than the first. This is not the tent caterpillar which appears in the spring and builds its webs in the forks of the limbs.

Remedy: Destroy the clusters of eggs if possible when the leaves are off. They may be cut out and burned.

If this is not done the arsenate of lead spray will kill them.

## Tomato Blight.

I have a letter from Mrs. G. O. Cleveland, Gooding, Idaho, describing a condition in her tomato vines, that I am guessing is "tomato blight."

There are several forms of this disease; or similar diseases; but the one most common in this country is what is called "western tomato blight."

It is supposed to be caused by a bacterium in the soil; but the physical conditions which make it favorable for the bacterium to work are in so far as I know as follows:

1. Transplanting, and thereby injuring the root. It is better therefore to plant the seed where the plant is to grow, and thin to the desired number.

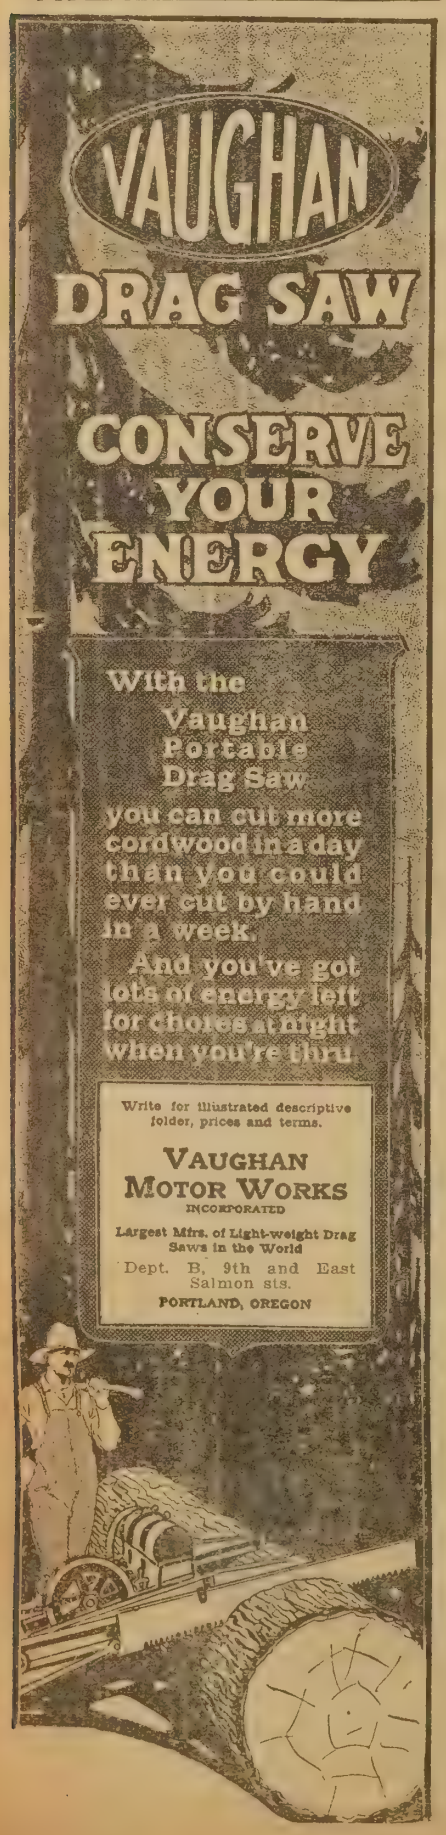
2. The hot sunshine of semi-arid and arid sections of the Pacific northwest is injurious to the plants. Therefore some tomato growers shade their plants, in part at least, from the sunshine.

3. If the plants are irrigated at night, in the morning the roots and stems will be sappy and turgid, and the evaporation of water from the plant on the following day will not be sufficient to cause it to wilt.

4. In irrigating, if the water is conducted as close as possible to the plants, causing the alkali in the soil to filter away from the roots, rather than toward them, they are less likely to blight. At this season of the year it may not be possible to save the crop, but it will pay to make an effort, as the blight may be held in check.

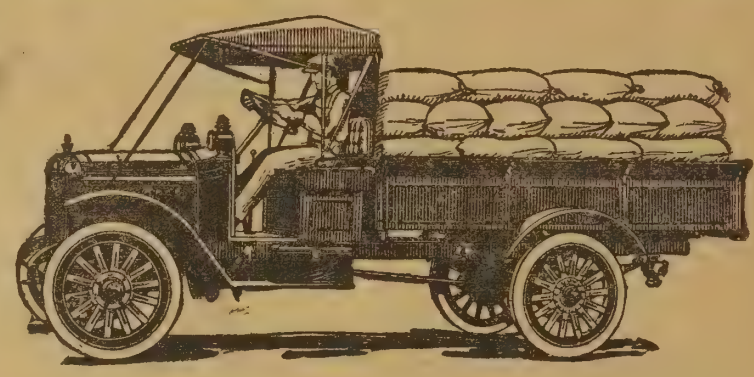
Cut out the blighted portions and burn them. Spray with bordeau.

G. L.



### Some System.

Secretary Daniels said at a reception:

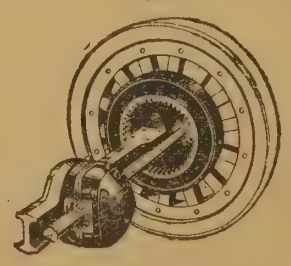


"Some of the ideas submitted to us for fighting the submarine peril are excellent. Some, again, remind me irresistibly of the pigeon fancier.

"There's a pigeon fancier in my native town who has great success with the birds. A farmer said, enviously, to him one day: 'You never lose a pigeon! How is it? Where's your secret?'

"'Well, you see,' said the fancier, 'I cross my pigeons with a talking parrot, so that if they get lost they can ask the way home.'"

REPUBLIC
Internal Gear Drive
MOTOR TRUCKS
Built by the Largest Manufacturers of Motor Trucks in the World



# Republic Trucks on the Farm

Republic Trucks are particularly adapted to the special requirements of farm work.

Republic Trucks have an Internal Gear Drive with I-beam load-carrying axle of solid forged steel. The driving mechanism is entirely separate from this axle and has nothing to do but drive the truck.

The power is applied near the rim of the wheel, gaining greater leverage for hard pulls. And this Internal Gear Drive permits 45% greater load clearance, a big advantage for country roads.

There is less unsprung weight which means important savings in tires, gasoline and all upkeep expenses. Every part is simple in construction, easy to get at and easy to adjust when necessary. 1300 Service Stations, distributed all over the United States, stand back of Republic Trucks to see that they give continuously satisfactory service.

The Internal Gear Drive gets extra power for pulling over bad roads and up hard grades by applying power near the rim of the wheel.

## Dependable—Economical Trouble Proof

Republics are easy riding and easy to drive. And they have proved so dependable and given such superior service to owners that it has been necessary to build more than twice as many of them as any other motor truck in order to supply the demand.

There are seven different Republic Models —¾ ton to 5 ton. One of these models will exactly fill your requirements.

See the nearest Republic dealer and send for latest booklet.

Republic Motor Truck Co., Inc.
Alma, Michigan

# Peas Six Cents

## Growers to Confer With Buyers.

Pea growers of the Fairfield district in eastern Washington, which is the leading pea growing section of the northwest, and one of the leading sections in the United States, believe that the price of peas for the season of 1919 should be at least six cents a pound for the Alaska variety with the usual premium over this price for the wrinkled varieties.

This was brought out at a meeting of 40 or 50 growers at Fairfield last week, when Agriculturist J. R. Shinn of Spokane county presented certain facts and figures bearing upon the situation. The growers arrived at their six-cent figure by comparing the price of peas and wheat before the war with the price of the same at the present time. It was pointed out that wheat in 1914 brought an average of approximately 80 cents a bushel. Peas of the Alaska variety at that time were contracted to the seed companies at about two and one-half cents a pound. With wheat at $2.20 a bushel or better this year for basic varieties at basic terminals, it figures out that the peas with a proportionate increase in price should bring between six and seven cents now.

For the purpose of conferring with the seed companies on the price to be paid for next year's pea crop a committee of growers was appointed at the suggestion of Henry Treede, one of the leading growers of the district. Other members of the committee are Charles Holsten, G. D. Miles, James Hayes of Waverly and Roy Adams. This committee, in cooperation with County Agent Shinn, is assembling data on the pea industry for presentation to the buyers.

The Fairfield meeting was noteworthy in the entire absence of any spirit of antagonism between growers and buyers. Several times during the session growers expressed confidence in the willingness of the seed companies to pay a fair price once the facts were available. In suggesting that a committee be appointed to thresh the matter out Mr. Treede said that while he felt that six cents was a reasonable price for peas, if the seed companies convinced him that they could not afford to pay that much he would be willing to continue growing for a less price. Other growers expressed the same sentiment.

Pending the result of the conference between the committee and the seed men, the growers present are informally pledged to enter no contracts at a less figure than six cents. It is said that in previous seasons the companies have made early contracts with sufficient numbers of the growers before the prices offered were thoroughly understood to practically compel the rest of the growers of the district to contract at the same figures. This year it is the plan of the growers to unify the contracting business as much as possible, and to get the price right at the start of the contracting season.

While no contracts are known to have been entered into up to this time, and no formal announcement of prices made by any of the buyers, it is understood that some have suggested five cents as a price for the Alaska pea for the 1919 crop, with corresponding higher prices for some of the most popular varieties. Representatives of several of the seed buying houses have expressed unofficially the opinion that the price would be voluntarily increased by the companies, but as to what extent they could give no information. Practically all of the Alaska peas in the Fairfield district were contracted at four cents for the present season's crop.

That the pea-growing industry in that section is to continue one of the big agricultural industries is indicated by the fact that two of the seed companies in the field have erected large, well-equipped warehouses for the sole purpose of handling the peas which they contract. These warehouses have been built and equipped at a cost of many thousands of dollars. Speaking to the growers present at the conference last week James Hays, one of the leading growers of the Waverly section near Fairfield, said: "I do not want it to appear that we are demanding something unreasonable from the seed companies just because they have spent a lot of money building their warehouses here, and must therefore continue to do business with us. All we want is a price that will divide the profit between the seed men and the growers."

Two years ago the Fairfield district harvested its most bumper crop of peas. Several thousand acres made a yield of 10 bushels or more to the acre. Few fields went below 25 or 30 bushels. Last year, owing to the almost unprecedented drouth the crop was nearly a failure, many pea fields being barely worth harvesting, though making considerable pasture for stock. The growers were not discouraged, however, and this year put in a largely increased acreage. They were again hit by drouth, but not so seriously as a year ago. Pea crops in the district this year are running all the way from 8 to 20 or 25 bushels per acre, with the average for the section being perhaps between 15 and 20 bushels. It is estimated that the crop in the vicinity of Fairfield will be worth approximately $2,000,000 this season.

## Old Sacks Relieve Scarcity.

The scarcity of sacks is being relieved by the appeal for all townspeople to return to the dealers all empty sacks which they find about their premises. There has already been a gratifying response to this appeal, which not only helps out in the matter of making more sacks available, but it teaches a lesson of thrift and economy. The old sacks are cashed in in many instances for more than the cost when new, and the money is being put into thrift stamps, so the old sacks are doing double duty.

### Democratic.

A Battle Creek lady danced three times with a good-looking first lieutenant, and then said:

"Pardon me, sir, but your face is strangely familiar. Haven't I seen you somewhere before?"

"Yes, madam, you have," responded the officer. "I was your milkman for more than three years."

# Help Save the Canadian Crops

When Our Own Harvest Requirements are Completed

## United States Help Badly Needed Harvest Hands Wanted

Military demands from a limited population have made such a scarcity of farm help in Canada that the appeal of the Canadian government to the United States government for

**Help to Harvest the Canadian Grain Crop of 1918**

meets with a request for all available sssistance to go forward as soon as our own crop is secured.

The allied armies must be fed and therefore it is necessary to save every bit of the crop of the continent—American and Canadian. Those who respond to this appeal will get a

**Warm Welcome, Good Wages, Good Board and Fine, Comfortable Homes.**

A card entitling the holder to a rate of 1 cent per mile from Canadian boundary points to destination and return will be given to all harvest applicants. Every facility will be afforded for admission into Canada and return to the United States. Information as to wages, railway rates and routes, may be had from the

# Western Electric POWER and LIGHT

*Let the Western Electric man show you the kind of plant you need*

THERE is as much difference in electric light plants as there is in automobiles or gas engines. No one type is equally suited to all farms, and your power and light requirements may be different from your neighbors'.

Like every farmer, you want electric power and light, but you don't want an outfit either too large or too small for your needs. Start right! Get all the facts! *Let the Western Electric man show you the kind of plant you need!*

Our business is bigger than the mere selling of any particular electric plant. We sell electricity for the farm. There are all sizes and types of Western Electric outfits. We are not forced by policy to sell one type for every purpose. We can sell you an outfit with or without a gas engine.

If you have a gas engine, it may be a needless expense to buy another engine as a part of an outfit. On the other hand, if you want an outfit with built-in engine, the Western Electric man will tell you about a new outfit of this type ready for delivery this Fall. In any case, it is just a matter of fitting our equipments to your needs.

More than forty years of electrical manufacturing experience is back of all these Western Electric Power and Light Outfits.

Make your entire equipment "Western Electric." You can get Western Electric Motors, Water Systems, Milking Machines, etc., to save labor on the farm; as well as Irons, Vacuum Cleaners, Washing Machines and other electrical helps to save time and labor in the home.

*There is a Western Electric man near you. Mail the coupon for Booklet No. WNF-7, and we will tell him to get in touch with you.*

# Lime Is Put on the Preferred List

The priority board has placed agricultural lime in preferred classification in the matter of fuel supply for burning in the stove as well as in the matter of transportation. It is pointed out that production and distribution of pulverized limestone and burned lime for agricultural purposes is essential in the production of food and other war necessities, both indirectly through the clovers and directly through many staple crops, such as wheat, corn and cotton.

The action of the war priority board should bring relief to farmers. Reasons given by the agricultural advisory committee for urging that lime be placed on the preference list were that the prices of lime and limestone are now very high, that they were advancing before the war on account of the newly-created demand on the part of farmers, and that now the high cost of labor and fuel has made further heavy increase. Inability to secure delivery by transportation lines, together with a great advance in the cost of material, is limiting the liming of land to a serious degree, the committee said. The limited coal supply and danger of actual coal shortage was declared to be a further serious handicap to the lime supply.

The full text of the advisory committee's recommendation to the secretary of agriculture is as follows:

We believe that hunger throughout the European countries is a thing to be greatly feared during the coming years, and the eastern half of the United States must do much in saving the situation. In a great part of this area production is hampered by soil acidity, which can be corrected only by plentiful use of lime. Meeting the lime deficiency of these soils should be our first consideration. Experiments running through long terms of years at various experiment stations, and the experience of thousands of practical farmers, indicate clearly that our acid soils will not produce the clovers unless lime is supplied. There has also been full demonstration of the fact, both by experiment station and repeated farm practice, that many staple crops can not profit rightly from applications of fertilizers until the lime requirement has been met. The prices of lime and limestone now are very high. They were advancing before the war on account of the newly created demand on the part of farmers, and now the high cost of labor and fuel has made further heavy increase. Inability to secure delivery by transportation lines, together with the great advance in the cost of material, im limiting the liming of land in a serious degree. A limited coal supply, and danger of actual coal storage is a further serious handicap to the lime supply.

We believe it to be just as important to deliver lime or limestone to the farmers quickly as it is to deliver most other war necessities. We believe that we are justified in asking that the railroads, under the director-general, make a special freight rate less than that now prevailing, and every possible improvement in the transportation of agricultural lime should be made. Manufacturers should be encouraged to put low-priced pulverizers on the market, and these should be delivered to buyers without any undue delay. Manufacturers of lime should be supplied all the fuel that they can properly use in the production of agricultural lime, and their shipments should go forward as promptly as other essentials. There should be assurance that material for new plants are necessary for an adequate supply of agricultural lime. If supplies of lime and limestone can not be secured by farmers promptly, and at prices that will encourage their free use, the government should regulate the whole business for the public good. This extreme course should not be taken until the transportation and fuel factors have been taken care of by the government and the full energy of the United States department of agriculture has been expended in propaganda to secure the liming of our soils.

Whereas, the advisory committee of the department of agriculture and the food administration fully indorses the above statement of agricultural lime situation, and

Whereas, it is our conviction that this statement is backed by the United States department of agriculture, by many state experiment stations, and by repeated experience of many practical farmers;

Resolved, that the production and distribution of pulverized limestone and burned lime for agricultural purposes should be declared essential in the production of food and other war necessities, both indirectly through the clovers, and directly through many staple crops, such as wheat, corn and cotton; and

Resolved, that our government should do everything in its power to further such production and distribution by placing agricultural lime in preferred classification in the matter of fuel supply as well as in transportation.

Subsequently the committee voted thanks to the secretary of agriculture for his prompt action in securing the placing of agricultural lime on the preference list of the war priority board, and requested that the ruling to that effect be made public, together with the resolution previously adopted by the committee.

## OBJECTORS WORK.

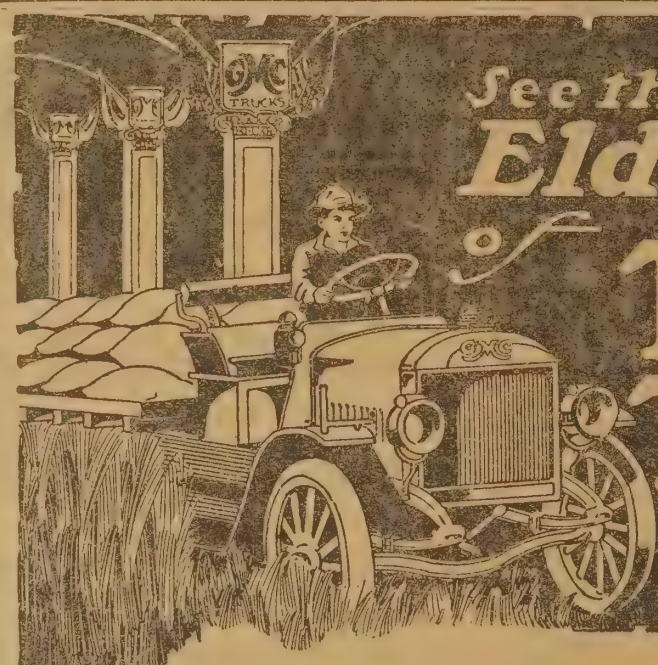
### Are Furloughed to Help Farmers.

After struggling for a long time with the knotty problem of conscientious objectors in army cantonments, the war department now announces that the difficulty has to a large degree been solved through the aid of the farm help specialists of the United States department of agriculture.

In the various states where there are farming communities which include sects opposed to war, such as the Dunkards and Mennonites, and where additional farm help is needed, these places are made known to the cantonment commanders, together with a record of their farm labor needs. Final arrangements have been made for labor furloughs for objectors in nearly all army camps, including Camp Lewis in Washington. The labor specialists in the states where the cantonments are situated have been instructed to communicate with specialists in other states in case they can not place all the conscientious objectors at work at once.

The furloughed men are under strict regulations drawn up by the war department. They are placed on farms at a standard wage and reports of their conduct and effectiveness are made to the cantonment commander at monthly intervals. If their services are not satisfactory the commandant is promptly informed of the fact.

The war department has expressed itself as thoroughly pleased with the arrangement for placing these men where their services will be an aid to victory through food production.



### Agree on Orchard Wages.

Wenatchee valley apple growers have agreed on the following scale of wages and charge for board during the present fruit harvesting season:

Picking, 40 cents per hour, or 5 cents per orchard box; sorting at ranch, 35 cents for inexperienced help, 40 cents for experienced help; machine sorting, 35 cents per hour; packing, 7 cents per box for graded but not sized apples, and 9 cents per box for ungraded fruit; packing from grading and sizing machine, 5 cents per box. Board for orchard help will be $1 a day or $7 a week. Little help will be needed in the valley before September 20.

### Don't Starve the Bees.

Those having bees are warned by the government against taking out too much of the honey.

See the Eldridge Line of TRUCKS & TRACTORS at the Fair!

You'll Find a Hearty Welcome

at our exhibit. Come in, look around. Expert truck men and tractor men will be on hand to give you any information you want.

GMC TRUCKS have earned a reputation as the real trucks for the farmer and dairyman. They help to solve his handling problem and reduce country hauling costs.

They are built extra strong for hard country use. Strong, economical, dependable GMC trucks give long life and freedom from trouble. Ask your neighbor who owns a GMC.

Warner Trailers

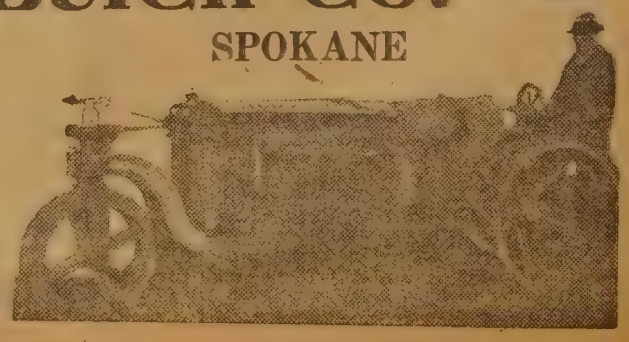
All capacities and sizes, for use behind your passenger car or motor truck. They increase the loads you can haul—decrease hauling costs. Enable you to handle heavy implements, cattle, milk, produce, with your passenger car.

SAMPSON GRIP-GRIP TRACTORS

Sixteen years of tractor experience is built into the Sampson—the tractor that grips and gets traction.

No frills; simple, strong construction; all parts accessible.

Exclusive Sampson features, such as the big, powerful 4-cylinder Sampson motor, Sampson cooling and oiling systems, sieve grip wheels, low center of gravity, easy steering, economy of fuel and oil, make the Sampson the tractor for your farm.



And this complete line of standard farm machinery is backed and guaranteed by the responsibility, the reputation of the Eldridge-Buick Co., and its state-wide organization of dealers.

Owners of GMC trucks, Sampson tractors, Warner trailers know their equipment will always be running, for the Eldridge-Buick service—expert mechanics and a big stock of repair parts—covers the entire northwest.

# West Side Fairs

## Will Set Pace Hard to Follow

By PAUL E. TRIEM.

That western Washington fairs for the year 1918 will be different than they have ever been before goes without saying. Some of them probably will not weather the strenuous conditions of war times. Others will meet the emergency by adapting their activities to the spirit of the times, realizing that a county or community fair at its best is one of the most important educational influences available.

In the matters of preparing both the public and the program, the southwest Washington fair, which is in session during this present week at the grounds between Centralia and Chehalis, stands among the foremost in the state. The live stock exhibition will naturally attract much attention from visitors to this fair. Lewis county has been rapidly forging to the head as a "purebred" community, and it is probable that this year's entries have never been surpassed, either in number or quality. The Holstein class is particularly strong.

Among other important exhibits are those in the grains and grasses department, which are up to their usual high standard in spite of the rather unfavorable season.

The better babies contest is proving a winner with the women of the community, who are quick to realize the tremendous importance of the recent federal movement to standardize the care and the measuring of children.

A splendid racing program has been provided, and the Wortham Shows, which presented their carnival features last year, have been secured again for this year.

### Puyallup Fair Coming.

The Western Washington fair, to be held in Puyallup October 1 to 6, inclusive, promises to measure up to its usual standard, which is praise enough for those who are acquainted with the Pierce county exhibition. In his annual letter, President Paulhamus sounds the keynote of the coming session:

"Western Washington is developed in many ways to a greater extent than in farming, and we believe that a good old-fashioned country fair that will bring the farmers out of their slumber and teach them the necessity of ascertaining what the other fellow is doing, will be helpful not only to the Puyallup valley, but to every other part of the state."

The Puyallup fair has been just this kind of a pacemaker in western Washington for years. It is always clean and progressive. Even the premium list which it gets out is worth a place on any farmer's book shelf, for it is full of vital information not easily accessible in other places, and this information is always compiled by recognized authorities.

Among the strong features of this fair as measured by past performances are the live stock exhibits, the displays of fruit and vegetables best adapted to western Washington conditions, the educational and floral departments, the agricultural college and experiment station features, and the racing and musical program. All of these things will be found at their best at Puyallup this year, and in addition President Paulhamus and his assistants may be counted upon to provide such additional features as shall best bring the fair into harmony with the interests of the present time.

Among other West Side fairs for 1918, the Grays Harbor county fair, to be held at Elma, September 4 to 8 inclusive, will interest many visitors as a measure of the growth of this important seaside county. It is safe to say that no county in the state has advanced more rapidly in the really worth-while agricultural activities, during recent years, than this community of timber and agricultural resources. Potato farming and dairying in particular have achieved a wonderful development, and both of these specialties will be reflected in the displays at this year's fair. Secretary Palmer states that food conservation, the stock shows, and horse racing will be the main features of the program.

School children's day, to be held Friday, September 13th, will be the great feature of the Mason county fair. The exhibition will open September 11 and continue four days, and in addition to the feature just mentioned will display representative exhibits of Mason county grains, grasses and vegetables. On former years the showing of potatoes has been particularly creditable, and it is to be remembered that Mason county contains at least one corn specialist, Mr. Rex, of Shelton.

The Lynden fair grounds have beeen turned over to the school children this year, in keeping with a strong tendency of the times to feature the work of the younger generations of farmers. The Whatcom county school fair will be held at Lynden, October 4 and 5, and will feature pretty much everything to be found at the best class of "grown-up" exhibitions. In addition to displays of farm and garden products, there will be milk testing contests, potato judging contests, cooking contests, stock judging contests, typewriting contests, etc. On Friday afternoon there will be an "Achievement Club Rally," to be followed by chorus singing. It is safe to predict that the fair-wearied adult who is inclined to take a pessimistic view of community fairs in general will receive a new lease of life and enthusiasm by visiting this boys' and girls' exhibition in Whatcom county. It sometimes seems as if it is only these farmers of tomorrow who are really profiting by the teaching of today, and they may be confidently counted upon to set a pace that will be hard for associations given up largely to older and less enthusiastic exhibitors to follow.

It is unfortunate that it has been impossible, up to the present moment, to get definite information on the activities of some of the other West Side fair associations for this year. An effort will be made to list as many as possible of these in the "Coming Events" column of The Washington Farmer.

### For Man or Wife.

I am very much pleased with your paper and think it is fine for either man or wife.

HOMER B. MYERS.
Omak, Wash.

## Sheep Are Lost.

A report from Baker, Ore., tells of the loss in that section of a considerable number of sheep. They were found dead or dying in their yards under circumstances which indicated poisoning, though some unrecognized disease may have been the cause of the loss.

### Two of a Kind.

Postmaster—Give that man a job.

Assistant—But he can't even read addresses.

Postmaster—Then put him to work sorting newspapers.—Buffalo Express.

## Crime and Philosophy.

Frederich Wilhelm Nietzche was one of the most noted of modern German philosophers. How much has his philosophy affected the views and character of the Germans of today? Is not the answer written in the blood of the women and children, the old men of occupied France and Belgium? Are not the Lusitania victims witnesses to German adoption of Nietzche's faith?

Here is his indictment of Christianity:

"With this I conclude, and pronounce my sentence: I condemn Christianity. To me it is the greatest of all imaginable corruptions. The church is the great parasite; with its anemic idea of holiness it drains life of all its strength, its love, and its hope. The other world is the motive for the denial of every reality. I call Christianity the one great curse, the one great intrinsic depravity, the one great instinct of revenge, for which no expedient is sufficiently poisonous, secret, underhand, to gain its ends. I call it the one immortal shame and blemism upon the human race."

Solves your Hauling Problem!

HORSE and wagon delivery costs about 27 cents per ton mile. The Smith Form-a-Truck has demonstrated its ability to do the same work at less than half the cost.

There's a reason for this economy and efficiency, of course. You know what a wonderful automobile the Ford is—how simple to run, how saving of gasoline and oil. Well, the Ford is your power plant with a Smith Form-a-Truck.

It is not enough to harvest your crops, Mr. Producer. You must get them to market in time and in prime condition. Twenty-four hours delay in selling may turn profit into loss. You can't afford to gamble with a product which has cost you months of hard work. Right now you can begin to solve this problem correctly by investigating the

## Dreamland Farms

*Profits Are of Dreamland Variety*

I heard two men on the streetcar recently gossiping. One of them said: "What's become of Jones? I haven't seen him for months." And the other replied, "Why, didn't you hear? Jones' uncle down in Frisco died and left him $50,000. Jones has become a farmer."

The details came out gradually. Jones had always desired to be a farmer—not the old-fashioned kind that gets up early and works late, wears heavy shoes, overalls, etc., and sets the pace for a hired man or a crew of them in the field; Jones wanted to be a sort of super-farmer, and he had made his plans accordingly. He had paid down half of his $50,000 on a "gentleman's farm," if you know what that is, and had spent most of the rest in buying purebred stock and fancy machinery. I have seen some of these fancy farms, and I was not surprised to hear that Jones' place was not famous so much for its soil or productivity or even its accessibility to market as for its scenic properties; it was a "dream of a place," with hills and dales and a small lake and winding trout streams. And without taking time to figure the thing out on paper, I thought I could see Jones' finish. At the first jump he had tied up most of his capital. He knew nothing about farming—a field of shocked grain to him was simply a beautiful picture, for he was as ignorant as any kitten of the hard work that lay back of the grain, and the additional labor that would have to be lavished on it before it made any cash return to its owner. Jones stood to me for a type of the city farmer at his worst.

Seattle has had a few city farmers of both sorts, the successful and the unsuccessful ones. Recently there was offered at public auction the famous "manufacturing farm," which crystallized the dream of A. L. Brown, one of the heirs to the Amos Brown estate. A few years ago I was commissioned by an eastern magazine to visit this farm and get a story on it. The editor's instructions were to "make it plain to our readers how such a place can be made to pay." After a 10-minute walk from the railroad station I found myself following a beautifully constructed private road, with broad, flat, well cultivated fields on each side. Before me lay a small village of farm buildings. As I approached one of these Mr. Brown himself came out. He had been assisting at the butchering of a hog, and his sleeves were rolled up and his hands bloody. Even before I explained my mission, I noticed the expression of his face - the wrapt, intent look of an enthusiast.

The Brown farm at that time was certainly a "dream of a place." It had its own electric light and power plant, its own blacksmith shop, its own highway system and telephone lines. The crew of men who did the farm work were comfortably housed and well fed. I think there were about 60 of them at that time, and every one of them with whom I talked had a good word for the "boss." He knew what he wanted, and if a man carried out the definite instructions given him, there would be no trouble with headquarters. Mr. Brown told me that he had no difficulty in getting plenty of good men, but that he intended to build cottages for married men, as he believed these would be even more dependable than the class he was then employing.

I don't remember the exact number of live stock on the place at the time of my first visit, but I know that the hogs were like the sands of the sea—there must have been thousands of them. There was a modern horse barn stocked with purebreds of various types—coach horses from Europe, and other high-steppers not particularly adapted to the rough, heavy work of an everyday farm. The cow barn was modern and sanitary, and Mr. Brown showed me a little wobbly-kneed bull-calf for which he had paid a fancy price a few days before. His herd was made up largely of Jerseys at that time, I believe. The chicken houses and runs were on a colossal scale, with an "expert" poultryman in charge.

I didn't write the story I went after, because I couldn't see just how to tell that eastern editor's readers how the manufacturing farm was being made to pay. Some time after my first visit a packing plant was added to the farm equipment. Mr. Brown specialized on parcel post selling, direct to the consumer. Theoretically the place was 100 per cent perfect, but most of its perfection seemed to me to be the result of putting money into the plant rather than taking it out in the form of a profit. The recent unhappy termination of this city farmer's dream lends probability to the surmise that the venture was not exactly a paying one, and that perhaps it was another case of too many "expert" agriculturists, and not enough practical, working farmers.

I have described the case of the Brown farm before taking up some other Seattle-owned country places for two reasons: In the first place, I would like to do my bit in warning those city-reared people who have visions of a workless, scenic, and profitable farm against yielding to any such deceptive dream. Better search for the pot of gold at the other end of the rainbow. And in the second place, I want to be free to tell of some of the city farmers in our town who are making good.

One of the most complete of these farms owned by city men is Hollywood farm, the home of the famous Hollywood Holsteins. Probably Mr. Stimson, the owner, would object to being called a "city man," as he spends most of his time on the farm, and is one of the most whole-hearted farmers and breeders in the northwest. His place might stand as a type of farming done on a big scale without that lost motion which so easily develops in show places. The farmstead is scenic, but it is first class farming land even before that. The cows in the dairy barn have long pedigrees, but they are also able to produce milk at a profit. A well located retail store in Seattle handles Hollywood products exclusively, thus effectually closing the usual gap between producer and consumer.

Willowmoor farm, owned by J. W. Clise, is given up largely to the breeding of Ayrshire cattle. Mr. Clise spent much time and money in visiting the various types of dairy cows in their

(Continued on page twenty-seven.)

## 80 Acres — Palouse Home

78 acres cultivated, 8 acres hay meadow, watered by creek and springs, 40 acres summerfallow (peas 1918), 30 acres stubble; 2 wells, good barn and sheds; 5-room house; granary, hog house, etc. This is a dandy Palouse farm and adjoins 100 acres of leased pasturage. $6100 takes it. Terms.

## Hay and Stock Farm

490 acres with ½ mile of lake frontage; 225 acres of the finest bottom land, well drained and in a high state of cultivation. The meadow lies near state highway and one hour's ride from Spokane. The farm is improved with nice 6-room house with water piped in, fireplace, fine view; barn for 50 head of stock, hay barn and hog house. $30,000 buys it and it's a bargain. Good terms.

# "Make the Best Better," Is Motto

## *Boys and Girls Will Demonstrate at Fairs This Year*

By ELIZABETH DEITS JONES, Assistant State Club Leader.

The colleges of agriculture from the seven northwestern states are sending club members to the Interstate fair to compete in canning, cooking, sewing, stock judging, gardening, poultry and pig raising. The states entering into this plan are Wyoming, Montana, Idaho, Utah, Nevada, Oregon and Washington.

The contestants will be accompanied by the state club leaders from these states, who will assist in the arrangement and carrying out of the contest work.

The Interstate Fair association will entertain the boys and girls in a club camp which they have arranged for our accommodation. This camp is located inside the fair grounds and consists of a large tent where the girls will be quartered, a kitchen and dining room tent and another large tent for the use of the boys.

The quarters are furnished with excellent beds and blankets and every detail is worked out for the comfort and well-being of the competing teams.

The canning teams consist of three in number and will compete daily from 2 p. m. to 5 p. m. and will be in the nature of a canning demonstration. One member from each team will lecture by explaining every step in the process of the government cold pack method of canning, while the other two members prepare the material for canning and process the pack until the demonstration is completed.

Each team has the opportunity of competing in the drying demonstration, which takes place from 10 a. m. to noon. Fruits, vegetables and meats will be dried.

The sewing demonstration is under the supervision of Miss Z. Faye Fowler, assistant state club leader of Idaho, and will probably consist of the making of one Red Cross garment. The cooking contest will consist of the making of one loaf of war bread, the contestant being required to file cost and receipe. The stock judging will be under the direction of Mr. McCall, state leader of Idaho. Only boys who are club members, and who are actually raising an animal, can compete in the contest. This is for the purpose of interesting boys in stock raising and to afford those who do the real work an opportunity of winning a reward.

Demonstrations in good practices in poultry raising will be entered into by poultry club members. This is the first year that poultry contest work and that of gardening was offered club members. The contest in gardening will be a new and unique feature of the fair. The club members must exhibit, arrange and display 6 varieties of vegetables.

An exhibit of three pint glass jars of canned food by each canning club in the state will be one of the most attractive features of the club department. This display, consisting of fruit, vegetables, meat, fish and poultry, will be displayed first at the Interstate fair, then shipped to Yakima for display at the state fair, September 16-21. Two dozen of the best jars will then be selected from this exhibit. One dozen to go to the United States department of agriculture, Washington, D. C., and one dozen to remain at the Washington State college, Pullman, for permanent display. The remainder of the collection will be auctioned off to the highest bidder and the proceeds used to take care of Belgian babies. The names of these unfortunate little ones whose comfort is purchased with this money will be secured and published by the press of the state so that the canning club girls will know what little children received comfort from their patriotic efforts this year.

During the Interstate fair the Northwest Association of Club Leaders will convene for the purpose of formulating plans for increased efforts and results in club work. H. E. Seymour of Oregon is president of the association and has the arrangements of the program in hand. Anyone directing or assisting in furthering club work can become a member of the association. Mr. Seymour has sent an urgent request to O. H. Benton, Washington, D. C., to be present at this conference.

The generosity of the Interstate fair association in supplying the entertainment for the club members and their leaders and for the complete cooperation which they have manifested in furnishing building equipment and materials for their work, have made it possible to carry out these elaborate contest and demonstration plans in club work. The club people hope to continue these contests from year to year, and will try to demonstrate their motto, "Make the best better."

The winning team in canning will have the privilege of attending the National Corn show at Chicago. This will be a free trip, the winning team going from Chicago to the annual conference of state club leaders, at Washington, D. C.

The first two days of the fair, September 2 and 3, will be given to contest work among club boys and girls of Spokane county. The contests will consist of canning, sewing, cooking, pig club contest, garden, poultry and sheep club work.

The winners of first places will have the right to attend the state fair at Yakima.

Mrs. Josephine Corliss Preston, state superintendent of schools, is contributing $50 toward the expenses of the club leaders and their chaperons in attending the state fair.

The business men of Spokane, cooperating with the Interstate Fair association, are planning to give the club boys and girls a pleasurable and instructive time in the way of trips for sight seeing and shows. The evenings will be given over to plays, games, songs and taking in the sights of the fair.

Last year the boys and girls visited the most beautiful and important places in Spokane, enjoyed a trip to the paper mill, and were entertained one evening at the Clemmer theater by E. E. Flood of the Exchange National bank. The people of Spokane have been so generout in their hospitality and support of club work that it is an eagerly looked forward to pleasure by all club boys and girls.

### Grow Into Better Citizens.

The following letter from Mrs. Lenora B. Simpkins of the advisory board of the Spokane Humane society, will be appreciated by those who still believe that kindness to animals is one of the best paying investments in character growth:

To the Editor: Please accept my very sincere thanks for the article in the magazine department of the August 15th issue, entitled "Pets the Builders of Child Character." It is an education for children to find such reading matter and if there were more of it animals would have a happier time than they have now and children would be kinder and grow into better citizens. I hope you will keep it up. You have a splendid opportunity to reach a lot of children, for I think a farm paper is read by more of them than any other.

MRS. LENORA B. SIMPKINS.
Route 6, Spokane, Wash.

### Simply Impossible.

Pat Rooney was a new arrival on the job. Having gone to the top of the building and failed to return, the foreman shouted up:

"Come on, Pat; what's keeping ye?"

"Sure," said Pat, "I can't find my way down."

"Well, come down the way we went up," shouted the foreman.

"Faith an' I won't," says Pat, "for I came up head first."

## Save Garden Seed

### Insure Supply for Next Spring

Saving seed for the home garden—a practice that was the rule in earlier times—is the cheapest and best way of insuring a supply for planting next spring. Saving garden seed is an emergency meaure; and supply is limited, yet thousands of people had gardens this year and last year who never raised them before. There is but one general principle, say garden specialists, underlying the production of good vegetable seed, and that is: Save seed from the best plants. Seed should not be gathered until maturity, the specialists add, and should be properly dried, placed in suitable containers, carefully labeled and stored in a dry place where insects or mice can not get at them.

Even if the scarcity of seed does not emphasize the importance of saving a supply from the home garden there are advantages to be gained by the latter plan. The selection which the gardener gives his seed plants, while not greater than that which the seed grower gives his seed stock, is often better than can be given to the seed that is placed on the market. The plants selected also will be the ones which succeed best under the local environment. Well-matured seeds, if properly stored, with the possible exception of those of parsnip and onion, should retain their vitality from 5 to 10 years, and for this reason it is urged that an abundant supply be saved, for if it is not all planted next spring, it can be laid away for the following year.

Very little care is required to save seed for a home supply. With plants like beans and peas which are gathered for food before the seeds are mature, a few of the finest plants should be marked and the seeds which they produce allowed to ripen completely. In making such selections it is best to choose plants alike in varietal character and earliness. Never save seeds from plants that have suffered from diseast attacks. In selecting sweet corn for seed, select the best and earliest ears, mark them and allow them to mature on the plant before they are harvested. The ears should be dried immediately after harvesting and stored "on the cob." In saving cucumber and squash seed, select and mark fruits of desirable character while in the usable stage and allow them to remain on the vines until fully ripe, then remove the seeds and spread them out to dry before storage. In selecting tomatoes and potatoes for seed the vigor, productiveness and freedom from disease in the plant should be taken into consideration.

Seeds which have been grown and carefully saved should be well labeled and stored, or all the previous labor goes for nothing. Cloth bags are the best containers for large seeds, such as peas, beans and corn. They should be used also for larger quantities of small seeds, but for smaller lots, paper envelops, made at home or purchased are most desirable. Ordinary letter envelopes are fairly satisfactory, but usually are not gummed so as to close completely, and if handled carelessly small seeds may sift out of them.

Correct labeling is of paramount importance. Every envelope or container should show the kind and variety of seed, the date, including month and year when harvested, and the place where grown. For the cloth bags, a slip of paper bearing all this information should be inserted with the seed. It is very convenient also to have a tag on the outside of the bag, but on no account should the inner label be omitted, because of the liability of loss of the outside tag.

Many seeds, especially beans, corn and lettuce, are subject to injury by a number of insects, all of which may be destroyed by fumigation with carbon disulphid. A tight tin pail, box or barrel makes an excellent container for fumigating seeds. For a tight barrel full of seeds one-half cupful of carbon disulphid is sufficient. For smaller containers, use in proportion. Seeds to be fumigated must be dry, and if they are in paper bags, the bags should be opened. The gas penetrates cloth bags easily. Immediately after starting the fumigation, the container should be covered with several thicknesses of heavy paper, or other tight cover, and allowed to remain covered from one to two days. A longer fumigation in tin pails is apt to injure the germinating power of the seeds. Carbon disulphid gas is highly inflammable. No lights, or fire of any sort should be allowed near while fumigation is in progress, or an explosion may occur. The foul odor of the gas disappears after the seeds have been aired for several days.

After the seed has been properly labeled, and fumigated if required, it is necessary to store in a dry, well-ventilated room. Cellars are too moist, attics usually are too hot, but a second-story room furnishes the ideal location.

THESE are serious times, and every one *must* shoulder a serious task, but how efficient would we be if we worked all the time?

Each morning and afternoon at school the children are given a *recess*, to sharpen their tired brains and take the kinks out of their cramped little legs.

Like the boys and girls in school we *must* play a little now and then, too, to be able to work the harder after we are done playing.

That's why we have hunted to the four corners of the earth for clean talent of every kind to amuse you in a wholesome manner this year.

For recreation and play of the finest type no place compares with the Spokane Interstate Fair and Livestock Show, September 2-7, 1918.

## Dreamland Farms

(Continued from page twenty-two.)

original homes in Europe before deciding upon the thrifty Scotch milk producers, and since his embarkation as a breeder he has been one of the well-known Ayrshire men of this country. His farm is well located, both for agricultural and scenic purposes, and the business end of the enterprise is adjusted as accurately as the parts of a fine watch.

J. von Herberg, the Holstein man, is another Seattle farmer who is making good in the city and the country at the same time. His farm is located on a beautiful little lake, five miles or so east of Kent, and from the number of A. R. O. records which are being made there, it is pretty evident that a moving picture magnate can also get down to the brass tacks of cattle breeding without losing efficiency.

When Dr. Park Weed Willis wants to forget the aches and pains of his patients—and possibly some of his own—he pins a card "Back in 15 minutes" on the front office door and slips out to his farm near Redmond. It is here that the doctor breeds those Guernseys which bring a twinkle of enthusiasm into his eyes, even during office hours, and a skeptic would have to admit that Oxford Hill farm seems to be a very practical working out of a practical man's dream of farming. Parts of the farm buildings lie on a hillside, sloping down from the road to the river-bottom plow land below. Barn and equipment are thoroughly modern and practical.

While there are probably many other farms owned and operated by Seattle business men, there is just one other I want to describe at this time. One of the first things the city man, turned farmer, tries to do is to shorten the distance between producer and consumer. Having been a consumer himself, he knows by experience the metallic taste of eggs at 5 cents each, and of butter at 60 cents a pound. When he himself becomes a producer of things to eat, he begins at once to figure on getting his products to the people who are to eat them without any unnecessary delay or expense.

This is one of the fundamental principles adopted by R. T. Reid of Seattle and Bellevue, in his farming operations conducted at the latter place. Mr. Reid produces grapes and loganberries, among other things. A few years ago one of the agricultural commandments of western Washington was, "Thou shalt not try to raise grapes, because it can't be done." Mr. Reid is raising them, however, and he is selling them without lost motion. His farm is partly hillside land and partly flat land. On the former he raises Island Belle grapes, and on the latter loganberries. Much of his marketing is done direct to the consumer, and in that part which is conducted through a middleman, Mr. Reid takes a personal interest in seeing that all the details, from the choice of a container and the form of packing to the actual merchandising, are fair and satisfactory to the housewife who is the ultimate purchaser.

### CONTROL DOGS.

### County Agents Adopt Resolutions

County agents in western Washington recently adopted the following resolutions:

"In anticipation of increased interest and for the furthering of the present growing interest in sheep husbandry in western Washington, and believing that a great handicap and hazard to the small farm flock exists in the stray dog and outcast cur,

"Therefore, we believe that a state law for the control of dogs is very important and we recommend that farmers' organizations should promote interest in the passage by the state legislature of such suitable legislation.

**Ingredients of Feed.**

"In face of the existing shortage of feeding stuffs there is a tendency on the part of some feed companies to resort to a large variety of mixtures of feed materials of unknown feeding values; hence, we believe that the dairymen should have a full knowledge of what goes into the composition of compound mixtures.

"Therefore, we believe it is urgent that a state law be passed which will require the statement of all ingredients used in the combination of concentrated feedstuffs, and that the statement, together with a statement as to the percentage of protein fat and crude fiber contained therein, be plainly marked on the package containing such feedstuffs.

**Supervise Milk Tests.**

"Inasmuch as all milk in western Washington is sold on a butterfat basis, and such tests are made by the recognized Babcock test, and the accuracy of such test depends on the accuracy of the glassware and the competency of the operator,

"Therefore, we believe that the supervision of the test should be controlled by the state and we recommend that legislation be made which will provide for the licensing of all operators of the Babcock test in commercial milk and cream purchasing plants, such license to be given on the basis of the passage of an examination under the direct supervision of the dairy division of the state experiment station. We further recommend that such legislation should provide for the state calibration and accurate testing of all graduated glassware used in the process of Babcock determination of the butterfat in milk and cream delivered to commercial milk purchasing plants, and furthermore, that only a licensed tester be permitted to sample or test such milk or cream received by and paid for by such commercial milk or cream purchasing plants. C. C. FARR."

**It Makes a Difference.**

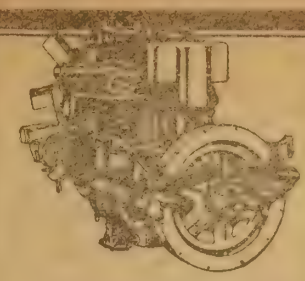
Arthur was passing a day with his aunt. "I am going to do something to please you on your birthday," she said to the little boy, "but first I want to ask the teacher how you behave at school."

"If you really want to do something to please me, auntie," said the boy, "don't ask the teacher."—Lippincott's.

**Sugar Cargoes Reduced.**

Vessels sailing from New York in June were cut more than 25 per cent in their sugar requisitions, to conform to the food administration ration.

*Experts Say*



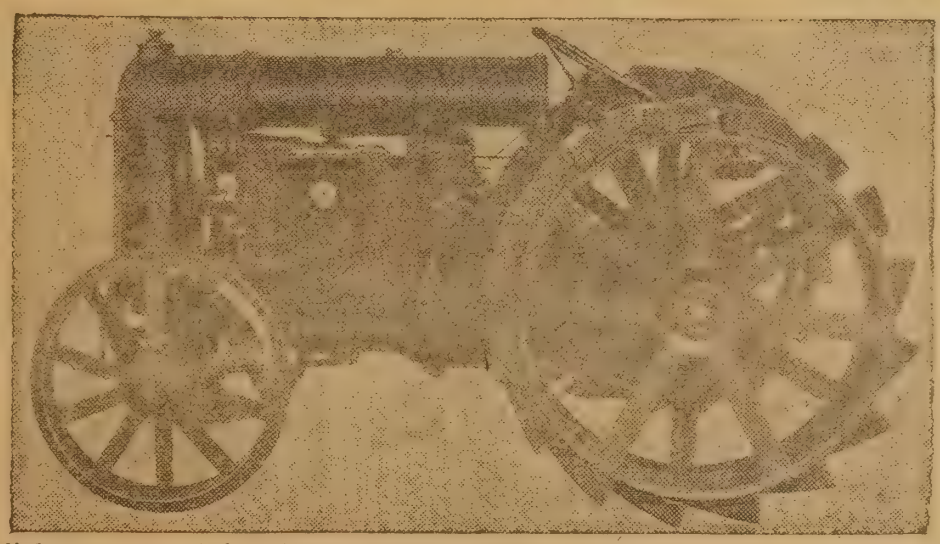
"ZEROLENE IS BETTER"

—because it holds better compression, gives better protection to the moving parts and deposits less carbon.

Zerolene is the correct oil for *all types* of automobile engines—the correct oil for your automobile.

Get our Lubrication Chart showing the correct consistency for your car.

STANDARD OIL COMPANY
(California)



The "T"-Head type engine, illustrated here, like all *internal combustion engines*, requires an oil that holds its lubricating qualities at cylinder heat, burns clean in the cylinders and goes out with exhaust. Zerolene fills these requirements perfectly, *because it is correctly refined from selected California asphalt-base crude.*

# The "Fordson" Tractor

THE FORDSON TRACTOR is the result of extensive trials and experiments conducted by Mr. Henry Ford, covering a period of many years. Before placing the tractor on the market, every detail has been thoroughly tried out under actual farming conditions in various parts of this country and abroad.

Experience has pointed to the small, light tractor as being the one machine which will fill all varying conditions satisfactorily.

In developing the "FORDSON" Tractor, the aim has been to produce a small tractor which will be low in first cost, reliable, and above all—efficient.

Being small, light and economical, the "FORDSON" Tractor is adapted for use on small farms, as well as on the largest. It will pull all farm implements and do the work generally done by horses on the farm. In addition, by its belt pulley the tractor will drive farm machinery, such as a thresher, ensilage cutter, sawmill, etc., making the "FORDSON" a truly universal tractor.

In design and construction the "FORDSON" takes a long step in approaching the ideal tractor. The simplicity of its operation and construction will at once appeal to the farmer.

Special devices were perfected to keep out dust and dirt. All moving parts are enclosed and thoroughly lubricated. The number of lubricating points requiring attention are very few and easily gotten at.

As evidence of the success of this tractor there are approximately 20,000 in daily use at the present time. The English government placed an order for 6000 after the most extensive tests and there have just been delivered 100 FORDSONS in various sections of this state, whose owners will testify as to their merits.

Our allotment of tractors for the state of Washington is only about one-third the amount needed for this year, so if you are contemplating the purchase of a tractor kindly fill out the coupon and we will send you the new circular about the Fordson Tractor.

# Kill the Weevil!

## Peas and Beans Often Destroyed

The serious losses caused by bean and pea weevils—which amounts to millions of dollars annually—is claimed to be largely preventable by methods described in a new publication of the United States department of agriculture by E. A. Zack and A. B. Duckett. The crop should be harvested as soon as possible after maturity, according to the bulletin, and the seeds threshed or shelled and treated by fumigation, heat or cold storage in order to kill the weevils in them before they can increase in numbers and carry on their destructive work.

Weevils not only cause serious damage to peas, beans and cowpeas in storage, but also in the field, and are responsible for a curtailment in the acreage planted in these crops. In some sections this pest has carried on its work of destruction so successfully that growers have become discouraged and have discontinued to produce on a commercial scale. Badly infested seeds are worthless for planting.

In gathering the crop exercise care, the bulletin urges, to leave no portion of it in the field, as seeds scattered on the ground or left in shattered pods on the dried vines may carry the pest over winter and furnish a supply of weevils the following summer. The crop should be harvested as soon as possible after reaching maturity and the seed threshed or shelled soon afterwards. Storing in the pod does not confine the weevils. Immediately on placing the seed in storage, fumigate with carbon disulphide or carbon tetrachlorid. These chemicals, when exposed to the air, vaporize into a heavy poisonous gas, which immediately kills the weevil. Carbon disulphide is the more generally used though carbon tetrachlorid has the advantage of not being inflammable. Seed to be fumigated should be placed in an air-tight container, such as a tin can or barrel. The chemicals, used at the rate of from two to four pounds to each 500 cubic feet of space to be fumigated, should be poured over the top of the seed and fumigation should continue for from 24 to 48 hours. As weevils breed generation after generation in stored seeds, the seeds should be watched to make sure that they do not become reinfested. In such case fumigation should be repeated.

When there is only a small quantity of seed the weevil may be killed by heating the seed in the oven for several hours. The oven should not be hotter than 120 to 145 degrees F. Dipping seed in boiling water for one minute is also an effective remedy. Weevils will not feed or cause damage at low temperatures, and if seed can be kept in cold storage at a temperature of 32 to 43 degrees F. no trouble from this pest will result.

## Food Prices Soar High.

The United States department of labor authorizes the following: "The retail price of food for the United States on May 15, 1918, showed an increase of 3 per cent over the price of April 15, 1918. A comparison of prices as between May 15, 1918, and May 15, 1917, shows that food as a whole increased 5 per cent. Seven of the 25 articles recorded showed a decline in the retail price. Potatoes declined 64 per cent; onions, 35 per cent; flour, 24 per cent; sugar, 9 per cent; beans, 7 per cent; cheese, 1 per cent, and coffee less than 1 per cent. Ten articles show an increase of 20 per cent or more. Plate boiling beef increased 32 per cent; corn meal, 30 per cent; hens, 29 per cent; milk, 26 per cent, and pork chops, 20 per cent. A comparison for the five-year period shows that food was 63 per cent higher in May, 1918, than in the same month of 1913. Every article increased 38 per cent or over. The least increase was shown in potatoes. Three articles show an increase of 100 per cent or more."

### Squelched!

Mother was out, and Sister Sue was putting on her best blouse, so 6-year-old Bobby had to entertain Sue's young man. As is the way with his kind, he began to ply the unfortunate caller with questions.

"Mr. Brown," he began, "what is a popinjay?"

"Why—er—a popinjay is a—eh—vain bird."

"Art you a bird, Mr. Brown?"

"No, of course not."

"Well, that's funny. Mother said you were a popinjay, and father said there was no doubt about your being a jay, and Sue said there didn't seem to be much chance of your poppin', and now you say you aren't a bird at all."—Pittsburg Chronicle Telegraph.

## Avoid Burlap Shortage

Continued and increasing war demand on the jute industry of India for burlap makes necessary the utmost conservation of this product, which we have been accustomed to use freely, even wastefully. India is the great jute center of the world. There the jute is grown, made into fiber and manufactured into jute cloth, which is commercially known as burlap or gunny-sacking.

Imports of burlap cloth by the United States normally average about 700,000,000 yards annually. After reaching this country most of the burlap cloth is sewed into bags, most of which are used as containers for food and feed. Investigations by the food administration show that somewhat more than three-fourths of all burlap imported is used by farmers in shipping agricultural products or in buying necessary supplies.

Familiar products shipped principally in burlap include cereal grains, mill feeds, mixed feeds, seeds, fertilizer, potatoes, onions, binder twine and nursery stock. In peace times burlap bags were worth about 6 or 7 cents apiece, and at this value dealers found it impracticable to advertise for, gather and reuse second-hand bags. But the present price, which is about four times these figures, and the decreased imports owing to such enormous prices warrant the most careful conservation and reuse of bags.

The United States food administration is without authority to control either the supply or price of burlap from India at the moment, but the importance of this product as a food and feed container makes a full understanding of the situation by farmers desirable. Here are the food administration's requests:

Save the present supply, reserving enough on farms for probable future needs.

Put surplus bags back into the channels of trade.

Even fertilizer bags can be saved unless acid fertilizers are allowed to remain in them too long. Empty the bags at once, wash and dry them. Sugar bags, after emptying, should also be washed and dried.

You need not mend torn bags that are to be sold. Bag manufacturers have special facilities for doing this work, and they prefer to do it.

Allow no burlap or bags to mildew or to be damaged by storing in a damp place. Keep them clean and dry.

In addition to the international and military sides of the question, which are the most important, a personal consideration may also be mentioned. New burlap imported by the United States now costs about $150,000,000 annually, of which at least $100,000,000 is ultimately paid by American farmers. The food administration believes that this figure can be materially reduced if conservation is actively practiced and the reuse of second-hand bags encouraged.

## DAIRYMEN LOSING.

### Public Must Be Shown Milk Value

The following resolution was adopted by the county agents of western Washington in conference at Puyallup recently regarding the dairy industry in western Washington:

We, the county agricultural agents of western Washington, recognize that dairying is the leading agricultural industry in western Washington, with millions of dollars invested. We also recognize that the following conditions exist relative thereto:

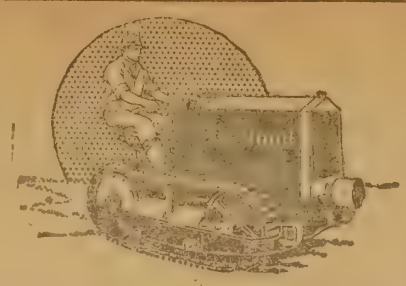
1.—That if the economic value of the dairy industry to the state is maintained and improved, it is necessary that dairy products be considered on the same commercial basis as other food stuffs and prices raised accordingly.

2.—That the advanced price of feed, labor and dairy supply has caused an increase in the cost of producing milk, so that the dairymen are not now receiving sufficient returns for their products to cover cost of production.

3.—That increasing the price of milk and its products will tend to decrease their consumption. We believe, however, that by educating the public concerning the special value of milk and its products for human consumption, through advertising and demonstrations, consumption will remain normal or perhaps be increased.

4.—In order to secure the cheapest production of milk and to market the milk and its products in the most advantageous manner, cooperative selling of dairy products and cooperative buying of feed and supplies are necessary.

5.—That the success of such a cooperative movement will depend largely on the number of dairymen that support it. If the majority of the dairymen join together in promoting the best interests of their business, great benefits will result, in our opinion.



6.—We indorse the United Dairymen's association of Washington and the county auxiliaries of the same, and will endeavor to encourage this organization so long as the present policy is followed and its present constitution and by-laws lived up to.

This resolution was prepared by the following committee of agents:

A. B. Nystrom, Floyd W. Rader, C. B. Sprague, C. C. Farr and C. H. Bergstrom.

## Spokane Jersey Makes Record.

Rudolph C. Johnson, cow tester for Spokane and Whitman counties, reports that the registered Jersey, King Milans Mabel, belonging to T. S. Griffith of the Glen Tana farm near Spokane, produced 1552 pounds of milk with 74.4 pounds of butter fat during the month of July. The cow is a 10-year-old and has been fresh for three months. Her record topped the list of 280 cows of the Whitman and Spokane counties' cow testing association for the month of July.

# Big profits from YOUR PIGS

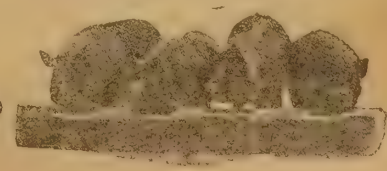
## SAFETY AND ECONOMY FROM PIG TO PORK

**The pig is the most economical animal for turning crops into meat. Start your pigs right; feed them BLUE BAG Pig Meal, the proper food in a well balanced ration and they will produce handsome profits**

BLUE BAG Pig Meal is made entirely of linseed oil meal, oatmeal, wheat flour, barley meal, rice polish, corn meal, cocoa shell meal, bean meal, crushed flaxseed, fenugreek and salt.

ANALYSIS

| | | | |
|---|---|---|---|
| Protein | 18 Per Cent | Fat (minimum) | 5 Per Cent |
| Fiber (maximum) | 7 Per Cent | Carbohydrates | 62 Per Cent |



Every ingredient used in the manufacture of BLUE BAG Pig Meal has its special purpose. The feeding of BLUE BAG Pig Meal to the baby pig, and the bigger fellow as well, means sturdier, heavier, healthier pigs at the very small cost of less than 5 cents per pound. A POUND OF BLUE BAG PIG MEAL IS EQUAL TO A WHOLE GALLON OF SLOP.

Don't get the idea that BLUE BAG Pig Meal is meant for the little pigs only. When you want to fatten up your pigs for market and produce the finest quality and the largest quantity of lean, flavory bacon, feed them BLUE BAG Pig Meal as well as grain.

If you will feed BLUE BAG Pig Meal from an early date, you will find your pigs ready for market a month or two earlier than they would have been with your ordinary ration.

**Sears, Roebuck & Co.**

SEATTLE

MORE!

# Purple Vetch Is a Possibility

Purple vetch gives promise of being a valuable addition to the list of crops that can be grown in those parts of the states where winters are not severe, according to Farmers' Bulletin 967, just published by the United States department of agriculture.

This vetch, which is similar to the common and hairy varieties, but is less hardy, was brought into the United States by the office of foreign seed and plant introduction in 1899 from Italy. In California, where experimental work has been conducted, it has proved one of the best, if not the best, crop for use as green manure in orchards, and in commercial plantings it has been thought well of by the farmers who have used it.

It has not been sufficiently tested in the southern states to determine definitely its value in localities where common vetch is now being grown, but as it requires conditions similar to the common varieties, according to the bulletin, it seems probable that it may serve an excellent purpose in this region, as well as in the western United States. It is of high feeding value and makes good hay in pasturage.

Under average conditions, purple vetch will stand a winter temperature of 15 degrees above zero with little or no injury. Where the temperatures are not likely to fall below this mark, it should be sown in the fall. With colder winter conditions, spring seeding is essential. In localities where common vetch has been grown successfully and the necessary bacteria have been established in the soil, it is not necessary to inoculate for purple vetch.

Purple vetch should be drilled in close drills or broadcasted at the rate of 60 to 80 pounds of seed per acre. Harvesting can be done best with a common mower having a swather attachment. It should be cut for hay during the period from full bloom to the formation of the first pods. The yields average about two and one-half tons of hay per acre. When harvesting for seed, the crop should be cut soon after the lower pods are ripe, at which time the upper pods will be mature and the plant will be carrying a maximum quantity of seed. Purple vetch is less exacting as to the time of cutting than common vetch, as the seed shatters less readily. Threshing may be done with an ordinary threshing machine.

# Must Inoculate

For the fall seeding of alfalfa it is well to remember that this crop differs from most others by having bacteria living in nodules on its roots. Supplying these bacteria to the plants is what is meant by inoculation. Where the crop has never been grown, the bacteria are not usually present, or only in such small numbers that it is necessary to supply them. The few bacteria naturally present, or carried into the field by chance, spread so slowly that the plants are usually killed by weeds before they can profit by the bacteria and outgrow the weeds. For this reason it is good practice to innoculate and help the plants start vigorously by giving them bacteria, rather than trust to chance. Through these bacteria the plants can feed on the nitrogen of the air as well as that of the soil.

There are two good ways to inoculate: (1) By means of soil transfer and (2) by means of artificial cultures. Inoculation by soil transfer is simple, inexpensive, and, with reasonable care, generally successful. Soil about six inches deep, with many root nodules in it is obtained from old alfalfa field, or a field growing sweet clover, and scattered on the new field at the rate of at least 300 to 500 pounds per acre. It is then harrowed in while the seed bed is being prepared.

In case only small amounts of soil with numerous nodules in it can be had, it may be powdered and sifted on the seed which has been moistened with a glue solution (one pound liquid glue in one gallon water). The seed should be mixed with the soil until every grain is dirty. After the seed is dried and screened to break up any clumps, it may be sown. Useless exposure to the sun should be avoided. Artificial cultures can also be used successfully. They are distributed by various firms and state agricultural institutions with complete directions for their use, and are usually applied to the seed rather than the field.

A few precautions are important when inoculating. The soil used must contain the bacteria as shown by plenty of nodules on the alfalfa or sweet clover roots. It must be thoroughly distributed either on the field itself, or on every seed. Artificial cultures must be used according to the directions. When properly used by the farmer who follows all other precautions for alfalfa, inoculation will do much to guarantee a good stand of this valuable forage and hay crop.

## Yakima Valley Ships Sheep.

It is estimated in the reports from the Yakima valley that the section will ship approximately 25,000 head of sheep before the 1st of October. This will approximate 100 cars and at an average of approximately $14 a head will mean about $350,000. It is estimated that the total shipments for the year will equal those of last year, when 1150 cars were shipped to the markets from Yakima valley points.

## North Dakota Needs Help.

G. F. Christy of the United States department of agriculture says that 16 counties in western and northern North Dakota need considerable aid from the government in securing seed grain as a result of the serious drouth in that state this season. He estimated that 4000 farmers would require aid.

Article 3.

A good many people are getting to the point where they see and understand the craving of their children for living pets, and understand how much it means to the child in points of character development and satisfaction with its home life to own and care for a pet. They are willing for their children to have a pet dog, perhaps, but to safeguard their children take all manner of means to keep the dog "sanitary."

We are quite safe if we allow ourselves to be guided by this simple rule: Any animal is sanitary that is healthy. Animals, as a rule, are healthy. Indeed, you will go far to find a more perfect picture of health than a rollicking young dog. Its teeth are like ivory, its eyes fairly sparkle with health and high spirits, it does not wake up in the morning with a "bad breath," general sluggishness of body and in a bad temper.

The fact of the matter is that our animals, if given half a chance, will, as a rule, be in better health, and from this standpoint more sanitary than the children they play with. It is a fact, also, that if the dog that is your children's playmate does have anything insanitary or unhealthy about it it will usually be something that it has "caught" from your or somebody else's children.

Quite obviously, then, the first step in keeping a dog healthy and sanitary, a fit playmate for the children, is to keep the children healthy and sanitary, fit playmates for their pet puppy. The parent who, on the average, keeps the children as healthy as the dogs they play with will be doing something worthy of public commendation. The children will practically never have measles, whooping cough, grip, earache, toothache, chickenpox and other ailments of childhood.

It is unnecessary, I should say, to wash and scrub the dog every day, as some people think they must do. Occasionally this may be necessary, but it is only occasionally, and then should be for some specific thing.

The child that has for a pet such animals as colts, calves, lambs or pigs will naturally be guided somewhat by environment of his home and the business in which his parents are engaged. If the father is raising purebred beef or dairy cattle, chances are that the animal would be one of these. The same may be said for sheep, horses or pigs. Whatever animal it is, however, the child should own it and care for it with this ideal in mind: That some day it is going to be a fine big animal of great value. Every day it is getting finer and bigger under the care of the child. This has a tendency to develop an idealistic temperament in children which is hard to get in any other way in such practical terms.

Colts, calves, lambs and pigs, like the pet puppies and dogs, as a rule are in splendid health. They remain so unless exposed to contagious or infectious disease, or are not properly cared for. The exuberance of spirits, their desire to frolic about, their perpetual alertness, are indicative of one thing—health, and lots of it. I presume that statistical data are not available on this subject, but if they were I am very sure that they would show this fact in plain and unmistakable terms: that children catch ailments and maladies of childhood from each other a hundred times for every single time from the animal pets they own and love so much, and to which they owe so much in terms of character development and human sympathies.

### Does It Ever Pay?

Is there any circumstance that makes it advisable to tell a lie?

## KHAKI COLLEGE.

### For Canadian Troops in France.

A system of inspection has been organized in one of the divisions of Canadian troops in France, and known as the University of Vimy Ridge. Lectures are given to large groups on subjects selected to equip men in active service for "greater efficiency in business, the professions, agriculture and other great industries of the dominion." Classes are organized for smaller groups, and individual instruction for more advanced students with recognition and credit on their return to Canada for work accomplished. It is also planned to obtain in this way an organization and staff which will be prepared to devote its attention to educating the soldiers during the interval which may elapse between the conclusion of peace and their return to Canada. Agriculture, applied science and vocational branches are among the subjects to be taught in this way.

What is known as Khaki college has subsequently been organized. This work is carried on farther back of the lines than the foregoing and is constituted on an somewhat more elaborate and permanent basis. A chancellor and senate have been appointed to serve as the governing body, together with what is termed an executive faculty, consisting mainly of heads of departments. Certificates of proficiency are issued by the college on the recommendation of heads of departments.

Eight departments have been arranged, among which is agriculture. Lieutenant P. Stewart, formerly district supervisor of agriculture in New Ontario, has been given charge of the work in agriculture, which also has two lecturers on animal husbandry, and one each on field husbandry, horticulture, farm bookkeeping, agricultural English and poultry.

Khaki college has been under way about six months. Over 900 students have been enrolled and about 376 took the first examination.

## SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University.)

## Your Complexion---How to Keep It Fine and Clear

Dr. Hirshberg.

Some people are naturally endowed with a white skin, some naturally are not. The facial skin of milk and roses is not the only combination that is beautiful. Although the common subject of the poet on facial beauty is ordinarily the maid with cheeks of "milk and roses," and although many a maid allows her heart to yearn and pine for such complexion, real beauty consists in a good combination or harmonization of colors, regardless of what the slight varying shades of the skin may be.

The color of the skin is most frequently hereditary. Beauty is never "skin deep," moreover, but only half that depth. The child is born with a certain amount of coloring or pigment situated half way down the skin, and it is this which determines whether the new baby is to be a blond or a brunette.

The pigment in the skin may be increased so as to cause more darkness as years go by. If the future dame does not wish to grow darker she will keep out of the sun's rays, for they are great stimulants to the growth of this pigment. She will wear a hat when she is obliged to remain on the street and be subject to the heat.

When the little dame grows older she may use a little coat of rice powder upon her face, so as to absorb the perspiration, and thus prevent sunburn or further increase of the pigment in the skin.

Freckles are spots upon the face where the pigment has increased out of proportion. These may be permanent or only temporary, but under any circumstances are out of harmony with the entire facial skin.

The best prevention of freckles is to keep out of the sun. A hat or veil will usually serve as a protection against the sun.

If these preventive measures were not taken, and freckles, brown and spotted appear, the application of white precipitate ointment each night will most likely remove them.

#### The Proper Care.

Sunburn, unlike freckles, does not spot the skin, but makes the entire skin uniformly dark. The pigment increases equally all over the skin. Calamine lotion is an excellent cure for sunburn, and is also a good preventive.

A light skin is, of course, one of the first essentials of one type of beauty, but not by any means the only one. When lightness of the skin has been retained or acquired by the proper care it is necessary that the white or light background should be properly tinted with a suggestion of rose. Nor should this be artificial, for there is no beauty to outdo the natural beauty.

Cold water is excellent to stimulate the little blood vessels of the skin and make them carry pink to its surface. What corresponds to a pretty blush should, if possible, always be upon the face. If the water in summer is not cold enough, put a piece of ice into it. This not only adds color, but also freshness and brightness. A piece of ice, morever, is also excellent for ironing the cheeks.

There are times when the skin upon the face appears rough, as if chapped. This may be due to too sudden contact with the cold air, or to the use of warm water, which chaps the skin. It may also be due, as it very often is, to a natural shedding of the skin.

The skin constantly forms new cells, and the dead cells of the epidermis, or outer skin, are pushed off and appear in the form of tiny white scales. These are of the same nature as the scales of the scalp, known as dandruff. Dandruff is removed by constant combing, massage and shampoo, and the "dandruff" of the face may be removed by washing and the use of cream.

Cold cream serves the purpose of removing the dried epithelial cells from the face or hands. The cream should be used sparingly, only on the tips of the fingers, for too much grease is apt to stimulate the hair follicles unduly, and the tiny hairs on the face are apt to become noticeable.

#### Creams and Soaps.

Cold cream should be used as a massage cream, and used about twice a week, or over night if the face is too dry and scaly. The cushions of the fingers should be employed in the process, and a rotary movement should be used. Rub away from the lines, not toward them, and thus smoothem out and not deepen them or add new ones. Massage with cold cream will not only do away with scales and create smoothness, but also add to the color, produce greater firmness of the skin, and keep it bright and fresh.

Before bedtime and in the morning soap should be applied to the face to remove the oil. When the face is not too oily, soap may be entirely omitted if there is no dirt to be removed. The alkali in the soap combines with and neutralizes the oil on the face and leaves it dry. If, therefore, there is too much free alkali in the soap, it tends to dry up the skin and make it rough. It is also apt to interfere with the oil glands of the skin. Yellow soap is of this nature and should therefore be avoided.

Castile soap is "pure" and has no alkali in it. It is for this reason that it is freely used for babies. Castile soap is not as expensive as some of the medicated, "high-grade" soaps, and yet it is about the most effective and least harmful of all soaps.

### The Complaint of the Farmer.

I hear the complaint of the farmers,
Whose muscle, whose labor and brain
Have conquered the deep tangled forests,
The prairies, the deserts and plain.

They lived on the frontiers in cabins,
Sod houses and dugouts and shacks;
Built schoolhouses, churches and highways
For masses who followed their tracks.

They feed the world's millions with harvests
The products of all they can give.
Then why should exploiters and gamblers
Decide on how much they must live?

Why not let the farmers determine
How many exploiters they need.
And how many idlers and gamblers
The workers are willing to feed?

G. L.

## Sidelights

#### The Efficient P. M.

In the Willoughby Independent there is published weekly the list of unclaimed letters remaining in the postoffice. Last week's list, we note, contained the name of H. I. Emerson. Somebody ought to tell Postmaster Webster that H. I. Emerson is the congressman from his district.

#### Anxious Bantam.

The bantams were talking over a line of trenches from one of the guards' battalions during a very long spell of wet weather. As the guards were coming out one of the bantams asked a big guardsman:

"How are the trenches—comfortable?"

"Yes," replied the six footer. "Very cushy, but full of water."

"How deep?" inquired the four-footer, anxiosly.

"Oh, about up to here," said the guardsman, pointing to some clay on the breast of his tunic.

The bantam put his hand up to his head and exclaimed, wearily:

"Then heaven help my cap badge."—London Tit Bits.

#### What a Hole!

Although the new war secretary, Lord Milner, can not exactly be said to shine as a humorist, he can enjoy a good story against himself, as witness the following, which he is fond of relating:

Some years ago, fresh from his South African triumphs, he addressed an audience of undergraduates at his old university.

Early in his speech he used the following phrase:

"We must remember not merely the beauty of the individual colleges, but the beauty of Oxford as a whole. And what a whole it is."

"Here, here!" yelled the varsity men. "Yes, what a hole!" they groaned. "What a beastly hole!"

Then it dawned upon Lord Milner that this was a sentiment he would rather have expressed differently.—Pearson's Weekly (London).

#### It Shrunk a Little.

Scene—An American storehouse. Enter a Yankee customer.

Customer—Say, boss, have you got any red flannel shirts?

Boss—Wall, stranger, I guess I can just fit you out beautiful—now, here's a fine red flannel shirt, price $2—may I let you have half a dozen of these red flannel shirt for $11?

Customer—You may not; I'll take wan red flannel shirt, and if I like it I'll come back again for the other five at your reduced price.

Same scene three weeks later. Enter same customer.

Boss—Well, stranger, I guess you've come back for those other five red flannel shirts.

Customer—I guess I have not, but I've come back for my $2. That red flannel shirt you sold me came back from the wash this morning. I put it on, and while I was brushing my hair my wife said to me: "Sam, where did you get that little coral necklace?"—Tit-Bits.

### Pamphlets Are Helpful.

To the Editor: I have found sending to agricultural department in Washington, D. C. for pamphlets on cooking, canning fruits and vegetables, caring for meats, balancing articles of food for meals, sanitation, etc., very helpful. They are to be had for the asking.

When drying corn and prunes you increase your oven capacity by placing the gasoline stove oven on your range. The same fuel heats both ovens.

The vacuum cleaner saves time, strength, and dusting, as well as rugs.

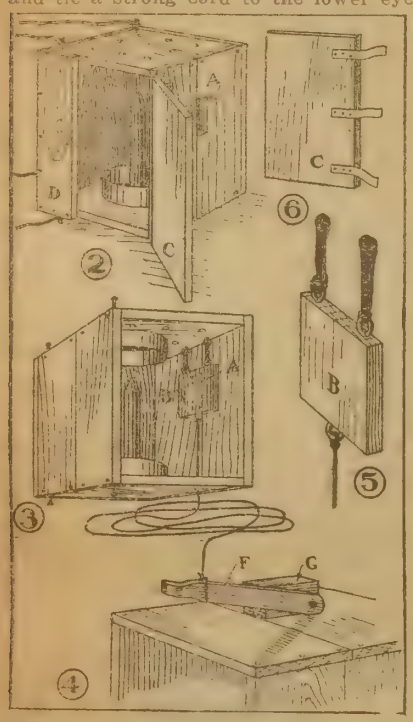
(Copyright by A. Neely Hall.)

## A Signal Lantern.



You boys can easily communicate with one another after dark by means of home-made signal lanterns similar to that shown in Fig. 1, at distances limited only by your range of vision. Field glasses or opera glasses would enable you to read messages from much farther points, of course. Communication is carried on by short and long flashes of light, which flashes correspond to the "dots" and "dashes" of the Morse telegraph code. First let us make the lantern; then I will explain how it is operated.

You will need a small box for the lantern. The dimensions are not important, but 10 or 12 inches is about right for the depth, width and length. Fig. 2 shows the completed lantern, and Fig. 3 shows the box before the door has been put on.

One side of the box becomes the front of the lantern. In the center of

the width of the front, a little above the center of the height, cut a slot one inch wide and three inches long, through which to flash the lantern light (A, Figs. 2 and 3); and make a shutter block (B, Figs. 3 and 5) by which to regulate the length of the flashes. Screw a couple of screw-eyes into the top edge of the shutter, and a third screw-eye into the center of the bottom edge; and loop a heavy rubber band through the upper pair of eyes, and tie a strong cord to the lower eye

(Fig. 5). Then tie the free ends of the rubber bands to a pair of screw-eyes screwed into the under side of the lantern top, in the right positions to come directly over the pair in the shutter when it is placed over slot A; and bore a hole through the bottom of the box for the cord attached to the shutter to pass through (Fig. 3). Then, by pulling the cord, the shutter can be opened so light will pass out of a small portion of the slot, for a "dot" of the code, or all the way open, for a "dash" of the code. The rubber bands will spring the shutter over the slot again.

The lantern may be lighted either by a candle or a bicycle lamp. If you use a candle, tack a can cover to the lantern bottom for a holder, and tack another to the top to protect the wood from the candle flame. Bore holes through the top for ventilators.

The cover board C (Figs. 2 and 6)

MORSE · CODE

| | | | | | |
|---|---|---|---|---|---|
| A | ·— | P | ·––· | 1 | ·———· |
| B | —··· | Q | ––·– | 2 | ··––· |
| C | —·—· | R | ·–· | 3 | ···–– |
| D | —·· | S | ··· | 4 | ····— |
| E | · | T | — | 5 | ····· |
| F | ··—· | U | ··— | 6 | —···· |
| G | ––· | V | ···— | 7 | ––··· |
| H | ···· | W | ·–– | 8 | –––·· |
| I | ·· | X | —··– | 9 | ––––· |
| J | ·––– | Y | —·–– | 0 | ––––– |
| K | —·– | Z | ––·· | | |

| M | –– | ' | ·––––· | | |
| N | —· | , | ––··–– | | |
| O | ––– | ? | ··––·· | | |

is hinged with three strips of leather or tape. Strip D (Fig. 2) provides a place for attaching the wooden button E.

The lantern is now ready for signaling. Fig. 1 shows a first-class position for it, upon a tree trunk. Any post, however will do. Connect ropes or skate straps to a pair of nails driven into both the top and bottom of the box for fastening the lantern (Figs. 2 and 3).

The operating key is shown in Figs. 1 and 4. Cut it about eight inches long and of the shape of F (Fig. 4); then nail a block G to a box (Fig. 4), and screw the end of the key to this block. Tie the operating cord to the key, allowing just enough length of cord to operate the shutter properly.

Fig. 7 shows the Morse alphabet code. Cut out and paste this diagram upon a piece of cardboard, and tack the cardboard to the box on which the key is mounted so the code will always be before you. Practice will enable you to memorize it.

## Feed Soil Properly

Stable or barnyard manure is of great benefit when added to soil sown to wheat. It supplies humus by the decay of the organic matter, and contains nitrogen and potassium, sometimes in considerable amounts. It usually does not contain a sufficient proportion of phosphorus. If 40 or 50 pounds of acid phosphate, rock phosphate, or basic slag are added to each ton of manure as it is being made in the stable or before hauling to the field, this deficiency of phorphorus is overcome, and a better form of fertilizer can scarcely be found. At least eight tons per acre of this treated manure should be applied at least once in four years.

When barnyard or other rotted manure is not available and plant refuse, such as straw and stubble, is not returned to the soil, the growing of suitable green-manure crops is imperative in order to maintain soil fertility and the supply of humus. On comparatively few farms is there enough rotted manure to take the place of green manures altogether, although by returning the plant refuse to the soil less of the green manure will need to be grown than where no returns are made. By the proper care of plant residues and the use of green-manure crops, principally the legumes, fertility can be maintained as cheaply and as effectively as with the use of large amounts of rotted manure only.

### All Gave It Up.

"Why," said the woman suffragist, stepping forward to the footlights, and commencing a lecture with a lofty flight of eloquence, "why was I born?"

She paused—a thrill ran through the audience. Again the rich tones of the winsome woman's voice rolled over the expectant people as she repeated the question.

"Why was I born?" and again she paused, that the due impression might be made upon her hearers before she answered her own question.

"Why was I born?" she asked once more, in touching and almost painful accents, when a wicked boy in the gallery shouted:

"We don't know. We give it up!"—Exchange.

### To Keep Flowers.

The addition of a little saltpeter or carbonate of soda to water in which cut flowers are placed will keep some varieties fresh more than two weeks.

### You Can Always Depend on It.

Two times two are four at any point in the universe.

CHANDLER SIX

*FAMOUS FOR ITS MARVELOUS MOTOR*

**This Is a Car You Need In Your Business**

A FARMER said recently, "To take the automobile from the farmer would be like taking the railroads from the country."

It is very generally agreed among intelligent people that the automobile is primarily a necessity to the progressive farmer.

*Any* automobile is of service to you.

The Chandler is of most *dependable* service to you. And in your business you want a dependable car.

The Chandler is like the big fine railroad, with rock-ballasted roadway, great steel bridges, bad grades cut down, mighty mogul locomotives and clean, deep-cushioned, easy-riding steel coaches.

The Chandler is famous for its marvelous motor, Chandler-designed and Chandler-built and now in its sixth year, without radical changes but with constant refinement until today it approximates perfection.

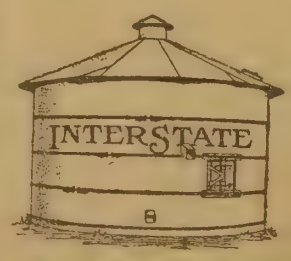
The Chandler motor is full of life and power. It will take you *anywhere*, and get you back quickly if you want to drive fast.

Nearly fifty thousand Chandler owners, many of them successful farmers, are Chandler enthusiasts.

Don't skimp on your new car this Fall. Make it a real car. Let it be a big and fine car, yet light and economical, that you can depend on.

**Choose the Chandler for Your Car**

*7-Pass. Touring Car, $1795* *4-Pass. Roadster, $1795*
*Four-Passenger Dispatch Car, $1875*
*Convertible Sedan, $2495* *Convertible Coupe, $2395*
*All prices f. o. b. Cleveland*



There are Chandler dealers in all principal cities and in a thousand towns. Some one of them is in position to show you the newest Chandler models. Write us today for catalog and folder "How Chandler Checks with High Priced Cars"

## CHAPTER XXXI.

### The End of the Journey.

"Are you sure they're Indians, Benoni?" questioned Boone, whose old eyes were not so good as Ben's young ones. "We don't want to make any mistake."

Ben looked again, as a matter of precaution. "No mistake, Uncle Dan'l! They're either Indians, or white men dressed in Indian costume."

"Not much chance of that, I reckon."

"Yes, they're Indians! I can make out their red faces," Jodo said.

"Count 'em, boys, if you can, and see how many we've got to hold out against."

Ben began to count, naming the number in each canoe: "Three—and five—and four—and three—and—What under the heavens does that mean?"

"What does what mean?" inquired the old hunter.

"Why, there come other canoes behind the Indian canoes—other canoes with white men in them!"

"That's right!" cried Jodo. "I can see 'em now, both the Indians and the white men!"

"Yassah—yassah! I sees 'em too!" burst out the black fellow, in great relief. "I sees 'em bofe. Reckon dem ah redskins cain't be on the wah-paf much! Caze ef dey wuz, what fo' dey keepin' so close ter dem ah white mens?"

"That's right!" cried Jodo. "There come more canoes with white men in them! My, what a swarm of canoes! Yes, and—and there's a boat—a boat full of white men!"

"And there comes another big boat—yes, and still another boat—three big boats full of white men!" Ben announced. "Those Indians are bound to be friendly, or they wouldn't be traveling with white people."

"Well, now, that's good news, boys!" cried the old hunter, evidently well pleased. "Fighting a big passle of redskins ain't half as funny as some folks think."

There being no longer anything to fear, the party under the cliff paddled out and moved on down the river again. Slowly the men in the rear gained, till the two parties were together.

And a very numerous party the new-comers proved to be. Besides several canoes with friendly Indians in them, which kept in the lead, there were about 30 other canoes, each paddled by from two to five men. Then there were the three boats, each boat with 20 rowers and a few other men in it. Indeed, the whole party numbered, by count, 179.

The three boats were owned by the Missouri Fur company, and were manned by hired rowers—Frenchmen, most of them. One of the owners of the company was in one of the boats, and in charge of them all. The Indians in the canoes were chiefs and prominent warriors from several of the upper-river tribes. The manager of the fur company had persuaded them to accompany him to St. Louis, by promising them valuable presents. He was bringing them down in the hope of keeping them friendly to the Americans, and because he knew that British agents were trying hard to coax and bribe them over to England's side in the coming conflict.

The white canoemen were, some of them, trappers from the Rocky mountains and regions not so far away. The others were settlers from Boone's Lick, Cote sans Dessein and Loutre island, on their way to St. Louis. The boats had gone up the river with trading-goods the fall before, and were coming down laden with furs. Most of the canoes also carried more or less furs and other skins.

Ben was acquainted with several of the men in the boats, and with several more in the canoes. Many of the big party knew Daniel Boone, and all the others knew of him and wanted to know him. As soon as the word was passed around that he was in the smaller party, all the paddlers and rowers rested, and the two parties drifted along together.

"Yes, the river from here up is just nachelly swarmin' with horsetyle redskins," one of a party of five, in a big canoe from Boone's Lick, informed Ben. "And 'tain't a powerful sight better from here down, I 'low. But with all these here rifles, what care we for redskins? We can snap our fingers at the whole caboodle of 'em—or our flintlocks either! It's a blazin' wonder, though, that your little bunch didn't have to fight for your lives."

"We haven't done any actual fighting since we struck the Missouri," Ben answered. "But we've done some pretty sly dodging at night. And we've been more than half expecting to have to do some fighting today."

"Well, no danger of that now. With all this noisy, rollickin' bunch around you, the horsetylest red man won't dare come a-nigh you."

"Yes, if we can keep up with you," said Jodo. "But we're loaded down and pretty slow—"

"Keep up with us! Of course you can keep up with us! We'll make you keep up! What's the use of travelin' lonesome when you can just as well travel in company? Here! Take this rope and tie it to your prow! Five of us in this holler log, and nothin' much aboard but a campin' outfit and a little grub. We can just as well do some towin' as not."

Ben caught the rope, thanked the man, and tied it to his own canoe. Another canoeman threw a rope to Boone's canoe, and the whole party were soon paddling down the river again.

And so they kept on during the rest of the forenoon. A noisy, jolly, good-natured crowd these trappers were. First the rowers in one boat would sing, and then those in another. And sometimes they would all sing together, with various trappers and settlers joining in. Wild songs they were, and rude, the songs sung by those wild men. But they were sung with a heartiness that made the two forests resound, and echoed from the lofty cliffs which walled in the valleys of the great river.

When noontime came, the boats and canoes were made fast to land; and presently the open woods along the bank were sending up smoke from many camp-fires. The whole camp was noisy with talking and laughing, and the air odorous with the smell of broiling meat.

Ben and Jodo had their camp with Mr. Boone and Tom. But there were always others at their camp-fire—men who had heard of the famous pioneer and wanted to talk with him. And very courteously the old hunter received them all.

Soon a trapper from a near camp came over with a bottle. Boone was busy talking to the man in charge of the boats, and the bottle was offered first to Ben.

He jerked his thumb toward the old man. "Not till after Uncle Dan'l drinks."

The trapper held out the bottle to Boone, who promptly waved it away.

"Young fellow, I'm 77 years old, and the first drop of that infernal stuff has yet to run down my gullet! Yes, I mean what I say. I don't even know what whiskey tastes like. I know what fools it makes people act like, though. Not a drop of it for me, now or ever!"

The man with the bottle looked astonished. And well he might. For nearly everybody drank in those days—even preachers. Had it been anybody else but Daniel Boone, he might have sneered at such sentiments. Soon he held out the bottle to Ben again.

That young man smiled and thanked him, but shook his head. "Not till you can get Uncle Dan'l to drink." He had long known of Colonel Boone's total-abstinence principles.

Again the bottle was held out, this time to Jodo. He also shook his head.

"Well, of all the crowds!" the trapper exclaimed. "All right, then! If I cain't git nobody else to drink, I'll drink myself!" So he turned up the bottle, drank long and heartily, then walked away, smacking his lips.

The party seemed in no great hurry, and full two hours passed before they were moving down the river again. And an hour or two later signs of civilization began to appear.

The first of these was a cow with a bell on, grazing on the north bank. Half a mile farther down a cabin was seen, standing between the river-bank and the great cliff which shut in the narrow valley on the north. Smoke was pouring from the cabin's chimney, and dogs were barking and chickens crowing near it.

To Ben and his partner the sight of the cabin was very pleasant, suggesting home. From here on, though very scattering, the settlement would be continuous to St. Louis.

Soon another cabin was sighted, and after that still others, from time to time, on both banks of the river.

When night came on, the voyagers camped on the north bank, in a narrow strip of meadow at the foot of a cliff. A spring issuing from under the cliff supplied them with plenty of clear, cold water. After dark the camp was a lively, noisy place, the merriment continuing till a late hour. Fortunately there was little drinking, less from a lack of inclination, perhaps, than from a lack of liquor to drink. Hence everything was pleasant and peaceable.

In spite of being up so late, the travelers were up again before daylight next morning, cooking and eating. And scarcely had the sun risen when they were on their noisy way down the river again.

"That's the mouth of Femme Osage creek, that I live on," Boone remarked to Ben, well on in the day. He was pointing to a good-sized creek that came down to the Missouri from the north through a deep gash, or gorge, cut through the hills and cliffs.

Ben nodded. "I recognize it. You're not many miles from home, Uncle Dan'l. Going to stop?"

"I'd like to, the best kind. But as we're together, all of us fur-catchers, I think I'd better run on down to St. Louis and market my furs and deer-skins with the rest of you. Maybe I can get better prices. And then I'll have the business off my mind."

"Jodo and I pass not many miles from home. We had intended to stop and tie up and tramp across the country. But now I think we'd better keep right on with this big party. Don't you believe that will be best, Jodo? We shall want to buy a few presents before we go home, anyhow."

"Whatever suits you suits me, Benoni."

Well on in the afternoon the voyagers were passing a house that stood not far back from the south bank. Jodo's uncle lived there; and it was there that they had intended to leave their canoes while making a brief visit to their homes. When near the house they saw a big boy tying a canoe to a stake as he gazed at the fleet of boats and canoes. Jodo recognized a cousin of his, and beckoned to him.

As soon as he noticed Jodo's signals, the boy sprang into his own canoe and came paddling out. In a few minutes his canoe was moving along by the one Ben and Jodo were in.

"Yes, your folks are all well," he told them, in reply to their inquiries. "I was just over there yesterday. And they're expecting you two some time soon. Spunky's already there. They'd found him grazing out in front of Mr. Armstrong's when they got up yesterday morning. He made it through all safe and sound."

"And did he have a little bottle on his neck?" Ben wanted to know.

"Yes, it was still on his neck, and your letter was still corked up in it."

While the boy kept paddling along near them, Jodo arranged with him to ride over at once and let their friends know that they had returned safely, and would soon be at home.

"We'll be glad if any of our folks can meet us in St. Louis tomorrow," Ben said. "Ask father to be sure to drive in with the wagon if he can. We shall have a lot of things to haul out."

"Yes, I'll tell 'im. And maybe I'll come in if pa will let me." The boy now turned his canoe and made for the bank.

Several miles further the big party of river-travelers paddled and rowed. Then they all tied to the south bank and went into camp for the night. Again there was a lively, jolly party of campers, now with numerous visitors from near-by farms and from Fort Bellefontaine.

Next morning all were up early, but the start was delayed, partly because they did not care to arrive in St. Louis at too early an hour; and partly because all the young fellows, Ben and Jodo among them, wanted to shave and array themselves in their most picturesque clothes. For to these trappers St. Louis, the great fur-market, was a very important place, and a visit to St. Louis was an important event. And because the place was a fur-market, trappers were very important people in St. Louis.

But at length, about 9 o'clock, all the canoes and boats were moving gayly down the river again. Out of the Missouri they soon swept, and into the Mississippi.

Once out in the Mississippi, the trappers knew that the end of their voyage—to many of them a very long voyage—was nigh. Gayly they swept along. Often the boatmen would start up a song, and any of the canoemen who could sing it would join in.

At last St. Louis itself came into view, strung along the top of a limestone cliff from 30 to 40 feet above the river. Just west of the town rose another hill, higher and almost as steep. Fourteen hundred inhabitants the little trading-post now boasted; and it was beginning to think itself a city. Word had reached town the night before that a great company of trappers, Indian chiefs and settlers were coming, and now the whole town had assembled on a big sand-bar between the cliff and the water, some to welcome them and others to watch the fleet come in. In the crowd a band was playing.

Down the middle of the broad river swept the whole fleet, till only about half a mile above the crowd. Then the boats turned in toward the west bank. As they turned, all the craft formed themselves in a V-shape, with the boat carrying the manager of the fur company in the lead, the other boats a little further back, the Indian canoemen on each side of the boats, and the other canoes spread out in two wings, one above and one below. They were headed straight toward the bank, but the current would carry them down.

And scarcely had the V-shaped fleet started for the bank when the crews of the three boats struck up one of their liveliest songs. Now the canoemen stood up to paddle. And so they moved in toward the bank and drifted down toward the crowd. Soon the band caught the air of the boatmen's song and began to play that.

When the boats touched the bar Colonel Auguste Chowteau, one of the founders of St. Louis, and at this time president of the town council, stepped forward from the crowd and held up his hand. The song ceased and the band ceased playing, and then he called out:

"Gentlemen, trappers, and chiefs of the mountain tribes, St. Louis, the greatest fur-market in the world, welcomes you to her hospitality! We're always glad to see you come, and always sorry to see you go!"

He spoke a few minutes longer. And when he had ceased came a loud hurrahing and a great waving of hats and handkerchiefs on shore, followed by a terrific hurrahing and a wild waving of 'coon-skin caps on the water.

Then willing hands seized the boats and canoes and held them fast, while the voyagers stepped ashore. There they were greeted with much hand-shaking, especially by the town-officials, the fur-buyers, the merchants, and others who expected to do business with them. The Indian chiefs were treated with especial consideration, that being the purpose for which they had been brought down here.

Most of the voyagers had friends or acquaintances in the crowd. Ben and Jodo had a good number, both men and boys and women and girls.

"Your folks are all here," the first acquaintance they met told them. And they looked toward the cliff to see Mr. Armstrong and Mr. Henderson making their way through the crowd to meet them. When they had greeted their fathers, they followed them to the back edge of the crowd, where their mothers and sisters were waiting.

# A CROOKED TRAIL

This is a story of the Texas plains, with just the dash and headlong adventure that holds the interest tight. It starts off with a casual, before-breakfast call to bring home a spotted, long-horned steer that has a strong desire for a change of scene. But you don't get back for breakfast. Not by a long shot. This roving steer's trail leads on, step by step, into a land of rare outdoor adventure. Before you know it, that steer has got you into a whole mess of trouble with cattle rustlers, Texas rangers and other rough-and-ready gentry who pack guns on their hips and pepper in their tempers.

## A CROOKED TRAIL

is surely a red-blooded story for red-blooded people of all ages and both sexes. Its author is Lewis B. Miller, whose story, TRAPPERS OF THE OZARKS, has been enjoyed by the readers of this paper for the last several months, and which is concluded in this issue.

Bear in mind the date when the new story begins, and get all the interest of the opening chapters. The first instalment will appear in our issue of September 12.

## Save Canning Space

The food administration sends out the following concerning tomato paste:

As the space-saver in canning and a time-saver in cooking tomato paste will commend itself to the thrifty. Get rid of the water in fresh tomatoes and you can pack all the food value, flavor and color in one-tenth of the original space. Bottle the paste in any size bottle, cork and seal for use in soups and sauces. One teaspoon of paste will make one dish of soup.

**Plain Paste**—Boil the tomatoes until soft. Crush thoroughly and pass through a fine sieve or screen to take out the skins and woody portions of the pulp. Place the pulp and juice which pass the screen in a shallow pan and boil down gently over a slow fire to a thick consistency. Then place it over hot water or in a slow oven where the heat is not sufficient to cause the paste to stick to the bottom of the pan. Allow the pulp to evaporate until it reaches the consistency of peanut butter. While still hot add about two ounces of salt to a gallon of the paste and pack into hot scalded jars or bottles. Sterilize in washboiler from half hour to an hour.

**Dried Paste**—Spoon paste into plates or pans in thin sheets and dry thoroughly in a very slow oven, from 130 degrees to 140 degrees, until it can be cut in squares or rolled in sheets. Store carefully in moisture-proof containers.

**Flavored Tomato Paste**—To one gallon of tomato juice and pulp prepared as above, add two sliced onions, two buttons of garlic, one bay leaf and two or three chili peppers. Boil down over a slow fire until it thickens and then concentrate over a steam bath or on the back of the stove to a thick paste. Beat in olive oil and salt to taste. Store in jars or cans. Sterilize as directed for plain paste.

## Onions Rot in Soil

To the Editor: Onions that I have raised here in this soil rot occasionally, and will not keep when pulled, dried and stored. Sometimes they are rotting before pulled, though the ground is dry. When stored, they often get soft and rot.

J. G. S., Soda Springs, Idaho.

The above question was answered by F. D. Heald, head of the department of plant pathology, State College of Washington, as follows:

"It seems probable from your description that the rotting of the onions is due to a definite fungus which is present in the soil. If such were true it would be advisable to discard the ground for the growing of onions for a number of years. If the soil is really infected with the fungus which causes the rot, there is no definite treatment which you can employ which would give you a healthy crop.

"The only other possible explanation for the trouble would be freezing temperatures, which cause injury to the onions before they are harvested and put into storage. It sometimes happens that low temperatures, which do not apparently injure the onions at the time, make them very susceptible to various rot-producing fungi, which develop during the storage period. In such case, the onions look fine when they go into storage, but go down rather rapidly."

## Trappers of the Ozarks

(Continued from the preceding page.)

"We started before daylight this morning, so as to get here in time to see you come in," Rachel Henderson told them, when all the greetings were over.

"And I'm glad we did. It was well worth seeing!" declared Betsy Armstrong.

"Benoni, you must have taken pretty good care of Jodo," Mrs. Henderson said. "He looks stronger and heartier than he did when he went away."

Jodo grinned. "I have to be stronger and heartier, to stand all the ups and downs we've been through, or I'd snap like a dead twig," he declared.

As soon as the crowd began to break up, the little party all went down to the water's edge to greet Daniel Boone. After 14 years in this country, the old pioneer knew almost everybody in town, and was now surrounded by a crowd of acquaintances. The Armstrongs and Hendersons urged him to go out home with them and stay a few days. But he declined, on the ground that he must get up to his own home just as soon as he could market his furs.

The Armstrongs and Hendersons were at the house of some friends on Main street—the street that ran along the top of the cliff; and Jodo and Ben, leaving their canoes in the care of black Tom, went up to the house with them. But after an hour or two spent talking over the happenings of the last eight months, the trappers returned to the river. And there they, assisted by their fathers, spent the rest of the day converting their winter's work into cash. For their own use they kept some of their salt, a few pieces of their wild meat, and the two pots of honey. Everything else was sold, including their canoes.

The following morning there were some presents and other things to buy. After that a farm wagon, with the two families in it, climbed the hill west of town, passing by the great stone tower—built by the Spaniards—and the old fort. Soon emerging from some woods, it rattled away across the prairie toward the west. At Camp Spring, a mile and a half out, it halted long enough for the team to drink, then jogged on toward a blue line of forest. Ben and Jodo, chatting gaily in the midst of their friends, declared themselves well satisfied with their winter's work. And they had reason to be. They had made as much as they had expected to make, and nearly $200 besides.

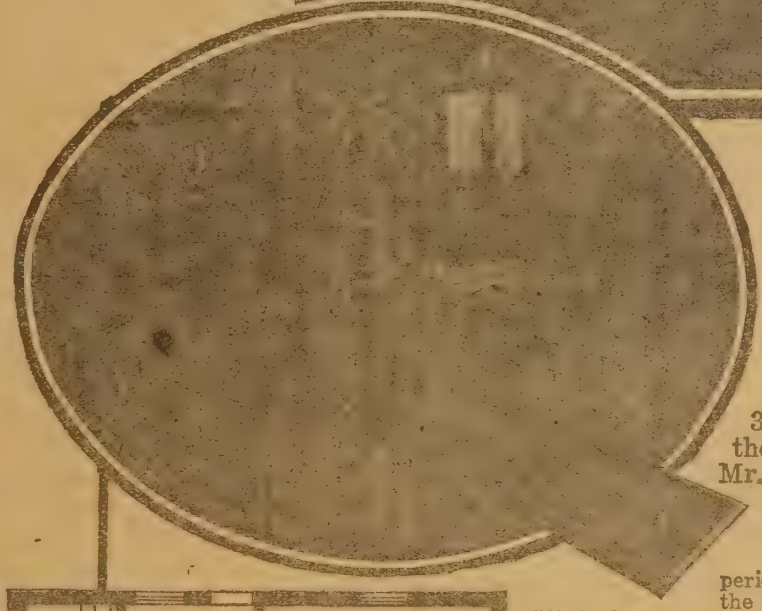
The wagon reached home just at sunset. As the trappers drew near, little Spunky, grazing by the road-side, lifted up his head and brayed them an ear-splitting welcome. And scarcely had the two jumped from the wagon when Bose and Tinker were leaping all over them.

After resting a day or two, while they told of their experiences in the wilds, the returned trappers went to planting corn. And after that there was plenty of farm-work to keep them busy.

Just now some of the talk in this part of the country was of a bill that had been introduced in congress to make Upper Louisiana, or at least the part of it found within the present states of Missouri and Arkansas, a territory under the name of Missouri, with a governer of its own, a legislature of its own, and a delegate in congress. That bill became a law of the 4th of June.

But even more interesting to these people, and far more exciting was the threatened war with England, which congress declared on the 18th of June, while Ben and Jodo were at work, plowing over their corn. The part of the war which concerned these frontier people most was the threatened Indian uprising, which, already begun in a small way, was to break out fiercely and continue for years. No one knew but that all the settlements along the Mississippi, not excepting the people of St. Louis, might have to fight for their lives.

Even while the returned trappers were busy with their farm-work, Jodo was planning to go to Kentucky to school in the fall, and Ben and Jodo's pretty sister were planning something even more interesting.



The wedding took place, and at the appointed time. Jodo also went to Kentucky to school. But the going away to school was not till three years later. As it happened, he spent most of the intervening time up in the Boone's Lick country, scouting for Indians and fighting Indians. But those experiences, exciting though they were, can not be narrated here.

This is the story of a trapping-trip into the Ozark wilderness. And that story has been told.

THE END.

# Save FUEL

## The CALORIC
### Saves 35% to 50% Fuel

First floor plan of Mr. Stearns' house

"Air is always balmy and sweet"

### "So Low a Cost We Were Astonished"

"Our home faces the west. We get the northwest winds, which are very severe here." Just locate that home on Rural Route No. 1 out of Brookings, South Dakota, where the thermometers show even 30 degrees below, and you will realize the house heating problem faced by Mr. H. I. Stearns, who has lived near Brookings for 35 years. How he solved it let him tell himself:

"Yes, we people up in the Dakotas experience very rough weather. Our home faces the west. We get the northwest winds, which are very severe here. That was one of the reasons why, two years ago, I doubted that the Caloric one register would heat my house satisfactorily.

"But we have used the Caloric Pipeless Furnace now for two winters, and are much pleased with it. It keeps our eight room house uniformly comfortable, and our floors warm, a pleasure we never enjoyed before.

"And it is so clean and sanitary. The air is always balmy and sweet, and there is a remarkable freedom from dust and ashes.

### Only Four Tons of Coal

"All this we have enjoyed at so low a cost that we are astonished. Only four tons of coal kept our eight rooms comfortable all last winter—one of the severest we have experienced.

"You see from this why we consider the Caloric a good investment and why we would not part with it for anything. We take great pleasure in recommending it to anyone wanting a good heating plant."

Yes, Mr. Stearns has had an experience over fifty thousand others, in all parts of the country, have been delighted with, both for comfort and economy. Many thousands have written us in praise of this furnace. Your home may have these advantages, too, and at little cost. See the Caloric dealer about it.

Let us send you, free, our beautiful new catalog that tells the whys and wherefores and the reasons for its effectiveness and its economy. With it we will send the names of users in your section, so you may see for yourself.

The Caloric burns lignite most successfully. Hundreds of people in this section are using lignite exclusively for fuel.

## How the States Are Asked to Increase Winter Wheat

Acreage of winter wheat suggested for sowing in the fall of 1918, with data showing basis for the recommendations. States that have suffered from drouth conditions are not asked to increase wheat acreage, but if generally favorable conditions obtain it is expected that increases will be shown in those states. In Michigan, Wisconsin, Minnesota and South Dakota larger increase of winter wheat acreage is not suggested because of heavy increases suggested for rye:

| State | Acreage suggested 1918. | | | | Acreage Sown 1917 (000s omitted) | Maximum acreage sown, 1913 to 1917 | |
|---|---|---|---|---|---|---|---|
| | Minimum (000s omitted) | Per cent 1917 acreage | Maximum (000s omitted) | Per cent 1917 acreage | | Acreage (000s omitted) | Year |

## HOME CANNING.

### Sterilization Is the One Need.

Mrs. Elizabeth Jones, who is connected with the state club work, makes one thing clear in her various addresses and demonstrations along the line of home canning.

"It isn't the canning outfit or the can you use that determines your success as a canner," Mrs. Jones insists. "One method is as successful as another, provided you secure sterilization; that is the basic principle. The pressure method has some advantages—it saves time, labor and fuel, but it is possible to can garden products just as successfully by the old washboiler method as by any other."

This canning expert calls particular attention to the fact that the government is not condemning any style of jar or can, and that even the old type Mason jar, which many housewives are beginning to think is a thing of the past, can be used as successfully as its modern rivals, providing sterilization is secured and maintained. In this latter respect the rubber is of far greater importance than the jar.

In the home canning of vegetables, at least two steps precede placing the product to be canned in the jars. First comes the "hot dip," which is very hot, indeed; the beans, for instance, are put into boiling water—and this water must be at a jumping boil, not merely simmering—and are kept there from three to five minutes. Next, they are drained out of the hot dip and are at once given a cold dip. The water for this second bath should be as cold as possible—running water from the tap is good.

The purpose of these dips is somewhat as follows: First, the hot dip tends to do away with the acrid flavor observable in some vegetables canned in the old way; second, it removes part of the bacteria; third, some of the cellulose is broken down; and fourth, the color, which is started by the hot dip, is checked and in a measure set by the cold. This cold bath, in addition, firms the texture of the vegetable, and makes it easier to secure the full, solid pack so desirable in quality goods.

### FRUITS FOR TABLE.

**Some Canning and Cooking Hints.**

To the Editor: We are told that fruit will keep without sugar. It will freeze more quickly, but if wrapped with papers or other precaution that can be forestalled. We can not very well eat it with no sweetening, but sweet apples will do wonders where they can be obtained. Dried or evaporated they will keep a long time if heated to kill all possible moth or other insect eggs and sealed in paper bags or other receptacles. When served they are especially nice after being soaked and added to corn meal or rice, cooking either separately or together with raisins.

In preparing acid fruit for canning add your sweet apples one-half or less as desired, cook well until surplus moisture is cooked away and it will be like Shaker or boiled cider. This can be done if desired by setting the vessel containing the sauce in a slow oven—covering so it will not crust over the top. It can also be cooked and canned in the ordinary manner and thus have variety. One lady of my acquaintance when canning up a small quantity by the cold process sets a few small jars of fruit in a pan of water and cooks them in the oven in place of steaming in a kettle upon the stove.

If molasses is used for sweetening fruits they must be cooked as soft as desired before adding the molasses as it hardens the fruit. In cooking juices the same precaution must be taken with sugar. Sweet apples require more time for cooking than do sour apples.

A pinch of cooking soda added to very acid fruit helps reduce acidity and save sugar, but care must be taken not to add enough to kill the acid or it will result in a flat, insipid flavor.

A small portion of salt added to fruits of all kinds will improve flavor, if not too much. We are told that the secret of all flavoring is to blend so that no one flavor can be distinguished from the other.

The pinch of soda will aid in the cooking of string beans or an old chicken more quickly and make it quite tender. In cooking green peas if just a pinch of soda is added in cold water to start with they retain their green color and the skins separate and come to the top and can be removed if desired.

**Is Old Merchant.**

Mrs. Rebecca Mayo, age 90, still conducts a shoe store in Provincetown, Mass. She has had charge of the business since her husband died, in 1875.

## A Talk to Girls

What are slackers? Men who avoid military duties? Yes. But there are even worse slackers than these. They are the girls and women who shirk their duties, who refuse to accept their share of responsibility. The girl who spends her time auto riding, preparing for dancing and parties when she could be helping her mother is a slacker. The woman who spends her time the same way is a worse slacker, because she is older and should know better. She should not spend any time foolishly when there are so many poor children that need clothes; for it is a sin for us to indulge in idleness because some one else makes our living for us.

Girls, do not feel you are abused because you have to work while some other girl idles her time away. Do not envy her, for she is really greatly to be pitied. Some day she may be a wife and mother and she will be poorly prepared for her duties. She will suffer greatly, and so will her innocent children, from her ignorance.

Try to do all your work well; avoid idleness. If you haven't enough to keep you busy, try and help some one else. Look around you and you will find golden opportunity for making others happy. Sew for the neighbor who has a large family, or help take care of some invalid. These things keep us from growing selfish and narrow-minded. The girl who is always helping others is bound to be happy herself, and she will have the love and respect of all who know her.

Dear girls, if there is one thing the United States needs more than soldiers, it is good wives and mothers. They are the backbone of the nation. Oh, that there were more of them! Now, girls, I will tell you the things that caused me sorrow. I went to dances against my mother's will before I was 16 years old. If I had my life to live over again, I would not go to dances before I was 18 or 20, for it caused me to lose interest in my school work. I read novels before I was through the eighth grade. If I had it to do over again, I would never read novels except those recommended to me by a teacher. Novels give us faulty ideals of life and cause us much unhappiness.

You are not a slacker if you can do things well.

**Cook, sew and knit.**
**Wash clothes, patch and iron.**
**Sweep, dust and scrub.**
**Change the clothes on a small baby.**
**Mind your mother without talking back.**

Girls, if you can not do these things, get your mother to show you how. Get her to let you get a part of the meals and do the family mending. It is such fun to know you are able to do things.

E. D. M.

**Happiness Begins at Home.**

You have a better chance of creating happiness at home than of finding it abroad.

## Circular Maltese Yoke

By WINIFRED WORTH

Crochet workers never tire of yoke designs. Here is a very beautiful and unusually different one for you to try.

Make 1 1-8 yards of 3-4 inch Maltese lace and another piece 5 yards in 1 piece.

**First Row**—Ch. 1 on 2nd L. ch. 3 take up 3 L on end of 5 yard piece, continue 2 on one side and 3 on other for widening.

**Second Row**—1 dc. in 2 L unite 3 in a bunch ch. 3, continue across.

**Third Row**—4 dc. as other row ch. 1, join to middle of first space of last row, ch. 1 make 3 dc. join.

**Top of Yoke**—1 dc. in 2 L. Ch. 3 across.

**Second Row**—1 t. crocheted in each dc. r ch. across for ribbon.

**For Edging**—1 dc. in 2 L ch. 7, 1 dc. ch. 5, 1 dc. the same 6 times. Ch. 2 and join 1 dc. to middle of the ch. 5 ch. 2 back to other side with 1 dc. ch. 2, join to 1 dc. to middle of ch. 5 ch. 2 back to other side with 1 dc. ch. 2 join to ch. Ch. 4 and join to braid, ch. 2, fold tops up two at a time until 5 on needle. Draw thread through 1 at a time, open and begin 2nd scallop. Whip edging on after joining.

# Aeolian Player Piano

*The Best Player Value at or Near the Price*

## $545

To those that can't play but want so much to play the Piano—what a blessing is the Player! But the higher types of Player instruments are often beyond the reach of the average pocketbook. This is where the Aeolian Player Piano fills a great need—**it is a good, substantial instrument, yet moderate in price.**

The Aeolian Player Piano does not depend on any single sensational feature to command attention—**its excellence is due to a well balanced perfection throughout.** It is a product of the Aeolian Company, makers of the famous Pianola and the wonderful Duo Art.

We will gladly arrange convenient payment terms if desired.

### Could Do His Bit.

The sergeant major had trouble in finding an accountant for his captain, but at last brought in a private for trial.

"Are you a clerk?" demanded the captain.

"No, sir," replied the man.

"Do you know anything about figures?" asked the captain.

"I can do a bit," replied the man, modestly.

"Is this the best you can find?" asked the officer.

"Yes, sir."

"Well," growled the captain, "I suppose I'll have to put up with him!" Turning to the private, he snapped: "What were you in civilian life?"

"Professor of mathematics at——— college, sir," was the unexpected reply.

### Further Saving Possible.

"Why do you live in the country, Smith?"

"So as to save money."

"Food cheap, eh?"

"Not much saved that way."

"How, then?"

"Well, no theaters, $50 a year; no swell restaurant dinners, $100 a year; no taxicab fares, $50 a year; no distractions of any kind, more saving. Get the idea?"

"Um, yes. But look here, old man, couldn't you save more money if you died."—Boston Transcript.

# Must Not Profiteer on Farm Needs

To sell farm equipment on the basis of what it would cost the dealer to replace it may be considered profiteering, according to a statement issued by the office of farm equipment control of the United States department of agriculture.

Persons who have sold equipment at replacement values when costs were high must continue to do so if prices go down, even though such sales bring less than the original cost price of the stock. Morover, those whose selling price is fixed in relation to high replacement prices must restock immediately and carry the same quantity of equipment throughout the high-price period as they had at its beginning, in order not to profiteer. Those who desire to sell out without replacing their stock should not sell at a prevailing high price, but at cost plus a fair usual profit.

It will be considered hoarding if manufacturer or dealer holds contracts for, or arranges for, more equipment than the reasonable demands of his business require. Dealers finding themselves with excess stock on hand through inadvertence should sell their excess holdings at cost plus a fair usual profit.

The hoarding of farm equipment is defined by the act of congress of August 10, 1917. Manufacturers or dealers who hoard will be dealt with under the terms of this act of congress, and not under the ruling as to replacement values just issued by the equipment control office, says an official statement.

## SCHOOL LUNCH BOX.

### Pointers for New School Year.

By ALVARA P. WILLIAMS.

If you happen to be in a district which does not furnish hot lunches to the school children, you have a nine-months' program ahead of you, to properly put up lunches for your children, and be sure that they are all eaten and contain the proper amount of nourishment. Most families have their dinner at noon, and thus the child misses the most important meal of the day. His lunch must therefore have as nourishing food as possible, and yet there must not be so much of it that he will lose his appetite and leave some of it. What are the things which will fill the box, and be appetizing?

If you think back to your own school days, you will remember certain things you had so much that you were unable to eat them. You will remember the messy-looking lunches many of the children had, and how impossible it seemed to finish up a cold lunch after the first few weeks, when it had been a continual picnic. Do you suppose you or those other children were getting enough nourishment when you left half of those unattractive lunches?

First of all, then we must keep in mind that the child must get a certain amount of nourishment, and balance your lunches with that in view. There are some things which should never appear in school lunches, because they are hard to digest, and the stupid afternoons which will follow some lunches are due entirely to thoughtless food. A few of these foods are: Pork, fried foods, rich foods, especially cakes and pastries, highly seasoned foods, too many pickles; in fact anything that is hard to digest.

Into your ideal lunch box, then, you may put food which is easily digested, and which gives great food value for the small space it must occupy. The sandwich will be the best article of food with which to get the right proportion of nourishment. In their season, fresh vegetables may be added; canned fruit, fresh fruit of course being preferable when it is in season. Simple puddings, cookies, nuts and raisins, cheese, eggs, all furnish good value for the space they require. A collection of small jars with screw tops is a great help in putting in canned fruit or puddings such as custards, gelatine, rice or bread pudding; baked apples.

Sandwiches should give most of the variety of the lunch, and they generally show the least thought. Don't always put in the same kind of meat or egg sandwiches, but try to give enough variety so that all the sandwiches will be eaten. If you use meat, try mixing it with a little salad dressing after putting it through the meat chopper. Then add chopped pickles or olives; chopped celery, etc. A dozen different kinds of sandwiches may be made from the same kind of meat. Another point, which is often overlooked, is that the best sandwich is the one that keeps moist until it is eaten. That is why most children prefer chopped meats to sliced. That is why the addition of salad dressing helps so much.

Egg sandwiches do not need to be made every day of friend eggs. They may be made of hard-boiled, mashed eggs, with the addition of cream, salad dressing, parsley, cheese, pickles—anything to vary the flavor and still have the food value of the egg. Eggs scrambled, or scrambled with bacon; omelet; these add to the varfety.

Foods which may be kept on hand for some time to use in lunches are: Chipped beef, sardines, peanut butter, nuts, dates, figs, cooked salad dressing, minced ham, cheese, olives, jelly. Perhaps some of these seem too expensive, but when you consider the small amount necessary to make a lunch attractive, the outlay is justified. Anything which will induce the child to eat all of a properly balanced lunch is not extravagance. Consider also, the length of time 25 cents' worth of these things will last if used only for the lunch box.

If your child likes salad dressing, many kinds of salad sandwiches are possible, with lettuce, cheese, either cottage cheese or full cream cheese; tomatoes, celery, salmon, sardines, etc.

Bread should not always be the same, any more than the filling. Use a variety. Jell is particularly good with the "tan-colored" breads. When you make jelly sandwiches be sure to butter the bread first so that the jell will not soak into the bread.

A little care and forethought will result in attractive lunches, put up so that they are as good when eaten as when prepared. Sandwiches stay moist if wrapped in parchment paper or moistened cloth. The paper is better, and when purchased by the roll is cheap enough for any one to have. Cake and cookies should be wrapped, also. Nothing is more unappetizing than a layer of gingerbread on bread. The average child likes a surprise, as well as grownups. This is easy if you have little frosted cookies occasionally, instead of plain ones; individual molds of gelatine, saucer pies, little cup cakes, nuts, etc.

As to the lunch box itself: The best kind is not a box at all. Children deserve the best lunch bucket you can buy, if they are to lose one meal a day at your table. This is a bucket which has a top for drink, with a cup for a cover; a partition for pie or cake, and the lower space for sandwiches, jars of dessert, etc. Such a bucket costs a dollar and lasts for years. Don't give your child a spice box, a tobacco box, a lard pail, or any other makeshift, if you care about his feelings as well as his health. Get a good bucket and put in it all the child should eat, made attractive enough so he will eat it, and there will be less headaches, fewer worn-out children at the end of a school year, and perhaps even better natured children when they come home from school at night. You may even look ahead to the future of your child's digestion when he is full-grown, if you wish. Is it worth the effort?

## HOME CANNING.

### Sterilization Is the One Need.

Mrs. Elizabeth Jones, who is connected with the state club work, makes one thing clear in her various addresses and demonstrations along the line of home canning.

"It isn't the canning outfit or the can you use that determines your success as a canner," Mrs. Jones insists. "One method is as successful as another, provided you secure sterilization; that is the basic principle. The pressure method has some advantages—it saves time, labor and fuel, but it is possible to can garden products just as successfully by the old washboiler method as by any other."

This canning expert calls particular attention to the fact that the government is not condemning any style of jar or can, and that even the old type Mason jar, which many housewives are beginning to think is a thing of the past, can be used as successfully as its modern rivals, providing sterilization is secured and maintained. In this latter respect the rubber is of far greater importance than the jar.

In the home canning of vegetables, at least two steps precede placing the product to be canned in the jars. First comes the "hot dip," which is very hot, indeed; the beans, for instance, are put into boiling water—and this water must be at a jumping boil, not merely simmering—and are kept there from three to five minutes. Next, they are drained out of the hot dip and are at once given a cold dip. The water for this second bath should be as cold as possible—running water from the tap is good.

The purpose of these dips is somewhat as follows: First, the hot dip tends to do away with the acrid flavor observable in some vegetables canned in the old way; second, it removes part of the bacteria; third, some of the cellulose is broken down; and fourth, the color, which is started by the hot dip, is checked and in a measure set by the cold. This cold bath, in addition, firms the texture of the vegetable, and makes it easier to secure the full, solid pack so desirable in quality goods.

### Ignorance Is Bliss.

Few persons in Pine Top, a southern town in the mountains, had ever seen an automobile, so when a big car stopped for a few minutes in the isolated village the curious inhabitants gazed at the devil-wagon with a mixture of fear and awe, and the owner, who had entered the general store to make a purchase, heard one rustic remark:

"I'll bet it's a man-killer."

"Shore," assented the other.

"Look at the number on the back. That shows how many people it's run over. That's accordin' to law. Now, if that feller was to run over anybody here in Pine Top it would be our duty to telegraph that number—1344—to the next town ahead."

"And what would they do?" demanded the interested auditors.

"Why, the constable would stop him and change his number to 1345."—Harper's.

### Make Sugar Go Around.

Almost 70 per cent of all the sugar consumed in this country is used in the households; so it is up to the women to make the sugar go around.

### Put Everything Away.

There is a place for each thing, and it should be put there.

### Can't Beat the Game.

For every action there is an equal and opposite reflex action.

**Heal Itching Skins With Cuticura**

All druggists: Soap 25, Ointment 25 & 50, Talcum 25. Sample each free of "Cuticura, Dept. F, Boston."

**RECORDS FOR ALL MACHINES**

We carry all makes. Victors Columbias, Edison and Blue Amerolas. RECORDS SENT TO YOUR HOME ON APPROVAL. Pay for only those you wish to keep.

Review Building, Spokane, Wash.

**Lives in a Beautiful Country.**

Dear Aunt Nellie: I just finished reading the letters and I enjoy them very much. I wish more of the children of Washington would write. I think Washington is the best state of all, don't you? I have never written to the Corner before, though I've wanted to for a long time. I have not seen any letters from my part of the country yet. I live on the Little Pend Oreille river. This is a beautiful country. Mary, my sister, and I like to go fishing. We have caught a lot of fish already. There is a beautiful falls near our house. Our school was out May 7. We had a dandy program. My teacher's name is Miss Roberta Newman. I got a kodak for being neither absent nor tardy during the year. I am 11 years old and my birthday is November 28. Have I a twin? I have filled one card with thrift stamps and am going to fill another. I am not going to eat any more candy or gum, but I am going to use the money for thrift stamps. I am going to make a garden. I should be glad to correspond with any of the cousins.—Anita Hughes, Star route, Colville, Wash.

**Brother Will Help Whip the Kaiser.**

Dear Aunt Nellie: This is the second time I have written to the Children's Corner and I enjoy reading it very much. I am 13 years old. My birthday is April 2. The way I am helping my country is eating rye bread, barley bread and corn bread and eating fish, rabbit and chicken, leaving pork and other fats for my brother in the war, for he needs it more than I do, because he is going to whip the kaiser with the other Sammies. I have made four Belgian squares and if I knew how I would knit a sweater for the soldiers. I went in town yesterday and bought a Red Cross doll that they sold for 25 cents. I bought one, mama bought one, papa one and my sister one and that made $1 for the Red Cross. The high school girls were selling them. Then one time I went to a Red Cross sale and I bought a rabbit for $1 and my sister bought a lamb, but gave it back to the Red Cross to sell over again. I hope some of my cousins will write to me.—Eva Priddy, R. 2, box 23, Touchet, Wash.

**Gave Their Money to the Orphans.**

Dear Aunt Nellie: This is the first time I have written. I wish to join the Children's Corner. I am in the sixth grade next year. Our school was out May 7. I am 12 years of age next January 16. There are 12 in the family with my two sisters-in-law. I have four sisters and three brothers. Alvin is 25, Ethel is 23, Eugene is 20, Claud is 18, Pearl is 15, Myrtle is 13, I am 11 and Florence is 3 weeks old. I have no pets now, but I used to have a little pony, but she was hardly good for us to ride because she was mean. Sometimes when the boys would ride her she was all right. She wouldn't let us ride her. Papa donated her to the Red Cross. I can crochet and can knit a little bit. Last Christmas we gave our money to the orphans instead of buying presents. I forgot how much we got; it was up in $40.—Wilma McDowell, R. R. 1, Deep Wash.

**Has a Flower Garden.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I have two miles and a half to go to school. My teacher's name is Miss Kelly. I like her. I am 10 years old. I am in the fourth grade. I have two brothers. Their names are George and Willis. George is 3 years old. Willis is 9 years old. I have no sister. We have four cows. We have four horses and one colt. We have 31 little chickens. I have a flower garden. I have pansies and nasturtiums in my flower garden. We have lots of wild flowers here. I go out in the fields and pick wild flags.—Viola Powell, R. F. D. 1, box 72, Winlock, Wash.

**Go Out Riding Often.**

Dear Aunt Nellie: This is the first time I have ever written to the Children's Corner. I am 11 years old. My birthday is February 18. I have three brothers and two sisters. Their names are Harry, Willie, Leonard, Ellen and Lilly. We have an automobile and we go out riding most every Sunday. I live on a 10-acre farm. We have two cows and one calf. I have a pet dog. His name is Prince. We have two kittens which I am very proud of. My papa gets the Farmer and I enjoy reading the letters from the other children.—Annie Anderson, Hobart Wash.

**A Belgian in the Play.**

Dear Aunt Nellie: This is the third time I have written to you. I will tell you about my school. We have two rooms: One room has from the first to the fourth grades, the other one has from the fifth to the eighth. I am in the fifth grade. I got 98 in spelling, 98 in grammar, 97 in geography and 95 in arithmetic. My brother is in the eighth grade. We had a picnic. Our school was Out May 17. We had school in the morning. First we practiced our pieces. I am in a play. The name of it is "The Cry of Belgian Children." I am a Belgian in that play. I have to have an old dress on, old ragged shoes and ragged stockings. Have I a twin? My birthday is January 26. I will be 12 years old in 1919. If I have a twin I wish she would write to me.—Dorothy Cain, box 200, Route 6, Vancouver, Wash.

**We Will Catch Old Kaiser Bill.**

Dear Aunt Nellie: I am 9 years old. My birthday is April 26. I go to the Paradise school and passed in the fourth grade. I like to go to school. I have two brothers and two sisters. My brothers' names are Albert and George and my sisters' names are Leona and Genett. We have five cows. Their names are Daisy, Rosie, Molly, Bell and Mutchy. Our calf's name is Beauty. We have one horse named Dolly. We have 20 acres of land, a small orchard and some chickens. We live a half a mile from the river and I go fishing sometimes and catch trout. I am going to Bellingham to my grandma's house to spend part of my vacation. I have a little garden. I belong to the Junior Red Cross. Mama has a big garden. I hope the war will soon be over and they catch old Kaiser Bill. My papa takes the Farmer and I like to read the Children's Corner. The letters are very interesting. If I have a twin I wish they would write to me as I like to receive letters. The place where we live they call Paradise, but we get our mail from Ferndale.—Lawrence Barraford, R. F. D. 1, box 37A, Ferndale, Wash.

**Taking Care of Little Nephew.**

Dear Aunt Nellie: This is my second time of writing to the Children's Corner. I think the letters are very nice, so I thought I would write again. I live on a 160-acre farm and have eight horses and 120 chickens. I have a little bantam rooster and chicken, and a pet dog and cat. The cat's name is Muff and the dog's camo is Curley. The dog is black and the cat is yellow. I have a little white pony and like to ride it very much. I am staying with my sister, Louise, and taking care of her little boy. His name is Fred. I will give some riddles. White told white to drive white out of the white. A man rides and yet he walks. A man took off his hat and drew off his gloves. What was his name? What hen lays the longest? What is it which you take off the last when you go to bed? What is the first thing you do when you fall in a pond of water? If a donkey and a person were walking along what fruit would you think of? I will write again and give you the answer to the riddles.—Virginia Brockmiller, Wheeler, Wash.

**Brothers Are in the Army.**

Dear Aunt Nellie: I read the letters in the Farmer and I enjoy them very much. I have seven brothers and two sisters. My brothers' names are William, Henry, Walter, Fred, Homer, Clinton and Ted. My sisters are twins. They are 16. Their names are Nida and Nita. My oldest brother is 32 and my youngest brother is 8 years old. Two of my brothers are in the army. We have about 60 hens, 10 turkey hens, one old gobbler, and about 60 little turkeys. I am 11 years old and I am in the fifth grade. I will be 12 December 16. I passed the fifth grade very well this year. I got 85 in history, 88 in physiology, 93 in arithmetic, 94 in language, spelling and geography. If I have a twin I wish she would write to me.—Della Davis, R. 1, Kennewick, Wash.

**In the School Play.**

Dear Aunt Nellie: This is the first time I have written to the Corner. I am 11 years old and my birthday is April 8. If I have a twin I would like to hear from him or her. I am in the fourth grade. I ride horseback to school. My teacher's name is Miss Wright. I like her fine. My school had a play and I was in it. I live on a 120-acre farm. I have six hens, a pony and a dog. My pony's name is Charley and my dog's name is Jack. When I was small I had a wagon and a harness and hitched Jack up and often drove him a mile and a half to town. I have one brother, Richard. He is 5 years old.—Zella Wilson, R. F. D. 1, box 46, Port Stanley, Wash.

**Their School Has the Cup.**

Dear Aunt Nellie: This is the first time I have written to the Corner. I have three brothers and five sisters. My brothers' names are Art, Mose and Jesse. My sisters' names are Cora, Ora, Leota, Lulu and Ruth. I have one pet dog and two kitties. My dog's name is Fritz. My cats' names are Tommie and Snowball. We are milking six cows. Their names are Mabel, Tiny, Beauty, Lady, Creamer and Spika. We have 14 pigs, 40 chickens and one pet bird named Bobbie. I am 10 years old. Next year I will be in the fifth grade. I missed just exactly 12 days last term. We have quite a bit of Red Cross work at our school. I haven't been tardy once this year. We have a loving cup

# SUBSCRIPTION PLAN SAVES YOU MONEY

**RATES**
For Subscription to The Washington Farmer
**25c**
For 1 Year
**50c**
For 3 Years
**$1**
For 5 Years

We are holding open our direct-to-the-reader subscription plan during the summer months. It means a real saving at a time when most things cost more.

The central idea of the plan is to deal direct with our subscribers in securing and renewing subscriptions, thus eliminating the middleman and giving our friends the benefit of every penny saved.

It is gratifying to know that the new cooperative system has had the heartiest kind of backing; and that it has been put on a successful basis. We could not have got along without the assistance of well wishers who have told their neighbors about the plan and passed along copies of the paper.

There are many things of value which your state farm paper can bring you and your neighbors during the summer months. The various departments will be full of helpful hints, instructive articles and entertainment. Send in the orders!

at our school. It is silver, lined with gold. It surely is pretty. Our school is against five other schools. If we keep the cup for one more year we can keep it all the time. The things we won in this year are: First prize counts 10, second prize five. Girls won in a potato race, 10; boys won in a potato race, 10; girls' running race, 10; boys' running race, 10; girls' basket ball, 10; boys' basket ball, 10; boys' broad jump, 10. The other five schools won: Running race, 5; boys' running race, 5; girls' potato race, 5; boys' potato race, 5. Aninsle got first prize exhibit. Have I a twin?—Elsie McGlaughlin, R. F. D. 2, box 117, Winlock, Wash.

**Helping Uncle Sam's Soldiers.**

Dear Aunt Nellie: This is my first letter to the Corner. May I be a cousin? I have light brown hair, blue eyes and a light complexion. I am 12 years old. I will be 13 September 25, 1918. Have I a twin? If so I would like to correspond with her or him. I will be in the eighth grade next year. There are about 60 pupils in the school I go to. It is a country school. I live on a 40-acre farm. I have about a fifth of a mile to walk to school. The grades I got in my final examinations are as follows: Spelling, 100 per cent; reading, 100 per cent; grammar, 100 per cent; history, 100 per cent and arithmetic, 99 per cent. Geography and physiology were state examinations, so I don't know what I got in these. To help my country I have bought $4 worth of thrift stamps and expect to buy more. I have also gathered moss to put in bandages for our brave and noble soldiers. In the future I want to be a Red Cross nurse. They do such splendid things. I think it would be splendid to have a feeling in your heart that you are going to save the life of some of Uncle Sam's noble soldiers, or at least help save their lives. I am going to learn to knit so the soldiers can have the socks, etc. There are so many ways in which children can help their dear old Uncle Sam. I wish more children would become interested and want to help him. My birthday is September 25. I will be 13 years old my next birthday.—Elizabeth Odell, box 166, Monroe, Wash.

**Pet Horse Is Gentle.**

Dear Aunt Nellie: This is my first letter to the Corner, but I hope it won't be the last one. I am 12 years old. I was born on May 13. Have I a twin? If so wish that he or she would write to me. I go to school at the Naches public school, district 91. belong to the Junior Red Cross and have helped to make two quilts. I can knit now. One week after I learned to knit I knitted four afghan squares. We have 10 pigs. There are seven little Hampshire pigs and a Hampshire sow. Then we have two Berkshire sows. We also have three little calves. I have a pet horse, too. Her name is Daisy. She is just as gentle as a kitten. She had a ring bone on her right front foot, but papa put some medicine on it and killed it. I have four little pet kittens, two of them are gray, one is blue and one is yellow. Then we have two dogs also. If I have a twin I should like very much to correspond with him or her. I would like to correspond with any other boy or girl who writes to the Corner.—Bessie Kincaid, Naches, Wash.

**Father Used to Be a Soldier.**

Dear Aunt Nellie: My papa takes the Farmer. I like to read the letters. I was 10 February 15. Our school will be out next Friday. I am in the sixth grade and I am hoping to pass. Miss Turner, our teacher, got sick and her sister, Mrs. Rodda, finished the school year for her. There are three pupils in the school. I have a brother, Samuel, who was six last December 29. Mama, brother and I joined the Red Cross. I have one uncle in the army. My father fought in the Spanish-American war. I live on a 160-acre farm. We have 19 little pigs and five big ones. We have 16 cows and calves, one horse, two dogs, Ponto and Bobby. We have three cats, Petra, Dolly and Ring. Brothers and I go after the cows and pick wild flowers on the way. Have I a twin? If I have I wish he or she would write to me. I have blue eyes and curly hair. I can crochet and knit. This is my second letter to the Corner. I will write again.—Leona B. Jacks, box 473, Raymond, Wash.

**Picnic at the Lake.**

Dear Aunt Nellie: We take the Farmer and I like to read the Children's Corner. I was 11 years old April 9. Next year I will be in the seventh grade at school. We went down to the lake and had a picnic. We got a boat and rowed all around the lake. We got a ride home and were sorry that the picnic was over. I live on a 240-acre ranch. I would not trade for anything in the world. I like to ride horseback after the cows and to town. We milk five cows and we make butter.—Helen Christina McKeen, box 339, Republic, Wash.

**Little Chickens Are Cute.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I like to read the letters very much. My pets are a cat, a rabbit, a bird. We also have a cow, two pigs and some chickens. We have 38 little chickens. I think they are very cute. I am in the fifth grade and am 9 years old. Will Kathlyn Bowen write to me? She is my twin. I lost her address, and so could not write to her.—Gertrude Wittine, 16 B Street, Anacortes, Wash.

**Has Sibelle a Triplet?**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner and I hope I can write many more times. I enjoy reading my cousins' letters and I will try to make one more letter for the Corner. I have three sisters. Their names are Zelma and my twin, Adele, and Willamina. We live on a 10-acre tract near Prosser. We have two horses, four cows, six pigs, about 40 rabbits, 32 old chickens, 75 little chickens and a cat. The horses' names are Prince and Tom. The cows' names are Queen, Molly, Star and Butty and the cat's name is Tom. I am 13 years old. My birthday is March 18. Have I a triplet because I have a twin already. I will give two riddles. Spell live mouse trap with three letters.—Answer—Cat. What is the best thing you can put in pie. Answer—Your teeth.—Sibelle De Chenne, R. R. 1, Prosser, Wash.

**Cousins Expect to Go to France.**

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. Quite a few of the girls I know have written to you. I am glad summer is here. My sister and I went in swimming yesterday and we both know how to swim. One summer I went down to my aunt's place in Centralia. That summer my aunt, uncle, cousin and I went to Olequa, where my uncle's mother and father live. I had an awfully good time. Today the Red Cross meets at our house. I have my thrift card full of thrift stamps and I have a war saving stamp. My little sister has the same amount of stamps that I have. I have two cousins that expect to go to France any time. One is in Kansas. The other is in Camp Lewis.—Lahville Fountain, Fragaria, Wash.

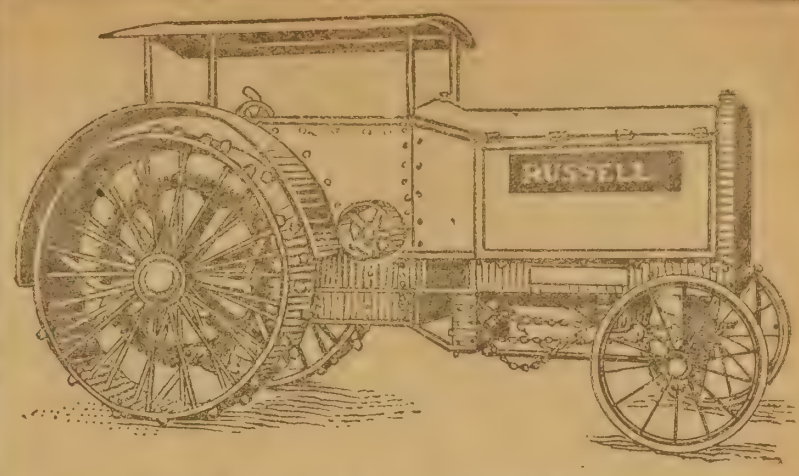
**Uncle Is in France.**

Dear Aunt Nellie: My first two letters to the Corner were both printed so I will write again. I like to write to the Corner and I enjoy the cousins' letters very much. One of the cousins, Erma Sparber, wrote to me and I answered her letter, but she hasn't written again. My sister and I like to gather wild flowers. We get our hands full every night when we get the cow. We will be sorry when they are all gone. I am still knitting for the Red Cross and have finished my fourth wash cloth. One of my uncles is in France. He is in the 24th engineers and has been in France nearly three months. Maybe Erma will see my letter and answer it. —Elizabeth Cook, R. 2, Box. 46, Mansfield, Wash.

**Clara Will Come Again.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner and I hope it won't be the last. I go to Whitman school and am in the seventh grade. My sister and I haven't missed a day of school nor been late. There are 25 pupils in our school. We have 50 big chickens, 150 little chickens, three ducks, 14 pigs, eight cows, three calves, eight horses and one colt. My birthday is July 8 and I am 13. Have I a twin? If I have please let me know. I will write again if I may be a cousin. May I?—Clara Pohle, Route 5, Spokane, Wash. (Of course we all want you to come again, Clara. We will watch for your letter.—Aunt Nellie.)

**Carl Joins the Red Cross.**



Dear Aunt Nellie: This is the second time I have written to the Corner. We have two cows and a horse. The cows' names are Pet and Blossom and the horse's name is Crib. We have two cats. Their names are Tommie and Minnie. We have 200 chicks and 60 old hens. I have a sister and her name is Marion. I joined the Red Cross. I have three thrift stamps and my sister has four. I am in the third grade at school. My teacher's name is Mrs. Parker. My birthday is May 4. I am 9 years old.—Carl Dahlstrom, Box 164, Elma, Wash.

**Jessie Is Eight Years Old.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 8 years old. I am in the second grade in school. My mother teaches me at home. I have a doll, 14 inches long, and her name is Mamie. My sisters' names are Florence, Evelyn and Marian and I have a sister married and she has three children. My birthday was March 30, 1918. Have I a twin?—Jessie Willey, R. F. D. 1, Ferndale, Wash.

---

Aunt Nellie has received letters from the following cousins during the last week: Hazel Gleick, Phoebe Galbraith, Emma Mehus, Mary Dalan, Ludvig Peterson, Violet Eldred, Earl Joplin, Beatrice Smith, Sam Rich, Barbara Jenkins, Doris Jenkins, Ethel Harriman, Bessie Robinson, Myron McCormick, Lois Chace, Helen McBride, Waive Brooks, Elvira Anderson, Virginia Wilson, Lucile Weaver, Elfleda McNeilly, Gladys McNeilly, Naomi Ensley, Ethalee Magee, Zelma Parkinson, Lucile Turnley, Lois Turnley, Mae Turnley, Albert Ness, Pearl Chaney, Sterling Saunders, Catherine Harrier, Dema Boyd.

# History of Liberty Loans Is Told

In connection with the announcement of the campaign for the sale of the bonds of the fourth Liberty loan the latter part of next month and the first part of October the treasury department at Washington, D. C., has issued an interesting statement of the history of the Liberty loan movement in America.

"The United States entered the war on April 6, 1917. Eighteen days later, by a practically unanimous vote, congress passed the Liberty loan bond bill," says the statement.

"On May 2 the first Liberty loan was announced, on May 14 the details were made public, and on the 15th the campaign began and closed one month later. The issue was for $2,000,000,000, the bonds bearing 3 1-2 per cent interest and running for 15-30 years. The bonds carried the conversion privilege, entitling the holder, if he chose, to convert them into bonds of a later issue bearing a higher rate of interest. Four and a half million subscribers from every section of the country, representing every condition, race and class of citizens, subscribed for more than $3,000,000,000 of the bonds. Only $2,000,000,000 was allotted.

"The outstanding features of the first Liberty loan were the promptness with which it was arranged and conducted, the patriotism of the newspapers, banks, corporations, organizations and people generally in working for its success, and the heavy oversubscription of more than 50 per cent. Another notable feature was that there was no interruption to the business of the country occasioned by the unprecedented demand upon its money resources.

"The second Liberty loan campaign opened on October 1, 1917, and closed on October 27. The bonds of this issue bear 4 per cent interest and run for 10-25 years. They carry the conversion privilege. It was announced that 50 per cent of the oversubscription would be taken. Nine million subscribers subscribed to $4,617,532,000 of the bonds, an oversubscription of 54 per cent. Only $3,808,766,150 of the bonds were allotted.

"This campaign was marked with the same enthusiastic support of the public as its predecessor. The labor and fraternal organizations were especially active in this campaign, and the women of the country did efficient organized work which greatly contributed to the success of the loan. The men in the army and navy worked for and subscribed largely to the loan.

"The third Liberty loan campaign opened on April 6, 1918, one year exactly after our entrance into the war, and closed on May 4. The bonds of this issue bear 4 1-4 per cent interest and run for 10 years, are not subject to redemption prior to maturity and carry no conversion privilege. The loan was announced for $3,000,000,000, but the right was reserved to accept all additional subscriptions. Seventeen million subscribers subscribed for $4,170,019,050 of the bonds, all of which was allotted.

"A great feature of this loan was its very wide distribution among the people and throughout the Union and the fact that the country districts promptly and heavily subscribed to the loan, in a great measure making up their quotas earlier than the cities. Secretary McAdoo pronounced this loan the soundest of national financing.

"A little over a year ago there were some 300,000 United States bondholders; there are now somewhere between 20,000,000 and 25,000,000. Awakened patriotism has made the American people a saving people, a bond-buying people. The effect of the Liberty loans on the national character, on our national life, on the individual citizen and our home life is immeasurable—of incalculable benefit. Not less incalculable is their effect on the destiny of the world as our ships plow the seas and our men and material in Europe beat back the Hun.

"The fourth Liberty loan campaign will begin Saturday, September 28, and close October 19. No American doubts its success; no good American will fail to contribute to its success. The blood of our men fallen in Europe calls to us; our answer must be and will be worthy of them and our country."

## Clean Potato Cellars

Clean up the potato cellars now and don't wait until harvest, says the United States department of agriculture in pointing out that the potato crop promises to be a big one and that there is no excuse for allowing losses by rot in storage.

Among the suggestions the department makes the following: Get rid of every bit of vegetable matter in the storage cellar; sweep and brush until it is clean; then give a thorough dose of fungicide, either gas or spray, the quickest and easiest to apply being formaldehyde gas.

**Fungicides to Use.**

For each 1000 cubic feet of space use 10 ounces of formaldehyde and five of potassium permanganate. Pour the formalin over the permanganate in a deep container, and then leave the cellar immediately, because the gas is given off at once.

Should it be found that these chemicals are too expensive, the department recommends a bordeaux mixture of 5-5-50 strength. It may be applied with hand sprayer, pump or broom; it is effective when thoroughly used and it does not cost much.

It is expecting too much, says the department, to look for potatoes fit for market from a dirty, ill-ventilated cellar. Time, money and work spent in growing a crop are wasted if the potatoes are stored where dead potatoes are carrying over the organisms that cause rots.

## Reduce Winter Killing of Wheat.

An average of 10 per cent of the area annually sown to wheat is abandoned on account of winter kill. Much of this abandonment can be prevented by planting wheat in the right kind of soil, says the United States department of agriculture. Winter killing is usually a sign of poor drainage and the worst losses occur in soil that is low in humus or vegetable matter. On poorly drained soils wheat is often killed directly by the accumulation of water in low spots or is smothered by the formation of ice in winter. Wheat plants are also often heaved out of the ground by the alternate freezing and thawing in the fall or spring, this being due to the formation of ice in soils saturated in water. Sufficient moisture should be present for good growth, but all water in excess of this amount should be promptly removed by proper drainage. Better drainage results from the improved physical condition of the soil in which humus is plentiful.

## Cattle Men Want Aid.

W. B. Tagg, president of the National Live Stock exchange at Chicago, has appealed to Secretary McAdoo of the United States treasury, urging that the government take some steps to help finance the cattle business. Mr. Tagg says that as a general rule cattle growers can borrow money for six months' time only. He urges that congress make provision whereby longer term loans can be secured. He says that the present difficult conditions under which stock are raised and marketed render it especially important that some such action as this be taken.

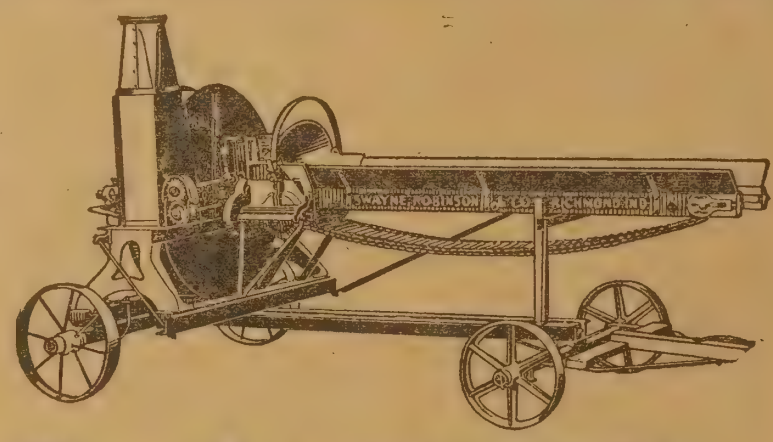
## Should Gather Sumac.

The United States department of agriculture is now preparing a bulletin of advice to persons living in districts where wild sumac grows. It is said that there is opportunity for the development of a considerable sumac industry, owing to the fact that this plant is one of the sources of tannin, which is used in tanning and dyeing. Much of this product has come heretofore from Sicily, but war shipping conditions have practically stopped the trade, and the opportunity in this country therefore becomes more interesting.

COME

We are counting on you to attend the First Annual Exhibition of the California International Livestock Show. And we would like to have you consider this a personal invitation.

Special note to BREEDERS: You will find it well worth while to show at this exhibition. Over $30,000 is offered in premiums.



Remember—this will be a really big, representative exhibit of pure-bred livestock. Make it a point to be here; we will expect you and will make you welcome.

This is the season of preparation on the farm. There's many a timely and practical suggestion on equipment, etc., to be gleaned from our advertisements these days. Read them.

# Fix Feed Price Regulations

## *Basic Prices and "Margins Over Basis" Are Announced*

Basic prices for various classes of mill feed at the mills in carload lots in bulk, as fixed by the "fair price" committee of the federal food administration, have been previously published in this paper covering the various milling points of the northwest. The question that these basic prices aroused in the minds of all farmers and dealers was what additional charges would be made for small purchases in sacks. The conference of northwestern representatives of the food administration at Boise, Idaho, last week prepared a schedule of what it terms "maximum permissible margins over basis," covering the sale of mill feeds. While it is understood that this schedule must be ratified by the national food administration at Washington, it is improbable that it will be altered in any vital feature by the national administration. The following are some of the important parts of the regulations:

A charge of $5.50 per ton shall be allowed over the bulk basic price to cover sacks, twine and packing.

On sales to retail feed dealers mills may charge an additional $2 per ton over the bulk, carload lot basis for feed sold in lots of a ton or over but less than a carload.

On sales to all feed dealers mills may charge an additional $3 over the bulk, carload lot basis for feed sold in lots of less than a ton.

Wholesalers and jobbers may charge a commission of 50 cents a ton in carload lots, $1 a ton in less than carloads but a ton or over, and $2 a ton for less than ton lots.

Retailers may charge consumers $1 a ton on carload lots over the cost to the retailer, $2 a ton on less than carload lots and a ton or more over the cost, and $3 a ton on less than ton lots over the cost.

The following is a complete list of these regulations as issued by the conference at Boise, including those referred to above:

Mill sale to any one, wheat mixed feeds, carload lots, bulk, mill, with or without screenings, cash or draft attached to bill of lading, base price.

Mill sale to any one, mixed carloads of feed and flour (containing at least 40 per cent of feeds or wheat flour substitutes), 50 cents per ton over base.

Mill sale to wholesale feed dealers, less than carloads and 2000 pounds or over, $1 per ton over base.

Mill sale to retail feed dealers, less than carloads and 2000 pounds or over, $2 per ton over base.

Mill sale to all feed dealers, less than one ton, $3 per ton over base.

Price of shorts and middlings, with or without screenings, 75 cents per ton over base. Bran with or without screenings, $1.25 per ton under base.

Trade acceptance discount 1-2 per cent or actual interest for time of credit where credit is extended.

In lieu of the $2 additional allowed on the sale of wheat mill feeds containing not less than 90 per cent soft winter wheat, a uniform advance by all mills of $1 is permitted in excess of the maximum fair price schedule for all wheat mill feeds.

A charge of $5.50 per ton for sacks, twine and packing shall be allowed over bulk price for all wheat mill feeds.

The base price shall be determined according to location of mill as established by the United States food administration grain corporation.

Mill sale to consumers at not more than $1 advance over above schedule of prices to retail dealers.

No licensee selling wheat mill feed as a broker shall charge more than a reasonable brokerage, not to exceed 25 cents per ton, and no licensee shall charge a brokerage on any wheat mill feed on which a brokerage has already been charged.

No licensee selling wheat mill feed as a commission agent for the sale of consigned wheat mill feeds, making sale, delivery and collection, shall charge more than a reasonable commission, not to exceed 50 cents per ton, and no licensee shall charge a commission on any wheat mill feed on which a commission has already been charged.

No licensee buying and selling wheat mill feeds as a wholesaler or jobber shall charge more than a reasonable advance over cost at warehouse door, and shall not exceed the following: In carload lots, 50 cents per ton; less than carload lots and 2000 pounds or over, $1 per ton; less than one ton, at the rate of $2 per ton.

Retailers buying and selling wheat mill feeds shall not charge more than a reasonable advance over cost, and shall not exceed the following:

Shall not charge more than $1 a ton to consumers in carload lots.

Less than carload lots and 2000 pounds or over, shall not charge more than $2 a ton over cost.

Less than one ton lots, shall not charge more than at the rate of $3 per ton above cost.

A reasonable charge may be added for delivery.

Interest permissible on credit sales.

It is understood that a resolution was adopted providing that any charge of buyers in excess of 7 cents for handling and marketing wheat would be unfair. Another resolution said to have been adopted by the conference calls the attention of the officials at Washington to the seriousness of stock feed shortage, due in some instances to drouth, and declares the situation in the northwest states "calls for the most sympathetic and intelligent consideration."

In line with this a resolution was adopted recommending that all wheat produced in zone 10 up to the capacity of local mills be milled in this zone in order that wheat mill feed may be made available for stock feeding.

Taking another step in the interests of the feeders of the northwest the conference is making an effort, it is said, to have the grain corporation designate sample grades of wheat impracticable for milling purposes to be used for animal feed purposes, upon a submitted sample, when released by the grain corporation or its representatives.

Like privilege is being sought concerning wheat at inaccessible points remote from transportation facilities.

Taking up again the interests of the wheat growers the conference is said to have decided on an effort to secure payment of a certain percentage of grain delivered by having a draft drawn direct on the grain corporation with bill of lading attached, this action to be taken after necessary rules and regulations have been formulated by the grain corporation to protect itself

The conference adopted a resolution declaring itself in full accord with the principle announced by Herbert Hoover that conservation of wheat be continued throughout the year and that a percentage of the surplus of the 1918 crop be retained for any possible shortage of the crop of 1919 and that fair amounts be retained in the territory where produced.

The conference was attended by R. F. Bicknell, food administrator for Idaho; Charles Hebberd, food administrator for Washington; W. B. Ayer, food administrator for Oregon; W. W. Armstrong, food administrator for Utah; M. H. Houser, second vice president food administration grain corporation, with headquarters at Portland; J. E. McAlpine of Pocatello, agent for the grain corporation; J. K. Smith, Spokane, a member of Mr. Hebberd's staff; W. A. Johnson of Portland, zone secretary and counsel to zone 10, and Edward G. Rosenheim, a member of Mr. Bicknell's staff.

### Conserve Moisture.

Weeds use up moisture. When they grow in a crop they compete with the crop for the moisture, and weeds usually keep on growing after the crop is cut, thus using moisture that should be saved up for next year's crop.

### First Thresher Destroyed.

The first destruction of a threshing machine reported this season was that of Herman Madsens, which was blown up and burned near Colfax last week. No grain was destroyed.

### Apple Crop Valuable.

Rufus Woods of Wenatchee is authority for the statement that the apple crop in the Wenatchee valley this year will have a value of $7,000,000. He predicts a crop of 7300 cars.

## More Sugar Is Allowed

State Food Administrator Charles Hebberd has issued a revised regulation concerning the use of sugar in this state following consultation with the national food administration on the subject. While no increased amounts are allowed for common table uses more will be permitted for canning and preserving, according to the regulations just issued. The following is a schedule of amounts that can be secured for canning purposes, based on the number of persons in the family:

50 pounds for 1, 2 or 3 people.
75 pounds for 4, 5 or 6 people.
100 pounds for 7, 8 or 9 people.
100 pounds for 10 or more, plus five pounds for each additional member of family above nine.

The following are instructions sent by Administrator Hebberd to the county food administrators throughout Washington:

"Sugar granted on the foregoing basis must be in amounts not greater than 25 pounds at any one purchase. In other words, first purchase permits for canning will allow the buyer not more than 25 pounds. On repurchase permits the purchaser must certify the number in the family, thus qualifying for subsequent purchases if there be four or more in the family. Only one repurchase permit will be granted purchasers where there are not more than three in the family.

"Hereafter there will be no definite restrictions in the use of sugar in making jams, jellies or preserves. You are urged, however, to advise as strongly as possible that every effort be made to conserve sugar to the utmost. The new plan of distribution does not mean that we have more sugar in the state for canning. It is only a different plan for equitable distribution of our limited allotment of sugar.

"You are advised and you should advise applicants for sugar permits that 25 pounds of sugar is sufficient for canning 100 quarts of fruit. Families should be urged to put up fruit juices and make jellies later when sugar is available.

"In cases, however, where it is shown that fruit or vegetables will otherwise spoil a special permit to purchase sugar in excess of amounts named in the above table may be granted in the discretion of the county food administrator or his local representative. All such cases must be carefully investigated, however, and reported to this office after certificate and permit for such excess use has been granted."

## Will It Pay Growers?

(Continued from page three.)

We are making these inquiries in a desire to aid, to the full extent of our ability, the prompt, unhampered buying of wheat by the government for its armies and navy, for the armies and navies of our allies, and for the civilian populations of those allies, as well as the securing by the growers of the full measure of prices which congress and the president intended for them when they enacted the food control law under which you are operating.

Mr. Houser's reply follows:

In response to yours of the 20th, before consigning wheat to the food administration grain corporation at basic terminals it would be wise, in the exercise of ordinary precaution, for the shipper to ascertain in advance the condition of the storage facilities at the designated terminal points, thereby eliminating the expense and delay of demurrage caused by congestion of terminal facilities from conditions over which we have no control.

Presume you are aware that at Seattle, Tacoma, Portland and Astoria there are public docks and elevator companies as well as private ones, also at three out of these four terminal points there are storage and dock facilities municipally owned.

That is just the information which The Farmer is trying to secure for the wheat grower who desires to ship direct to the United States grain buying corporation—"to ascertain in advance the condition of the storage facilities at the designated terminal points, thereby eliminating the expense and delay of demurrage caused by congestion of terminal facilities." It is that information which the grain producers of the three states of Washington, Oregon and Idaho have the right to ask of Mr. Houser's office, and it is the duty of Mr. Houser, as a high officer of the federal government, to supply it.

The grain producer also has the right of asking and expecting from the director of the grain buying corporation at Portland information as to all the other intermediate charges he may be called upon to pay in shipping his wheat directly to the grain buying corporation. It is only in this way that the wheat shipper can avail himself of the protection offered by the United States food administration against what he may regard as unfair charges made by privately owned combinations of grain buyers and warehouse men.

Mr. Houser's office of the grain buying corporation at Portland evidently has given explicit and needful information through its nine bulletins published for the information of the millers, grain buyers and warehouse men. It is hoped that Mr. Houser's office in Portland will now issue as explicit information to the wheat grower who desires to take advantage of the protection offered by the United States grain buying corporation in its provision giving him the privilege of shipping directly to the government agencies at Seattle, Tacoma, Astoria or Portland.

Unless the grain buying corporation can assure the wheat grower of terminal facilities or tell him when such terminal facilities are available the grower will be deprived of the protection which the shipping-direct provision is supposed to confer.

From the above correspondence it is evident that Mr. Houser has not yet furnished the important information which can enable the wheat grower to judge of the advisability of either marketing his grain through the customary channels or shipping directly to the grain buying corporation.

The foregoing developments and complications further emphasize the urgent need of the appointment by President Wilson of a national food production administrator who would serve in a big, constructive way the vital interests of the producers as Mr. Hoover is serving the interests of the consumers.

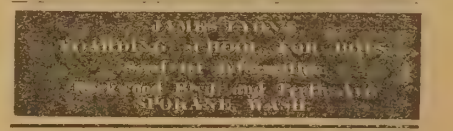
## Coming Events.

**Fairs, Shows, Exhibits.**

September 2-7—Spokane Interstate fair, Spokane, Wash.
September 16-21—Washington state fair, Yakima, Wash.
September 19-21—Roundup, Pendleton, Ore.
October 1-6—Western Washington fair, Puyallup, Wash.
November 7-13—Northwest live stock show, Lewiston, Idaho.

## All Should Adopt This Motto.

The League to Enforce Peace has adopted a new motto, which is: "Win the Next War Now." The object of the league is to win the next war by so organizing the world that there will be no next war.



AT THE STATE FAIRS

AT SPOKANE, AT YAKIMA, AT SALEM AND AT BOISE.

Be sure to see the Aberdeen-Angus cattle. There you will have an opportunity to inspect the choicest representatives of the grand champion beef breed. These show animals are samples of the best American herds. Their produce has won at the world's greatest live stock show, the International Exposition, at Chicago, 15 out of 16 fat carcass grand championships over all breeds, as well as 13 out of 16 fat carlot grand championships, 11 out of 14 steer herd grand championships, and 10 out of 16 single steer grand championships. Calves of the breed have been demonstrating their baby beef making superiority at shows and markets from Canada to Texas. The bulls of the breed have been getting market-topping steers at all leading markets, demonstrating their place in the winning of the war.

"Ask the Man Who Owns Some."

ECONOMY STOCK POWDER

For Hogs, Cattle, Horses and Sheep

Economy Stock Powders are not a stock food, but a medicine; not a panacea, but a remedy; not a medicated salts, but a purely medicinal compound, composed of the very best and choicest of herbs, roots and sodas; not a cure-all, but a genuine conditioner, composed of ten different ingredients, scientically compounded. No oil meal, no bran, no salt, no mill sweepings, no cheap filler, no poisonous or harmful drugs or stimulants, such as Arsenic and Black Antimony, that will create a false appetite. Economy Stock Powders are as carefully compounded as a doctor's prescription in a drug store.

It will keep your hogs free from worms, build up the constitution. It will also pay you in more pounds of fat out of the grain fed. It's like writing insurance on your herd against disease, as it purifies the blood, sweetens the stomach, expels and destroys all germs, worms and parasites, and it keeps your stock in a healthy condition. It stands in a class by itself—an honest article, which has been proved by the business that we have built up.

OVER 200,000 FARMERS AND STOCKMEN ARE FEEDING ECONOMY REGULARLY.

To the Dairyman

Economy Stock Powders will give you an increased flow of milk, and will keep your dairy cows in better flesh. The reason for this is that the stomach is sweet, the digestive organs are in a healthy condition, the fever suppressed, and a good pond of digestive fluid is made, so that the food consumed is thoroughly saturated, thereby giving the best results from the food.

FREE 36-page book and a liberal supply of Economy Stock Powder to make a thorough test—free. The book contains valuable information on live stock diseases, such as Lumbercoid, Lung Worm, Thorn-headed or Bodkin Worm, Whip Worm, Pin Worm, Kidney Worm, Typhoid Pneumonia, Spleen Fever, Swine Plague, Indigestion, Coughing, Thumps, Paralysis, White Scours, Cholera, etc. You will also find valuable information on feeding.

Economy Hog and Cattle Powder Company
1016-1017 Hearst Bldg., San Francisco, Cal.

Send me your booklet, "Economy-ize Your Farm," also a free sample of Economy Stock Powder to try out on my stock.

# News for Breeders

Willis M. Fisher of Colbert, Wash., reports that he has a gilt granddaughter of the grand champion Duroc sow at the Spokane interstate fair in 1917, which farrowed 17 pigs August 12, all of which are living.

Fred Mespelt of Scio, Ore., has purchased Gold Mine Third from E. H. Hollaway of Albany, Ore. The bull is now nine years old, straight and strong of back. Mr. Hollaway has a fine lot of calves by him and will exhibit this fall at the Oregon state fair.

Both hogs and cattle reached the highest price on the Portland market Monday, August 19, that has ever been paid in Portland or the Pacific northwest. A clear jump of 50 cents put hogs at $20, while steers rose over previous prices 25 cents, to $13.25. Lambs went to $15, which is a new record for this time of the year.

Jacob Fox of Silverton, Ore., recently sold four grade Jersey cows for $125 each. While Mr. Fox knows that not many dairy cows have sold for that price this year and while these were by his great herd sire, Foxhall's Fern Lad, yet he points to the fact to controvert the idea that good dairy cows are not in demand. Mr. Fox says it is possible, even with the high cost of feed, to have a balance on the right side at the end of every month. He now has seven registered Jerseys on official test, all making good records.

Helma of Ashwood, a Jersey heifer owned by McArthur & Staff of Rickreall, Ore., recently completed a year's official test, begun at 19 months old. She produced 365.5 pounds of butter fat, which is an excellent record for that age. If reported in terms of 85 per cent butter, it would be 425.2 pounds, or 456.9 pounds of 80 per cent butter.

Congressman McArthur is a strong believer in reporting records only in terms of fat, and a little study of this record will show how much "camouflage," as Mr. McArthur calls it, is involved in reporting records in butter, instead of what the cow actually produces—butter fat. This heifer is a daughter of their great herd sire Holger.

The quarterly publication Shorthorns in America, has compiled figures of 137 sales of bulls during 1917, at which 2254 bulls were sold, for a total of $746,619, an average of $331.24. At 133 of these sales females were sold, of which there were 4471, and they brought a total of $2,073,746, an average of $463.82. Highest average for bulls was at Anoka Farms, Waukesha, Wis., when 14 were sold at an average of $2607, highest average for females was at the Carpenter and Ross sale, Mansfield, Ohio, at which 81 averaged $1288. There were a few sensational sales, but in general sales were made up of fair prices for good animals throughout. H. A.

## Belma Triune.

Herewith is a picture of the beautiful Ayrshire cow, Belma Triune snapped by the Farmer camera, as she appears at pasture in her present home, "Elbow Dairy," of J. R. Maben, at the bend of the Smith river, near Reedsport, Ore. While Belma would not pose, her wedge shape, depth of body, straight top line, clean throat, good udder and excellent breed type are all apparent. While purchased from Walter Domes, she is of Clise breeding. Her sire is Willomoor Sentinel 16th, by Willomoor Sentinel, and he out of Garranton Dora 2d, with an official record of 21,025 pounds of milk and 804.7 pounds of fat. His dam is Willowmoor Coroline B., that with first calf produced 6011 pounds of milk testing 4.23 per cent.

Mr. Maben has secured some of the best breeding in the northwest, among the 36 head he now owns. A majority of them are of Clise breeding, including Willowmoor, Happy Give, Willowmoor Frances and Willowmoor June, all prize winners at the Panama Pacific stock show. Seven heifers and a fine young bull came from the Honeyman herd and several from the Domes herd. The young bull from the Honeyman herd is out of a dam now on official test at 14 years old. On her fifth month she has produced over 6000 pounds of milk and seemed sure of decidedly more than 10,000 pounds for the year.

Mr. Maben selected an Ayrshire herd because he likes the breed. He has started right, by selecting good stock. He is in a great little dairy region—the coast region of Douglas county, Oregon, and it is safe to predict he will put the Ayrshire "on the map."

## Lincoln and Cotswold Sheep.

William Riddell & Son, Monmouth, Ore., breeders of Lincoln and Cotswold sheep and Angora goats, will show both breeds of sheep at the Oregon state fair this fall and will fill all classes. Three of their Lincoln yearling rams sheared 30 pounds each, and the flock shears a heavy average. Their mohair has all been sold at 60 cents a pound. They have not decided about showing Angoras. H. A.

## May Have to Use Wood.

The United States fuel administration has suggested to state fuel administrators that in those states where a plentiful supply of wood is available the sale, shipment, and distribution of coal for domestic purposes to persons residing outside of cities or incorporated towns may be prohibited, except under special permit.

State fuel administrators are advised that if they find as a result of prohibiting the use of coal outside of cities excessive prices are demanded by wood dealers, they should be dealt with under the authority conferred by the Lever act.

The authority for prohibiting the sale, shipment, and distribution of coal to domestic consumers, it is pointed out, is contained in the order appointing state fuel administrators to office.

**You Can Count On It.**

The right thing at the right time in the right way can be depended upon to bring the right result.

# Breeders' Department

## SHORTHORN CATTLE

**Herds Bulls**

Imported Donne Radiance No. 609412

and

Gainford Perfection No. 442173.

**Hercules Shorthorns**

We can supply you with choice, well grown bulls and females of breeding age. Your inspection of our herd is invited. Visitors always welcome.

**Day & Rothrock Company**

205 Exchange Bank Bldg. Spokane, Wash.

## HOLSTEIN CATTLE

### 365-DAY HOLSTEINS

24,667 lbs. milk—1026 lbs. butter—is the S. O. advance registry, yearly; record of the dam of the yearling bull we are offering for sale. Fine individual. Good breeding. Ready for service.

THE HERD WITH YEARLY RECORDS.

**WESTERNWOLD RANCH, Prineville, Ore.**

### HOLSTEINS

Steno Farm is now offering a few high class reg. Holstein bull calves. Out of ARO cows and sired by one of the finest bulls in the west. Priced right.

**STENO FARM, C. F. Williams, Mgr.**
Mead, Wash., R. No. 2.

### For Sale—Pure Bred

High grade Holstein calves, yearlings and two-year-old, both male and female. None better in the northwest. Come and see them or write

**THE INTERMOUNTAIN INSTITUTE.**
R. F. D. I, WEISER, IDAHO.

### Registered Holstein Heifer

for sale; also May and June farrowed O. I. C. pigs, either sex, from matured sows, with pedigree; by a son from a grand champion sow. Also 18-month-old sows to farrow second litter this fall.

**E. C. SCHUMACHER, R. 1. Granger, Wash.**

### Registered Holsteins

Finely bred bull calves for sale at prices that are an inducement for you to finish raising them.

**H. R. BOOMER, New Plymouth, Idaho.**

### HOLSTEINS

Well-Bred young bulls for sale.

**THOS. CARMICHAEL, Gaston, Ore.**

### A Registered Shorthorn On Every Farm

If you will put in a registered Shorthorn female and bull and retain the female produce you will soon have a pure bred herd at small cost. Then sell the surplus from your grade herd. It is good business. THE SHORTHORN IS THE BREED FOR YOU. For information or assistance address

**American Shorthorn Breeders' Association**
13 Dexter Park Ave., Chicago, Ill.

### MILKING SHORTHORNS

with world records behind them for milk production.

**A. R. O. HOLSTEINS**

A son of the King of the Pontiacs at head of herd.

Can make special prices on young bulls of each breed.

**A. V. Bradrick & Son**
Palouse, Wash.

**SHORTHORN COWS.**

Ten high class Shorthorn cows, calf at foot or heavy in calf. Come and look them over or write for particulars.

**E. H. HALLOWAY, Albany, Ore.**

**REGISTERED SHORTHORN COWS.**

Young bulls and heifers, sired by Scotch bulls; liberal terms.

**CALDWELL CATTLE CO., Caldwell, Idaho.**

## AYRSHIRE CATTLE

**EDGEWATER FARM.**

Only one bull left, calved Dec. 14, 1917, with high producing dam; grand dam and great grand dam both world's record cows.

**ELBERT M. CHANDLER, Burbank, Wash.**

**In writing advertisers, be sure to say that you saw their advertisement in this paper.**

### TEN GOOD HOLSTEIN COWS

All of excellent breeding. Three extra heavy producers, and all good. Seven safely in calf to Tobie DeKol 2d's Johanna Duke; a 75 per cent brother to Lady Tobie DeKol, once world's record senior 3-year-old, and sire of Jantilna Colantha Johanna, 22.5 pounds butter in seven days as junior 2-year-old, besides other A. R. O. heifers of fine type. Come and see them or write for full particulars and pedigrees. Will be sold below their value together or singly.

**HERMAN KEUNZI, Silverton, Ore.**

**REGISTERED O. I. C. SWINE**

Choice young pigs, either sex. Write me. Ringgold Farm, J. H. West, Prop., Centralia, Wash., R. I. Box. 157.

## GUERNSEY CATTLE

### Looney Farm Guernseys

Langwater, Glenwood and other best strains have won more show honors than any other herd in the west. A few very choice young bulls from heavy producing dams. Write for particulars to

**DAVID H. LOONEY, Jefferson, Ore.**

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, Aug. 26.—The corn market, which early was nine cents under the high point established last Wednesday, closed with a net gain of 2 1-8 cents today. The close was strong with October at $1.62 1-4.

Information that the government purchased 800,000 bushels of oats here last Saturday explained the stubbornness of that market at the time, and coupled with the corn strength today sent the market up for a net gain of 3-4@1c. October, closing at 83 1-4c, made the maximum gain. Standard grade sold at the September price, and No. 3 white 1c under it.

In the provisions pit pork declined 15@20c for lack of demand, but lard and ribs, influenced by the corn strength, were bid up 12½@17½c largely because offerings were light. The week's exports of lard and meats were materially in excess of last year.

### Cash Quotations.

CHICAGO, Aug. 26.—Corn—No. 2 yellow, $1.73@1.74; No. 3 yellow, $1.68 1.70½; No. 4. yellow, $1.62@1.65. Oats—No. 2 white, 71@71½c; No. 3 white, 69 3-4@70 3-4c; standard, 70½ @71½c. Rye—No. 2, $1.69@1.69½. Barley, $1@1.10. Timothy, $6@8.75. Clover, nominal. Pork, nominal. Lard, $26.77. Ribs, $24@25.

### Chicago Futures.

CHICAGO, Aug. 26.—

| Corn— | Open. | High. | Low. | Close. |
|---|---|---|---|---|
| Sept. | 1.57¾ | 1.60⅝ | 1.57⅜ | 1.60⅝ |

Sheep—Receipts 1195; market steady. Prime lambs, $14@15; fair to medium, $11@13; yearlings, $10@11.75 wethers, $9@10.75; ewes, $7@9.

## Spokane Stock Yards.

SPOKANE, Aug. 26.—The following is a digest of the business at the Spokane union stockyards for the week just ended:

| | Cattle | Calves | Hogs | Sheep |
|---|---|---|---|---|
| Monday, Aug. 26... | 297 | 82 | 337 | 22 |
| Saturday, Aug. 24.. | 35 | 1 | 171 | .... |
| Friday, Aug. 23.... | 229 | 65 | 94 | .... |
| Thursday, Aug. 22.. | 199 | 71 | 40 | 165 |
| Wednesday, Aug. 21 | 399 | 12 | 20 | 1136 |
| Tuesday, Aug. 20.. | 4 | 6 | 13 | 1270 |
| Week ago ..... | 61 | 11 | 288 | 2154 |
| Year ago ..... | 69 | .. | 76 | .... |
| Two years ago .... | 56 | 10 | .. | .... |

A very good over Sunday run of cattle in the pens this morning. The market opened with brisk bidding for the good to better grades and was active throughout the day. Twenty-five cents was added to the middle grades of steers, other grades remaining steady to strong at Saturday's close. The top in the steer line today was $12.00 paid for a small bunch, $10.50 and $11.00 was paid for a load of just good killers. The bulk of the trading was made at $7.00 to $9.00 for the common to medium grades. A few real choice cows were among the day's offerings at $9.00, the medium to good butchers going at $6.50 to $8.00 and the common kinds at $5.50 to $6.50. Canners were steady at $3.50 to $4.75. Twenty-five cents was added to the price of heavy bologna bulls, the best going at $6.60 to $7.25 and the light and poor quality at $5.00 to $6.50. Calves were steady at $10.00 for light vealers, $7.50 to $8.50 for the fair kinds down to $6.25 for the fair kinds down to $6.25 for the heavier sorts.

General cattle range:

| | |
|---|---|
| Prime steers | $12.50@13.50 |
| Good to choice steers | 11.25@12.25 |
| Medium to good steers | 10.00@11.00 |
| Fair to medium steers | 8.75@ 9.75 |
| Common to fair steers | 5.75@ 8.25 |
| Choice cows and heifers | 8.50@ 9.50 |
| Medium to good cows and heifers | 6.50@ 8.00 |
| Common to medium cows and heifers | 5.25@ 6.25 |
| Canners | 3.00@ 5.00 |
| Calves | 7.00@10.00 |
| Stockers and feeders | 6.00@ 8.00 |

A few more hogs than usual arrived over Sunday, the bulk being stockers and feeders. The quality of the packing hogs was only fair. The market was active from the start, the best going to the packers at $20, breaking all previous records for this market. The stocker and feeder market was active at prices from $17 for lightweights to $19 for heavy, good quality sort. General hog market was steady to strong at following closing prices:

General hog range:

| | |
|---|---|
| Prime mixed | $19.50@20.00 |
| Medium mixed | 19.00@19.50 |
| Rough heavy | 17.75@18.50 |
| Pigs | 18.25@19.00 |
| Stockers and feeders | 17.00@19.00 |

While there were only a handfull of sheep on the market this morning a decided decline was evident, due to weakness on other markets. Prime lambs dropped 50 cents to $15.00, prime yearlings to $11.00, weathers to $10.25 and ewes to $10.00.

The market closed at the following:

| | |
|---|---|
| Prime lambs | $14.00 to $15.00 |
| Fair to medium lambs | 11.50 to 12.50 |
| Prime yearlings | 10.00 to 11.00 |
| Prime wethers | 9.50 to 10.25 |
| Best mutton ewes | 8.00 to 10.00 |

Today's shippers.

Cattle—J. P. Helphrey, Curlew, Wash., 1 load; J. P. Flood, Republic, Wash., 1 load; J. Walker, Chewelah, Wash, 1 load; Wilson Produce Co., Colville, Wash., 1 load; E. Bain, Curlew, Wash., 1 load; J. R. Henshaw, Rocklyn, Wash., 2 loads; G. Mihills, Sawyer, Idaho., 1 load.

**Oil Meal**—$75 per ton.
**Hay**—Timothy, $38 per ton delivered, $37 by carload; alfalfa, $32 per ton delivered, $31 by carload.

## Portland Market.

PORTLAND, Ore., Aug. 24.—The butter market is very firm and may go higher, though the price is now at a point that means 60-cent butter at retail. Supplies are not equal to the demand in spite of large receipts from the east.

Dressed meats were also firm with receipts below the trade's requirements.

The onion market has eased off somewhat, Walla Walla Globes selling at $2.50@2.75. Oregon, Washington and Idaho potatoes are in larger supply and the market is barely steady at $3@3.50.

Hide dealers have begun buying on selection and are paying 15 cents for No. 1 and 14 cents for No. 2 stock.

Butter—Cubes, extras, 51c; prints, fat, No. 1, 56c, delivered.

Eggs—Oregon ranch, candled, 50c; selects, 52@53c per dozen.

Cheese—Jobbers' buying prices, f. o. b. dock, Portland; Tillamook triplets, 27c; Young Americas, 28c per pound; Coos and Curry, f. o. b. Myrtle Point, triplets, 26½c, longhorns, 27½c per pound; 1-4c discount to Portland trade.

Poultry—Hens, 26c; broilers, 26@27c; ducks, 32c; geese and turkeys, nominal.

Pork—Fancy, 26c.

Veal—Fancy 20c per pound.

Potatoes—Oregon, $3@3.50 per hundred.

Hay—Buying prices, f. o. b. Portland; eastern Oregon timothy, $34 per ton; valley timothy, $29; alfalfa, $26 @27; valley grain hay, $26@28; clover, $26@28; straw, $9@10.

## Seattle Market.

SEATTLE, Aug. 24.—The Elberta peach shipping season is on, but Seattle jobbers theoretically are unconscious of it. F. o. b. prices to growers of eastern Washington are $1 and buyers here are opposing any selling levels over $1.25. One of the largest houses on the street with strong connections at Yakima will offer three carloads of high grade Elbertas early next week at $1.25@1.50. Eastern buyers are laying off the cash market to some extent.

All kinds of dealers who have made it their business to ascertain the facts say that the peach crop will fall far short of supplying the eastern demand.

### Purchasing Prices.

Eggs—Select ranch, 52@53c per doz.; Oregon, eastern Washington and Idaho, nominal.

Butter—Fresh dairy, 31c per lb.; butterfat, 58c per lb.; bakers', 38c per lb.; raw milk, $2.85 per cwt.

Poultry—Broilers, live, 1918, 28c per lb.; hens, 3½ to 4 lbs. and up, 27c per lb.; under 3½ lbs., 24c per lb.; old roosters, 17@18c per lb.; ducks, live, fat, 28c per lb.; squabs, large, $3.50 per doz.; geese, fat, live, 23c per lb.; Belgian hares, 14@17c per lb.; guineas, $7 per doz.; turkeys, young toms and hens, dry picked, 10 lbs. and up, 30@35c per lb.

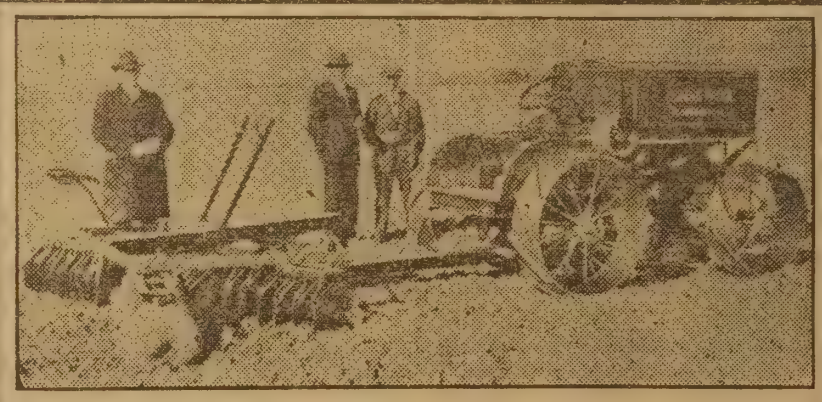
Hogs—Light, 21@22c per lb.; heavy, 19@21c per lb.

Beef—Steers, fat, 14@15c per lb.; heifers, fat, 14@15c per lb.; cows and bulls, 13@14c per lb.

Veal—Fancy light, 19c per lb.; do heavy, 13@18c per lb.

Mutton—Fat, 22c per lb.; spring lamb, fat, dressed, 25c per lb.

### Hides, Tallow and Wool.



Bid prices to producers: Salted hides, cows and steers, No. 1, 15c lb.; do No. 2, 14c lb.; green hides, cows and steers, No. 1, 12c lb.; do No. 2, 11c lb.; salted, bulls or stags, No. 1, 12c lb.; do No. 2, 11c lb.; green, bulls or stags, No. 1, 10c lb.; do No. 2, 9c lb.; salted or green calfskins, No. 1, 32c lb.; No. 2, 30½c; salted or green kip skins, No. 1, 16c lb.; do No. 2, 14½c lb.; dry hides, No. 1, 30c, lb.; do No. 2, 29c, lb.; dry, bulls or stags, 25c lb.; dry salt hides, 24c lb.; dry calfskins (5 lbs. and under), No. 1, 35c lb.; do No. 2, 33c; tallow, No. 1, 13c lb.

Horse hides, green or salted, each, $2@4; do dry, each, 50@$2.

Clean ranch wool, full growth, lb. 50@55c.

Sheep pelts—Long wool, each, $2.50 @4.50; medium wool, each, $1.50@2.50; short wool, each, $1@1.50; shearlings, each, 35@75c.

Beeswax, per lb., 25@27c.

More Power at the Draw Bar Giving More Efficient, Economical and Durable Service to the User.

*The Fitch 4-Drive Tractor*

Is Delivering These in Every Community Where It Is Being Operated.

The special and exclusive feature of driving on all four wheels used in the construction of the Fitch Four Drive Tractor allows us to use the front end draw bar hitch, which gives a downward leverage pull on all four wheels. With this method we secure traction from the load we pull and eliminate excessive weight from the tractor.

Bear in mind every wearing part is encased in an oil tight, dustproof case, running in a bath of oil.

**Place your order now for a four-drive to insure having one when needed.**

**The government requests that 750,000 additional acres in Washington state alone be cultivated this fall.**

**Write for Descriptive Literature and see the Four-Drive at the Interstate Fair next week.**

# Food Substitutes

## Plan Timely Fair Exhibits

"The purpose of this circular is to present information which will help to prevent the waste ordinarily incurred in exhibits at fairs, and to encourage special effort to have in war time only such exhibits as will help win the war and to make our homes and communities better after the war," says the foreword to a circular recently issued by the University of Illinois, college of agriculture.

The conservation of food, energy, clothing, health and ideals is the basic idea underlying successful war time exhibits, in the opinion of the authors of this booklet. Organization and standardization of exhibits must be achieved in the very beginning, in order that the competition between communities, townships, counties, etc., may be placed on an impartial basis.

Turning to the very practical and timely matter of food exhibits, the keynote for this year's fairs is sounded in these words:

**"In planning the exhibits one must remember that our country's food problem is to use less of the foods which must be shipped 'over there'—wheat, meat, fat, and sugar—and to substitute for them in the diet the foods which are plentiful."**

Exhibits of substitutes for wheat products, exhibits of dishes to replace meat in the dietary, sugar saving ideas and the utilization of perishable products are suggested as the practical working out of this principle. Diagrams or models of drying and storing plants and equipment are also in order.

"In the textile department there is need to remember that everything should be considered in relation to the war," continues the circular. "Red Cross supplies, knitting and relief work should have an important place. Because of textile conditions, it is very necessary that remodeling, renovating and mending of garments be practiced by every housewife. This work can well be featured at the fairs."

In judging articles usually classed under the head of "fancy work," two tests are proposed: First, has the article real practical merit—is it useful? And, second, does the decoration conform to the principles of decorative design?

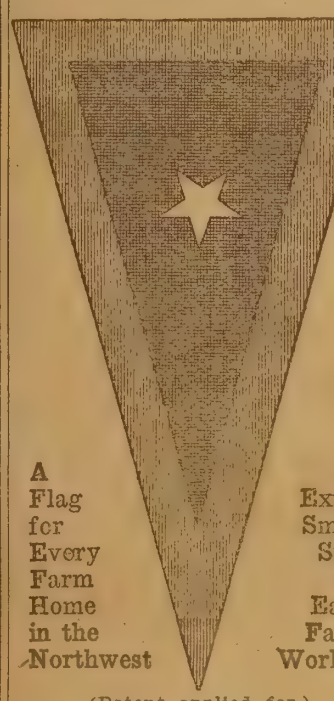
Under the head of home decoration and equipment, both the artistic and the practical should be considered. Economy of effort and material does not necessarily mean austerity, and such things as pottery, reed work, and artistic combinations of wall covering, floor covering, draperies, and curtains are suitable subjects for exhibits even during the present strenuous times. Displays of labor saving kitchen equipment and of models showing proper water and drainage systems, sanitary methods of garbage disposal, home made fly traps and practical window screening, carry out the main idea of effectiveness.

Turning to the subject of securing exhibits, the Illinois circular makes one suggestion which is too often overlooked! "The list of entries and the score cards should be published in the local papers far enough in advance to enable people to prepare the exhibits in such a way that they will conform to the standards and ideals which have been set." Eleventh hour preparedness and a lack of community education through the local papers make a poor team to hitch to your county fair.

This instructive circular closes with a list of suggested score cards, in the formulation of which the guiding principles of saving time, energy and material has been kept constantly in mind.

"If such standards are not to be maintained at a time like this, there can be no reason for the expenditures of materials, time and money for the exhibits," conclude the authors.

An acid test, truly, but hardly too searching a one for the spirit of the times.



## Canadians Not Favored.

The common report that there are no restrictions against the use of sugar in Canada at a time when the people of this country are urged to conserve sugar as much as possible is flatly denied by the national food administration. It points out that Canadians are allowed even less sugar than are the people of this country. At the present time, while the people of the United States are urged to use not more than two pounds per person per month the Canadian is allowed only one and one-half pounds per person, according to the food administration's statement.

### Candidates in Japan.

Candidates for the Japanese parliament must be 30 years old at least. Members are allowed a salary of about $1000 a year.

## FARM SERVICE WAR FLAG

A Flag for Every Farm Home in the Northwest

An Extra Small Star for Each Farm Worker

(Patent applied for.)

### Get a Farm Service War Flag.

The man, woman, boy or girl who stays at home and works hard to produce necessaries for the soldiers in Europe is entitled to real war service recognition. That is the idea back of the farm service war flag. It is pennant-shaped, made of the good old red, white and blue, and has a star representing the producing farm home. Small stars are added to represent each worker of that home.

.....

**Convenient Order Blank.**

O. B. WILLIAMS CO.
1943 First ave. So., Seattle, Wash.

*Effect of hard wadding that fits the barrel loosely. Unchecked by friction or muzzle choke, it is blown through the shot cluster, scattering the shot charge. Actual test target, 221 pellets out of 431 or 51% of the shot charge (1¼ oz. of 7½ chilled) inside a 30-in. circle at 40 yds*

*Effect of weak wadding torn to shreds by the gas blast. The separate pieces are blown into the shot cluster, scattering the pellets in all directions. With no resistance to the explosion, the pressure is low and penetration poor. Actual test target 178 pellets out of 431 or 41% of the shot charge (1¼ oz. of No. 7½ chilled) inside a 30-in. circle at 40 yds*

*The Winchester system of wadding. The wadding expands evenly, sealing in the gas blast all the way to the muzzle, where it is checked by the "choke" or constriction. Shot cluster travels on ahead unbroken. Actual test target, 320 pellets out of 431, or 74% of the shot charge (1¼ oz. of 7½ chilled) inside a 30-in. circle at 40 yds*

# Effect of wadding construction on shot patterns

## *Poor wadding responsible for more faulty patterns and lost birds than all other gun and shell troubles combined*

A strong uniform shot pattern depends upon how perfectly the *wadding* in your shells controls the five-ton gas blast behind it.

The wadding, like the piston head of a gas engine, must give the explosion something solid to work against so that the shot may be *pushed* out evenly.

It must expand and fill the tube of the barrel, completely sealing in the gas behind it. No gas must escape to scatter the shot.

It must offer just the right amount of resistance so as to develop uniform pressure and high velocity without danger of jamming the pellets out of shape at the "choke" or muzzle constriction.

The illustrations at the top of this page show actual test patterns, 50% to 70% faulty, the result of poor wadding.

### The Winchester system

*Winchester wadding* is the result of repeated experiments to determine the most efficient control of the gas blast.

The special construction of the *Base Wad* gives what is known as *Progressive Combustion* to the powder charge.

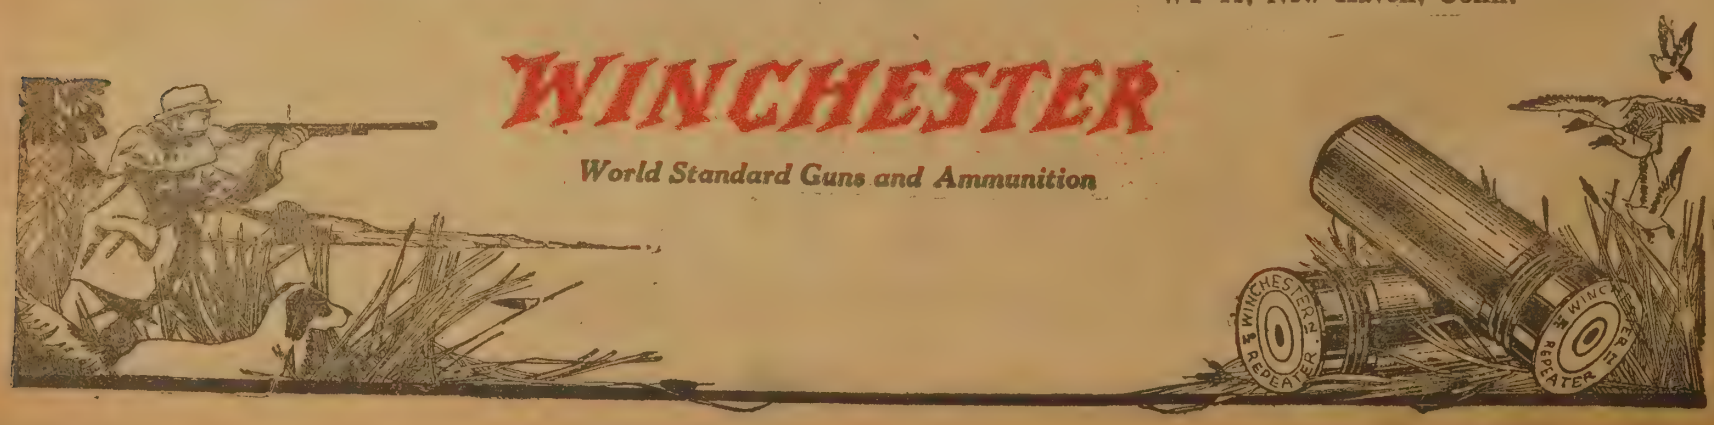
Combustion spreads instantly through the powder charge. By the time the top grains of powder become ignited the *full* energy of the burning powder behind is at work. Though the explosion is almost instantaneous, it is none the less *Progressive*, the final energy and maximum *velocity* of the completely burned powder being developed at the *muzzle*, where it is most needed.

Meanwhile, under the heat of combustion, the tough, springy Winchester *Driving Wad* has expanded to fill the barrel snugly all around. No gas escapes. It is completely sealed in. The wadding *pushes* up the shot evenly.

At the muzzle, the shot pellets slip out without jamming, while the wadding is checked for a brief interval by the constriction of the muzzle. *It follows some distance behind the shot pattern.*

The shot cluster travels on unbroken by gas blast or wadding and makes the hard hitting, uniform pattern for which Winchester shot shells are world famous.

***Fish Tail Flash*** All Winchester smokeless shells are made with the new Winchester Primer—the quickest and most powerful shot shell primer made. Its broad *fish tail* flash gives even and thorough ignition. Every grain of powder is completely burned up before the shot charge leaves the muzzle.



***The Crimp*** The required degree of pressure necessary in seating the driving wads is worked out in combination with the *hardness* or the *softness* of the *crimping* required for any particular shell.

***Water-proofing and Lubrication*** In the cold, damp air of the marshes, or under the blazing sun at the traps, Winchester shells will always play true. Winchester water-proofing process prevents them from swelling from dampness. Special lubrication of the paper fibres prevents brittleness and "splitting" in dry weather.

***Uniform Shells*** From primer to crimp, Winchester shells are constructed to insure the maximum pattern possible from any load and under all conditions. $100,000 is spent annually in the inspection and testing of finished shot shells. 25,000,000 rounds of ammunition are fired every year in testing guns and ammunition.

### Clean hits and more of them

To insure more hits and cleaner hits in the field or at the traps, be sure your shells are Winchester Leader and Repeater for Smokeless; Nublack and New Rival for Black Powder. Write for our Free Booklet on Shells. **Winchester Repeating Arms Co., Dept. WT-11, New Haven, Conn.**

# Crop Conditions Improve

## Potatoes Good, Béans Best, Corn Is Fair, But Greatest Improvement Is on Range; Stock Putting On Flesh to Begin Winter.

METHOW, Okanogan County, Wash., Aug. 26.—The general crop conditions have improved greatly since July. The potato crop is going to be good, although a little knotty with second growth. The bean crop is best of all, and the corn is fair, but the greatest improvement is on the range. A month of cool, rainy weather has transformed it from a parched desert to a fine pasture. Stock are putting on flesh and they are to go through the winter with 50 per cent less hay than if they came in thin in flesh. No interest is taken in fairs here any more. It used to be one of the greatest fair counties in the state, but it has died out. George had to do most of the work and he got tired. The greatest service a fair is to its patrons is seeing what your neighbor can do and getting acquainted. This community is as prosperous as usual. Most of the farmers here practice diversified farming, so if the wheat fails the corn makes good. All who are shipping cream declare that the test has increased from 25 to 50 per cent since the rain improved the range. We are shipping feed out of here. The fall wheat will have to be shipped in. There is plenty of spring wheat. CHARLES GRANT.

### Hay Crop Is Very Light.

COLVILLE, Stevens County, Wash., Aug. 23.—Crop conditions have steadily improved throughout this county since the rains have begun. Farmers report a very slight improvement in the grain yields of spring-sown fields, but the hay crop has hardly been improved, with the exception of alfalfa, of which there is only a limited acreage. There is some prospect of a third crop of alfalfa on some early-cut fields. Garden crops are finishing the season well. The general condition is not favorable, as the shortage of hay, the total lack of feed for swine and the scarcity of poultry are impossible to overcome this season. Farmers are cleaning out their cattle and spare horses at any price, and pigs are also going. One relief will be the excellent fall pasturage, which will relieve the hay situation greatly until snow falls. Inquiry among farmers reveals the intention to hold on to dairy cows, if possible, even at a loss, for the coming winter. Dry cows will undoubtedly be fattened and possibly some young stuff. Heavy cows are already a drug on the market. Many dairymen will sell their timothy hay at the prevailing high prices and will ship in alfalfa, saving the difference in price and getting a forage better suited to their requirements. There will not likely be any demand for seed grain to be shipped in, although the quality of this year's crop is very low.

Considerable interest in the local fair, to be held early in October, is already manifest. E. E. ELLIOTT.

### Grain Is Below Normal.

STEVENSON, Skamania County, Wash., Aug. 22.—There is nothing much doing here but getting in the supply of wood and hauling lumber to the railroad and river docks. This has been the most peculiar season ever seen here. The first of the summer was very dry with two good rains in July and this whole month has been cool and cloudy with no rain worthy of mention. Plums, pears and blackberries are a heavy crop, with no sale on account of the restrictions on sugar. Wood is selling for $6 per cord; slabwood, $4, delivered. The grain crop is nearer a failure than ever before in the history of this county. What little alfalfa is grown is a fair crop and the second crop is ready to cut. Though not a corn county it promises fair. The Portland market prices prevail here for feed and hay. W. T. JACKSON.

### Grain Production Is Fair.

GLENWOOD, Klickitat County, Wash., Aug. 25.—The Klickitat fair grounds are being put in good shape, or, rather, some new buildings are being added to the grounds, and the grandstand is to be changed somewhat, so I expect there will be a good fair this fall. The present crop conditions are about the same as they have been in that there is some good 20-to-25-bushel wheat, also a great percentage of the grain is from one sack to eight or nine per acre, so that there is, I think, at least a third shortage in the grain crop condition, according to former years. The small combines, as well as the large, are having a time of it to thresh on account of the damp nights and cloudy days until this last Friday. The steam threshing rigs will be through before the combines this year. Our community, really Klickitat valley, seems to be harder hit in the crops than the Columbia river district; also the Bickleton country, there having been scarcely any rain to start the winter wheat a year ago this fall. There has been a little rain in places already, but hardly enough to make it very safe for wheat sowing yet. I think there will be enough feed for stock only in the case of bran and shorts, of which we are always short, as our milling has not, until lately, ground much more flour than we use. There is plenty of seed grain here for all purposes. The fruit prospect should be good for those having fruit to sell, as we are paying about $1 a box for peaches, and there seems to be a good demand for everything in the fruit line. C. A. LESTER.

### Unirrigated Crops Are Poor.

OMAK, Okanogan County, Wash., Aug. 26.—There will be no fair in our community this season; farmers can not spare the time and other conditions are such that it would not be advisable. Our community has had a shortage of water and unirrigated crops are looking very bad. There are many pumping plants which have been installed this season and most of the orchardists will pull through with a fair crop. Hay is going to be very scarce and there will be a shortage of seed grain. Apple packing will start in a few days and prices are good. The peach crop will be very light. J. O. WOODS.

# Mr. Houser Explains Replies to Farmer

## *Says His Object Is Faithful Performance of Duties as Official of the U. S. Grain Corporation—Has No Interest in Management of Any Grain or Milling Concern*

In the following letter to the Farmer, M. H. Houser of Portland, in charge of the food administration grain corporation for Washington, Oregon and Idaho, explains the unfortunate circumstances connected with the unsatisfactory replies from him in our issue of last week with regard to the direct shipment of wheat to the grain corporation by the producer. Now Mr. Houser throws further light on this inquiry but leaves the wheat grower in ignorance of a number of points concerning the billing of wheat and the handling of it at the terminal station and elevators, such as:

What car switching charges, if any, may be made against the producer shipping directly to the grain corporation?

At what rate per day, per car, is demurrage charged in case of delay in unloading?

What condition might result in demurrage, and on the face of present terminal conditions is demurrage probable?

What charges, if any, not covered by the corporation's 1 per cent administration fee, does the terminal warehouse or elevator company make covering the following items on wheat shipped to the grain buying corporation: (a) storage, (b) handling, both bulk and sacked grain, (c) insurance, (d) bad order sacks?

What are the charges for inspection and grading at the terminal elevator?

The above points may seem extremely elimentary to Mr. Houser and grain buyers and warehouse men in general, but to the average wheat raiser, who is not familiar with shipping customs and their present modifications, details such as the above are of the utmost importance. The grain buying corporation seems the logical source of specific and official information on matters of this nature, if it is to be of the greatest practical assistance to the grain grower, who needs aid in marketing his grain.

The following is Mr. Houser's letter explaining the correspondence on this subject from his office:

To the Editor of The Farmer: I notice in your issue of the 29th a rather vicious attack that seems to the writer, under existing conditions, entirely unwarranted, though I must frankly admit that the answers to your letters were stupid to say the least. It was one of those unfortunate circumstances that at times seem to creep in regardless of my endeavor to give this work my general supervision as much as it is possible to do so.

When your letters of the 12th and 13th were received the writer was on the Sound looking over the terminal storage docks and taking up with the officers of the emergency fleet corporation the possibility of securing more ships, both steel and wooden, for the movement of the wheat and flour, as the army and navy needs for nitrate from the west coast of South America have made it necessary to divert a large amount of the tonnage that we had expected and been promised would be available for wheat and flour, as I consider if I can get the wheat and flour aboard ships, and cars to move from the interior I will have accomplished a great deal and that this will go a long way toward automatically solving our marketing problem.

Then, again, when your letter of the 20th reached this office the writer was at Boise, Idaho, attending a meeting of the Pacific northwest and intermountain state administrators, trying to assist in devising ways and means that would be best to move the wheat raised in the intermountain section and also to make a general survey and report on the serious feed shortage that is confronting the intermountain and Pacific northwest sections on account of the almost complete failure of the coarse grain crops, so you will see that notwithstanding your apparent apprehension we are giving our entire time and attention to the interests of the farmers of the Pacific northwest.

In carrying out this work it is naturally necessary for me at times to be away from the office, leaving the alternative of either letting the mail accumulate or depending upon some one else. Just at this time my assistant was away on a vacation, the first he has had in two years, and your letters, unfortunately, got into the hands of a new man that had just come into the office on August 1.

Regardless of your attempted reflections to the contrary, I have done absolutely all in my power through the grain corporation, food administration, emergency fleet corporation and regional railroad director of operations to bring about conditions that would make it possible to permit an expedient movement of the crop in the states of Oregon, Washington and Idaho.

Recently, when Mr. Aishton, regional director of railroads, was here on the Coast, I took the matter up with him personally, making the strongest appeal that was in my power, to see that ample cars were left here in the Pacific northwest for the movement of the crop. Last spring, when the delegation from the three states was at Washington, they were promised an advanced basic price for their wheat delivered at our northwestern terminals. The large prospective fleet that was under construction made possible a very low rate of freight, and everything looked extremely favorable for a rapid movement of the crop, but, unfortunately, the war demands have made it necessary, as stated before, to divert a large amount of the steel tonnage for nitrate, and it was trying to arrange for the loading of the wooden ships that necessitated my absence from the office when your first letter arrived, or I assure you you would have received an entirely different reply.

Personally I have no criticism to make of anything that you wish to publish, as that is the function of the press, and far be it from me to criticize so long as you adhere to the work we are endeavoring to carry out, and in fact I am at all times open and invite criticism and suggestion if it is made in the proper spirit.

As to your letter of the 12th, please allow me to say that the growers of the three states, Oregon, Washington and Idaho, can ship their grain directly to the food administration grain corporation. Under the law, which states payment to be made delivered at certain points, we of course can not make advances against bills of lading, but we will and are handling all shipments coming in to us, giving them our personal attention and supervision. For this we charge the shipper 1 per cent commission for looking after the consignment, placing it in store and remitting to the shipper the funds. There are several public docks in our list, and I may say we have taken in everything that was available for wheat storage that was open to receive these shipments from the farmer, and if the farmer wishes to send in his wheat and place it in storage he may send the receipts to us and we will remit to him in full on the basic price without any charge whatsoever.

The grain corporation and this office have covered this situation fully in the bulletins that have gone out and which apparently you have overlooked. We have tried to give them all the publicity possible, giving them to the press and sending them to the various state administrators, requesting them to give these bulletins all the publicity possible through their publicity bureaus. It is apparent that these have not come to your notice, so I am enclosing you a full list of the bulletins that have gone out this year, which are fundamentally on the same lines as we put out last year.

I wish to call your attention particularly to our own Bulletin No. 1, issued from this office as of July 13, wherein we say we expect the grain trade to operate on a fair basis, as we do not wish to solicit consignments which we are prepared to handle on a 1 per cent commission basis. The general grain trade fully realized what we meant in this paragraph that if we heard of any united unfair practice that we would at once solicit direct consignments, as it is not the intention of the grain corporation to disrupt the present and existing grain trade, as they have undoubtedly in the past furnished a needed service, and I see no reason why they should not continue to do so.

You make mention of an 8-cent charge. We wish to call your attention to the resolutions which were passed at Boise, Idaho, at the food administrators' meeting hereinbefore mentioned, that were given due publicity, that anything over a 7-cent charge would be classed as unfair. It is true that the advance in the net returns to the farmer, based on the terminal markets today, are on a wider margin than in the prewar period. A good part of this, though, is taken up in the advanced warehouse charges that used to be 50 cents and today are $1 in the sacked houses and in some instances in the bulk houses as high as $1.50 per ton, or practically two or three times what they formerly were. Another matter that enters into this is, in the prewar times a dealer buying wheat always had the chance of a speculative market, which does not now exist. In other words, he can not go out and pay a certain price with the expectation of "shopping" around or waiting for an advance in the market, which under the old conditions, with a strong market, made it very tempting to "bid 'em up." However, the three to four and one-half cent handling and storage charges are regulated by the public service commission.

The early run this year has been largely direct to the mills, both interior and terminal, the tenders to the grain corporation to date having been a lit-

(Continued on page six.)

## *Letter From Governor Withycombe*

"Will It Pay Wheat Grower to Ship Direct?" was the topic discussed at some length in the Farmer of last week. This article reviews the correspondence with H. M. Houser of the Food Administration Grain Corporation at Portland. Failing to find from the correspondence satisfactory information with regard to this matter, and in its acquiescence with the request of the government to conserve news print, this article was reprinted in circular form from the Farmer and forwarded to a number of prominent people. The following is the reply of Governor Withycombe of Oregon:

To the Editor: Have your interesting letter, with circular, which I have read very carefully. While it is true the farmers are not represented generally in the Food Administrator's office, however, I have very great confidence in the fairness and broad-mindedness of Mr. Max Houser. In Oregon we are fortunate in having as First Assistant Food Administrator Mr. W. K. Newell, who is heartily in sympathy with agriculture and food production.

JAMES WITHYCOMBE, Governor.

Salem, Ore.

## New Flour Rules

### International Plan Is Adopted

Food Administrator Herbert C. Hoover, upon his return to this country after a conference with food administrators in the allied countries of Europe, announced a new set of regulations governing the sale and use of wheat flour and wheat flour substitutes. Under the new provision a mixed flour containing one-fifth substitute and four-fifths wheat, complying with the international policy agreed upon at the European conference, will be put on the market. In addition, the rule heretofore in existence requiring that purchasers take equal amounts of wheat flour and wheat substitutes is revised so that they must now take only 20 per cent in substitutes. Where millers, retailers, wholesalers, bakers and consumers have been allowed only a 30-day supply of flour of various kinds, they are now, under the new regulations, allowed a 60 days' supply. Under the new rule requiring that only 20 per cent of purchases be substitutes it is required that the substitute be either corn or barley.

## Wheat Price Fixed

### This Year's Prices Are Continued

This year's government wheat price was continued in effect for the 1919 crop by President Wilson today in a proclamation fixing $2.20 as the minimum price at primary markets. Winter wheat will be sold at this price, but the president accompanied his proclamation with a statement giving notice that before the harvest of next spring he will appoint a commission to report on increased cost of farm labor and supplies to guide him in determining whether there shall be an advance in price for the spring crop.

The proclamation fixes as reasonable guaranteed prices for No. 1 northern spring wheat and its equivalents at the principal primary markets, the following:

New York, $2.39 1-2; Philadelphia, $2.39; Baltimore and Newport News, $2.38 3-4; Duluth, $2.22 1-2; Minneapolis, $2.21 1-2; Chicago, $2.26; St. Louis, $2.24; Kansas City and Omaha, $2.18; New Orleans and Galveston, $2.28; Tacoma, Seattle, Portland, Astoria, San Francisco and Los Angeles, $2.20; Salt Lake City, Great Falls, Pocatello and Spokane, $2.

## *Should Foster a Broader American Agricultural Policy*

The Washington Farmer does not have to endorse Mr. Roosevelt's sagacious views on farming problems in the United States, printed on another page, for they are but a more vigorous statement than we are capable of making of conclusions reached long ago by this paper, and expressed repeatedly in these columns. Summarized and enumerated, Mr. Roosevelt's recommendations are:

**Ownership of the land by the man who tills the soil.**

**Thorough reorganization of the United States department of agriculture and the adoption of an American agricultural policy.**

**Better marketing methods to "do away with the holdup methods that in so many places still obtain."**

**More small farms and fewer vast estates.**

**And the building up of strong cooperative farm organizations.**

All summer long, as our readers know, we have been appealing to the president to foster a broader American agricultural policy by appointing a national food production administrator, who would hold the same relation to food production that Mr. Hoover holds to food conservation. We became convinced long ago that the agricultural department needs revivification and reorganization, and are glad that Mr. Roosevelt is lifting his powerful voice for the reform, and for other policies that are substantially the platform on which this journal stands.

## *Too Many Cooks Spoil the Broth*

The sentiment of this old adage has many applications. Just as too many cooks spoil the broth, so do too many endeavors spoil the results.

Did you ever toss bits of meat to a dog? He catches them every time when thrown one at a time. But throw him two or three at once and what happens? He misses all of them because he tries to catch them all. Did he center his attention on one of them, disregarding the others, he would catch it and be only partial loser.

Just so when the farmer tries too many things or operates on too large a scale, he can not fully succeed. If he farms too many acres he doesn't farm them well enough, and a second rate crop results. If he milks too many cows he fails to feed and care for them properly, and the expense and income balance the wrong way. He should do one thing or a few things well, the very best possible. The results in the long run, if not at the first, will be more satisfactory.

## *Farmers in the Legislature*

The farming interests of the state should have a better representation in the legislature.

This can only come to pass by nominating and electing to the legislature farmers who know farming, who have farmed efficiently and who can put the facts of the agricultural needs of the state so plainly that they will be understood by all.

The bona fide farmer who successfully manages a big wheat ranch is needed in the legislature; so is the man needed in the legislature who efficiently cultivates the ten-acre tract. The fruit farmer, the truck farmer, the poultry raiser, the livestock man—all, alike, should find a place with the law making body of the state.

The mere talker and one who is taken up with every theory that comes along is not a fit legislator, whether he is a farmer or a carpenter or a lawyer or a merchant. It is the broad-minded, level-headed man of hard sense who should be sent to the legislature.

## *No Selfish Interest in the War*

While there are those persons in the United States who are making unwarranted profit out of the war, one of the world's greatest facts today is that the American people are fighting without selfish purpose. There is in the mind of no one a thought of conquest. No one wants to extend the American border line or secure additional colonial possession. No one is thinking of indemnities. No one is thinking of any material gain whatsoever—except those comparatively few who are using war conditions to bring to themselves financial profit.

On the other hand, the heart of America is throbbing with enthusiasm to right wrong, to secure and insure liberty and justice to all mankind. The heart of America aches for the millions on foreign soils who have suffered and are suffering untold horrors to satisfy the fiendishness of Prussian military lords and their misguided and servile warriors. Several generations ago the resources of the North American continent were dedicated to the establishment and perpetuation of liberty and democracy. One terrible war has since been fought on our own soil "that government of the people, by the people and for the pepole should not perish from the earth." And now America crosses the ocean to the Europe from which her first citizens came, there to take part in another struggle, even more terrible, that the justice and the liberty and the humanity and the democracy that she has tried and made true may become to the world what they have become to America. The people of the United States ask nothing; they offer all. "It is more blessed to give than to receive."

## *Selecting Seed Stock*

In the early fall while the crop is still growing is the time to select your seed stock. You can then get seed from the most vigorous plants —those that are not diseased and at the same time are the best yielders.

Go through your potato patch and put a stake down beside the plants that look the best from every standpoint. Select those with four or five sturdy stalks that show no disease whatever. Select enough so as to allow you to discard some. At harvest time dig the marked hills by hand before plowing up the patch. Select seed from the hills that have the largest number of smooth, medium sized potatoes of uniform size. Do not take the hills that have large and small ones in the small hill.

In the case of corn the seed selection should be done after the crop is mature. Put a hoop in the top of a burlap sack and fasten it across your shoulders so as to have both hands free. Go down the corn row and make individual selection from the most sturdy stalks that have the largest ears on them. Take those that are the most mature. In this way an early maturing variety will be obtained.

Practically all kinds of seed should be selected in this way. Seed from kale, rutabaga, cabbage, and all biennial plants should be selected by picking out the best individual plants and re-setting in a field that will not be disturbed the following year. By such methods it is a simple matter to get strains that will practicably double the present yield.

## *Watch Out for the Weevil*

With the increasing importance of the growing of beans, peas and other grains in the northwest that are subject to weevil attacks, the problem of keeping this pest out of this territory is one that demands the attention of every one growing or handling these crops. In many sections of the older farming regions the weevil has done irreparable damage, and in some cases has practically destroyed this class of farming. In fact it was, in part, to find a section free from the weevil pest that seed companies investigated northwestern possibilities several years ago, and set the northwest on the way toward extensive seed production. So far this section is practically free from the pest. Constant precaution should be taken and every grower and every handler be constantly on the alert to detect the first invasion of the pest. The United States department of agriculture recently published a bulletin on this particular subject dealing with methods by which the weevil can be controlled. Any one discovering evidence of weevil should write the department at once for specific information on how to destroy it.

## *Other Gains Besides Victories*

To America there will be other gains besides victory on the fields of battle. This war is giving impetus to men and women with latent abilities. It is inspiring them to do and achieve. Not until after the war will we know what great inventions and discoveries have been made which can be used for the benefit of man in times of peace.

It has been the incentive to men who were formerly satisfied with doing common labor to learn valuable trades. Not only is a great army of soldiers being trained, but a great army of skilled mechanics also, who will return from the battlefields and fill their place in a new industrial era.

In place of wastefulness we have learned thrift. In place of bragging we have learned humility. Not humility based on inferiority, but humility when we compare each individual with his duty to his community and country, for in times of danger liberty means collectively and not individually.

Since we have gone to war we have wrought great changes which in time of peace would seem almost impossible. Reforms which would not have been passed for some time are now passed without hesitation.

It has been the stimulus to home industries. Many things for which we were dependent on foreign countries are now manufactured at home and thereby creating new industries and employing home labor.

C. J. M.

## *The Milking Machine*

The milking machine is here to stay. It is one of the best labor savers recently invented. It takes drudges out of the dairy business. It does not talk rough nor abuse the cows. It does not go to town on Saturday nights and fail to come back for milking the next morning. It is always on the job and does a good job when the owner looks after it properly.

Do not hesitate because you do not know which machine to buy. Some farmers have had troubles with all kinds of machines, others have been successful. The trouble does not lie with the machine as much as with the men operating them.

The milking machine is probably in the same class as the farm tractor. It may still be further perfected, but it has reached that stage of development where it is a successful and paying investment when farm conditions warrant and it is carefully operated by an intelligent farmer.

# Must Register on September 12

## *Twelve Million Men From 18 to 45 Will Sign Rolls*

Congress has passed and President Wilson has signed the new draft bill extending the draft ages so as to include all men from 18 to 45 years. Immediately following the signing of the bill the president issued a proclamation designating Thursday, September 12, as the date on which all the men included in the draft shall register. The registration offices will be open in precincts throughout the entire nation from 7 in the morning till 9 in the evening. All men within the new ages, whether citizens of the United States or not, must register, except where aliens are official representatives of their governments in the United States.

Calculations by the office of the provost marshal general indicate that between 12,000,000 and 13,000,000 men will be enrolled under the new act. The original draft act, taking those from 21 to 31 years, caused approximately 10,000,000 men to register.

Of those subject to the new draft, it is estimated that approximately 2,300,000 will be called for military service. Of this number probably a million and a half or more will come from the men between the ages of 18 and 21 years.

Men already registered under the old act or already in military or naval service will not be required to register.

General March, military chief of staff at Washington, D. C., has announced it as the policy of the government to place all of the eligible men under the new draft in France by the first of July, next year, swelling the total American forces in Europe to at least 4,000,000 men.

The motive behind the new draft act is clearly expressed by President Wilson in his proclamation designating September 12 as registration day when he says:

"We solemnly purpose a decisive victory of arms and deliberately devote the larger part of the military manpower of the nation to the accomplishment of that purpose."

Another part of the president's proclamation, designating the new move as "our final demonstration of loyalty, democracy and the will to win," is as follows:

"Only a portion of those who register will be called upon to bear arms. Those who are not physically fit will be excused, those exempted by alien allegiance, those who should not be relieved of their present responsibilities, above all those who can not be spared from the civil and industrial tasks at home upon which the success of our armies depends as much as upon the fighting at the front. But all must be registered in order that the selection for military service may be made intelligently and with full information. This will be our final demonstration of loyalty, democracy and the will to win, our solemn notice to all the world that we stand absolutely together in a common resolution and purpose. It is the call to duty to which every true man in the country will respond with pride and with the consciousness that in doing so he plays his part in vindication of a great cause at whose summons every true heart offers its supreme service."

### Allied Armies Continue Gains.

The last week has been another remarkable demonstration of the power of the allied armies and their determination to win over Prussianism. The week from August 24 to 31 shows as much ground gained on the northern portion of the western battlefront as had been gained during the preceding two weeks. At this writing the allies have regained two-thirds or more of all the territory taken from them since Germany launched her gigantic drive the latter part of last March. At one point in the Lys sector the line from which General Hindenburg launched his campaign in March has been penetrated there for a considerable distance. Before Arras the British armies are practically up to this so-called Hindenburg line. At the present time the allied battle line runs practically straight from the north and south to Noyon. Along this entire front there is practically no opening to invite strong counter attack by the Germans, and it is believed that the entire line is so well prepared that a counter attack could scarcely be successful except for a brief time. In the south, between Soissons and Rheims, comparatively little fighting has been done during the last week.

### Casualty Lists Not Withheld.

Some fear has been expressed in this country that the casualty lists from the American participation in battle have been to some extent withheld from the public. The war department declares, however, that this is not true, but that all casualties are reported as rapidly as they can be determined. Secretary Baker announced at the time of this country's entrance into the war that no misfortune and no casualties would be withheld from the public, but that no news would be good news. The department declares that it is strictly adhering to this policy at the present time.

### Prohibition Is Rapidly Advancing.

Very soon there will be a measure enacted by congress and signed by the president prohibiting the sale of intoxicating liquors anywhere in the United States after June 30, 1919. This act will be in effect until the war is over and the American armies disbanded according to the agreement that has been reached by the committees of congress that have worked out the measure. Whether or not the ban on liquor would be removed then is problematic. It is possible, if not probable, that within the next year or two the prohibition amendment adopted by congress some time ago and submitted to the various states for ratification will have been ratified and become legislation. The constitution requires that three-fourths of the states ratify a constitutional amendment, meaning that 36 of the 48 states must ratify the prohibition amendment before it becomes national law. Fourteen states have already ratified it, leaving 22 more necessary to put it into effect. Eighteen states that are now listed as dry have not yet acted upon the amendment, but undoubtedly will ratify it when their legislatures meet. This leaves only four wet states to be won over, and since one of the leading arguments against prohibition by individual states has been that national prohibition only could actually prohibit the use of liquor, it seems highly probable that the four states will be readily won over.

### Border Mexicans Cause Trouble.

For the first time in several months actual trouble has been experienced on the Mexican border. Three American cavalrymen were killed and a number of others injured. The immediate cause of the trouble is believed to have been an attempt on the part of a Mexican immigration official to pass a fellow countryman across the border illegally. American sentries drew their guns and the Mexicans involved fired, resulting in the clash. Whether the trouble is sufficiently explained to prevent further and greater activity is not known, but it is apparently the intention of the American officers in command on the border to rule the situation with an iron hand if necessary.

### Money Value Greatly Reduced.

The United States department of labor hsa compiled statistics showing that a dollar now buys as much foodstuff in the average city of the United States as from half a dollar to 75 cents bought five years ago. Food that cost $1 five years ago now costs as follows in the following six cities, according to the report: In Washington, D. C., $1.85; in Baltimore, $1.83; in Philadelphia, $1.77; in New York, $1.68; in Chicago, $1.69, and in San Francisco, $1.58. The report also shows that during the last 12 months food prices advanced on an average of about 20 per cent throughout the country.

# I. W. W. Get Sentences

## *Haywood Given 20 Years and a Heavy Fine*

What the chief prosecutor in the I. W. W. trial at Chicago terms "a closing chapter in America's biggest criminal case" was written last week when Federal Judge Landis, who conducted the trial, passed sentence upon nearly 100 convicted men, inflicting a prison sentence of 20 years and a fine of $20,000 each on 14 of the defendants and lesser penalties upon others down the line. The sentences range from 10 days to 20 years, and the fines aggregate $2,735,000.

The case was that in which more than 100 I. W. W. leaders were being tried for conspiracy to interfere with the government's conduct of the war. William D. Haywood, general secretary-treasurer and most prominent leader of the I. W. W. in America, was one of the 14 to receive the maximum sentence of 20 years in federal prison and $20,000 fine. Thirty-three of the members were given 10-year sentences, 33 others five years, and 12 one year each. Others drew lesser sentences.

The convicted men are allowed 90 days by the court in which to make their appeal for renewed trial or to file their formal appeal to the United States supreme court. It is understood that the I. W. W. organization throughout America has been raising a large fund with a view to appealing the case to a higher court.

## LAND BANK LOANS BIG SUM.

### Business of Northwest District Grows Rapidly.

President D. G. O'Shea announces that since the district land bank of which he is president was organized at Spokane in April, 1917, it has placed $19,359,695 in the hands of the farmers. More than 8300 loans have been made.

Since the bank opened for business last year it has received 21,445 applications from farmers desiring loans. They asked the huge total of more than $55,000,000. Of these applications, 11,972 have been approved and loans allowed on them totaling $27,262,000. While this amount has been allowed, much of it is not yet in the hands of the farmers, owing to the great amount of work that must be done in clearing up titles and executing legal papers before loans can be made.

The bank officials have rejected many applications because the security was considered insufficient or the title to land clouded so that safe mortgages could not be made.

The demands for farm loans by the farmers of the northwest continue, and the system has been extended practically into every rural community of the four states of the district. A total of 407 national farm loan associations have been chartered and are now serving the farmers of their respective territories. The associations are distributed over Idaho, Montana, Oregon and Washington.

The capital of the bank has been increased from $750,000 to $1,716,147.

Farm loan bonds find a ready market, the issues now being subscribed for in advance.

### Apply System to Dairy Prices.

One of the morsels of sweet to be found in the bitterness of the dairy situation these days is the fact that there is fair prospect that before much longer the prices of milk and milk products will be regulated on the basis of the cost of those things that are required to produce them. If so much labor, costing so much, and so much feed, costing so much, and so much capital invested, deserving such and such a rate of interest are required to produce and place so much milk on the market, it ought not be extremely difficult to calculate a fair price that the consumer should pay for the milk—assuming that the cost is not more than the value of the milk as food, which is a safe assumption.

## *Washington Gleanings*

Fire recently destroyed the plant of the Vancouver Ice and Coal company, entailing a loss of $20,000, with $5000 insurance.

M. E. Metz of Colfax has just returned from the east, where he purchased two carloads of blooded horses from the Blue Ribbon stud.

The boys' and girls' canning clubs of Yakima county will hold their annual canning contests at the Yakima high school Saturday, September 7. An all-day program has been arranged.

A big Indian council, including members of tribes from many parts of the Pacific northwest, is to be held on October 15 at the home of the Rev. George Waters, in the Yakima reservation.

The craze to work on the section has struck the women of Mineral and Morton. Some of them have stuck it out for some time, and others are sort of wavering. They are paid $3 a day.

The Walnut Grove school district, near Grandview, has voted to buy a school bus to take the children to school from the outlying districts and to take the high-school scholars to Prosser high.

Charles Kamm of Snohomish has purchased the O. A. Ottestad ranch of 53 acres at Hampton for $12,000. The purchase included the stock, implements, crops, teams, etc. Forty acres of the Ottestad farm are cleared.

The Yakima Fruit Growers' association recently established a record price for Yellow Transparent apples, when it sold in New York a car for $1475.58. The car contained 566 standard boxes and 391 peach boxes.

The Evergreen huckleberry harvest is on in Cowlitz county, and the boys and girls and many older ones are berrypicking. They are receiving 5 1-2 cents a pound, and it is said that they can easily pick 100 pounds a day.

J. J. Gallaher, who operates a five-header and threshing crew on his ranch near Mansfield, has a number of women header box drivers, and says they are delivering first-class work and equal any of the drivers in his employ.

R. B. Mitchell, late head of the poultry department of the Agricultural College of Delaware, will assume the headship of the poultry department of the state agricultural college on September 1, taking the place of Mrs. Helen Dow Whitaker, resigned.

The Indian women of the Yakima reservation have proven their interest in the art of canning and jelly making by asking the home demonstration agent to demonstrate before them. Their request was responded to by Miss Elizabeth Jacobson.

From the increase from one brood sow which he purchased eight years ago last March W. H. Amon of Kennewick has sold $6159.40 worth of pork, has butchered 72 hogs for home use and still has left on his Horse Heaven ranch 11 hogs and 48 young pigs.

One thousand homes to be built every month until January 1 is the goal set by the war house-building drive committee of Seattle to take care of the vast army of war industry workers there. An army of 5000 men to build these houses is now being recruited.

Jacob Harder of Ritzville has purchased 10 sections of land in the northeast portion of Adams county. Most of the land is grazing land, which Mr. Harder will consolidate with his other large holdings, using it in his stock business. The consideration was around $106,000.

The business men of Aberdeen have offered to organize a business men's shift at the shipyards to relieve the labor shortage. The men plan to abandon their offices and business clothes for from four to eight hours a day in order to speed up the production of ships.

It has been reported that 12,000 bushels of wheat on about 700 acres in the Okanogan valley have been destroyed by a horde of grasshoppers. This is the fourth year the insects have devastated this section, and it is estimated that the loss already caused by grasshoppers is $80,000.

For the first time in several years the Nooksack river is now clear of drift from its mouth to a point near Ferndale. A government snagboat has been working for three weeks and has just succeeded in clearing the river so that light-draft boats can make the trip from Marietta to Ferndale.

Plans for the mammoth state college mess hall, to accommodate 600 soldier mechanics, are completed and construction will soon commence. The building is to be in readiness for the third training contingent, to arrive October 15. The building will be 64x210 feet, with two full stories and a half basement.

Under the direction of James Brolin, flax expert, of Portland, the first Whatcom county flax gathered by Dr. A. W. Thornton for practical demonstration this year was broken and scutched last week at the building on Dock street, Bellingham, where several tons of the flax have been stored. Mr. Brolin was well pleased with the results, and hopes to see the flax industry developed in Whatcom county.

Mrs. Grandville Ross Pike, known throughout this state as the "Bird Lady," died recently at North Yakima. All her life she made a study of birds and their lives and habits, and it was through her efforts that the school children grew to know and love the birds. She obtained many members in this state in the schools for the society for the prevention of cruelty to birds.

# Roosevelt on Farm Problem

## *Should Formulate American Agricultural Policy and Reorganize National Agricultural Department.*

Twenty thousand people heard Ex-President Roosevelt at Springfield, Ill., last week. The occasion of his address was the centennial celebration of Illinois' admission to statehood, in 1818. Colonel Roosevelt spoke for the speeding up of our war program and for preparation for universal military training after the war and for solving social and industrial problems that will come with peace. Turning from labor problems to the farm, he said:

"The foundation of our permanent civilization rests on the farmer; and by farmer I mean not the man who owns land which others till, but the man who himself tills or helps till the ground part of which, at least, he himself owns. A cardinal feature of our national policy should be the insuring of his rights to this man; and this not only for his sake but for the sake of all of us. Normally he must be the owner of the ground he and his sons and his hired man till; and the hired man must have conditions shaped so that if he is hardworking, thrifty and energetic he shall have the means and the opportunity himself to purchase farming land on which to dwell and to bring up his family. We ought now to formulate, and we ought long ago to have formulated, an American agricultural policy; and the national agricultural department should be completely reorganized and its activities made far more productive than at present, especially in view of the large sum of money now allotted it. Normally, in farming regions, where the land is agricultural land, tenancy should be recognized only as a transitional and temporary phase, and normally the working farmer should himself be the landowner; and legislation to secure this should at once be enacted.

"Drastic action should be taken to stop the purchase of agricultural land for speculative purposes. Where necessary, this should go to the length of giving full title to the occupant for use only, and limiting his power or alienating the land. System of marketing must be developed, so as to do away with the holdup methods that in so many places still obtain. The producer must get more and the consumer pay less than at present, and both these ends can be and have been attained by proper legislation.

**Tenant Farming Growing.**

"We ought to do these and the many other things necessary now, when it is possible to do them without causing too great distress to those in possession of long undisputed privileges which by time have grown to possess much of the character of rights. Nine-tenths of wisdom is being wise in time. In this country tenant farming and the individual ownership of extensive tracts of agricultural land are growing at the expense of the homestead holders. Let us take whatever steps—conservatively if possible, radical if necessary—are needed to remedy the situation; for if left unremedied the result may be something unpleasantly near revolution a half century hence; and in such case the wrongs will be remedied only by action which causes other wrongs to innocent people and works deep demoralization to those benefited; whereas at present, by the exercise of forethought and resolution, we may escape both kinds of evil.

"There are certain things the state can do and must do for the farmer. But most things the farmer can do for himself by association with his fellow farmers, and such independence of unnecessary state action is healthy in itself and is consonant with the rugged self-reliance characteristic of that most typical of American citizens, the American who dwells in the open country and tills the soil with his own hands."

# Loving Cup

## For Championship Hereford Bull

The Pacific Northwest Farm Trio has posted a loving cup to be awarded the exhibitor of the champion Hereford bull at the Northwest Live Stock show at Lewiston, Idaho, November 7 to 16.

**Let Bygones Be Bygones.**

She was an eminent woman surgeon who before the war had been an ardent suffragist, and was attending to a wounded guardsman.

"Do you know," she said, "your face seems strangely familiar to me. I've been trying to remember where we've met before."

The guardsman looked at her for a moment unflinchingly. "Well, mum," he said, "let bygones be bygones. I was a police-constable."

**WHAT IS THE BEST COMBINation of poultry feed under present conditions of supply and prices, profitable production being the basis of comparison? James Dryden, editorial contributor to the Farmer's poultry department, answers this question in next week's issue of this paper.**

## POTATOES SHORT.

### Condition Less Than 80 Per Cent.

An official statement by the United States department of agriculture estimates the crop of potatoes this year for the entire country at 391,000,000 bushels. This is a reduction of 14,000,000 bushels from the estimate made on July 1. The figures give the northwest approximately 140,000 acres and an estimated production of approximately 18,500,000 bushels. The production in the northwest last year was approximately 24,000,000 bushels, which indicates a reduction this year of approximately 25 per cent. The estimated yields for the three northwest states this year are as follows: Washington, 8,463,000; Oregon, 5,533,000; Idaho, 4,309,000. The total acreage in potatoes this year in the entire United States is given as 4,113,000, approximately 93 per cent of the 1917 acreage. The state of New York leads this year with 344,000 acres and an estimated yield of 35,500,000 bushels. The next two states, in order, are Michigan, and Wisconsin.

# Mr. Houser Explains Replies to Farmer

(Continued from page three.)

tle over 300,000 bushels. Of this we have received over 20 cars that have been consigned direct to us. To give you an illustration of the service we are rendering on these direct consignments, I am enclosing a copy of a letter dated yesterday addressed to W. L. Gibson of Nyssa, Ore. This letter speaks for itself. Under the regulations, if I had taken this grain in for the account of the grain corporation I would have had to take it on the grade designated by the state and deputy federal inspector, which, on account of damaged kernels, would have been graded No. 4. This seemed to the writer a rather excessive charge, and knowing that the mills were anxious for wheat, we sold this on sample to a mill, netting to the shipper 4 cents per bushel more than I could have legally paid him.

I sincerely hope that I have made myself clear to you in this letter and that there will be no further apprehension on your part as to the protection of the farmer by this office. We receive here on an average of from 300 to 500 letters daily, and put in many nights going over this vast correspondence to personally see, as far as we can, that every letter coming in here receives a courteous and explanatory reply.

Please permit me to say that if at any time the farmers of the three states in my zone feel that some one else could give them better service in a large and broad way toward the movement and forwarding of this wheat crop to make it possible for them to receive their payment I do not wish to stand in the way for one minute, as I assure you that regardless of the reflection cast I have taken this work up with no other view than to be of some benefit to the wheat growers of the Pacific northwest. With the many perplexing problems that we have encountered in this work it is by no means at all times pleasant, as many conditions have arisen here in the northwest that are so different from those throughout the eastern part of the country that some of the regulations by no means fit our condition. These I have undertaken to modify and adjust wherever it was possible to do so. As you know, the grain corporation has a war function and is devised to meet war conditions. I fully realize that it is not perfect by any means, and I do not expect to see it perfect, but that is not going to deter me from continuing to try to make it perfect.

So much for our public work; just one word in regard to the Portland Flouring mills. I think if you will take the pains to read over our statement it should be apparent that we have not taken this over with any selfish motives whatsoever. It is unfortunate, through the death of Mr. Wilcox, that the heirs decided to dispose of this property and that I should have been rather embarrassed with the work that I am now doing, but I ask you in all fairness if I really should have been altogether disenfranchised from the opportunity that presented itself, as I assure you no one has ever undertaken any work with a higher motive than I had in taking up this work, having had to practically put in other hands my entire grain business, which I had toiled diligently, slavishly, for the last 20 years, on many days as much as 18 hours, in building up. The entire proceeds from this business, which is now being audited by a public accountant, have been turned over to the Red Cross and other war relief funds, the same as I am now doing with the proceeds that will come to me over and above 6 per cent on my part of the investment in the Portland Flouring mills, and so far as gouging or unfair treatment to the grower is concerned, I will respectfully refer you to any of the points or sections where we have been in direct touch with the grower and I will leave it for them to answer. The volume of our purchases and shipments during the five years preceding our entrance into the war speak for themselves. During that time there were not to exceed a few days in which we were not in the market, and needless to say, if we did not pay the price we would not have done the volume of business we did.

At present I have but one object, and that is the faithful performance of my duties as an official of the grain corporation. I have absolutely no interest in the management of any grain or milling concern. The grain business was turned over to Mr. Draper over a year ago. The Portland Flouring Mills and the Puget Sound Flouring Mills companies and their subsidiary companies are all under the direct management of Joseph Ganong. I have been to the office only twice since taking it over, and then only for the purpose of some signatures pertaining to the transfer.

FOOD ADMINISTRATION GRAIN CORPORATION.

M. H. HOUSER,
Second Vice President.
Portland, Ore., Aug. 31, 1918.

The following is the copy of the letter addressed to W. L. Gibson of Nyssa, Ore., with regard to the direct consignment of a car of wheat to the food administration grain corporation, which is mentioned in the accompanying letter of Mr. Houser:

"The grade on this car on arrival, as per official inspection certificate attached to account sales, shows No. 4 soft white on account of 8 and 4-10ths per cent damaged berries. Had this car been unloaded at the dock for our account we would have been compelled to purchase same at the discount for No. 4 wheat, 11 cents per bushel, but we were successful in turning the same to one of our local mills which was in need of wheat, and when so doing prevailed on them to take it as No. 3 wheat, 7 cents per bushel discount, and enclose herewith account sales on this basis.

"We were fortunate in having the opportunity to dispose of the car locally. The local mills now have more wheat on track than they can take care of, so arrivals to the grain corporation are going into the terminal docks for our account, and this condition will probably exist for some time to come."

# Will Be Big One

## Fourth Liberty Loan Comes Soon

The biggest financial achievements of a nation accustomed to big finances, the first three Liberty loans, are to be eclipsed by the fourth Liberty loan. The coming loan will be at least twice as large as the third loan, and perhaps larger, dependent upon whether it is finally decided to call for $6,000,000,000 or $8,000,000,000.

"It is for statisticians and economists to enlarge upon the extent to which individuals have responded to their country's call and to set forth to what extent history's greatest war chest was furnished by present and what by future generations and to dilate upon direct tax levies and bonded indebtedness," says a government official. "The general patriotic American only knows that six or eight billion dollars is needed and that it will be raised."

Germany's people, faltering at home as their soldiers are faltering beneath Foch's blows in the field, raised only enough in their last loan, it is said, to pay interest on previous war levies. Turkey's last feeble effort was to raise $12,000,000 of a proposed $32,000,000 loan.

Real sacrifice of many comforts will be the means by which many American families swell their purchase of fourth Liberty loan bonds. Those whose service flags bear a star of gold will not be inclined to sympathize deeply with those who complain at slight economies in the interest of war funds.

# Stick to Association

From the Spokesman-Review.

Mr. Roosevelt spoke in wisdom when he said, in his address the other day at Springfield, Ill., that progressive legislation can help to bring about better marketing conditions, but the farmers can do more themselves through cooperative organization and action.

While that truth applies to all farmers it has special force in relation to fruit growing. As P. R. Parks, general manager of the cooperative Spokane Fruit Growers' company, says, "the grower has his ups and downs and there is nobody to help him when he is down. The grower must stay with a competent sales agency that can get him the maximum price whether the season is good or bad."

After a series of poor seasons the apple growers of the Inland Empire are enjoying the liveliest market they have known in several years. Their product is in demand and far-seeing speculators have come into the field to tempt growers to leave their cooperative organizations and make quick deals for cash. Mr. Parks reports that the cash buyer who bought apples at $40 to $45 a ton is making a snug profit at the grower's expense of 25 to 50 per cent on his investment.

The grower will find it a pretty safe rule to follow that when cash buyers come into the field he will do well to stay with his own organization and its marketing agency. In a good season like this his organization will get him better prices the season through than the cash speculator will pay. In poor seasons the speculators vanish and the grower needs his own organization to find him markets and sell his apples through collective bargaining.

## Apples Good and High Priced.

Present indications are that the Spokane valley will produce three or four times the quantity of apples that it did last year and that the average price will be about 50 cents a box more than the price last year. This is the estimate made by P. R. Parks, general manager of the Spokane Fruit Growers company. The company represented by Mr. Parks reports the confirmation of orders for considerably more than 100 cars of fruit at the following prices:

Extra fancy Wageners, $1.75; Jonathans, $1.75 to $2; King David, $2 and Delicious $2.

Fancy Wageners, $1.25; Jonathans, $1.65 to $1.75, King David $1.75, Delicious $2.15 to $2.25.

C grade Wageners, $1.10; Jonathans $1.25 to $1.50, assorted varieties $1.15 to $1.25.

## Irrigation Development.

In the platform of Dr. John W. Summers of Walla Walla, who is a candidate for nomination for congress in his district, the following are among other plans: The speedy development of our streams for irrigation, and land allotments for our soldiers. Water power for factories and cheap electricity in every home and on every farm for light, power and fuel.

# Damaged by Clover Root Borer

## *In Western Oregon and Yakima Valley, Washington*

The clover root borer is doing considerable damage in Coos county, Oregon, this season. Its effects were seen by a Farmer representative while there recently, and it is present in both the Willamette and Yakima valleys. Mr. Creel, in charge of the United States

**These sketches show the root borer in various stages, also his work.**

department of agriculture's station for cereal and forest insect investigations in the northwest, at Forest Grove, Ore., advises plowing while the ground is dry as the most effective local remedy. When plowed, the ground should be harrowed and as many roots brought to the surface as possible. This will help, even if the same ground is seeded to clover the next year. The plowing and harrowing is estimated to destroy 50 per cent or more of the borers, depending on the number of roots brought to the surface. The beetles left must have good sized roots in which to bore, or they can not survive the next spring.

Ths beetle travels by spring flight and has been proven to travel a mile and a half and reach a height of 50 feet, so that in a country like the Willamette valley, when every farm has clover, it does not seem that even by eliminating clover from a farm for a season or two the danger of borers would be entirely eliminated.

The plan most recommended by Mr. Creel's office is short crop rotation. If clover is sown one season and, after the crop is harvested the next season, it is plowed up during the dry weather and sown to grain or some cultivated crop, most of the borers will be eliminated.

Originally from Europe, the clover borer was accidentally imported into America without the natural enemies with which it had to contend in its native home. Affected plants are apt to break off at the level of the ground, and on examination the roots of the clover will be found to be tunneled, the cavities being blackened and often containing the tiny beetles or the grubs; sometimes eggs will be found if the tunnels are examined with a good lens. The winter is passed in the tunnel, for the most part in the adult stage. Migration occurs usually in the latter part of the spring, new fields being attacked and tunnels made. In the course of a few weeks the eggs are laid, packed away in dead parts of the roots and covered up with refuse. Toward the latter part of the summer the larvae change to pupae in the tunnels and become adult beetles by fall. Both larvae and pupae feed on the substance of the roots.

## MUST RESPECT LAW.

### Must Handle Lawless Lawfully.

The council of national defense has sent to all the state councils of defense throughout the nation an urgent appeal that lawless treatment of persons suspected of disloyalty be prevented.

"In the last few months in many parts of the country there has been a tendency toward lawless treatment of those suspected of disloyalty," says the appeal. "However patriotic may have been the motives which prompted these outbursts, their effect is deplorable. They are blots upon the war record of a nation which has declared itself to be fighting for a universal reign of law; they furnish ammunition to those makers of enemy propaganda who are trying to make the world believe that the enemies of Germany, too, are capable of atrocities; and frequently, by rousing anger and fear, they tend to undo the work which the councils of defense, through their educational campaigns, their Americanization work and their community organization, have done and are successfully doing to unite the nation in the fellowship of war work.

"The council of national defense looks to each state council of defense to see to it that these disorders do not occur in its state, but that sedition is henceforward stamped out by lawful means only, and that differences and disputes are adjusted, not by voluntary or self-constituted committees, but by official authorities.

"This task calls for leadership and action. The council of national defense makes this request in the full confidence that each state council will assume the responsibility for keeping the fair record of its own state clean from this time forward."

# You Sit Where You Always Sat On the Seat of the Implement

YOU wouldn't think of riding on the back of one of your horses while at work in order to guide your team. If you did you would require another person to operate the implement, because implements require constant attention.

Then why attempt to operate a tractor in a manner which your experience has proven impractical? It is just as illogical to ride on a tractor in front of the implement and expect to operate the implement from that position as it is to operate the implement from the back of your horse.

*Any way you look at it you are working at a disadvantage with the ordinary tractor. To do the best work two operators are required, one on the tractor and one on the implement. In these days of extreme labor shortage this is a tremendous handicap. With the operator on a tractor in front of the implement it is manifestly impossible for him to give the implement attention and make adjustments for varying field conditions without losing time.*

### *Just Like Driving Horses*

With the Moline-Universal Tractor you sit on the seat of the implement and have perfect control of both implement and tractor. You are in the best position to observe the work, make adjustments and manipulate both tractor and implement. This holds true regardless of the work being done—plowing, discing, harrowing, planting, cultivating, mowing, harvesting, both grain and corn.

### *A Time Tried Principle*

There is nothing new about this, we simply apply a principle which millions of farmers have demonstrated to be sound. The Moline-Universal gives one man control of greater power than is possible with horses, with the same method of handling and as much versatility. With the Moline-Universal one man can farm more land. It is a six-horse unit—easier to control than one horse and capable of doing the work of from 6 to 8 horses.

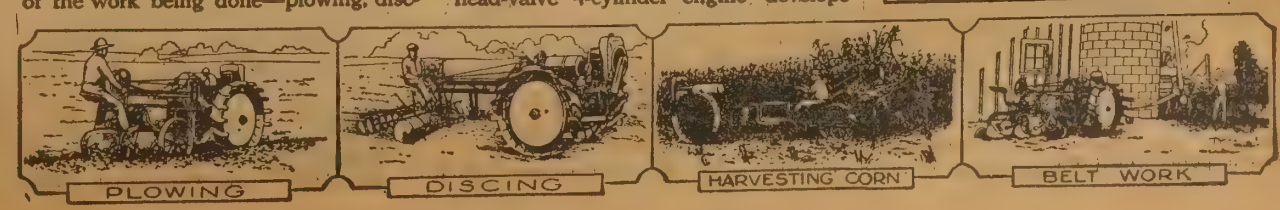
### *Works Day and Night*

The One-Man feature is just one of many advantages the Moline-Universal has over other tractors. It is the only tractor which will do all farm work, *including cultivating.* It is the only tractor regularly equipped with self starter and electric lights. Non-robust labor can operate the Moline-Universal successfully, and it can be worked day and night.

No detail has been overlooked to give the new Moline-Universal Model D Tractor positive reliability. The perfected, overhead-valve 4-cylinder engine develops unusual power, and is economical in operation. It is conservatively rated at 9-18 H. P. Oil is forced to crankshaft bearings under 35 lbs. pressure. Gears are steel cut, drop forged, and heat treated. All shafts are splined. Every working part is easy to get at, and every moving part is enclosed.

### *Valuable Information for You*

Our catalog tells how you can operate your farm with less help and expense by using a Moline-Universal Tractor. A post card will bring the catalog to you.



Since 1865 we have been making farm machinery, and now offer a complete line of both tractor and horse drawn implements. Information on any of the Moline implements listed below will be gladly furnished on request.

# Keep Silo Air Tight

Dairy specialists of the United States department of agriculture issue warnings to beginners with silos and for those who have not made complete success of this method of preserving feed to use constant precaution to have the silo airtight. The complete exclusion of air is recognized as one of the first essentials in making a good quality of silage. Speaking of making corn silage the department says that corn should be cut when the kernels have passed the milk stage and are beginning to dent, as this is the period when it contains the greatest amount of food material. Concerning the packing of the silage the advice continues:

"Too much stress can not be laid upon the necessity of thoroughly packing the fodder in the silo so as to exclude the air as much as possible. It is upon this one thing that the keeping of silage largely depends. A device consisting of a jointed pipe, or some variation of it, attached to the top of the blower pipe is at present in use for distributing the corn fodder in the silo. By the use of this distributor it is possible for one man to scatter the cut corn evenly and at the same time to tramp it. Without the use of this device it is necessary to have at least one extra man in the silo to fork the material over so that it is evenly packed. Besides the saving of one man's labor, the distributor does away with the nuisance of having the loose material flying around, thus annoying the man in the silo, and also lessens the danger of being struck by some foreign object that may have passed through the blower.

"Oftentimes the corn fodder is so dry when it is cut that it is necessary to add water to make up for the deficiency in moisture and provide for the proper packing of the silo. This water is most easily added to the blower when the corn is being cut, and it is also more thoroughly mixed with the cut material in this way.

"For the top layer of the silo it is good practice to use heavy green stalks from which the ears have been removed. This forms a heavy layer that packs well and at the same time contains a smaller amount of food material, so that the minimum loss is sustained if it spoils. Various methods and materials have been used for covering the top of the silage to prevent its spoiling. None has given complete satisfaction, but the one mentioned above has given as good results as any, especially when the top layer was thoroughly wet down and packed firmly by tramping. The best practice is to commence feeding as soon as the silo is filled, in which case there will be no loss of silage through decay."

## Babies at Dairy Show.

How and why milk and butterfat are essential to the growth of babies and young children will be shown in the most graphic way at the national dairy show, Columbus, Ohio, October 10 to 19. One entire building will be devoted to the interest which mothers have in the use of dairy products. A large enclosure will be provided for a well babies' clinic to be held, and the cooperation of the children's bureau of the United States department of labor; state, local, as well as national children's welfare workers are being enlisted in this great movement that is designed to emphasize the importance of keeping children growing by supplying them all that they need.

## TESTING COWS.

### At One-Half the Usual Expense.

By A. B. NYSTROM.

A new plan of testing cows has recently been started in Lewis county, Washington. It differs from the old plan of cow testing associations in the respect that the farmer must take his own samples and weights and make his own estimates of the feed consumed.

It is not presumed that all the dairymen who would patronize one of the old associations will join this new one for the reason that there is no advertising feature connected with this new plan. While the old plan was inaugurated for the purpose of weeding out the poor cows, experience has taught us that most dairymen join because of the advertising they get by having a certain number of cows pass the 40-pound mark for the month. Cow-testing association records can be made very authentic if the tester is "on the job" all the time, but too often it has been found that even though the tester is there the owner does his own weighing and sampling.

It was after considering these points that the writer decided to devise a plan whereby every dairyman in the county, no matter how far distant, could have his cows tested at one-half the usual expense of a cow testing association. The following is the plan and contract:

1.—Organization:
- a. (Name) Lewis County Cooperation Testing association.
- b. All Dairymen who sign contract shall become members.
- c. The Association shall be managed from County Agent's office.

2.—Finance.
- a. There shall be a membership fee of $1.
- b. Every member shall pay into the Association treasury in advance 75c for each cow tested each year, or part of year.
- c. This money shall be used to pay tester's salary, purchase acid, and other supplies.
- d. Dairymen must provide their own milk scales, sample bottles, and cases. The cases shall be uniform.

3.—Operation.
- a. Testing shall be done and record kept at the County Agent's office, under direction of the County Agent or his assistant.
- b. Milk to be weighed and samples to be taken of two consecutive milkings from each cow each month.
- c. Weighing and sampling to be done by the owner or his helpers and the records of the weights, with the samples, to be sent to the County Agent's office.
- d. Each member shall weigh (or estimate carefully) the daily amount and grade of feed each cow receives. In case the feed has been purchased he shall give price. He shall make make note of this on proper blanks and send them to the County Agent's office with the milk records.
- e. All association books and records to be kept at the County Agent's office.

4.—Special Rules.
- a. No herd less than five cows will be accepted.
- b. Farmers wishing a record on their cows must sign contract. (See attached.)
- c. All bills must be paid annually in advance. Checks made payable to the county treasurer but sent to the County Agent's office.
- d. The Association year will begin September 1, 1918.
- e. The County Agent shall make a complete report once a year showing the records of the testing and receipts and expenditures.
- f. No records of production shall be published, only general information, such as number of cows tested, the yearly report, cows sold for beef, shall be allowed to go to the press.

**Testing Association Contract.**

I ....., hereby agree to follow all rules laid down in the plan of organization of the Lewis County Cooperation Cow Testing association and herewith send a check for $1 for membership fee. I further agree to enter ..... cows, and to pay a testing fee of 75c per year in advance for each cow tested for the year or part of the year. You will find check for same enclosed. I also agree to provide myself with a milk scale, and the proper sample jars and case, and to take every precaution to see that my records are accurate and authentic.

Date .....

(Signed) .....

Address .....

A laboratory has been fitted up in the county courthouse, where a large electric tester and all the necessary equipment have been installed. The apparatus needed by each dairyman is assembled at the laboratory and sold at cost to the farmers as they sign up for the work. The regular cow-testing association books and record sheets are used. These are furnished by the dairy division of the United States department of agriculture.

Your Daughter and an Empire

can positively relieve you of the tiresome, irksome disagreeable task of milking. You and your sons can spend more time in the fields both morning and evening.

Empire Milking Machines are so simple—so easy to operate—that a boy or girl can milk the entire herd with it in less time than it took you and your hired hands.

Hard milkers or easy milkers—nervous or calm cows—large or small teats—even or uneven udders—make no difference to the Empire. It milks them all. And the teat cups stay on without surcingles.

The New Empire Super-Simple Pulsator has no piston. Nothing to wear and lose vacuum. Its action is regular and positive, gentle and soothing to the cow. Usually produces greater milk flow and lengthens period of lactation.

Learn the details. Have the Empire dealer in your locality give you a demonstration. Write for our 1918 Catalog No. 48,

# Use Cottonseed Cake

W. B. Ayer, federal food administrator for Oregon, is advocating the wider use by stockmen of cottonseed cake as a means of relieving the feed situation. Mr. Ayer believes that the cottonseed cake can be laid down at northwestern points so that it should cost the buyer not over $75 per ton in carload lots. Where smaller amounts are needed they might be secured by cooperative buying. Concerning the matter of this class of feed Mr. Ayer says:

"In view of the serious shortage of forage and other animal feeds, it has occurred to me that a much greater use of cottonseed meal or cake could be made to great advantage. The sheep industry has been using it to a limited extent for a number of years, but nowhere near as extensively as in many other sections of the country.

"I took the matter up with E. A. Peden, federal food administrator for Texas, and Mr. Peden advised me that the food administrator has fixed no price on cottonseed; that the present market price is $53.50 per ton basis, 43 per cent protein, f. o. b cars at mills; that the mills are in operation at the present time on the new crop of cottonseed, and he also states that he is unable to make any forecast of future prices. My own judgment is that the situation is so serious that sheep, cattle and dairy interests should not hesitate about filling their wants promptly.

"The rules governing the sale of cottonseed prohibit the dealer from carrying over a 60 days' supply and the consumer from buying an excessive stock. This rule, so far as it affects consumers, on account of our great distance from the market, will be suspended, and consumers will be permitted a full winter's supply, with the understanding that it is not to be resold.

"Consumers should be advised that any less protein content than 43 per cent should be bought at a reduction for every point under 43, but that there is no economy in buying cottonseed products of a less protein content; that 43 per cent is the standard and should be adhered to and the buyers should see that they get this percentage."

## Veterinary

Dr. S. B. Nelson

**Colt Is Ruptured**—I have a young colt three months old that is ruptured at the navel cord. It is now very near the size of my fist and seems to get larger all the time. The colt is fat and seems to be doing well. Can you tell me what to do for him?

Silvies, Ore. J. V. S.

The best advice I can give you regarding your colt is to take it to your nearest competent veterinarian and have him perform the radical operation for the rupture. The animal can be cured. Most of them recover perfectly; but it is an operation that only a skilled operator can perform.

**To Dry Heifer**—Our 8-year-old heifer comes fresh in September. It is hard to dry her up. Is it wise to cut down her green feed? Can you give me a good ration for her? G. I. F.

Prosser, Wash.

Put your heifer on dry feed, and not very much of it. Any kind of dry feed will do her, and not too much, of course, not so she will have a bowel disturbance. You want to keep the bowels open with a little physic, such as a quarter to a half an ounce of epsom salts daily or every other day. There would be no special ration for her until after she calves.

**Stomach Worms in Sheep**—My brother has lost five lambs all from stomach worms, I think. One died just recently and I helped him to make an examination and found the worms in the fourth stomach, all right, also about one-half a teacupful of soil. Under a glass it looked like soil, also several pieces of gravel one-half the size of a pea. I think the soil may have come from eating grass that had been irrigated with muddy water. But the pieces of gravel I can't explain. The lamb that just died was fat enough for mutton, but some have got thin.

Any advice you may give will be appreciated. F. J. C.

New Plymouth, Idaho.

The following treatment has frequently given very satisfactory results: Give one tablespoonful of gasoline in a couple of ounces of raw linseed oil, this mixture to be added to a smaller quantity of milk and given as a drench once daily for three or four days. It would be well to change the pasture for the sheep if this is possible.

**Bloat in Cows**—I am pasturing some cows on alfalfa pasture and they are bloating quite a bit and I understand that it becomes a chronic disease. Is it so, and is there a cure for it?

A SUBSCRIBER.

Hagerman, Idaho.

The best thing for you to do is to take your cows off the alfalfa. It may become chronic with the cows to bloat if kept on that kind of feed constantly. There is no cure for the alfalfa bloating the animal, but for that particular bloat a very valuable thing to do is to give one ounce of creolin in an ounce of water. Follow with one to one and one-half pounds of epsom salts in three quarts of water. If the weather is warm so as not to cause the animal to chill, the throwing of very cold water over the loins will also stimulate the contraction of stomach muscles. Of course, in severe cases, the best thing to do is to immediately tap the animal with a trocar and canula. This should be done on the left side, half way between the last rib and the hip joint and a hand's breadth below the back. Then follow with the treatment previously given.

**Udder Hard; Milk Stringy**—We have a cow that calved May 29, 1918. At times the right quarter of her udder seemed a little hard and milk was stringy, the last day or two this part of the udder has been very hard and manage to get very little milk out of right front teat. The milk is yellow from this teat. As I have five children would like an early reply to ascertain if milk is good to use and to know what to do for the cow. S. C., Yakima, Wash., R. 1, box 115.

The milk is not good for your children and you ought to consult your local veterinarian and have him give you treatment for the disease in your cows. It is never safe to feed children, or use it yourself, if it comes from an udder which is inflamed or diseased.

**Cow Has Sores**—We have a cow that has sores on her right side and on her head, around the horns. These sores have a white scab on them. She is not sick that we can see. She eats all of her feed, but she is very poor and holds her ears back all the time. What kind of a disease is this and is it catching? A. H.

Sumas, Wash.

The cow is probably affected with some fungous disease. Try painting the sores daily with a solution of one-half of 1 per cent of titric acid in water. This is poisonous and wants to be kept where children can not get hold of it.

### Boys' Idea.

Recruiting Office—But what would a boy like you do in the army.

Lad—Don't you need a caddie to carry the swords and things?—Dundee Herald.

# Why the cost of producing cattle does not determine their selling price

TO produce a steer for meat purposes requires, as you know, a period of from one to three years.

The prices the producer has to pay for feed, labor and other items during this period, together with weather conditions, determine what it costs to produce the steer.

But the price the producer receives for the steer depends on conditions existing at the time it is sent to market.

If the supply of cattle coming on the market at this time is greater than the consumer demand for dressed meat, the prices of meat and live stock go down.

On the other hand, if the number of cattle coming to market is less than enough to supply the consumer demand for meat, the prices of meat and live stock go up.

Not only do the receipts of animals vary from week to week but the consumer demand for meat also fluctuates.

The rise and fall of prices results from an economic law that operates in every business. It is the packer's task to turn live stock into dressed meat and by-products, and distribute them to the consumer under control of this law.

Market conditions and competition establish the prices the producer gets for his cattle. When meat prices go up or down, so do cattle prices.

The packer can't pay out more money for animals than he takes in from the sale of meat and by-products.

Swift & Company will gladly co-operate in the carrying out of any national policy that will tend to steady the prices of live stock and meat.

# Win War With Eggs

## Poultry Industry Must Increase

The National War Emergency Poultry federation, an organization of poultry interests throughout the entire country, is making a nation-wide campaign for the increased production of poultry as a means of improving the food situation. The policy of the organization is set forth in an official list of objects which it is its purpose to attain during the year 1818-19. These objects are as follows:

1. To help win the war by uniting the poultry interests, fostering the industry and supporting the nation.

2. To enlist, for the federation in the fulfilment of its purposes and program, and the full and united support of every individual, firm and corporation, association or other organization having to do with or interested in any branch of the great poultry industry.

3. To eliminate duplication of effort and to studiously avoid conflict with the activities of any organization, individual or governmental agency in the accomplishment of the constructive and patriotic work we may later undertake.

4. To enlist and equip the American hen to fight the kaiser through her ability to economically produce more wheat and meat substitutes.

5. To formulate a sound, practical policy looking to the stimulation of poultry and egg production which shall secure to the producer fair remuneration for his efforts.

6. To educate the consuming public as to the food value of poultry and eggs and their proper use as everyday foods.

7. To assure those engaged in production that the increased per capita consumption of poultry and eggs from year to year is clear proof that this tendency will continue with reasonable profit to the producer under proper production methods and conditions.

8. To provide ways and means to assure producers they will get feed, fuel and other necessary supplies, and to make known to the authorities at Washington and elsewhere that the meeting of these requirements is a national necessity, without which the industry will perish.

9. To assist actively in securing raw materials and manufactured products needed by the people in various branches of our industry, so as to prevent the stopping of those processes essential to and a part of the fabric of our nation-wide business.

10. To encourage among producers modern business methods, such as cost accounting and the adoption of approved scientific practices.

11. To help to secure uniform, interchangeable standards for our products in all markets, as we believe this to be a progressive step for the welfare of all concerned.

12. To work diligently with government agents and otherwise to secure and provide adequate transportation facilities for our products and at such rates and charges which shall be upon an equitable basis compared with those applying to competitive products.

13. To appeal to bankers and other business men of this country for their help in properly safeguarding our billion-dollar industry, which represents one-twelfth of our annual agricultural crop wealth.

14. To cooperate with all educational and publicity agencies, particularly the poultry and agricultural press, in securing and giving wide circulation to all available information of vital importance to the poultry industry.

15. To inaugurate a nation-wide survey of our resources, and to collect statistics which shall be classified and distributed with other data bearing upon the welfare of our business.

16. To correct abuses and prevent waste in any and all phases of our industry.

17. To initiate and secure the passage of such laws and regulations as will insure the economical production of the largest possible volume of poultry and eggs.

18. To lay plans to promptly restock war-torn Europe with poultry for breeding and commercial purposes when peace shall have been declared.

19. To set forth more clearly the true function of the exclusive breeder in improving and spreading the best types of fowls for different sections of this country.

20. To aid in selecting a suitable date to be known as National Poultry and Egg day, when we aim especially to direct attention by all available methods to the value and desirability of poultry and eggs in our national dietary.

21. To cooperate with national, state and local government agents in all matters pertaining to our industry, with the aim of maintaining continued high efficiency in their work.

### The Slacker Hen Again.

The slacker hen is in evidence now. She is getting ready for fall styles rather than helping win the war. She is starting to grow a new dress—in other words, molting. Her large plebeian comb,' indicating usefulness, is growing smaller. She is beginning to paint her legs and beak yellow (if she is of a yellow-leg breed). Her ovaries contract; her intestines grow smaller, and her abdomen grows hard. She is not laying. She is getting ready for the fall shows, for society. In another month she will have a new dress and will look neat and trim and will be sent to the show and get a blue ribbon, while Old Reliable will be looking the worse for wear but shelling bullets as usual to beat the Huns.

If you want to save on the feed bill, courtmartial the slacker and send her to the pot. She is worth more dead than alive. The hen that quits early to dress up for the fall shows is the slacker hen, the pro-Hun hen, the profitless hen.

Pick out and market those hens that are molting and not laying in August, and those that have molted and are not laying in September and you will get the poor layers. J. D.

### Intelligent Dog.

"And is your dog intelligent?" asked the lady.

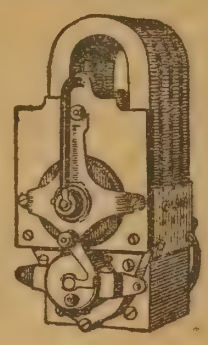
"I consider him so," replied the mere man.

"And does he do tricks?"

"Oh, no; he's too intelligent for that."

"Why do you consider him intelligent, then?"

"Why, madam, when the women folks are around that dog never opens his mouth!"—Yonkers Statesman.



### Perfectly Safe.

Wife—The fact that there are germs on money doesn't worry me.

Hub—No, my dear. It would take a pretty active germ to hop from the money to you, during the brief time you have it.

Plow This additional Acreage Without Fuel Cost

Owners of tractors equipped with K-W Magnetos find they can fire thinner mixtures and cheaper grades of fuel and still develop full horse-power, than they could by any other system of ignition.

The intense hot spark that a K-W produces gets all the power out of every drop of fuel. It turns the ordinary wasted fuel into extra work *without* cost. A

TRADE K-W MARK High Tension MAGNETO

will start your tractor quickly and easily regardless of how cold the weather and will operate on all the low grades of fuel. It gives continuous—no trouble ignition.

Forty tractor manufacturers pay more for K-W Magnetos because they want their users to have the best. K-W Ignition is one of your guides as to quality in your selection of a tractor. Insist that your new Tractor be K-W equipped.

If you are not using a K-W on your present tractor and wish to cut fuel cost—write us. There is a type of K-W Magneto that will do this.

# Orchard Troubles

## Pests, Disease and Remedies

By Granville Lowther.

ARTICLE IV.

The fruit tree leaf roller has of late years come to be considered as of more than ordinary importance. It has spread to most parts of the United States, and in some cases has damaged from 20 to 90 per cent of the fruit. I have seen a few orchards in New York state in which nearly all the foliage was destroyed, and a few cases have been reported in which every green thing on the trees was eaten off. In the Pacific northwest it has not been serious. In the spring, as the buds are bursting, the eggs hatch. At once the young caterpillars migrate to the developing buds and begin to feed on the unfolding leaves. In a few days they begin to spin fine silken threads from leaf to leaf. A little later they roll up a single leaf or cluster of leaves, and here they feed for most of the time, although straying out occasionally to feed in the open. As soon as the young fruit is set they go from leaves to fruit, sometimes destroying it almost entirely.

There are three stages of development, the egg, the larvae and the moth. The natural enemies are the bluebird, robin, catbird, redwinged blackbird, oriole, king bird, phoebe and English sparrow.

Control is difficult on account of the fact that they are to a considerable extent resistant to poisons. The contact sprays are better. Take the black leaf 40 in the proportions of one to 400, or one quart of the black leaf to 100 gallons of water, and it will kill. Kerosene emulsion or crude oil emulsion, in the proportions of one gallon to 15 gallons of water, will prevent most of the eggs from hatching if used before the buds open.

### Fruit Tree Leaf Syneta.

This insect is not well known, and is hard to eradicate, because it deposits its eggs in the ground, and the larvae have been found as much as 14 inches below the surface.

When the blossoms open in the spring the adults are found feeding on the petals. Later they feed on the leaves.

The remedy is not well known. Some think that arsenate of lead, double strength, is the best; but my own opinion is that black leaf 40, one to 400, is better. However, I have not tried it for this particular pest; but am basing my belief upon my knowledge of its effects on other insects.

### Greedy Scale.

In general appearance this pest resembles the San Jose scale, and is controlled by the same treatment.

### Green Fruit Worm.

In the apples these caterpillars often make small openings, which do not heal smoothly, and form a rusty or corky area, often mistaken for apple scab. They also affect the peach, plum, quince, currant, wild cherry, box elder and rose.

They are controlled by the same method as codling moth, in so far is it is possible to reach them with the poison; but the contact sprays, such as tobacco or lime sulphur, will kill them.

### Gipsy Moth.

This pest is not believed to have reached the northwest in any considerable number, but in Europe and in the eastern states it is quite destructive. It may be killed with arsenate of lead or tobacco spray.

### Mediterranean Fruit Fly.

This pest is carried into distant localities in fruit that is infested. It was probably brought to this country from Brazil; is abundant in parts of South Africa, is known to affect the peach, pear, plum, apple, fig, orange, lemon and other important fruits.

The eggs are deposited in the fruit; they hatch in about three weeks, then leave the fruit and enter the ground, where they change to puparia and later to adults. The adults push up through the soil and are again ready for the work of puncturing the fruit and depositing more eggs.

The remedy is some kind of contact spray, such as lime-sulphur, tobacco, etc.

### Oyster Shell Scale.

The adult scales measure about one-eighth of an inch in length and are dark brown in color. The color in early spring is grayish. The eggs hatch about the time the petals of the apple blossoms are falling. They are a little harder to kill than the San Jose scale on account of the stronger protection, but lime-sulphur or coal-oil emulsion will hold them in check, and tobacco will destroy them.

### Periodical Cicada.

This pest is what is familiarly known as the "seventeen-year locust." In the southern part of the United States it appears every 13 years. During the long period of their development as nymphs they live in the ground, sucking the juices of the roots of the trees. After they leave the ground and assume the form of moth or beetle a lime sulphur or tobacco spray will kill them.

### The Advance Guard.

The Puddelton Railway company, hearing that trains were being run more slowly to save wear and tear on the rails, adopted the idea.

One day, in consequence, a stranger waited for the train at Little Puddleton for over three hours. At last he said to the porter-cum-stationmaster-cum-ticket collector:

"Isn't this beastly train ever coming, man?"

The official sighed and then stared down the track. Suddenly his face brightened as a fat terrier waddled into sight.

"Ah, yes, sir. It'll be getting very near now," he said cheerfully. "Here comes the engine driver's dog."

LILLY'S SEEDS For Fall Planting

BEST FOR THE WEST

To lose a crop or part of a crop these days of food shortage is a calamity. Do not take chances with inferior cheap seeds or seeds not acclimated.

We test our seeds not in a general way but specifically for climate, soil, germination and pedigree. LILLY'S tested seeds, northern grown, are good seeds—by which we mean clean, pure, strong seeds, capable of producing the maximum crop of superior quality.

# United States to Furnish 70 Per Cent of Allies' Food Requirements

There are three outstanding features of the general international position which are exerting now, or which will exert in the future, a considerable influence on the supply and quality of our flour and bread, says George Broomhall's Corn Trade News.

The most important of the three influences is, perhaps, the continued good promise of American supplies, and the statement that in the coming season the United States will furnish 70 per cent of the allies' food requirements, compared with 50 per cent in the season just finishing. This statement includes all foodstuffs, but naturally breadstuffs are a very important part of the whole, and it is easy to reckon that if such a large part of our foreign supply is coming from the United States, whose food administration plans to export the surplus in the form of flour, we must be prepared for large imports of flour also in the new season.

The second important point is the expected large size of our own crop, which, if present hopes are realized, will yield some 3,500,000 quarters more than the 1917 crop. Everyone will welcome this fine addition to our home-grown food supplies, but unless the wheat is well harvested and millers receive plenty of strong, dry foreign sorts for admixture, the milling of such a large additional quantity of home-grown wheat will present difficulties.

The third point to which we may allude is the large proportion of our present foreign wheat supply, which is being furnished by the southern hemisphere. It is quite natural that these "mid-season" crops should furnish our supplies at the time when North American shipments are at their lowest ebb, and although the need for these supplies will be less urgent in the coming months, yet we are sure all will hope that we shall continue to get a good share of these favorite qualities. There are large supplies available, and we hope the transport difficulties will not be found unsurmountable.

**America's Great Effort.**

A telegram from Washington to the American embassy at London states:

Through the efforts of the United States food administration, the American people have voluntarily saved food to such an extent that in the last year the United States was able to provide 50 per cent of the general food shortage of the allies. This was done, even after three years of war demands, with no food surplus in the country and with crops 7 per cent below normal.

During the present year, with bounteous crops, the United States expects to provide against 70 per cent of the allied food shortage. During the last year the United States has shipped to the allies 150,000,000 bushels of wheat. The normal meat consumption in the United States averages 167.8 pounds per capita, but this was reduced voluntarily by the efforts of the people to an average of 159.8 pounds during the last year. By means of public cooperation of the general consumers an aggregate saving of 840,000,000 pounds was thus produced.

In peace times the export of food products from the United States for the two months of March and April averaged 196,000,000 pounds. In these two months this year the exports were 754,000,000 pounds. The total export of pork in May of this year was 281,000,000 pounds, almost all of it in bacon, ham and lard products.

## Mount Vernon Fair.

An agricultural fair will be held in Mt. Vernon on the ballgrounds October 4 and 5. The boys' and girls' agricultural clubs of the county will enter exhibits for prizes in competition. Professor P. Holland of the Washington State college will give some addresses. The Anacortes Elks' band has been asked to furnish music. The Junior Red Cross and the Boy Scouts will give exhibitions and demonstrations of their work.

**Real Dreams.**

"Ah, Miss Ethel, may I not dream that one day you will be mine?" "You may, but it won't come true."—Boston Transcript.

# The Biggest Link in the Chain of Greater Crop Production!

# PEORIA DRILL

NOTE the Wonderful PEORIA DISC SHOE

***AN ACCIDENT***

W. J. Rummens, of Pomeroy, while seeding along the right-of-way, his team became frightened by a passing train and ran across the track, breaking his drill so badly that he had to buy a new one to continue the seeding of his field. The new drill he bought was a PEORIA. The result is shown in the picture on the right.

***THE RESULT***

With the new PEORIA Mr. Rummens started seeding where he had left off. When the grain was grown the point where he began with the PEORIA could be easily marked with the eye. The grain sowed by the PEORIA was four inches higher and at least fifteen to twenty per cent thicker.

## Uncle Sam says "increase your crops"—the Peoria will do it

JUST as the big tanks play a vital part in the big offensive in France, so the New PEORIA DRILL plays an equally important part in the big food offensive which is constantly being waged in the Northwest. By actually increasing your crop yield the New PEORIA makes every acre of ground on which it is employed do nobler duty for our country in this hour of need. It is the duty of every farmer to produce the biggest crops possible.

The New PEORIA makes every seed count. It opens the furrow, drops the seed at the very bottom. This means a bigger yield—more profits for you. No seed is wasted—none left exposed to the birds or wind. Because every seed is laid at the bottom of a packed seed bed and covered, the grain grows evenly—the whole field ripens uniformly—the grain grades better in the market.

At the price of grain today can you afford to waste seed? Do you know that your crop yield will be greater when sown by a New PEORIA? NOW is the time to investigate the New PEORIA—not after your crop has been put in.

## Disc Shoe the Greatest Drill Feature in Existence

Does a saving of 20 per cent in your seed interest you? That's exactly what the famous PEORIA DISC SHOE will do for you. It has been absolutely proven by farmers all over the Pacific Northwest that grain sown with the PEORIA DISC SHOE at the same time and on the same soil and under the same conditions yields from 2 to 3 bushels more grain per acre than grain sown by any other method. With the high prices grain is bringing can you afford NOT to investigate the wonderful PEORIA?

At Washington on February 3, 1915, President Wilson said: "There is a shortage of food in the world. It is necessary that our land should yield more per acre than it does now. It is necessary that there should not be a plow or spade idle in this country."

The PEORIA will make the words of our great President come true—it will make greater crops and thereby help our Government in this time of need.

*Written by Lewis B. Miller, Autho*

## Regarding this Story the Author Says:

THIS narrative has to do with that period of Texas during which the state was just emerging from its early pioneer period. All around the frontier from Red River to the Rio Grande spread miles of thinly settled country, into which only those who courted danger and were unafraid of hardships had ventured. Still farther out was the wide wilderness, with an occasional ranch and patrolled by the Texas rangers and the United States soldiers.

Such a country offered splendid possibilities for romance, the author points out, and we believe that every one who has read this stirring tale will fully agree with him, since he has woven a splendid lot of romantic charm into the chapters of the story.

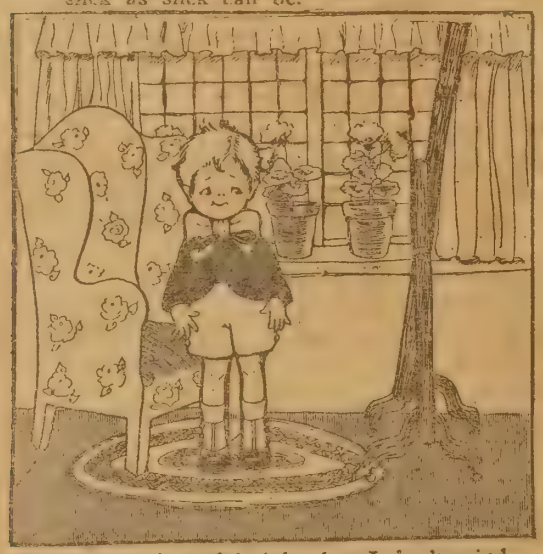
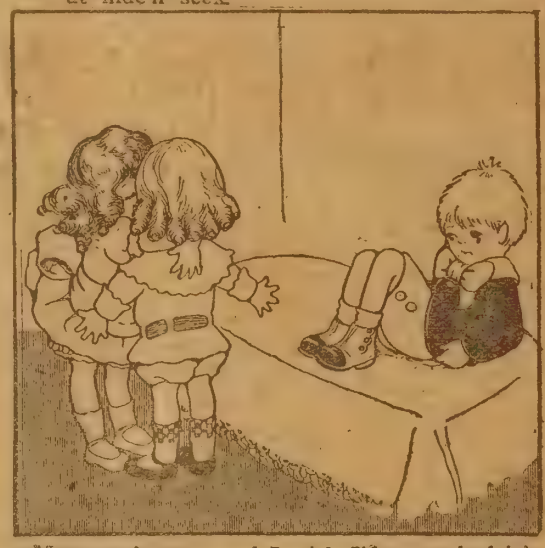
# "BUDDIE"

Verses by Margaret G. Hays



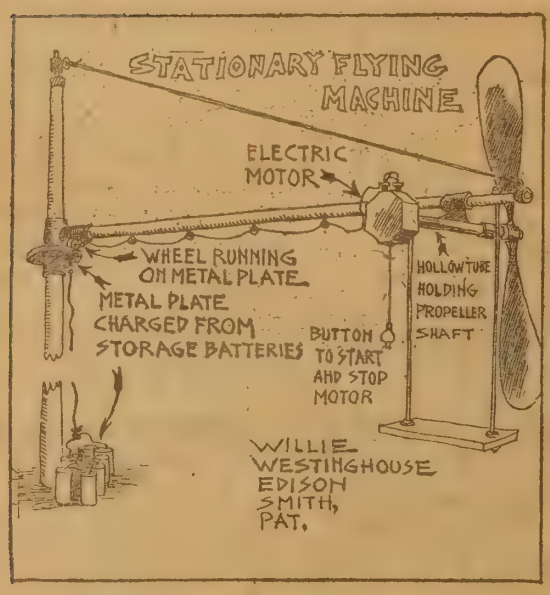
There's a new girl moved to our town, her name is Kitty Lee.
Her eyes are blue, her hair is brown—she's slick as slick can be.



I'm going to have a party—my birthday comes next week.
We'll have ice cream an' candy—we'll play at hide'n seek.

SHE'S coming, 'cause her mother wrote and said, "Miss Kitty Lee
Accepts with pleasure, and will come, on Thursday next at three."

My new suit's awful tight, but I don't mind, 'cause Kitty said
She liked boys' clothes to fit "Jus' so." (Wish my hair wasn't red.)



My party's over, and I wish I'd never had it! GEE!
SHE went and kissed old Percy Plunks and never noticed ME!

I've "had it out" with Percy Plunks—I pulled his PRETTY CURLS.
I'm goin' fishing now with Bill. AIN'T GOT NO USE FOR GIRLS.

# THE MINISTER TAKES A RIDE ON WILLIE'S AIRSHIP

DEAR TOMMY: This is a diagram of a new flying machine. I didn't put on enough power when I first tried it, so Papa had me connect up a whole barrel of batteries. Then it went so fast that the seat rods bent backward and the minister's coattails got tangled up in the propeller! Yours, etc., WILLIE.

ENCLOSED find check for $1 for which send me your publication. The enclosed clipping is worth this amount. I have taken almost all the stock and farm papers in the United States, and you are the first one I have seen that has struck the bull's eye on this subject.

Here is the editorial referred to above:

**INFLATED PRICES ARE DETRIMENTAL.**

All over this land there is the declaration of dairymen that they can not afford to produce milk and cream for what they can get for it. There is the accompanying declaration on the part of the consuming public that it can not afford to pay even the present high prices. And now there comes a report that a 6-month-old dairy bull calf sold for $106,000 in the middle west the other day.

Can the dairy industry pay that price for any dairy animal that ever lived? What is $30 hay and mill feed compared to prices like that for foundation breeding stock? What is $75-a-month labor, even inefficient labor, compared to that? What is the high cost of meals for the hired man and the family compared to $106,000 bull calves that are not ready for service for several months yet?

Strictly good stock is essential to dairy success. No dairyman can afford to keep an ordinary cow now, much less an ordinary bull. But when it costs $100,000, or $50,000, or even $10,000, to get a strictly good sire, or the makings of one, the dairyman that needs the good stock to keep from going bankrupt can not afford to invest. He must necessarily accept the ordinary animal. If any prospective sire on earth is worth $100,000 the sire that can be purchased for $1000 is not worth having. He is a scrub—just plain scrub. There is no sire good enough to be worth 100 times as much as the sire that is good enough for the successful dairy of these turbulent days of the industry.

The question forces itself upon us: Are not the professional breeders or dealers who manipulate things to be able to give or to receive these inflated prices for individual animals doing the great dairy industry an injustice? The answer likewise forces itself upon us: They are.

I, as well as many others, have quit taking many papers which go crazy talking such prices, and to discourage many stock readers. Come again on this subject if you want to succeed.

Lakeview, Ore. J. C. OLIVER.

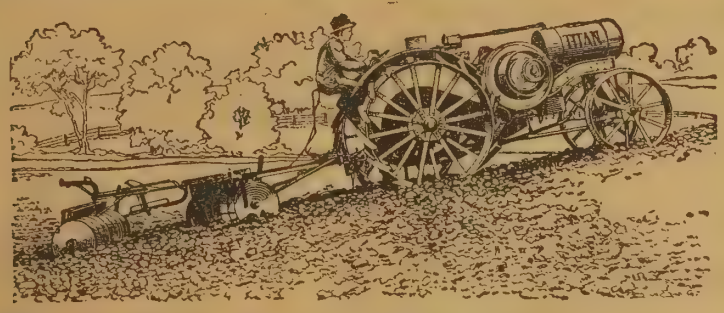
## Need Left Hand Mower.

Pea growers in the southern part of Spokane county are figuring on how they can acquire mowing machines that will cut left-handed. The necessity arises out of the inability to keep the horses off of the windrow of cut peas when making successive swaths on rough land. It is a difficult matter to cut peas successfully with the present machinery available for the purpose. Owing to the fact that the vines do not stand upright throughout the entire season, but are easily blown over or lean over of their own weight, it is necessary to cut in the direction against which they lean. For this reason it is impossible to take advantage of the lay of the land in cutting as is the case in other crops that stand upright, such as wheat and oats.

The growers are considering making a definite effort to have the manufacturers of pea cutting machines put out a left-handed mower to be used on hillsides where the right-handed mower requires the tramping out of considerable seed by the teams. One grower states that he has information from a manufacturing house that if an order for 25 left-handed mowers could be placed at an early date would be prepared and shipped for next season's cutting.

**The Initial Dig.**

"Has the excavating been begun for your new house yet?"



"Yes; I've just dug up $1000 advance money for the contractor."

**Another Source of Revenue.**

"The government ought to get after those peace predictors and tax them."

"Under what head?"

"Excess prophets."

# When You Buy a Tractor—

REMEMBER, it's the plows, disks, drills, binders, ensilage cutters, feed grinders, threshers and the like that do your farm work. The tractor is useful only as it furnishes cheap, dependable power for **all** the other machines.

That's why we say, if you need a tractor, you can't make a mistake in buying an **International kerosene tractor.**

We have had over 75 years' experience with farm machines. We know the kind of power they require—all of them. For over twelve years we have sold tractors that supplied that kind of power. We know from experience that the sizes and styles of tractors we sell today will work with the machines you depend upon for your success and prosperity. And—our tractors all operate successfully on cheap kerosene.

When you buy an International kerosene tractor you buy with it the benefit of our long farm machine experience and all the advantages of dealing with a service organization which brings a well stocked branch house or a live, wide-awake retail dealer within telephone call of you. It may surprise you to know that an International tractor, plus these advantages, which no one else can give, costs you less per year of active service than any other tractor sold in anywhere near the same numbers.

# Your Local HOME PAPER and Your State FARM PAPER

## at a Special Club Price

A special clubbing arrangement has been made with a number of newspapers throughout the northwest. We can now offer you a one-year subscription to your local home paper with a one-year subscription to your state family farm paper at a special rate for both.

**YOUR HOME PAPER** is of great value to you. It brings you all the local happenings and news of the affairs of your community and keeps you posted on the gossip of the social and commercial life. It brings you the news of the home boys at the front and prints many interesting letters from them,

**YOUR FARM PAPER** brings you each week interesting facts of the agricultural development of your state, all the farm news, features for every member of the family, including color comic pages, women's and children's pages Departments devoted to every phase of farming and farm life.

We can now send you your local home paper and your state family farm paper for one year each at the special clubbing rates as quoted below:

| | | | |
|---|---|---|---|
| The Daily Journal, Bellingham, Wash., and Washington Farmer. | $3.00 | Puyallup Valley Tribune Puyallup, Wash. and Washington Farmer. | $1.50 |

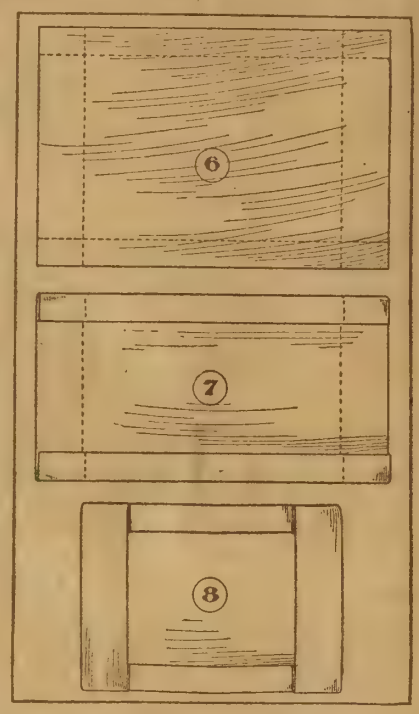
## School Book Jackets.

Protect the covers of your school books with paper or cloth jackets of one of the forms shown below, and they will look as fresh and new at the end of the school year as they do now. Then brother or sister, to whom they

are handed down later, will have no reason to complain about having to use "old books."

Heavy, glazed brown wrapping paper makes the best paper jackets. If you have none in the house, get a roll or two from your grocer. Place each book to be covered upon a piece



of the paper (Fig. 1), open it, and mark out around the edges of the covers; then measure off a margin of 2½ or 3 inches outside of this, and cut out the piece. Next, cut away corners A (Fig. 2), and cut and bend over tabs B. The dotted lines represent the edges of the covers, and with these as a guide it is a simple matter to snip away corners A with a pair of scissors. Tab B should be as wide as the book is thick, and the full depth of the margins, and should be located in the center of the top and bottom margins. Cut obliquely, as shown.

After folding over the tabs, place the opened book inside of the margins, and fold flaps C, then flaps D, over on to the covers (Fig. 3). Dob glue or mucilage upon the under side of the end of flaps D, and press down upon flaps C.

**Cloth jackets are more durable than** paper ones. Gray or brown cambric dress lining is the best material to use. Cut the cloth in exactly the same way as described for the paper jacket (Fig. 2), but instead of pasting the flaps together tack their corners with thread (Fig. 4). Then lace the thread back and forth from the upper flaps to the lower ones, as shown in Fig. 4, pulling the lacings taut.

If you are handy with a pen or brush, you might letter the title of

each book upon its jacket (Fig. 5).

The jacket shown in Fig. 8 must be made of heavy canvas, because it requires stiffness to hold its shape. The dotted lines in Fig. 6 indicate the margin to leave outside of the book covers, also the lines on which to fold. The top and bottom margins should be 1½ inches wide, the side margins 3 inches wide. Fold the top and bottom margins over, first, as indicated in Fig. 7, then the side margins; and tack the under folds of the ends of the side margins to the folds of the top and bottom margins. The result will be a pocket on each side edge of the jacket (Fig. 8). In putting the jacket upon the book, it is but necessary to slip the book covers into these pockets.

## France Superb

### Heroism Pictured by U. S. Banker

Otto H. Kahn, American financier who has been active in matters of war finance and who recently returned from a trip to Europe has the following to say concerning the spirit of France during the trying times of the present conflict:

"France is superb beyond words. I happened to be in Paris during the two weeks beginning May 27, when the Germans broke through at the Chemin des Dames and came within about 40 miles of Paris, when there was a long-range bombardment of Paris almost daily and air raids practically every night.

"Yet life and business in Paris went on as before; there was not the slightest evidence of excitement, let alone fear. A good many men sent their womenfolk and children away, other measures of prudence were taken to guard against contingencies, but there was absolute calm and sangfroid

"It was only the outburst of enthusiasm at the magnificent fighting and far-reaching success early last June of the Americans hurriedly thrown into the battle in the neighborhood of Chateau Thierry which showed how great had been the strain, how tense the nerves underneath the outer calm.

"It is a soul-stirring story—the story of that relatively small American force rushing forward at a very critical moment and turning the tide by throwing itself upon the enemy with irresistivle dash and bravery. When the full account of the war comes to be written it will, I believe, be found that that action, in its psychological and strategic consequences, was among its determining events.

"What the men—and the women, too—of France have done of heroism, and resolutely and uncomplainingly borne of sacrifice these last four years, forms one of the very noblest chapters in the world's history. The entire civilized world owes a debt to France which it can never repay.

"She has, indeed, become the sacred soil of humanity."

# SECRETS OF HEALTH AND HAPPINESS

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (Johns Hopkins University).

## Eat Well but Patriotically to Ward Off Indigestion

Dr. Hirshberg.

The blessed dinner hour may be accursed, if you eat not wisely but too well. To clog the hungry edge of appetite with pickles and peppers and all sorts of sauce and condiments that stir the stomach without nourishment, is to arouse a train of evil.

So many grown-ups go through life with a coated tongue or a bitter taste in their mouths that you might think the young mothers with respect to infant feeding of today would give no ear to the advice of some ancient yet mistaken grandmothers and aunts. Still neighbors and elderly women persist in thrusting their ancient, outworn methods upon their daughter's babies. If those old-time ways had been abolished and the infants of former days nursed at the breast, regularly by the clock, with no nipples, no pacifiers, no bone rings, no teething rings and no other abominations there would be fewer digestive ills in the grown-ups of today.

Another source of alimentary disorders is the lazy habit of bolting food at one gulp, with little or no mastication. To prevent many of the stomach troubles too hastily blamed upon "improper food" you should give your mouth and throat muscles the physical training of chewing your morsels until they're as soft and as sweet as molasses.

**For Health and Country.**

"Doctor," complains the average over-weight business man, "I belch up my food and feel my stomach overloaded whenever I eat." A glance at many such men suffices to prove that they eat not only too much, too often, but they dine at restaurants and hotels upon "the fat of the land," and consider sacrifices, the war, Mr. Hoover and doctors of preventive medicines pests and nuisances.

So selfish, self-satisfied and gluttonously comfortable are large numbers of men above 25 that they gulp, swallow, devour, bolt and gormandize three repasts a day, while their wives, sisters, mothers and daughters skimp and economize their fare. The upshot is that the feminine members of a family some times suffer less gastric evils. Their solid fare and meagre dishes ward off the digestive mischief, which downtown browsing in lunch-rooms and cafes produces.

You personally must help to win this war, as well as to achieve your own physical salvation by proper and patriotic attention to your food. Head off the Hun and the health disturber by eating no wheat, no sugar, no mutton, no chicken, no beef, no pork and no porterhouse or tenderloin on Sundays, holidays, Mondays, Wednesdays and Fridays.

In lieu of such rich substance as your comfortable living, your extravagant habits and modern civilization have hitherto allowed you, hereafter for the duration of the war ration your epicurean stomach upon the following provisions: Cornmeal, hominy, barley, rice, oatmeal, hard tack, hoe cake, pilot bread, ragout, bran bread, cottage puddings, hashes, stews, ship biscuits, cornstarch, watercress, succotash, clams, berries, apples, bananas, oranges, malts, tea and the rest of a potluck instead of your usual tri-daily blowout.

Good digestion doesn't always wait on appetite. Hunger is appeased and gastritis and other stomach inflammations are side-tracked long before that artificial and pampered habit, the appetite!

Finally, sustenance and nutrition are satisfied when hunger is allayed. To go beyond this is to invite trouble.

# Sidelights

**Takes the Cash, Too.**

"Mrs. Bing's new baby is just in the fashion."

"How do you mean?"

"It is such a red cross affair."

**The Line Drawn.**

Pat was celebrating and he had imbibed too freely. He punched another man in the face and got haled up before the court. The judge told him he was charged with striking a man. "Shure, yer honor, can't a man have a bit of fun?" asked Pat.

"Yes," said the judge, "but your right to have fun ended where this man's nose began."—Boston Transcript.

**Heavenly Visitants.**

Kirsty MacDonald, who lived in a remote highland parish, had a visit from her Edinburg nieces, who were to spend a week or two with the old lady. So she determined to show them off on Sunday at the village kirk of Lochaber. The young ladies wore costumes of the purest snowy white.

At one point of his sermon the minister, in speaking of the angels of heaven, said: "And who are they in white array?"

To the consternation of the congregation Kirsty said: "It's ma two nieces, sir, from Edinburgh."—Exchange.

**Practice Makes Perfect.**

A young Burnley weaver, according to an English paper, was taking her little baby to church to be christened. Its father had been in the trenches for three months, and it was impossible for him to get home for the ceremony.

The baby smiled up beautifully into the minister's face.

"Well, madam," said the minister, "I must congratulate you on your little one's behavior. I have christened 2000 babies, but I never christened one that behaved as well as yours."

The young mother smiled demurely, and said:

"His grandad and me hev' bin practicin' wi' him for a week wi' a bucket of water."—Current Opinion.

**Spoilt the Play.**

One of the favorite stories of that popular actress, Miss Mova Mannering, concerns a certain melodrama she once played in.

The strongest part was that of the villain, and the actor who took the part gave quite the best performance.

Half way through the second act the heroine, after having been left starving on the embankment with a bunch of children for several weeks, and generally having been well "put through it," finally got tired of this sort of treatment, and shot the villain stone dead.

"What have I done!" she cried, gazing up at the gallery.

"Shot the best blooming actor in the show, miss," came the prompt reply.—Pearson's Weekly.

**Try This.**

She was waiting for him.

Gathering her brows like gathering storm, nursing her wrath to keep it warm, and when he entered the room she began:

"This is a nice time of night——"

"I—er—know I'm late," he hastily interrupted, "but I couldn't help it, my dear. Club had—er—big discussion on female beauty."

"And what had you to do with that?" demanded the fretful wife.

"More'n any one there. I was the one—er—who had the most beautiful wife, an'—er—course, the best authority on female beauty, an'——"

"Why don't you take off your overcoat, Henry? Let me get your slippers for you. It's awful cold outside. I think you must be half frozen."

Half a minute later Henry was safely ensconced in his easy chair with his wife at his feet putting his slippers on.—Philadelphia Inquirer.

# Two Weeks in the Harvest Field

## *During Which Great Ideas Were Born, Among Them Being the Need of Electric Starters for Mule Teams*

By M. S. Shrock, County Agent, Umatilla County, Oregon.

FEELING it my patriotic duty to forego my vacation and spend, instead, two weeks in the harvest field helping to save Umatilla county's wheat crop, I cast about early in the season for something to do. I had served my apprenticeship with a threshing machine crew some years ago, chiefly as a traction engineer with what Umatilla county farmers call a stationary outfit. From my recollection of it, it was far from stationary when we used to move eight or ten miles on a dark night over shaking bridges. But that is another story.

M. S. Shrock.

On a combine there seemed only one job at which I could exercise my talent and that was sewing sacks. I had sewed sacks a half day some 20 years ago and I was sure that I could qualify again. Judge J. W. Maloney needed a sack sewer and I accepted the job at whatever salary he cared to pay. It was the fun that I was after and the service I wished to perform. The shekels were an unimportant part of the program.

Weeks of anticipation rolled by and finally the time came. Just then a rainy spell delayed harvesting for five days, during which time Judge Maloney decided that he would "bulk" his grain and he put the crew to work making huge wagon boxes suitable for bulk grain.

Driving four mules to a grain wagon was the only job left. Hauling bulk grain is a snap. You "spot" your wagon at a given point 20 feet from the standing grain. There the combine crew "picks it up" and you hitch onto a loaded one which they have just "dropped." At the elevator the grain is dumped out with almost no effort. So the only effort on the driver's part is the agony of watching the mules do the work.

What I didn't know about mules would fill a library, having never driven one in my life. When I arrived on the scene on a damp morning the other three "skinners" had picked their teams. Having no ill feeling toward any one I should like very much to give them credit for leaving the best team for me since I was the only greenhorn on the job. I will let the readers judge from what took place the next hour and a half as to whether they are entitled to this credit.

My four mules were of the same breed and almost of the same color, but there the similarity ended abruptly. Nellie was a good wheel mule. She had good size and good judgment, would hurt no one, not even herself. She is like a lot of people I know who will never set the world afire but they can be relied upon to be on hand to put a lot of it out once it gets to burning good. Turk, her mate, was a high voltage, cantankerous sort of a critter, with a snorty disposition. The Swede roust-about assured me that he would not kick. My knowledge of Swedes being no greater than my knowledge of mules, I insisted that he demonstrate Turk's non-kickable nature by currying one side, which he did to my satisfaction. With a shaky voice and a jerky heart I succeeded in currying the other side and harnessed him.

For leaders they had left me a nice little span of colts, three and four years old, which the man afterward admitted had never been worked in the lead. The only thing that can be said against them is that they were densely ignorant. It was some relief to know that I was not the only ignorant one around.

When it came to my turn to take out a wagon I managed to get them all four out of the stable and as far as the wagon shed. When it came to hitching them to the wagon I found that four to one was too big a majority in their favor so I tied the leaders to the oil wagon and proceeded with two. In two jumps Turk had Nellie and the wagon and me out of the barnyard and across the road into the tall stubble field. I had foreseen the necessity of turning the wagon around, but Turk thought of it first; so round and round we went. If the O.-W. R. & N. company ever find it necessary to turn a helper engine around up in the Blue mountains where they have no turntable, I would recommend Turk for the job. He turned that wagon once and a half around in 25 feet of space. He believed in dividing up his efforts so he stayed on one side of the tongue for a few minutes and then jumped to the other. I finally got the wagon "spotted" and since there was no loaded wagon ready I put them in the barn preparatory for an early start after lunch. My! how relieved I felt when I finally got them all four back into their stalls and fed.

During the noon hour I held a conference with Judge Maloney and we decided that the leaders were superfluous. If Turk's pent-up energy could be controlled and timed to meet with the powerful Nellie's reserve force they would take any kind of a load to the station without help. I also saw the absolute need of giving my undivided attention to Turk whenever his moods possessed him and I could not possibly be bothered with a pair of infants whose sole virtue was ignorance.

With the judge's help I got the two hitched to a loaded wagon. With shaky nerves, a jumping heart and the sweat streaming from every pore I climbed up into the tallest wagon box I had ever seen. When I arrived at those dizzy heights performance on the ground had already commenced. Turk had started like a battering ram, his timing gear being all out of accord with Nellie and the rest of the world. In less than a jiffy the wagon tongue was broken and the mules stood 90 degrees to starboard.

Wagon tongues should never have been invented. They serve no useful purpose. They are a survival in culture. Much better steering apparatus has been devised and I asked that the steering apparatus be taken from my roadster and placed on the wagon, as I was determined to take that load to the elevator. But the judge thought otherwise and so he and the Swede assisted me in attempting to hitch them to another loaded wagon that had appeared from somewhere while our excitement was on.

With the Swede added to our force we were now in the majority, but Turk's success had made him invincible and sometimes almost invisible. The judge said my light colored shirt was the cause of Turk's fear. We will never know, for although I took it off, the frenzy Turk had worked himself into was untamable. Had the big red wagon boxes been properly camouflaged we might have succeeded; but it was now too late. Our combined efforts were insufficient to get him even hitched. Every attempt to move him backward or forward resulted in his going in the opposite direction.

While trying to drive the team up to the wagon Turk would suddenly cut loose on high gear and take Nellie and me through the stubble at an alarming rate. Before I had time to shift gears he was full length of the lines away and still going. I plowed acres of ground with my heels, then becoming over-balanced I must have skidded several yards on my elbows and nose as is evidenced by liberal abrasions.

The judge finally decided that a change of scenery would steady my nerves and perhaps Turk's, too. I therefore put the mules away and accepted a boy's job with the combine crew for the rest of the day.

The afternoon on the combine and the Sunday following gave me time to study Turk from a distance and to analyze his all too hasty actions. He is a good mule physically, but mentally he needs a balance wheel. I also received oceans of unsolicited advice from members of the crew on how to handle mules in general and Turk in particular. A buck strap to hold him back, they said, was a necessity in everyday life with Turk. I had noticed an extra strap with two snaps at one end and one at the other. I supposed it was the forward end of a jerk line and that Turk was so well broken that they had used him for a jerk line leader. What an insult this would have been to Turk had he known my thoughts.

Turk, from the most tangible history of the brute, is a Missouri-bred mule, immigrating to Oregon four year ago. Just why he left his happy home back there is known to no one on the Missouri ranch. I have known men to come west after taking great pains to keep

**Mules of the latest model but still lacking in some of the modern appliances that add pleasure to wheat wagon travel.**

secret their departure back there, and Turk may be just human enough to keep his early life a mystery.

Sunday is overhauling day on a wheat ranch during harvest time, and Turk was to be overhauled, too. It was generally agreed that he was to be worked and re-broke by the crew. When I returned on Monday morning I expected to find a perfectly docile mule in a repentant mood. To my surprise I found Turk turned out with the yearling colts and a 1600-pound bay mare of Belgian extraction in his stable. Later in the day I saw a huge concrete block with a log chain attached out in the stubble field that looked mighty suspicious. Indications of a terrific battle were seen all about. It is not good etiquette to be too inquisitive with a harvest crew so I added this battle scene to Turk's absence from his stall and resolved that victory over Turk must have been far from satisfactory. No one attempted to drive him during the rest of the harvest and it seemed of no interest to any one to talk about working him.

I was advised that since the colts were not really broke leaders I might use them as wheelers until they and I became educated. Success now crowned my efforts to hitch four at a time. I succeeded because Nellie and the big bay mare had sense enough to stay put. When once in place their feet hugged the ground like they had taken root and grown fast. This gave me time to place the colts, and the time seemed to be the chief factor with them. There is absolutely nothing harmful about these innocent-looking colts. Such a thing as balking, kicking, or running away, was beneath their dignity. They were lovable little creatures, but steeped in stupidity and ignorance. Slowly, inch at a time, I coaxed them up to the wagon tongue, only to find that as soon as my back was turned, they had slid a yard or two away. The sun was beating down at a terrible rate by the time I got them hitched. Very cautiously I climbed up the transport-like grain box and gathered up the lines. Nothing exciting took place for a moment or two. I yelled at Nellie, and everybody but Nellie moved. Nellie's brain hangs fire something awful.

No sooner had the bay mare learned that the wagon was loaded than she turned crosswise in the harness, her head across Nellie's back, her eyes glaring wildly at nothing in particular, one ear pointed at the north pole and the other down toward Cayuse station. "Cold shouldered," that's all. I understood horse nature and was not at all disturbed by her actions. If a mule had acted like that I would have died of heart failure. Slowly and cautiously I straightened her out and refastened her traces. I dropped a little dry dirt in her ear for her to think about, and jabbed a nail into Nellie's ribs as I walked past her.

The thing that really saved my reputation as a mule skinner happened after I had again mounted the wagon. By the time I got fairly started yelling at Nellie in approved mule skinner's language, and long before Nellie awoke from her lethargy, those two slender-legged colts shoved their tiny little feet into the soft dirt, gave a grunt or two and actually started the load. Once started, all hands took hold, and the day passed without further adventure. The old mare refused to tighten a tug until the load was in motion, but once it was started she would fly into the traces like a belated harvest hand flies into potatoes and gravy at the grub wagon.

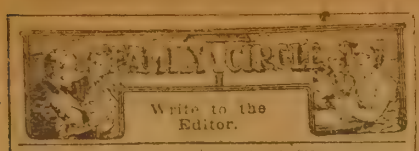
While the team was now workable, all was not satisfactory. Nellie was a born wheeler, but will never make a leader. Her strength is unsurpassed by any animal of her size, but to get her into action one must be in close communication with her. She must be kept close to the ammunition box which every mule skinner has at his side. How should I rearrange the team? The big mare was as fast as Nellie was slow. She might tutor one of the colts into leadership. Then again, to separate the colts might break their tender hearts. Most of the night was spent worrying over the various changes that might be made.

As the first rays of the morning sun came over the Blue mountains into the open shed where I had made my bunk, I climbed out with my mind made up. Slipping into only such clothes as the law makes me wear, I searched the shop for a stay chain for Nellie. With her anchored where I could reach her, I had no fear of getting stuck. The colts were put in the lead, but it was an awful job to keep them there. At sight of the slightest object they would turn around and give such an appealing look of dismay that I had to get down and coax them into their places. As wheelers they were willing to start long before I was ready. When given leadership, like human beings, they became lazy.

A very unfortunate thing about this team was their names. The 3-year-old was named Belle and the big mare Dell. When yelling at Belle or Nell, old Dell would try to monopolize all the going, and my tender hands soon became blistered gripping the lines. Horses and mules recognize only the vowel sounds, there being no consonants in their language. Belle, Dell and Nell were therefore all the same to them. Nell could not be communicated with by other means, so Belle had to have her name changed.

When they christen a ship they break a bottle of wine over her bow or stern or other part of her anatomy. To christen a horse or mule you "break" a lot of rocks at her stern simultaneously as you yell her new name. In a remarkably short time I had Belle digging into the collar at the sound of the name Fanny. The 4-year-old was named Crop, due to a cropped ear. Dell needed no name, for she was always there when she wanted to be, and when she refused, it was just as well not to remind her of it.

Fanny (or Baby, as I would lovingly call her in the stable) was awfully curious. She wanted to see everything, and I noticed nothing that she overlooked Nor was it possible for her looking apparatus and her legs to work at the same time. She simply had to stop and look at every squirrel hole, rock, piece of paper, bird or beast. Crop was less curious than Fanny, but far more persistent when once her gazing mood possessed her. Until she had satisfied herself in her own way as to the object of her fear, no amount of persuasion, either verbal or with rocks, would move her. She had decidedly more of the eternal feminine about her.



In approaching the wagon scale for the first time that morning a near-calamity resulted. The day before the leaders had virtually dragged the colts across. Now, with the colts in the lead, it was different. To get them up the narrow grade into the building where the automatic dump was located was worse still. With a man from the warehouse on either side of the wagon, well armed with rocks, the three of us laid down a perfect barrage just back of the leaders' ears, which brought results just as soon as we found their range.

After a few days of breaking-in, the weather became much cooler. This may have been more fancied than real, for there were so many factors that helped to raise the temperature the first day or two.

Observing the other mule teams as well as my own, I find there is great need of an electric starter that will set four or more mules off simultaneously, instead of the which-and-t'other fashion so common. There is, in fact, need for several attachments that will improve mules.

Nothing extraordinary happened during the remainder of my two weeks' vacation, except that the team improved with age and use. They actually learned to pull together and start the biggest kind of loads. It was with deep regret and a choking voice that I bade them farewell on that last evening.

I think I enjoyed the two weeks more than any vacation I ever took. As an appetizer it can't be beat. Judge Maloney supplied an abundance of wholesome grub and Mrs. Jacobs is a fine cook. I think I ate more those two weeks than any other two weeks of my life. I had no trouble getting the regular vacation tan. I returned with about the usual number of scars and bruises. For scenery we had on three sides the finest wheat-farming section in the world, with combines in operation on every farm. On the southeast are the Blue mountains, just where they would be if you were out there on a regular vacation, and just as pretty. For beautiful sunsets the harvest fields can't be beat. I have seen sunsets all along the Pacific ocean, but none prettier than those from the Maloney ranch. I am going to spend my vacation next year the same way if any one will have me. I hope Turk will be broke by that time.

Editorial Contributor.

## Macaroni and Other Recipes.

Dear Family Circle: Most French women are good cooks and from one I learned how to make the nicest mustard, which, unlike most home prepared, does not get hard. It requires one-fourth pound can mustard, one-half cup white vinegar, one level teaspoon salt, a good handful of mixed spices, such as we use for pickles, a few pieces of fresh celery, or celery salt will do, and two tablespoons of olive oil. To make: Mix the mustard, sugar and salt together carefully, leaving no lumps. Put the mixed spices into the vinegar with the pieces of celery, and let simmer slowly for 15 minutes, covered. While very hot strain over the mustard mixture and stir smooth. The next morning stir in the two tablespoons of olive oil. This makes the best mustard I ever tasted and will keep moist till used, if kept in a jelly glass or some glass with a close cover.

Another thing I learned from this same lady was a new way to cook macaroni. If you are cooking a chicken, especially an old one, after it is done take out one-half cup of the liquid and set it away. The next day cook your macaroni till tender in salted water as usual, drain off the water and pour over the macaroni the chicken stock or liquid with any scraps of left-over chicken cut from the bones. Let the macaroni simmer in the liquid with a cover on it for a while, then remove the cover and allow all the liquid to absorb. It is delicious.

We are not eating much cake these days, but as it is almost time for school lunches again a good war cake recipe will not be out of place. I made this war cake the other day and it is fine: Two cups of sugar, brown if you can get it, two cups raisins, two cups hot water, one teaspoon salt, one teaspoon each of ground cloves and cinnamon, two tablespoons rounding of lard. Boil the above all together for five minutes after it begins to bubble; be careful not to burn it. Take from the stove and let stand until cold. Then add one teaspoon soda dissolved in a teaspoon of warm, not hot, water, and add three cups of war flour. This will make two loaves and should be baked slowly for 45 minutes. This cake put away in a stone jar will keep moist for some time, but I imagine these harvest days, cake will not get a chance to keep very long.

I learned a new way to make pancakes, and they are as good as I ever ate and cost the least. Use one-half fine corn meal or corn flour and one-half barley flour with sour milk or butter milk. Make them a little stiffer than when you use white flour and a little more soda always should be used when barley flour is used. For amount one must be guided by the number in the family. One cup of sour milk, a little salt, and one scant level teaspoon of soda and the mixture of corn meal and flour enough so they drop quite thick off the spoon; if too thick, thin with a little sweet milk. You can tell by the way they fry. They are fine; try them.

A. W. B.

### Vegetable Soup.

Soak one-fourth pound lima beans and one pound rice for 12 hours. Cook one-half pound pearl barley for two hours. Blanch one pound carrots, one pound onions, one medium-sized potato, and one red pepper for three minutes and cold dip. Prepare the vegetables and cut into small cubes. Mix thoroughly lima beans, rice, barley, carrots, onions, potatoes, red pepper. Fill glass jars or the enameled tin cans three-fourths full of the above mixture of vegetables and cereals. Make a smooth paste of one-half pound of wheat flour and blend in five gallons of soup stock. Boil three minutes and add four ounces salt. Pour this stock over vegetables and fill cans. Partially seal glass jars. (Cap and tip tin cans.) Sterilize 90 minutes if using the hot water bath outfit; 75 minutes if using a water-seal or a five-pound steam pressure outfit; 45 minutes if using a pressure cooker outfit.

### Cream of Pea Soup.

Soak eight pounds of dry peas over night. Cook until soft. Mash fine. Add the mashed peas to five and one-half gallons of soup stock and bring to boil. Pass the boiling liquid through a fine sieve. Make a smooth paste of one-half pound flour and add paste, 10 ounces of sugar, and three ounces of salt to the soup stock. Cook until soup begins to thicken. Pack in glass jars or tin cans. Partially seal glass jars. (Cap and tip tin cans.) Process 90 minutes if using a hot water bath outfit; 80 minutes if using a water-seal outfit; 70 minutes if using a five-pound steam pressure outfit; 45 minutes if using a pressure cooker outfit.

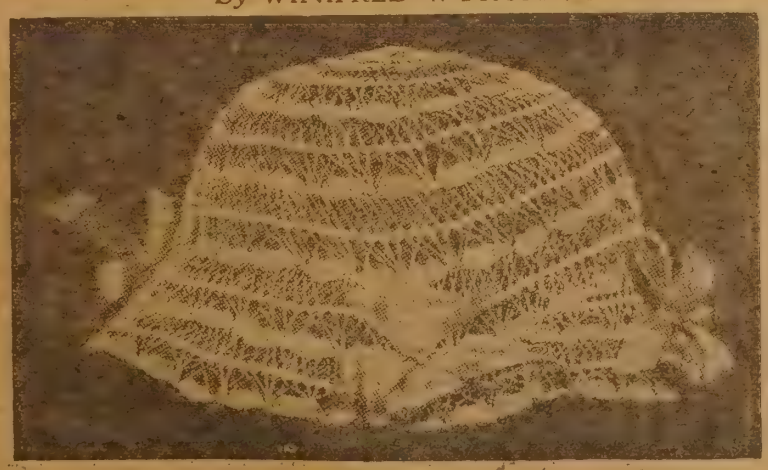
### Cucumber Pickles.

(Lazy housewife method—Very simple)

One gallon vinegar, one cup sugar, one cup salt, one cup mustard, four quarts small cucumbers.

Method: Mix salt, sugar and mustard together; then add the vinegar slowly, stirring well. Wash and look over the cucumbers, and put in a stone jar. Pour over the pickle brine. Let stand weighed down with a plate and stone to keep pickles under the brine or put in glass jars. Pour vinegar over and seal. The brine is not heated and these pickles are ready for use in a week's time.

### String Beans and Corn.



One and one-half cups string beans cut in small pieces, one and one-half cups corn, grated; cook until tender. Add one and one-half cups sugar, one and one-half lemons, cut in thin slices. Let simmer without stirring until mixture is thick. Pack in hot jars and sterilize.

### Green Tomato Marmalade.

Two pounds green tomatoes cut in cubes, two teaspoonfuls bruised ginger root in cheesecloth bags, two cups sugar, two lemons, cut in thin slices. Put in steel kettle and cook slowly without stirring until ingredients are tender and mixture is thick. Pack in hot jars and sterilize.

## Child's Maltese Lace Hat

By WINIFRED WORTH

Novel shaped hats always look cute on the little girls. You can make this over any shape you wish.

Cover any desirable shape with a colored silk, and crochet lace on as follows:

Take up 3 L. with sl. st., 8 dc. in next loop work up all the braid 1 ch. in 1 L. 1 ch. with fine thread at top.

Sew braid at edge and continue to top. Trim as desired.

# SUBSCRIPTION PLAN SAVES YOU MONEY

**RATES**

For Subscription to The Washington Farmer

**25c** For 1 Year

**50c** For 3 Years

**$1** For 5 Years

We are holding open our direct-to-the-reader subscription plan during the summer months. It means a real saving at a time when most things cost more.

The central idea of the plan is to deal direct with our subscribers in securing and renewing subscriptions, thus eliminating the middleman and giving our friends the benefit of every penny saved.

It is gratifying to know that the new cooperative system has had the heartiest kind of backing; and that it has been put on a successful basis. We could not have got along without the assistance of well wishers who have told their neighbors about the plan and passed along copies of the paper.

There are many things of value which your state farm paper can bring you and your neighbors during the summer months. The various departments will be full of helpful hints, instructive articles and entertainment. Send in the orders!

# Patterns

2577—Lady's dress. Cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Size 38 requires 5 1-2 yards of 36-inch material. The skirt measures about 2 1-8 yards at the foot. Price, 10 cents.

2559—Girl's dress. Cut in 4 sizes: 8, 10, 12 and 14 years. Size 10 requires 5 yards of 36-inch material. Price, 10 cents.

2573—Girl's dress. Cut in 4 sizes: 4, 6, 8 and 10 years. Size 8 requires 3 3-4 yards of 36-inch material. Price, 10 cents.

2184-2187—A charming three-piece suit. Coat-waist 2184 cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 2 3-8 yards of 36-inch material for the waist, and 3 3-8 yards for the blouse, for a 36-inch size. Skirt 2187 cut in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure, and requires 3 3-8 yards of 36-inch material for a 24-inch size. The skirt measures about 2 1-2 yards at the foot. Two separate patterns, 10 cents for each pattern.

1592—Dress or apron with bloomers for girls. Cut in 5 sizes: 2, 4, 6, 8 and 10 years. It requires for a 6-year size 3 1-4 yards of 27-inch material, with 2 1-4 yards for the bloomers. Price, 10 cents.

1735—Men's negligee or outing shirt. Cut in 7 sizes: 38, 40, 42, 44, 46, 48 and 50 inches breast measure—neck measures to correspond in sizes 15, 15 1-2, 16, 16 1-2, 17, 17 1-2 and 18. It requires 3 1-2 yards of 36-inch material for a 17-inch neck size. Price, 10 cents.

2561—Child's coat. Cut in 5 sizes: 1, 2, 3, 4 and 5 years. Size 4 will require 3 yards of 40-inch material. Price, 10 cents.

9662—Lady's combination. Chemise and drawers.: Cut in 3 sizes: Small, medium and large. It requires 2 3-4 yards of 36-inch material for a medium size. Price, 10 cents.

2402—Girl's dress. Cut in 4 sizes: 8, 10, 12 and 14 years. Size 12 requires 3 3-4 yards of 44-inch material. Price, 10 cents.

2569—Lady's house dress. Cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires for a 38-inch size, 6 1-8 yards of 36-inch material. The dress measures about 2 1-2 yards at the foot. Price, 10 cents.

2580—Girl's slip. Cut in 6 sizes: 4, 6, 8, 10, 12 and 14 years. Size 10 will require 2 1-2 yards of 36-inch material. Price, 10 cents.

2387—Lady's apron. Cut in 7 sizes. 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 requires 6 1-2 yards of 36-inch material. Price, 10 cents.

## Water System for Home.

To the Editor: I have had running water in my house for years, the first one in our vicinity. Now practically every one has at least cold water running in a modern sink, while the rest have hot and cold water, with a modern bathtub, several even with water closet. Myself and others are directly connected with a creek, some with a large ram and tank, while one, having a well, pumps his water twice a day into two 60-gallon barrels placed just high enough to flow through the hot water tank connected with the stove to the kitchen sink. This same one finds it so convenient he intends to install a bathtub and later a gas pump. It seems to me that if any one has any gumption at all there is no reason for not having running water at least on the first floor.

A. F. COPELAND.

Olalla, Wash.

# Good Sales of Hogs and Turkeys

Mr. E. A. Kruse of Roseburg, Ore., who not only breeds fine, big type Poland China hogs and Mammoth Bronze turkeys, but is establishing an enviable reputation among those who purchase from him, in a letter written us July 6, says:

**I make practically all of my sales from my advertising in your papers. I enclose ad offering another boar and will run a turkey ad later.**

Any breeder of live stock or poultry will find our advertising columns a mighty good place to offer salable stock, as we reach tens of thousands of possible buyers every week in the year.

**Busy Licking the Kaiser.**

Dear Aunt Nellie: May I try for a prize, too? My subject is on what I want to be. I want to be a school-teacher and teach little children. I think a teacher has easy work, and there is also fun in it. What are all the cousins doing? You, too, Aunt Nellie? All of us are working for our country, I suppose. I am busy trying to help win the war. I work in the garden or orchard every morning. This is my second letter to the Corner. I like to read the letters real well. Our school was out May 24, and on Saturday, May 25, we had a picnic and a big time. I send you a piece of poetry which I wrote myself at school. That kaiser who wishes to beat, Will he? Will he knock Uncle Sam off his feet? Can it we bear—that we can not. Our produce we must not let rot. Will Uncle Sam the war win? We hope, hope all day within. Woodrow Wilson, who sends to France all of the boys. We shall now receive no more German toys. We sing "America," that song; they sing it all day long. I liked Vesta Anderson's letter best. My hair is light brown, just the same as hers. I am four feet eight inches tall.—Vesta Goldie Short, Molson, Wash.

**A Colt Named Nawasa.**

Dear Aunt Nellie: We have four horses. Their names are Nellie, Bessie, Dixie and Don, and a colt named Nawasa. The colt is nine months old. We had a colt before that had the same name, but it died of lockjaw. The colt I mean to ride. The mother of the two colts is Nellie and they had the same father. I got the name Nawasa from the name of an Indian girl I read of in a book. I do not go to school because I have been sick. I am nine years old. I was 10 on June 18. We have 13 white baby chicks and five black baby chicks. My father owns a farm, but we do not live on it. I mean to buy two weanling sows this summer. This is the first time I have writen.—Herman Abeling, Goldendale, Wash.

**On the Banks of the Columbia.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I have been reading the children's letters. May I join? I live on a 26-acre farm by the Columbia river. When there is high water it flows into our fence. I am packing strawberries. I am 13 years old and in the seventh grade. I have light brown hair and blue eyes. I am four feet 10 inches high. My birthday is April 25. I have one brother and six sisters. We have three horses, three cows, one calf, five rabbits, and a dog named Arrow. I belong to the Red Cross. I have three thrift stamps and am going to get more. —Louise Kramer, R. F. D. 1, Kennewick, Wash.

**Visiting Cousin Eva.**

Dear Aunt Nellie: I am a girl 10 years of age. I have light hair and blue eyes. I thought for a while I might have to wear glasses. I am very glad I won't have to. This is the first time I have written to the Children's Corner. I am visiting my cousin, Eva Hickman, who lives four miles out of Farmington. My real home is in Moscow, Idaho. I was born, December 14. Have I a twin? If I have I would like to hear from her. I helped my mother knit a sweater for our soldiers. I joined the Junior Red Cross.—Bernadine Hatfield, Farmington, Wash.

**Letha Is in the Second Grade.**

Dear Aunt Nellie: This is my first letter to the Corner. I live on a farm. I am 7 years old. My birthday is December 4. I have one sister. Her name is Lydia. I am going to school and am in the second grade. We have six horses, two cows, one calf, four hogs, seven lambs, three puppies, one old mama cat and five little kittens, 300 chickens and two rabbits.—Letha Waldrop, Route 1, Touchet, Wash.

**Esther Visits Us Again.**

Dear Aunt Nellie: This is the third time I have written to the Children's Corner. I am in the sixth grade at school. My two sisters have passed and my brother has passed. My oldest sister is taking music lessons. She knows how to run the car. My teacher's name is Miss Codville. My birthday is January 12.—Esther Hergert, Box 48, Penawawa, Wash.

**Goes After the Cows Every Night.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 9 years old and my birthday is June 15. I am in the fourth grade. Have I a twin? If so, have them write to me. My teacher's name was Miss Bauer. I have seven sisters and two brothers. Two of my sisters are married. We have two cows and two calves. Our cows' names are Daisy and Strawberry and our calves' names are Molly and Buster. We have them in the pasture. Every night I have to get them. We have 125 chickens. We get 20 eggs a day. I have joined the Junior Red Cross. I have made two joke books and one mop for the soldiers. I will write again.—Florence Gleich, Paha, Wash.

**Pet Cat Named Tommy.**

Dear Aunt Nellie: This is the first letter I have written to the Children's Corner, but not the last one. I am a little girl 12 years old July 10. Have I a twin? If so, I wish they would write to me. I am in the seventh grade. I have seven sisters and two brothers. I have one pet and that is a cat. His name is Tommy. I live in a little town by the name of Paha. I do not know how to knit, but am going to learn soon. I had two teachers this year. One was Mr. Dodge and the other one was Miss Straling. When I get around to it I am going to write to some of my cousins. I think they will write to me, which I know they will gladly do, whether I am their twin or not.—Hazel Gleich, Paha, Wash.

**Tells About Her Many Pets.**

Dear Aunt Nellie: This is my first letter to the Children's Corner. May I be a cousin? I have five sisters and two brothers. Their names are Louise, Emma, Martha, Rosa, Jennie, Elmer and Clarence. I am the oldest girl in our family. I am 11. My birthday is August 12. Have I a twin? I wish some of the cousins would write to me. I have a lot of pets. I have a lamb named Johnnie, a mother cat named Pussy, a calf named Spot, and some horse pets. Their names are Babe, Prince, Buck, Smilax, King and Dolly. These are the work horses. I call them my pets. I have a sprained collarbone when Babe fell with me. I am in the fifth grade.—Augusta Lewis, Hooper, Wash.

**Girls Are Trapping Squirrels.**

Dear Aunt Nellie: This is the first time I have written to the Corner. I was 9 years old June 14. Have I a twin? I will be in the fourth grade when I start to school this year. I have three sisters and their names are Ellen, Katie and Isabelle. We have three little colts named Annie, Daisy and Prince. Papa takes the Farmer. I enjoy the letters very much. We live on a farm on a half section. This year I have a garden of my own. We girls have been trapping squirrels this spring. I hope the Corner will be larger next time.—Blanche Bernard, Oakesdale, Wash.

**Jennie Lives Near Bluestem.**

Dear Aunt Nellie: This is the first time I have written to the Corner. I am 8 years of age. My birthday is August 11. I am in the third grade. My teacher's name is Miss Spining. Have I a twin? We have two cats, two cows, 21 horses, four colts and 11 little chickens. I have one sister and one brother. My sister's name is Elsie and my brother's name is Cleo. Their birthdays are on the same day a year apart. Elsie is 16 years old and in the tenth grade. Cleo is 17 years old and in the eighth grade. I live three miles east of Bluestem. Our house is painted with brown paint. I was born near Valley.—Jennie Margaret Van Skiver, Bluestem, Wash.

**Charlotte Is Her Playmate.**

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. I am 13. My birthday was April 25. I have two sisters. Their names are Emma and Frankie and I have two brothers, John and Harold. I have a pet dog. Her name is Tango. She has four puppies. I live on the farm with my mamma and papa, sisters and brothers. We have 24 head of horses and 12 head of cattle. We have three little calves and 150 little chickens and we live about six miles from town. I have a playmate. Her name is Charlotte Utter.—Jennie Hoy, R. F. D. 1, Prescott, Wash.

**Go Three Miles to School.**

Dear Aunt Nellie: May I join the Children's Corner? I am 9 years old. My birthday is March 19. We have one cow and five horses. The horses' names are Pet, Queen, Corbett, Maude and Charley. I have a dog and his name is Toby. We have some chickens. We have four hens setting. We have to go three miles to Winthrop to school. I have two brothers. Their names are Emery and Verle. I am in the third grade. We live on a 160-acre farm. Have I a twin? This is my first letter to the Corner. I hope this won't be my last one. I have light hair and blue eyes.—Delphie Schmidt, Twisp, Wash.

**Pleasant Times During Vacation.**

Dear Aunt Nellie: This is my first letter to the Children's Corner and I hope it won't be the last. The Corner is growing larger all the time and I hope it will continue to do so. My subject is "Helping My Country." We all must help our country to win this terrible war. There are many little things the boys and girls can do. We can save our money and buy thrift stamps and war saving stamps. We also can knit things for the soldiers. If we can not fight we can do these things to help this war. In the homes we can save foods. Instead of wheat flour we can use substitutes. We use rice, corn, barley, oats and buckwheat flours, also cornmeal, rolled oats, cornstarch and potatoes for substitutes. I hope all the children are doing what they can to win this war. I have not joined the Red Cross yet, but hope to soon. I have two brothers, but no sisters. Their names are Merwyn and Paul. Merwyn is 15 and Paul is 13. I wish Aunt Nellie and all the cousins pleasant times through vacation.—Lois Hodges, Deer Park, Wash.

**Would Be a Soldier or Farmer.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am 8 years old. Why don't more boys write to the Corner? We can write just as good as the girls can. I am going to write about what I want to be. When I get big I am going to be a soldier and join the marines because they get to go to sea. I would like to fight on the big ships. But if the war is over then I'll be a farmer and raise lots of grain and ride in a big car. I want my house to be painted green and white and my barns red and white. I shall plant lots of trees and I shall farm with tractors.—Eugene Cannon, Dayton, Wash. (I do wish more boys would write, Eugene. We enjoy letters like yours. Come again.—Aunt Nellie.)

**Cousin Beatrice Is Visiting.**

Dear Aunt Nellie: My school is out. It was out May 17. My teacher's name is Miss Johnson. I liked her very well. This is the first time I have written to the Corner. I am 9 years old and am in the fourth grade. We have three little calves, Billie, Johnnie and Violet. We have a big dog. His name is Shep. We have 125 little chickens. Papa bought a place six miles out of St. John, Wash. We have a place and it is 425 acres. My cousin, Beatrice, is with me now. She and I have a big red rooster. He is a pet, too. We have a big garden. Papa and Beatrice and I planted it. My cousin Beatrice is 8 years old. She was 8 May 16.—Letha Peterson, R. F. D. 2, St. John, Wash.

**Brother Arthur Drives the Tractor.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner, and hope it will not be the last. I am 8 years old and in the third grade. I live on a 200-acre farm. I have three brothers and one sister. My sister's name is Ellen and my brothers' names are Arthur, and George and Gunner, who are twins. My birthday is August 15. Have I a twin? If I have I wish she would write to me. We have 14 horses and seven colts. We have three heifers, one calf and two cows. We have a tractor and my brother Arthur drives it.—Genevieve Halverson, Espanola, Wash.

**Two Little White Kittens.**

Dear Aunt Nellie: This is the first time I ever wrote to the Children's Corner. I read the letters in the Farmer and like them very much. I go to school four miles. School is out, but my teacher's name was Miss Windhusen. I was 11 years old June 19. I passed and am in the sixth grade. I have a mother cat that is white, and two little white kittens. We live on a 200-acre farm. We have nine horses and nine cows. We had a little colt, but the horse hurt it and it died. If I have a twin I wish she would write to me. I hope you will answer my letter.—Margaret Drew, Goodnoe Hills, Wash.

**Has Many Pets.**

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I have 15 acres of land. We have 20 chickens, two cows, one calf and one horse. The cows' names are Molly and Beauty, the calf's name is Tussy, the horse's name is Dolly. We have a dog and a cat. The dog's name is Prince. I have one brother and four sisters. My brother is 16 years old. He is in Alaska with papa. I have joined the Junior Red Cross and I have knitted one wash rug and five afghan squares. I am 12 years old. —Martha Petersen, Box 32¾, Colby Wash.

**Pearl Loves Music.**

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. I am 13 years old and in the sixth grade. I go to the Selah Central school. Every Tuesday noon I take music lessons from Professor Sharp. He comes Mondays and Tuesdays to the schoolhouse. I just love music. Every night I go right to the piano and practice my lesson. On Sunday I go to Sunday school. I like to stay for church, too. Well, goodby, with love to Aunt Nellie and cousins.—Pearl Mathis, Selah, Wash.

**Ella Passes With Honors.**

Dear Aunt Nellie: I have read many of the other cousins' letters. I think it is lots of fun. May I be a cousin, too? This is the first time I have written to the Children's Corner. I am 11 years old. My birthday as January 21. I have three sisters and one brother. We have a horse. I would like to ride her all the time. There are some girls live across the road from us, and I often take them for a ride. We have a cow, and a dog named Slats. We have had him four years. We brought him from Walla Walla with us. School closed May 24. I passed with honor. We have some ittle chickens, 10 of them are mine, and I like to feed them. I will write some riddles for the cousins to guess: Something that goes up and down the hill and yet it stands still. One hundred eyes and never a nose. Black and white and red all over, Grace Jones had a riddle in her letter. It was What time is it when the clock strikes 13? The clock does not strike 13. If I have a twin I wish they would please write to me, and I will answer their letters. —Ella Mae Payton, Greenacres, Wash. (Welcome to the Corner, Ella, dear. We are glad you are a cousin, too. —Aunt Nellie.)

**Barley and Corn Bread.**

Dear Aunt Nellie: I have never written to the Cousins' Corner before. May I be a cousin? My papa takes the farm paper. I read the Corner every time we get it. I wonder if I have a twin? I was 13 years old on August 12. I am in the seventh grade. I live on a farm. I don't like to live in town. I have two sisters in high school. One is in the 11th grade, the other is in the 10th grade. I belong to the Red Cross. I am going to raise a garden this year. We did lots of Red Cross work at school. We made three pillows and a spread and some gun wipers. We have four horses and a mule. Their names are Jack, Belle, Nellie, Mollie and Maggie, the mule. We have a colt that is 3 weeks old, but we haven't named it yet. We have four cows. Their names are Midget, Lady, Rose and Spotty. Our dog's name is Towser. We have 12 turkeys, 6 ducks, 60 chickens and 102 little chickens. My brother has a Liberty bond, and we are Hooverizing a lot. Mama makes barley bread and corn bread. We don't use very much wheat flour. I hope to find the cousins all well.—Alice Lillian Moore, R. F. D. 2, Pateros, Wash.

**Will Write More Next Time.**

Dear Aunt Nellie: This is the first time I have ever written to the Children's Corner. I am 11 years old, and will be 12 in October. Have I a twin? I live on an 80-acre farm. We have a team of horses, two cows, three pigs and some chickens. I have seven brothers and two sisters. My youngest brother is five years old. I will write some more next time.—Ruby Berthoff, R. F. D. 1, Tekoa, Wash.

---

During the past week Aunt Nellie has received letters from the following cousins: Annie Mickelson, Matilda Mickelson, Olga Hamilton, Una Cumming, Hattie Bell Hogan, Jean Phyllis Wilson, Alice Clift, Evelyn Baker, Rovilla Fletcher, Mildred Demaris, Lorene Demaris, Evelyn Amon, Harriet Imislund, Agnes Annis, Effie Lewis, Ellen Granlund, Ida Smalley, Helen Peiklik, Victoria Peiklik, May Millam, Ruth Harbison, Ralph Springston, Velma Martin, Marie Guntert, Florence Evans, Emma Bennett, Mary Harbison, Nola Conn.

# News for Breeders

At the Brookwater Farm sale of Duroc Jerseys at Ann Arbor, Mich., August 7, top price of $775 was paid for a sow by H. L. White of Mississippi. Hogs went to eight different states. The mature sows averaged $210.

### Shorthorn Record.

The Shorthorn breed has made a recent record of interest. In a series of auction sales covering a period of 27 months ended June 14 1282 Shorthorns have sold for $1000 or more each, the average being above $1500. The most impressive fact, however, is not that this large number sold for such prices but that they were the get of 680 sires. It is the general assumption that only a few bulls in any breed gain sufficient popularity or are prepotent enough to sire animals that sell for high value. Yet here within the Shorthorn breed are 680 bulls that have sired 1282 animals good enough to command this remarkable range of prices.

### Shipping Exhibition Stock.

Mr. Prendergast of the western classification committee declares that shippers are entitled to ship pure-bred show animals at released valuation, but it is a part of wisdom in such cases to see that such exhibition stock is covered by insurance.

Wayne Dinsmore, secretary-treasurer of the National Society of Record Associations, writes that if in any case this released valuation is denied the shipper should wire immediately to Mr. Prendergast of the western classification committee, 608 South Dearborn street, Chicago, Ill.

### U. S. Grows Own Bulbs.

The situations arising out of war conditions have taught the people of this country how to raise their own seeds, bulbs and plants that have heretofore been imported from various European countries. In various parts of the United States, especially on the Pacific coast, farms have been developed and have successfully grown the seeds and bulbs which Europe alone has heretofore produced.

AT THE STATE FAIRS
AT YAKIMA, AT SALEM AND AT BOISE.
Be sure to see the Aberdeen-Angus cattle. There you will have an opportunity to inspect the choicest representatives of the grand champion beef breed. These show animals are samples of the best American herds. Their produce has won at the world's greatest live stock show, the International Exposition, at Chicago, 15 out of 16 fat carcass grand championships over all breeds, as well as 13 out of 16 fat carlot grand championships, 11 out of 14 steer herd grand championships, and 10 out of 16 single steer grand championships. Calves of the breed have been demonstrating their baby beef making superiority at shows and markets from Canada to Texas. The bulls of the breed have been getting market-topping steers at all leading markets, demonstrating their place in the winning of the war.

Herd headed by Knoll Slope Colonel, assisted by Jolly Lad IV. Correspondence solicited.

**Bliss, Idaho.**

## FARM SERVICE WAR FLAG

(Patent applied for.)

### Get a Farm Service War Flag.

The man, woman, boy or girl who stays at home and works hard to produce necessaries for the soldiers in Europe is entitled to real war service recognition. That is the idea back of the farm service war flag. It is pennant-shaped, made of the good old red, white and blue, and has a star representing the producing farm home. Small stars are added to represent each worker of that home.

**Convenient Order Blank.**

..... 1918.

THE WASHINGTON FARMER,
Review Bldg., Spokane, Wash.
Enclosed find five cents (5c), for which please send me a Farm Service War Flag (printed on enamel paper) with ..... extra small stars for farm workers.

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, Aug. 31.—A bullish crop report by the expert of a big brokerage house injected a bit of variety to the day's news as affecting the corn market today and while it boosted the price for a brief period, it was inadequate to stem the tide of bearishness and the bulk of the moderate business was done at prices under yesterday's close. The net loss for the day was 3-4c, with October closing at $1.55 1-2. The private report made the crop condition 64.8 per cent, as compared with 79 a month ago. This would indicate a month's shrinkage of 405,000,000 bushels. Much of the trading was to even up accounts over the double holiday—Sunday and Labor day.

Oats were firm early with corn, but declined later on a private estimate that the crop at present indicates 72,000,000 bushels in excess of the government's August calculations. No. 3 white oats sold at 2 1-4 and standard at 1 3-4c under October.

Provisions were dull and worked a little lower despite higher hogs. Pork close 25@27 1-2c under yesterday; lard, 2 1-2@7 1-2c down, and ribs 5c lower.

### Cash Quotations.

CHICAGO, Aug. 31.—Corn—No. 2 yellow, $1.63; No. 3 yellow, $1.60@1.63; No. 4 yellow, $1.55.

Oats—No. 3 white, 69@70 1-4c; standard, 69 1-4@70 1-4c.

Rye—No. 1, $1.67; No. 2, nominal.

Barley, $1.02@1.05.

Timothy—$6.00@9.00. Clover, nominal.

Pork—Nominal.

Lard—$26.75; ribs, $24@24.50.

### Pacific Northwest Grain.

PORTLAND, Ore., Aug. 31.—Grain—September delivery—Oats, No. 2 white feed, $60 bid; barley, standard feed, $53.50 bid; standard A, $53.50 bid. October, Oats, No. 2, $60 bid; barley, feed, $52.75 bid; barley A, $54 bid. Eastern oats and corn in bulk—Oats, No. 3 white, $52 bid; oats, 38-pound clipped, $52.50 bid; corn, yellow, $70 yellow, $70.50 bid; corn, No. 3 mixed, $69 bid; oats, No. 3, $52 bid; oats, clipped, $52.50 bid; corn, yellow, $70 bid; corn, mixed, $69 bid.

Sales—200 tons October feed barley at $55; 100 tons October A barley at $54.50.

Car receipts—Wheat, 34; barley, 44; flour, 5; oats, 5; hay, 25.

TACOMA, Aug. 31.—Car receipts—Wheat, 68; corn, 1; oats, 1; hay, 10.

SEATTLE, Aug. 31.—Yesterday's car receipts—Wheat, 30; oats, 1; hay, 4; flour, 10; barley, 1.

### Minneapolis Grain.

MINNEAPOLIS, Aug. 31.—Wheat—Receipts—608 cars, compared with 308 cars a year ago. Cash: No. 1 northern, old, $2.22½; corn, No. 3 yellow, $1.65@1.68; oats, No. 3 white, 66 1-2@67c; flax, $4.17@4.27.

### San Francisco Receipts.

SAN FRANCISCO, Aug. 31.—Receipts—Flour, 5474 quarters; barley, 15,937 ctls.; beans, 1260 sacks; potatoes, 5329 sacks; onions, 1135 sacks; hay, 296 tons; hides, 560; wine, 54,-230 gallons.

Peaches, lug boxes, $1.25@1.50; figs, [illegible] ware, 65c@1; black, 65c [illegible].

### Car Receipts at Coast Points.

| Seattle— | Wheat. | Oats. | Barley. | Hay. |
|---|---|---|---|---|
| 1918-19 | 625 | 98 | 12 | 492 |
| 1917-18 | 167 | 85 | 32 | 847 |
| Portland— | | | | |
| 1918-19 | 1277 | 117 | 119 | 265 |
| 1917-18 | 293 | 130 | 34 | 268 |
| Total— | | | | |
| 1918-19 | 1902 | 216 | 131 | 757 |
| 1917-18 | 460 | 215 | 66 | 1115 |

## Live Stock Quotations.

### At Omaha.

OMAHA, Neb., Aug. 31.—Hogs—Receipts, 6800. Higher. Heavy, $18.90@19.35; mixed, $19@19.25; light, $19.20@19.65; pigs, $17@18; bulk of sales, $19@19.25.

Cattle—Receipts, 1600. Steady. Native steers, $12@18; cows and heifers, $7.50@12.50; western steers, $10@16; Texas steers, $9@12; cows and heifers, $7@11.50; canners, $6@7; stockers and feeders, $6.50@15.50; calves, $10@13.75; bulls, stags, etc., $7@12.

Sheep—Receipts, 100. Steady. Wethers, $12@13; ewes, $10@11.50; lambs, $16.65@17.65; yearlings, $12.50@13.25.

### At Chicago.

CHICAGO, Aug. 31.—(U. S. Bureau of Markets.)—Hogs—Receipts, 5000. Market mostly 10@15c higher, but closed weak; top $20.30; butchers, $19.20@20.25; light, $19.50@20.30; packing, $18.25@19.25; roughs, $17.75@18.25; pigs, $18.25@19.10.

Cattle—Receipts, 3000, compared with week ago, native steers unevenly strong to 50c higher; the medium and common grades advancing mostly; western steers mostly 50c higher; medium and good butcher cows and heifers unevenly lower; canners, strong to 25c higher; calves and stockers and feeders mostly 50c higher.

Sheep—Receipts, 3500; arrivals practically all direct; compared with a week ago lambs 10@15c lower; fat sheep and yearlings mostly 10c higher; feeding sheep, strong.

### At Portland.

PORTLAND, Ore., Aug. 31.—Cattle—Receipts, 257. Market strong. Prime steers, $12.50@13.50; good to choice, $11@12; medium to good, $9.75@11; fair to medium, $8.75@9.75; common to fair, $5.75@8.25; choice cows and heifers, $8.35@9.50; medium to good cows and heifers, $6.25@7.75; fair to medium, $5.25@6.25; canners, $3@5; bulls, $5@7; calves, $9@12; stockers and feeders, $6@8.

Hogs — Receipts, 340. Market strong. Prime mixed, $20@20.25; medium mixed, $19.50@19.85; rough heavies, $18@18.10; pigs, $17@18; bulk, $20.

Sheep—Receipts, 147. Market strong. Prime lambs, $14@15; fair to medium, $11@13; yearlings, $10@11.75; wethers, $9@10.75; ewes, $7@9.

### At North Salt Lake.

NORTH SALT LAKE, Utah, Aug. 29.—Cattle—Receipts 408. Choice heavy steers, $11@12; good steers, $9.50@10.50; fair steers, $8@8.50; choice cows and heavy heifers, $6.75@7.50; fair to good cows and heifers, $5.75@6.50; cutters, $5.25@5.75; canners, $4.50@5.25; fat bulls, $6.50@7; bologna bulls, $5.50@6.25; veal calves, $9@11.

Hogs—Choice fat hogs, 160 to 250 pounds, $18.50.

Sheep—Receipts, 90. Choice spring lambs, $14@15; wethers, $9@10; fat ewes, $3@9.

## Portland Market.

PORTLAND, Ore., Aug. 31.—Freer offerings of eastern eggs have weakened the market for Oregon. Most of the orders coming in from the spruce camps are being filled with Kansas short held stock, and this has caused some accumulation of home-grown eggs.

Cube butter continues very scarce in spite of arrivals of eastern butter. For extras 52 cents is now obtainable. Another advance in print prices is expected. City creameries have raised their buying prices of butterfat 2 cents to meet milk competition from the condenseries.

Poultry and dressed meat receipts are fair, but not equal to local needs, and the markets are strong.

Potatoes are steadier at $3@3.50 for locals. Walla Walla onions hold at $2.50@2.75, but the demand is slow and prices weak.

Among the peach receipts at the close of the week were five cars from Washington. Coming on the eve of Sunday and Monday's holiday, the trade found it necessary to cut prices. Elbertas sold weak. Bartletts are freely offered at $1@1.25.

Butter—Cubes, extras, 51@52c; prints, 53@55c; butter fat, No. 1, 58c, delivered.

Eggs—Oregon ranch, candled, 51c; selects, 52@53c per dozen.

Cheese—Jobbers' buying prices, f. o. b. dock, Portland: Tillamook triplets, 27c; Young Americas, 28c per pound; Coos and Curry, f. o. b Myrtle Point, triplets, 28½c; longhorns, 28½c per pound; 1-4c discount to Portland trade.

Poultry—Hens, 25@27c; broilers, 28@30c; ducks, geese and turkeys, nominal.

Pork—Fancy, 26 1-2@27c.

Veal—Fancy, 20 1-2@21c per pound.

Potatoes—Oregon, $3@3.50 per hundred.

Hay—Buying prices, f. o. b. Portland; eastern Oregon timothy, $34 per ton; valley timothy, $29; alfalfa, $26@27; valley grain hay, $26@28; clover, $26@28; straw, $9@10.

## Spokane Market.

The Carsten Packing company weekly price list shows an advance of 1 cent a pound in beef and 2 to 3 cents a pound in mutton.

T. C. hams and bacon have declined. Lard has advanced 1 cent a pound.

### Wholesale Meats.

**Beef**—Beef steers, 13@19½c lb; T. C. steers, 20½c lb; cow beef, 12@15c lb; heifers, 15@16c lb; best loin, 27c lb; steer chucks, 11c lb; square chucks, 12c lb; prime ribs, 22@24c lb; rump and round, 19@20c lb.

**Mutton**—Breakers, 24c lb; wethers, 23c lb ewes, 21c lb.

**Lambs**—Diamond T. C. lambs, 28c lb; lambs, 26@27c lb.

**Pork**—Packer dressed hogs, 29@30c lb; pork loins, 36@37c lb; legs, 33c lb; shoulders, 28c lb; leaf lard, 38c lb; tenderloins, frozen, 46c lb; spareribs, 13c lb; country dressed hogs, with head on, 22c lb to producer; country dressed veal, 13c lb to producer.

**Smoked Meats**—Washington hams, 35@35½c lb; T. C. hams, 36½c lb; T. C. bacon, 51½c lb; Washington bacon, 42@46½c lb; picnics, 25c lb; lean backs, 32½@36c lb.

**Star Brand**—Hams, 37½c lb; Shield hams, 35½@36½c lb; picnics, 25c lb; bacon backs, 36c lb; Star bacon, 51@54½c lb; Shield bacon, 42@46½c lb; Simon Pure lard, $18 case; Shield lard, tierces, 27½c lb; White Cloud compound, tierces, 23¾c per lb.

**Dry Salt Meats**—Clear bellies, 28¾@29¾c lb; loin backs, clear, 29½@31c lb.

**Lard**—Tierces, 29c lb, $21, 30 buckets per case; Diamond T. C. pure leaf lard, $16.05 case; Snowcap compound tierces, 23c lb.

### POULTRY.

**Live Poultry**—Live hens, 20c lb; spring chickens, 22c lb; roosters, 10c; ducks, 20c lb to producers, f. o. b. Spokane.

### GASOLINE, LINSEED OIL, ETC.

**Gasoline**—Red Crown, bulk, 25c gal, cases, 35c gal; Shell, 25c gal; refined oil (Pearl), bulk, 14c gal, cases, 23c gal; Eocene, 15½c gal in bulk, cases 26½c gal; engine distillate, 17c gal, bulk.

**Linseed Oil**—Raw, bbl, $2.02 gal, cases $2.20 gal; boiled, bbl, $2.04 gal, cases $2.22 gal.

**Turpentine**—Bulk, 84c gal, cases, $1.04 gal.

**White Lead**—Strictly pure white lead in oil, ton lots, 13¼c lb; 50-lb lots, 14c.

**Rice**—Fancy head, $7.50@9.50 cwt.

**Flour**—Bluestem, $9.40; Blend, $9.40; graham, $8.65 bbl, 49-lb sacks; whole wheat, $8.85; eastern rye, $9.90; eastern rye meal, $10.30; oat flour, $12.15, 4 45-lb sacks.

**Oats**—$67 ton whole, $70 rolled, delivered in city; steam rolled No. 2, $65 ton.

### GRAIN AND FEED.

**Corn**—$72 ton; cracked corn, $74 ton.

**Barley**—Rolled, $70 per ton.

**Oil Meal**—$75 per ton.

**Hay**—Timothy, $38 per ton delivered, $37 by carload; alfalfa, $32 per ton delivered, $31 by carload.

## Seattle Market.

SEATTLE, Wash., Aug. 31.—The rush to clean up all perishables for the half holiday and double holiday of Sunday and Monday precipitated prices under their values and all prior predicates for the week, and were not to be taken, jobbers declared, for the key to the quotations that will prevail on Tuesday. Cantaloups were cut to $1.75@2.50. Alberta peaches, fancy and extra fancy, of good color and uniformity of pack to $1@1.25, with the bulk moving at $1@1.10.

The statement was made by carload distributors today that the Alberta extra fancy peach market would open Tuesday morning at $1.

### Purchasing Prices.

Eggs—Select ranch, 56@58c per doz.; Oregon, eastern Washington and Idaho, nominal.

Butter—Fresh dairy, 30c per lb.; butterfat, 58c per lb.; bakers', 38c per lb.; raw milk, $2.85 per cwt.

Poultry—Broilers, live, 1918, 28c per lb.; hens, 3½ to 4 lbs. and up, 27c per lb.; under 3½ lbs., 24c per lb.; old roosters, 17@18c per lb.; ducks, live, fat, 28c per lb.; squabs, large, $3.50 per doz.; geese, fat, live, 23c per lb.; Belgian hares, 14@17c per lb.; guineas, $7 per doz.; turkeys, young toms and hens, dry picked, 10 lbs. and up, 30@35c per lb.

Hogs—Light, 21@22c per lb.; heavy, 19@21c per lb.

Beef—Steers, fat, 14@15c per lb.; heifers, fat, 14@15c per lb.; cows and bulls, 13@14c per lb.

Veal—Fancy light, 20@21c per lb.; do heavy, 13@18c per lb.

Mutton—Fat, 22c per lb.; spring lamb, fat, dressed, 25c per lb.

### Hides, Tallow and Wool.

Bid prices to producers: Salted hides, cows and steers, No. 1, 15c lb.; do No. 2, 14c lb.; green hides, cows and steers, No. 1, 12c lb.; do No. 2, 11c lb.; salted, bulls or stags, No. 1, 12c lb.; do No. 2, 11c lb.; green, bulls or stags, No. 1, 10c lb.; do No. 2, 9c lb.; salted or green calfskins, No. 1, 32c lb.; No. 2, 30½c; salted or green kip skins, No. 1, 16c lb.; do No. 2, 14½c lb.; dry hides, No. 1, 30c, lb.; do No. 2, 29c, lb.; dry, bulls or stags, 25c lb.; dry salt hides, 24c lb.; dry calfskins (5 lbs. and under), No. 1, 35c lb.; do No. 2, 33c; tallow, No. 1, 13c lb.

Beeswax, per lb., 25@27c.

## HEAR RATE PROTESTS.

### Commerce Commissioner Coming.

Announcement has been made that Clyde B. Aitchison, a member of the interstate commerce commission, will be in Portland, Ore., September 20 to 23 for the purpose of hearing complaints against the 25 per cent freight rate increase on fruits and other recent changes in the freight regulations. The hearing was arranged for by the public service commissions of Oregon, Washington and Idaho jointly with a view to presenting the case of the northwest producers and manufacturers in the most concise manner possible. While the three state commissions will be represented, it is desired also by the interstate commerce commission that every individual or organization desiring to present criticism of the increased rates show reasons why they should not be applied and present their side of the question.

The 25 per cent rate increase applies on fresh fruits and vegetables, fruit juices and empty containers for fruit and fruit juices. A 10 per cent increase in express rates on fresh fish and fresh fruits is also to be considered at the same hearing. On the last day of the hearing the matter of the reconsignment and diversion affecting the shipment of fruit and vegetables will be taken up by the representative of the interstate commerce commission.

## Protect Cattle Herds

In dealing with contagious diseases of cattle the basic principle of prevention is to keep carriers of infection away from the herd. Next in importance is maintaining the surroundings in a sanitary condition. Following this, the animal's natural resistance to disease should be increased by natural and occasionally by artificial means. Ordinarily, disease stalks about the country only in the bodies of diseased animals or attached to some intermediate object; these may include healthy or recovered animals, contaminated feed and water, infected cars and pastures, or the shoes or clothing of some inquisitive person who insisted on seeing the diseased stock. Avoiding such diseased animals and keeping healthy ones away from carriers of infection are the important methods of preventing disease.

The lack of immediate action upon the part of the farmer when he discovers animals that show symptoms of disease or sickness often is responsible for the loss not only of his own stock, but for that of his neighbors. At this time when every step should be taken promptly to avoid losses and to conserve production, it is all the more important that the farmer with sick cattle should get in touch at once with the local veterinarian or county agricultural agent.

## Make Rabbit Profitable

Fully 200,000,000 wild rabbits are killed in the United States every year, according to estimates made by the biological survey of the United States department of agriculture. Many of them are jackrabbits, the majority of which have not been utilized in the past. If all the rabbits killed were consumed, they would represent between 200,000 and 300,000 tons of valuable food, and if proper measures were taken to insure the collection of skins these alone would have a value of $20,000,000. The biological survey has frequently been called upon to help western farmers in coping with the rabbit pest. In view of the probable economic value of rabbit meat and fur in the coming few years, the energies of the farmers and ranchmen will be directed to the conservation of this important resource. Already a number of establishments for collecting, dressing, canning and shipping rabbit meat are in operation in western centers. As in Australia, the transition of the wild rabbit in this country from its status as a pest to a source of profit is assured, it is believed.

Warranted to Give Satisfaction.

**Gombault's Caustic Balsam**

**Has Imitators But No Competitors.**

### This Means U!

Food conservation is necessary in this country, as well as in England, where placards on the war proclaim:

If U fast, U beat U boats;
If U feast, U boats beat U.

## MUST RESPECT LAW.

### Must Handle Lawless Lawfully.

The council of national defense has sent to all the state councils of defense throughout the nation an urgent appeal that lawless treatment of persons suspected of disloyalty be prevented.

"In the last few months in many parts of the country there has been a tendency toward lawless treatment of those suspected of disloyalty," says the appeal. "However patriotic may have been the motives which prompted these outbursts, their effect is deplorable. They are blots upon the war record of a nation which has declared itself to be fighting for a universal reign of law; they furnish ammunition to those makers of enemy propaganda who are trying to make the world believe that the enemies of Germany, too, are capable of atrocities; and frequently, by rousing anger and fear, they tend to undo the work which the councils of defense, through their educational campaigns, their Americanization work and their community organization, have done and are successfully doing to unite the nation in the fellowship of war work.

"The council of national defense looks to each state council of defense to see to it that these disorders do not occur in its state, but that sedition is henceforward stamped out by lawful means only, and that differences and disputes are adjusted, not by voluntary or self-constituted committees, but by official authorities.

"This task calls for leadership and action. The council of national defense makes this request in the full confidence that each state council will assume the responsibility for keeping the fair record of its own state clean from this time forward."

## CLASSIFIED ADS

### EDUCATIONAL 45

EARN MORE. ENROLL ANY TIME, AT Behnke-Walker, Portland, northwest's biggest business college, because best. Graduates assured positions. Write for catalogue.

# The Surest Way To Make Dairying Pay

## Here's the Way to Stop Cream Waste

ABOUT 8 out of 10 farmers with dairy herds are wasting cream every day. **They are actually feeding cream to pigs**—simply because they are using inferior cream separation machines.

### Sweden's Lesson for America

Sweden's farmers won't tolerate the slightest cream waste. Their economy has perfected the most economical, fastest greatest labor-saving cream separator—the **Viking.**

### See the Viking Get All the Cream

There is no cream waste with the **Viking Cream Separator**—Sweden's most popular separator. It will pay you to investigate. Write your name and address on the coupon below and mail it to us. See a **Viking** work. You can do that by looking up the **Viking** dealer the next time you are in town. He will be glad to demonstrate it to you.

## You Save Money Right At the Start—You Make More Profits All the Time

Economical production and the largest cream separator factory in the world enable us to sell the **Viking** at a price that means a money-saving to you. **The Viking has a greater capacity than any other separator of equal rating.** Experts' investigations prove that the **Viking** has approximately 100 pounds of milk **per hour** greater capacity than many separators for which much higher prices are asked.

## The Closest Skimming Machine Ever Perfected

Tests show that the use of a **Viking** on dairy farm herds of 10 cows saved over $107.00 worth of cream that **before** had been actually fed to the hogs. The **Viking** will both **save and make money for you.** See your nearest Viking dealer.

Over One Million In Use

# VIKING CREAM SEPARATOR

Guaranteed For A Lifetime

## Made in the World's Largest Separator Factory

World-wide demand makes it necessary to produce over 180,000 **Vikings** per year. Each **Viking** is made of finest quality Swedish iron and highest grade tool steel. No separator **at any price** uses finer tool steel in its working parts. Furthermore, it is marvelously simple in its design. That's one of the secrets of its economy of first cost—and also the reason why it operates so easily. You know that all of the average hard-running separators are bound to waste cream. Their hard-working mechanism makes the whole separator vibrate—tremble. This causes the cream to mix with milk. The result is waste of costly cream through the skim-milk spout.

The smooth, easy action of the **Viking** (which starts the minute you move the handle) distributes the milk in thin, even, smooth layers over the discs. The cream **naturally** separates from the milk. You get more cream; do less work.

### Get These Two Books If You Want More Milk Money

These books are not merely advertisements for the **Viking.** They serve a larger purpose. One of them—"Making The Dairy Cow Pay"—is packed with profit-making ideas, methods, systems for the dairy farmer. Even though you don't believe you will buy a **Viking** this year, write for these two books. We would be glad to feel that they had been some help to you, even though you never buy a **Viking.** Write for them **right now!**

# LILLY'S SCRATCH FOOD

*Builds from the Crop!*

**is the very bottom and foundation of your flock's body-building, stamina and egg production.**

A—In LILLY'S SCRATCH FOOD there is food to make the wattles red with the glow of health.

B—In LILLY'S SCRATCH FOOD there is the building material for a healthy body and a quick, vigorous eye.

C—In LILLY'S SCRATCH FOOD there is building material for the nerve, for vertebra and every vital nerve center.

D—In LILLY'S SCRATCH FOOD there is the material for feather building—without it your flock would feel a strain that would count against it in the end.

E—In LILLY'S SCRATCH FOOD there is bone-building material. It is the all round character of the mixture that imparts to the blood the necessary materials for cell-building in every part of the bird.

F—In LILLY'S SCRATCH FOOD there are good grains in correct proportions; not such grains as we happen to have in stock and can not use for other purposes, or grains that happen to be cheapest, but good, sound grains best suited for the purpose.

G—In the manufacture of LILLY'S SCRATCH FOOD each variety of grain is cleaned by the most modern machinery—then these different grains are mixed in scientifically correct proportions—then all chaff, dust and dirt removed by other perfect machinery.

## Interstate Fair Defies Handicaps

### *Drouth and Feed Shortage Show Effects, but Displays Convey Message*

The heat and drouth and the feed and labor shortage made a powerful drive on the Spokane Interstate fair this year, but lost. Live stock displays and exhibits of produce from the farms were somewhat cut down, but not sufficiently to rob the fair of its stimulation and educational value. Competition was less keen than usual in the live stock department. It was as keen as ever in the boys and girls' section, and the agricultural section was well filled with displays that would do many countries credit in their best years. The machinery department was filled as usual; automobiles, trucks and tractors were shown in numbers, the industrial building was full of exhibits and demonstrations highly interesting and with valuable ideas for imitators.

In the live stock department the feature was undoubtedly the herd of Hereford cattle shown by the Curtice Cattle company of Calgary, Alberta, heralded as the "champions of the prairie." These animals are making a circuit of the fairs, and will make Hereford breeders groom their favorites well or take back seats. Another notable display was that of the beautiful black Aberdeen-Angus herd from the Ohrmanndale farm at Philipsburg, Mont. Hercules farm, of Sprague, Wash., owned by Day & Rothrock, upheld the honors of that breed, with Washington state college and the University of Idaho among the contestants in some of the Shorthorn classes.

In the dairy division John L. Smith of the Hazelwood farm had a good string of Holsteins. Jay P. Graves of Waikiki farm and R. E. Logan of Loch Logan farm, of Stevensville, Mont., were among the leading Jersey exhibitors, and M. H. Jerdee of Kiesling, Wash., had Guernseys on exhibition.

The sheep show was less extensive than on some previous occasions, but contained some flocks of unusual excellence. Professor William Hislop, formerly head of the animal husbandry department of the State College of Washington, but now in the sheep business for himself, was judge of the sheep, and declared that some of the flocks exhibited were of such quality as to rank well up in any of the country's greatest sheep shows. The University of Idaho's fat flock was not in evidence this year, owing to the numerous disasters that have overtaken them during the year. Three times marauding dogs invaded the pastures and killed several head, and just recently fire destroyed 20 head of them. The well-known J. G. S. Hubbard flock, of Monroe, Ore., was shown, and other exhibitors playing a prominent part were H. S. Currie of Castor, Alberta, I. H. Jordens of Spokane, Wash., and J. P. Fisk of Spring Valley, Wash.

The horse show was the greatest sufferer from the unfavorable conditions of the present year, though even in this department some excellent exhibits were shown. A good string of Clydesdales were shown by Lee M. Ford of Great Falls, Mont. The Percherons and Shires were less in evidence than in past years.

One of the great features of the fair was the boys and girls' department, where all manner of work and produce were entered in competition and where various contests were held. Several northwestern states were represented by clubs. Sewing, cooking, canning, gardening, manual training and other competitions were strongly contested.

In the poultry division a notable condition was seen. The heavier breeds showed predominance as against the purely egg-laying breeds, though the latter were well represented. One of the greatest rabbit shows in the history of the northwestern fairs was staged under the poultry division. These two facts may indicate the increased interest in the meat birds and the rabbits from the standpoint of meat substitutes for beef, pork and mutton under the regulations of the food administration.

From the standpoint of entertainment the camp of sailors on the infield of the race track was the leading feature. There were more than 600 of the sailors from the naval training school at Seattle, under the leadership of Commander Miller Freeman. They went through daily drill before the grandstand and followed all the routine of their regular camp life.

The racing program held the interest of those following sporting events of this type.

The automobile and machinery display was excellent and extensive, as were also the exhibits of modern farm equipment, such as cream separators, lighting systems, gasoline engines and devices of all kinds designed to improve the conditions of farm life.

In the agricultural exhibits Alfred Knutson of Harrison, Idaho, won first for the individual display. Mr. Knutson had an exhibit from his own farm, including scores of products, among them all kinds of vegetables, grains, grasses and fruits. In this department F. C. Sudhoff, Elk, Wash., won second prize, J. R. Orrock, Sherron, Wash., third prize, Hans Peterson, Greenbluff prairie, fourth prize and W. A. Hughes of Colville fifth prize.

Interest was no less keen among the granges within easy reach of Spokane than heretofore, their displays being of high order and emphasizing war production and conservation as their principal lesson. Camden grange was awarded first in this class for exhibit of agricultural products. Valley Prairie grange won second and East Spokane grange won third.

The agricultural exhibit of garden produce by the A. A. Kelley gardens of near Spokane was a feature of the agricultural building, though the display was not entered in competition. It showed a remarkable collection of varieties of vegetables of unusual quality for a dry and hot year like the present has been.

The following are the live stock awards, as announced by the secretary of that division:

**HORSES.**

**Clydesdales.**

Stallion, 3 years old and under 4—Lee M. Ford, Great Falls, Mont., on Mendel Prince.

Mare, 4 years old and over—Ford, on Leathes Lily.

Graded herd—Curtice Cattle company.

Exhibitor's young herd—1. Curtice Cattle company; 2. Platt Bros.

(Continued on page twenty-four.)

## Food Production Administration

### *Governor Frazier Believes Movement a Mighty Good One*

For some little time the Farmer has been persistently trying to obtain satisfactory information from the Food Administration Grain corporation as to just what methods must be taken and what costs may be expected by the wheat grower.

In connection with the direct shipment of wheat to the grain corporation, it addressed a letter to a number of farmers and others interested in this vital subject, saying:

"Eight months ago the Pacific Northwest Farm Trio led in a movement which resulted in a telegram to President Wilson urging 'the immediate appointment of the ablest available man in the country as national war-time food production administrator,' to whom the farmers in all sections of the country could appeal with confidence in meeting their war-time food production difficulties."

In answer to this letter, Governor Frazier of North Dakota, writes:

**Governor Lynn J. Frazier's Letter.**

I believe the movement advocating some one in the federal war work to directly represent the food producers of the country is a mighty good one. I expect to go to Washington in the near future and am going to take the matter up with President Wilson, and others, urging the necessity of having some one that we can depend upon to look after our interests and to whom we can petition and make requests to look after the interests of the farmers of the nation.

I am enclosing copy of a bill that was enacted during our last legislature, and which has worked out very satisfactorily. It has had the effect of guaranteeing the farmers a proper grade for their grain.

I appreciate very much the work your papers are doing and wish you the best of success.

LYNN J. FRAZIER, Governor.

Bismarck, N. D.

In a postscript to his letter, Governor Frazier adds:

"I have just been talking with Mr. Hagan, our commissioner of agriculture and labor, who is a member of the federal agricultural advisory board. He informs me that Hon. H. C. Stuart, ex-governor of Virginia, has been appointed as a member of the war industries board for the special purpose of representing the food producers of the United States. He speaks very highly of Mr. Stuart and says he believes he will make a good representative."

The North Dakota state grain law, referred to by Governor Frazier, provides for a uniform state grain grading law which contains many important features, provides for an inspector of grades, weights and measures whose duty it shall be to have charge of all grain inspection, and to establish grades when approved by the railroad commissioners; also inspectors of public warehouses to determine their financial condition, to provide for a proper system of accounting, and to aid in the marketing of grain. The bill also provides for the establishment of central markets at various points in and out of the state. It provides for the appointment of deputies in towns where provision is made, scales installed and a building for housing provided. It authorizes the appointment of buyers, or managers of elevators to be licensed as deputy inspectors with authority for grading grains and makes it illegal for public warehousemen not licensed to handle grain at elevators or elsewhere, and provides for the establishment of grades for all classes of grain and agricultural products.

## NONPARTIZANS WIN.

### Candidates Nominated in Idaho.

Returns from the primary election held last week throughout the state of Idaho show that the nonpartizan league succeeded in nominating practically all of the candidates that it had indorsed, including H. F. Samuels for governor and practically all of its candidates for congress and the state legislature.

Most of the candidates indorsed by the league filed on the democratic ticket. A close race was run in the First congressional district between the nonpartizan candidate and his opponent on the democratic ticket, the former winning out, according to figures at this time, by a very few votes. Samuels, for governor, received almost as many votes as both his opponents in the democratic primary.

**Unfit Officers Will Stay.**

Instead of rejecting officers who, for physical reasons, are unfit to be sent overseas, the war department is assigning such officers to home duties, it is announced.

THE WASHINGTON FARMER

VOL. XLI. NO. 37.

Trade Mark Registered U. S. Patent Office.

PUBLISHED WEEKLY ON THURSDAY.
REVIEW BLDG., SPOKANE, WASH.
444 Yates Bldg., BOISE, IDAHO.
411 Stock Exch. Bldg., PORTLAND, ORE.
617 Central Bldg., SEATTLE, WASH.

To either of which communications can be sent, but to avoid delay address office nearest you.

ABC Member. Audit Bureau of Circulations. Associated Farm Papers. Agricultural Publishers' Association.

Eastern Representatives:

S. E. Leith, Fifth Avenue building ..... New York
Tom D. Costello, Steger building ..... Chicago
C. A. Cour, Fullerton building ..... St. Louis
R. R. Ring, Palace building ..... Minneapolis

Subscription price: One year, 25c; three years, 50c; five years, $1.00. Canadian, one year, 75c. Foreign, one year, $1.25.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible advertisers, nor will we pay the debts of honest bankrupts. Complaints must be sent us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of disease in stock sold through these columns.

## *Plan No Non-Essential Work*

Whatever questions may come before the legislature of this state at its next session, there is one principle that should be borne in mind by its members: No non-essential state work should be authorized.

In carrying out this policy the legislature might go so far as to work a serious injury to state development. The future should not be disregarded, but legislation should be so drawn as to prevent the use of funds and labor and materials during the war that might be better used for strictly war purposes. The one great thing now is the winning of the war, and every man taken from war work to do unnecessary work for the state, every dollar invested in a non-essential and every bit of material of any kind that is needed for the prosecution of the war, but used for other purposes, is just so much toward the delay of victory. Every dollar of taxes levied for a purpose not directly contributing to the winning of the war is a dollar added to the burdens of the public, who will, in the long run, if not now, have to bear the cost of the war. There never was a time when level-headedness and loyal patriotism were more needed in legislatures than now.

## *Don't Leave It to Somebody Else*

Following the urgent appeal of the public service commissions of the three states of Idaho, Oregon and Washington, acting jointly, the interstate commerce commission, with headquarters at Washington, D. C., has granted a hearing on the recent increase in freight rates affecting fruits and vegetables. This hearing will be held at Portland, Ore., September 20 to 23. At that time representatives of the northwestern commissions will present the case of the fruit growers and the manufacturers of fruit products with a view to having the 25 per cent freight rate increase and other new regulations governing freights on these commodities revised so as to be more equitable. The case is one of the most important with which the fruit industry of the northwest has had to deal. While the public service commissions will undoubtedly present the matter ably and fairly from the viewpoints of all concerned, every fruit grower and every fruit growers' organization should consider it an opportunity and a duty to take a personal interest in the conduct of the case. It is too often true that persons directly interested leave the conduct of their affairs of this character to some one else and later complain because the results were not what they desired. In this particular case the fruit man should make every effort to insure a complete and vigorous presentation of the facts before the representative of the interstate commerce commission.

## *Mr. Houser Quite Misses the Point*

We are glad to have Mr. Houser's assertion that previous answers coming out of his office and signed with his name to our letters of inquiry have the stamp of his disapproval. Mr. Houser explains (and his explanation given in his letter published last week is undoubtedly correct) that the answers, which he himself pronounces "stupid, to say the least," were written by a new man, while he was away from Portland on public business.

Mr. Houser, however, quite misses the point when he says that we have cast reflections upon the sincerity of his efforts "to bring about conditions that would make it possible to permit an expedient movement of the crop in the states of Oregon, Washington and Idaho."

We do not question, and have not questioned, his commendable efforts in that direction. The point we raised, and which is not yet satisfactorily illuminated by Mr. Houser's latest letter, was:

**Whether the growers of the interior will be guaranteed by Mr. Houser terminal facilities, under which, if necessary, they can send their grain direct to the grain buying corporation and save themselves from the payment of excessive profit or rakeoff by private speculators.**

Mr. Houser's explanation that he had previously announced "that if he heard of any united unfair practice he would at once solicit direct consignments" is not as reassuring as the grower would desire. Widespread individual unfair practice on the part of wheat buyers could become exceedingly burdensome to the producers, who still might be unable to prove a united conspiracy.

It was the original explanation of the new system of grain buying that there would be actual competition by the grain buying corporation against private buyers and speculators. The Farmer believes that that competition, to give the growers adequate protection, must be actual and not potential or prospective.

Mr. Houser says in his letter: "You make mention of an eight-cent charge. We wish to call your attention to the resolutions which were passed at Boise, Idaho, at the food administration meeting, that anything over a seven-cent charge would be classed as unfair." This action of the Boise conference seems to be but a ratification of a previous agreement entered into by the associated millers and the organization of grain buyers at a conference at Seattle. At the latter conference the declaration was made that a seven-cent intermediate charge would meet with their approval. It was also agreed that a handling charge be made on purchases by mills and exporters from coast and country dealers of one-half of one per cent, which would be about one cent a bushel. Apparently the Boise conference did not approve that extra one cent a bushel, but whether the millers and exporters will give up that extra rakeoff is yet to be seen. Apparently Mr. Houser is approving these intermediate charges which many farmers regard as excessive and unwarranted.

Mr. Houser's action, as explained by him in his last letter, of turning over the entire proceeds of his former private grain business to the Red Cross and other war relief funds, is admirably fine-spirited and patriotic.

That is apart from his newly acquired interest in the gigantic merger of the Portland Flouring Mills, the Puget Sound Flouring Mill companies and their subsidiary warehouse and milling companies in the Pacific northwest. He explains that the profits that will come to him over and above six per cent of his interest in this large merger will also be donated to war relief funds.

## *A Man Without a Country*

It is an old story, one that has been read no doubt by nearly every one. But this is a good time to read it again. It is grippingly interesting and, in addition, has a lesson peculiarly appropriate to the present time. There are yet in this country those whose patriotism is at a low ebb, those who fail to realize the value of their country, those who fail to recognize the high degree of justice and liberty that the constitution of the United States of America guarantees to them. They criticize their government where criticism is not due; they advocate policies that would destroy those great things for which the colonists and the heroes of '61-65 fought for and for which five million loyal Americans are now mobilizing to preserve for the entire world. That little book, "A Man Without a Country," lying on many a dusty shelf throughout the land and to be found in every well equipped library, public or private, should be brought forth and its story re-read and pondered over in the light of the present hour.

## *Entire Community Is Helped*

One of the commendable features of the government's movement to lend creditless farmers money with which to finance their seeding of wheat is that the movement is more than a mere seed wheat matter. It is a community matter. To illustrate: Suppose 100 farmers in a community secure from the government the maximum ($300) allowed under the seed financing plan. That means $30,000 put into that community by the government. It means $30,000 more money put into circulation. Instead of scraping together every dollar possible to buy seed wheat with, the farmers buy their seed to as great an extent as possible with the money advanced by the government and have their savings to spend for other things that not only they need but that the community merchants and tradesmen need to sell. Thus it is more than a question of increasing wheat acreage, though that is the main object. It is a question as well of community stimulation. The government is not only helping the farmer. It is helping the merchant and blacksmith and preacher and doctor—everybody.

## *Security Must Be Unquestionable*

Occasionally a criticism of the federal farm loan bank is heard on the ground that its officers are not liberal enough in accepting farm mortgages and making loans on them. Such criticism as a whole is to be condemned, for the future soundness of the land bank, and hence its value to the farmers of the country, depends wholly upon the character of the security behind its loans.

Here is the way the bank operates: With a capital of $750,000 in each of its 12 districts to start with, it makes loans to farmers. For each loan it takes a first mortgage on the farm as security. This mortgage is accepted by the government as collateral against which government bonds are issued. These bonds are sold to individuals or corporations throughout the nation. The money received for their sale is loaned to other farmers, who give first mortgages on their farms to secure the loans. These mortgages are in turn used for the issuance of bonds, which are sold to raise money to lend to other farmers. Thus the wheel turns—the original capital, the loans, the mortgages, the bonds, the new capital from the sale of the bonds, new loans, new mortgages, new bonds, new capital, and so on as long as the security given by the farmers remains absolutely sound. Let that security once become unsound and the security behind the government bonds automatically becomes unsound.

Instead of criticism for demanding absolute perfection of title and mortgage and reasonable valuation of land on which a mortgage is accepted, the officers of the land bank are entitled to highest commendation when they thus protect the interests of those who borrow and will desire to borrow in the future.

# Hindenburg Line Disappearing

## *Allies Continue to Force the Enemy From Captured Soil*

The past week on the western battle front, as well as in Russia, has been the most successful week of recent months for the part of the allies. Gains of ground and strategic positions on the western front and a closer welding of allied interests in Russia have marked the week. In view of the war department's announced plan that the military effort would be centered on the western front, chief interest lies in the developments in that section. The one outstanding fact in that development is that the famous Hindenburg line, where the German armies had established themselves prior to the launching of the westward drive last March, has been successfully penetrated in a number of vital places. In addition every important German base west of that line in the territory occupied by the Germans during the drive has been retaken by the allies. Cambrai is expected to fall soon. At this writing it seems evident that the entire Hindenburg line must give way with a short time.

What this seems to mean is that fortified German lines are not impregnable, as has so often been felt. Reliable commentators on the situation call attention to the fact that the Germans have had adequate time to prepare this Hindenburg line for defense and that to be able to hold it was a matter of life and death to them. Hence, it is reasonable to assume that it was given up, or is being given up, because the German power is unable to hold it. When this line is finally wiped out it is not an over-optimistic prophecy to predict that before many weeks shall have passed nearly all of the territory invaded by Germany on the western front since the launching of the first great drive in August, four years ago, was begun, will be recaptured.

### Germans Recognize Their Danger.

Extracts from German papers indicate that the people of that country are beginning to realize the danger that confronts them on the battle front. The Cologne Gazette is quoted as saying:

"The struggle on the southern front becomes every day greater and more formidable. The greatest German offensive can not even be compared to the present fights. We must not let the relative calm reigning in some sections deceive. Formidable forces are gathered there. Are these troops in need of rest, or are they designed to fresh fights, ready to attack on the first opportunity?"

Other German papers and papers published in Switzerland, but which are understood to have a German circulation, openly admit the increasing menace to the German arms.

### U. S. Soldiers Continue to Go.

General March, military chief of staff at Washington, has announced officially that more than 1,600,000 American soldiers had embarked for France at the close of business August 31. More than 250,000 embarked during that month.

### Allies Recognize Loyal Russians.

The so-called Czecho-Slovaks, the loyalist element in Russia, have been officially recognized as a government by the United States and the other principal allied government. The effect of this official recognition will be the building up of an allied unity in Russia in opposition to the bolshevik and German elements. The allied nations not only are lending military aid to the newly recognized government, but are financing its undertakings to a considerable degree.

### Many Men Are Registering Today.

Today, September 12, is registration day for those men between the ages of 18 and 45 years who are not already registered for war service or are not already in some form of the military or naval service. It is estimated that more than 12,000,000 men will be registered under the new draft act. A statement from Washington indicates that broader grounds for the granting of exemptions on the basis of occupation will be observed in preparing the lists of men for call to service than was the case under the last draft act. A questionnaire will go out to each registered man immediately to be filled out and returned to the exemption board in his district. The operation of the new draft act will be rushed in order to get the first contingent on the way to the military training camps at the earliest possible date.

### Bomb Thrower Works in Chicago.

Probably as a result of the conviction of 93 I. W. W. recently in Chicago on charges of attempting to obstruct the government's conduct of the war, a bomb was exploded in the federal building of that city last week, resulting in the death of four persons and injury to a considerable number of others. Judge Landis, who conducted the trial of the I. W. W., and who sentenced them following their conviction by the jury, has his offices in the building. It is believed probable that the person guilty of the attempted destruction of the building is among a considerable number of suspects that have been arrested by federal authorities.

The convicted I. W. W. members have been taken to Fort Leavenworth, where they are being placed in the federal prison to serve their sentences, the highest of which run to 20 years. William D. Haywood, national secretary of the organization, was among those taken to prison.

### Railroad Workers Get Higher Pay.

Nearly a million railroad employes, including clerks, track laborers and maintenance of way men, are to receive wage increases of $25 a month, the equivalent of $1 a day or 12 cents an hour over the pay they received last January 1, under a wage order issued by Director General McAdoo. Advances are effective as of September 1. This order represents the second largest aggregate wage increase ever granted in American industrial history. It is supplementary to the general railroad wage order issued nearly four months ago, providing for about $300,000,000 increases.

### President Is Not Coimng West.

Announcement has been made at Washington, D. C., that President Wilson has for various reasons canceled his proposed trip to the west during the Liberty loan campaign, which will be launched September 28.

### War Cost Breaks Records.

Official figures show that this country spent for war purposes during the month of August $1.805,513,000, an average of considerably more than $40.000 a minute. Of this amount more than $1,500,000,000 went for the operation of the army and navy and other direct war expenses.

## *Washington Gleanings*

The Wenatchee apple crop is beginning to move, and from now on there will be practically continuous activity in the apple harvest.

Walla Walla county is caring for 161 French orphans, nearly every school in the county supporting one or more. The rest are supported by individuals.

It is reported that 490 cars of fruit left Yakima valley during the last week. Most of the cars were peaches, although there are holdings of pears in storage.

The Riverside Fruit Growers' association is contemplating the erection of a fruit warehouse in Riverside. The association is preparing to handle a record apple crop in this district next season.

Reports come from Vancouver that the prune harvest is on. The crop has every indication of being unusually large in nearly all sections of Clarke county, and the price this year is the highest on record.

The Kennewick-Richland marketing union this year shipped 26,036 crates of strawberries. The average price for extra fancy berries was $3.06 per crate; for fancy berries $2.83 per crate, and field run $2.29 per crate.

John Horrocks, who owns 360 acres of wheat land just across the Idaho line east of Palouse, has purchased 240 acres adjoining it from Mrs. M. Miller, paying $18,000. He will take charge of the farm October 1.

The Stillwater Lumber company's mill at Vader recently suffered a loss of $100,000 from a fire in the boiler room. The planing mill and dry kilns were saved, but practically all lumber on the docks was consumed.

One of the largest real estate deals in the vicinity of Ridgefield was made when J. W. Davis purchased the Island farm, on Bachelor island, of the W. W. Cotton estate. The farm consists of 700 acres, and the deal involved more than $50,000.

The White-Dulany company of Seattle has entered the Palouse country market with the recent purchase of warehouses at Palouse, Potlatch, Princeton and Harvard. C. W. McFarland has been employed as district manager, and will make his headquarters at Palouse.

Puyallup valley hop raisers will pick enough of their crop this year to fill existing contracts, at least. They are dubious about the future of the business, due to the approach of prohibition. The crop this year is as good as in 1917, when it totaled between 6000 and 7000 bales.

Yakima hop growers, as a result of the announcement of the order prohibiting the manufacture of beer after December 1, ceased picking the valley's crop last week, which is estimated at between 17,000 and 20,000 bales. Cessation of harvesting will, it is estimated, result in a loss of at least $260,000 to the growers.

The Morrison Mill company is planning to put $75,000 worth of improvements into its Anacortes mill in the near future. In addition to a warehouse 200 feet long and an extension to the dock, a 1000-horsepower turbine generator and electric motors, a double-cut resaw and other machinery will be installed.

# Boys Paid to Go to School

## *Unprecedented Opportunity Is Offered by Government*

An unprecedented opportunity is being offered this fall by the government and the colleges and universities to every boy between 18 and 21 years of age to get a college education and a military education and draw pay at the same time. Never before in the history of the United States were boys offered pay for going to school, declare the great educators of the northwest.

Here is the proposition: Under the new draft law boys from 18 to 21 years are subject to call for army service, but the government needs young men with education and military training. Hence, it will pay high school graduates of these ages the regular army pay of $30 a month and furnish them uniforms if they enroll in regular college or university courses and enlist in the so-called "student army training corps" for military training. They will be required to do 20 hours of military drill or other military work each week. Special arrangements are made in some instances for boys under 18 years or those who have not graduated from high school, though they will not be able to receive all the assistance that the graduates will.

As one of the leading educators of the northwest said recently, a young man who wants to do what his country most desires to have him do and at the same time be getting a college education should investigate this proposition. He is subject to call to service under the new draft act and will remain so while taking the school work, but he will be securing military education that will fit him to advance rapidly in the ranks if he desires to do so when he is called to service.

Every boy in the northwest should think about this opportunity and if interested in it write to the school that he would like to attend. Letters may be addressed to the following for detailed information on the subject:

Washington schools—President Henry Suzzallo, University of Washington, Seattle, Wash.; President E. O. Holland, State College of Washington, Pullman, Wash.; President S. B. L. Penrose, Whitman college, Walla Walla, Wash.; President J. M. Brogan, Gonzaga University, Spokane, Wash.

Oregon schools—President P. L. Campbell, University of Oregon, Eugene, Ore.; President W. J. Kerr, Oregon Agricultural college, Corvallis, Ore.

Idaho schools—President E. H. Lindley, University of Idaho, Moscow, Idaho.

### HOGS KILL WEEVIL.

### Gleaning of Fields Effective.

Reports have come from a number of the pea and bean growing sections of the northwest indicating that weevil are threatening to secure a foothold in the northwest. While various methods of destroying weevil in the harvested crops are practicable and should be put into vigorous effect, J. R. Shinn, county agriculturist for Spokane county, Washington, adds another argument to his appeal for gleaning fields with hogs by declaring that this is one of the best possible methods of preventing the spread of weevil pest.

Mr. Shinn says that in a large percentage of cases the weevil secure their foothold in the shattered and unthreshed peas and beans that are left on the ground after harvest. Hogs will clean the fields completely if given access to them, he says, and will thus destroy what weevils are in the field and prevent the development of others.

# Powder to Clear Land

By CARL J. MENZE.

The war cry, raise more crops, should be changed to buy a box of powder in western Washington. The most difficult problem the farmers west of the mountains have to contend with is to get their land cleared and fit for cultivation. When once the land is cleared, it is not often known to lie idle. It is very hard to increase crop production in one year without clearing more land. To increase the yield per acre requires rotation, live stock, drainage and good weather conditions. This can not be expected to produce results in one year. Since the war started the price of powder has doubled and the result is very little land has been cleared. Consequently, if each farmer with uncleared land would buy a box or two of powder and use, cultivated acreage and crop production would increase materially.

### Lewiston Show Promising.

O. P. Hendershot, secretary of the Idaho state fair and also of the Northwestern Live Stock show at Lewiston, announces that the prospects for a great show at Lewiston this winter are first-class in spite of the handicaps with which the breeders have been contending. He announces also that owing to increased contributions to the premium funds by the slive stock association throughout the country and to increased state aid the premiums offered this year will be 150 per cent greater than those of last year.

### Cost of Feed Hits Fairs.

While the livestock exhibits at the fairs this season are good in the main, there is evidence that the cost of feed and labor is having a bad effect on the displays. Fewer animals as a rule are shown, and they are as a rule less thoroughly fitted.

# War-Time Farming

## Who Loses and Who Makes by It

George Wilson of Wilbur was at the interstate fair. I always enjoy talking with Mr. Wilson. He gets as near down to brass tacks as almost any man I meet. His hands show that he has been pretty busy at farm work. Need of help and need of feed are the two big outstanding factors in his farming. George Wilson is a not a man easily discouraged. He is tiding over the troublous days like many others who are hanging on to their stock as far as possible and doing all they can to meet the war demands for food production. "If it must be, I am willing to meet with losses in my farming operations if the consumer gets the result. What I do not want to see is to have some one between myself and the consumer get the profits when I am losing the money." This is the attitude of mind of many a farmer throughout the Pacific northwest today.

Pren Moore, at the head of the poultry department of the Idaho State university, was in the poultry show. He was pleased with the remarkable display, considering war conditions, both as to quality and quantity. The fine poultry show which has become a factor at Moscow is dear to the heart of Pren Moore. "I do not know whether we will have a show the coming season or not. We can get the money. We have a surplus of $100 left over from the last show, but can those of us who are spared from immediate war service get the time to pull it off?"

Everywhere that question is being asked. The disability of many undertakings, you might say the necessity of continuing these undertakings, is evident. How can they find time to pull it off? It may be a question, in more than one instance of waiting till the clouds roll by.

EAS

# A CROOKED TRAIL

**The story of a saddle trip up and down the Texas frontier in pursuit of a runaway ox.**

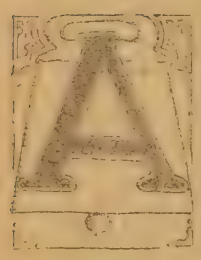
**By LEWIS B. MILLER**

**Author of "Trappers of the Ozarks," Etc.**

Copyright, 1911, by the Page Company.

**AUTHOR'S NOTE.**

Texas is a vast region; as wide at its widest as from New York city to Chicago, and as long at its longest as from Lake Erie to the gulf of Mexico. Naturally, owing to this enormous extent, it has had, at the same time, a greatly diversified and contrasting history. While the older-settled portion of the state was already enjoying a peaceful civilization, the whole circular frontier of nearly a thousand miles was waging a ceaseless, fierce warfare against the most savage tribes on the continent. And beyond the settlements stretched mighty, buffalo-grazing, Indian-infested wilds, [illegible] as extensive as the settled part of the state.



This narrative has to do with the brief period immediately following the pioneer period. The dreaded Rangers, aided by hunger after the buffalo-hunter had finished his bloody work, had driven the Comanche and the Kiowa to their reservation, never to leave it again. All around the frontier, from Red river to the Rio Grande, curved a wide, thinly peopled zone, from 5 day's travel to 10 days' travel from a railroad, into which as yet only those who feared neither hardships [illegible] dotted with an occasional cattle ranch or fort, [illegible] held by the Texas Rangers and the United States [illegible]

[illegible] and semi-wild region had come. In no [illegible] every man and every man's hand [illegible] the savage, too, he toiled not, and [illegible] by theft and robbery.

[illegible] tive, the "leading" character of which is one [illegible] already often in print. I have endeavored [illegible] the life of that day as I recollect it. That [illegible] sses wonderful possibilities for romance can not [illegible] And if they are not taken advantage of in [illegible] the fault lies not with the material, but is mine.

## CHAPTER 1.

### The Spotted Ox Runs Away.

T daybreak one morning, near the end of July, and less than a year after we had settled on the Little Pecan creek, I was startled by a vigorous pounding on the door of the east room of our double log-cabin—the room where my younger brother and I slept—and heard father's hearty voice saying:

"Up with you, boys! Up! up! up! Paw! out! Slide out! Bounce out! Out you come!

"All right!" I managed to call back, though still half asleep. And a little later I emerged from the door, dressed, but with a boot and a sock in each hand, and sat down, drowsily, on the edge of the entry-porch to put them on.

"You'd better find the calves and get to milking as soon as you can," mother remarked, from the door of the west room, where she had already begun breakfast.

"Didn't father go after the calves?" I inquired; for he was nowhere about the house. I was now standing up, groping along the wall for my hat. There was not yet light enough to see much.

"No. He spoke of driving up the oxen before they grazed off. He may bring the calves if he finds them and the oxen together; but you'd better not wait for him. Are you going to plow today?"

"Yes, I expect to start to breaking new ground if we can find Lep and Coaly."

My hat was not on its accustomed nail; and after looking everywhere without finding it, I reflected that the sun would hardly get very high before my return with the calves, and I started off bare-headed.

As I passed out through the yard-gate, hatless, coatless and breakfastless, not once did it occur to me that I should be gone more than a few minutes. As a matter of fact, I was destined to be absent nearly two months, during which I should travel a thousand miles and more, and pass through adventures I had never so much as dreamed of.

Crossing the creek at the ford, I climbed the hill beyond and soon entered the woods. A few hundred yards further on, and not far from the log schoolhouse, I came to a little prairie; and there, comfortably bedded in the thick, tall grass, lay all but one of our dry cattle. Coaly, the black ox, was with them, but Lep, his yoke-mate, was nowhere to be seen.

Wondering a little at this, I kept on, and after wandering about through the woods till the sun was shining against the upper tree-tops, I came upon the calves, all seven of them together. I had rounded them up and was just starting them toward home, when father came out of the bushes close by.

"Hello there, father! You've got on my hat!" I called out.

"Yes, I'd discovered that. Mistook it for mine in the dark. Thought it wasn't a very good fit." He took off my broad-brimmed head-covering and handed it to me. "Havn't seen anything of Lep, have you?"

"No, sir, I haven't. I noticed Coaly—"

"Yes, I found Coaly, down there at the little prairie, and I've been tramping about through the woods, thinking I might happen upon Lep. He likes to lie down by himself sometimes. How long has it been since you saw him?"

"A week or 10 days, I think, father. Lep and Coaly were both at the lick-log, I recollect. They don't often come down to the pen now, unless they get salt-[illegible]"

"It looks a little suspicious," father said, thoughtfully. "I'm afraid he may have run away again."

"But he couldn't run far, hobbled as he is now," I remarked.

"Yes, I know. He was hobbled. But rawhide has a way of stretching these dewy mornings. He may have lost his hobbles off. If he did, no telling how far he's gone by this time. And now is when we need him worst, too. We ought to get all that new ground turned over before cotton opens. I'll take a walk up toward the prairie and see if I can't run across him."

"Now that you're bare-headed, you'd better drive the calves home and let me look for Lep."

"All right," father agreed, starting after the calves. But he turned to add: "If you don't find him around here, one of us will have to get a horse after breakfast and strike out on his trail, and keep after the rascal till we run him down. But we want to make sure that he's really gone."

Father walked on after the calves, and I started off through the woods. Vic, my little dog, had been with father; but now she left him and followed me. I tramped on for more than a mile, listening constantly for the bell, till I reached the prairie. But not a stroke of the big bell-clapper had I heard.

At the edg of the prairie I happened upon our horses. Dick, my sorrel pony, walked straight up to me and rubbed his nose against me. He had been running on the range for a few months now, and was fat and shiny.

"Look here, Dick," I remarked, "guess I'll take a ride if you don't object."

Dick seemed willing enough, and I was quickly astride his round back. Of course there was neither saddle nor bridle. But I had taught him to turn when I leaned forward and slapped him lightly on the side of the head; so there was no trouble in guiding him. I intended to go home, and after eating my breakfast, and obtaining a saddle and a bridle, I would start out in quest of the missing ox and keep riding till I found him. But after mounting the pony I decided to follow down the edge of the prairie a few hundred yards, in the hope of hearing Lep's bell.

I did soon detect the dingdonging of a big bell, but it came from across the divide, from over in the Bosque creek country, and was so far away that I could not decide whether it was Lep's bell or some other bell. However, it would not take long to ride over there, and I promptly headed Dick in that direction.

The bell was traveling from me, and not till I had ridden two miles and more did I come up with the animal that wore it. Even before overtaking the bell, I felt sure it was not Lep's; and in that I was right. It was worn by a big red cow.

Now I turned the pony's head homeward. After riding several hundred yards, I came to Hank Richardson's cabin. Before settling here Hank had lived over on the Little Pecan, not far from us. He was a good friend of mine.

His cabin was small, but at the north end was a large brush-shed; and it was under this shed that he and his wife and children were just sitting down to breakfast as I rode up to the yard-fence. People lived largely out of doors here during the warm season. Besides the table, a bed stood under the shed.

"Hello there! 'Light and and look at your saddle!" Hank called out, in tones that might easily have been heard a mile. Hank had a terrific voice.

"Couldn't see it if I did," was my reply. "I'm looking for Lep. Haven't seen anything of him around here, have you?"

"Yes — no, not right around here. I've seen him, though—five or six days ago. I was down at Martin's, and old Lep was standing in the shade of a tree, right in front of Martin's house. I noticed him particularly, because I was a little surprised to see him there. But what made you go and sell your saddle and bridle?"

I explained how I came to be riding without them, and Hank said:

"Then get down and eat a bite of breakfast with us, and I'll lend you mine. Don't have much use for them anyhow. Off yith you! Here's a bridle now. You can hitch Dick with this. We've got plenty of bacon and eggs and coffee, all good an' hot, and there's surely no use of you going back home till you find that ox."

"Hello there, father! You've got on my hat!"

He caught up a bridle from the end of a log and came out to the fence. I was reluctant to stay, but Mrs. Richardson also insisted, and Hank said:

"How many meals have I sat down to at your house? What under the sun do you want to ride all the way home for, when you can just as easily get breakfast here, and then go on over to Martin's and find your ox? You can round up Lep and drive him home before you could go home and get back this far."

"But I'd have to come back to return your bridle and saddle; so it's about as broad as it's long," I objected.

"No, you won't have to return my bridle and saddle. Just let them stay over there till some time when you're passing. No matter if it's a month or two. Off you crawl, before I drag you off!"

Hank's hospitality was of a very hearty, almost violent, kind—and I dismounted. After bridling Dick, and hitching him to a limb, I went in and ate with the family. Afterwards, while I was saddling the pony, Mrs. Richardson fed Vic. Then I mounted and started for Martin's. But I soon stopped to shout back:

"Hank, was Lep hobbled?"

"Can't say positively as to that. Didn't notice any hobbles, but I wasn't right close to him. He might have been, or he might not."

I rode on. Martin lived four miles further, in the valley of the Bosque, but on the other side. On arriving at his house, I called "Hello!" Martin himself came to the door.

"Have you noticed a spotted ox around here, with a bell on?" I inquired.

"And with horns like that?" He reached out his arms at full length.

"That's the fellow—that's the ox I'm looking for. He's got about the longest horns I ever saw on a cow-brute. I can't quite reach from tip to tip. Hank Richardson told me he saw him here in front of your house."

"Yes, that steer was here for a day or two. I noticed him licking at my salt-log once or twice. But he's not here now. Four or five days ago, I took a ride over toward the prairie; and on my way back I met that spotted steer. He was following the main-traveled road and heading toward Lookout Gap. Chances are you'll find him over about Kelly's, at the edge of the prairie."

"Was he hobbled?"

The man shook his head. "No, no hobbles. He was walking a good, steady gait."

"Then I'll have a chase of it," I answered, and was soon hurrying on.

Kelly's house was six or seven miles away, but it was the first one I came to. Only recently had the Comanche Indians ceased their raids here.

Kelly was plowing cotton near the road, in a little field bristling with white-limbed, deadened trees. He was an acquaintance of my father's, and I had seen him a few times.

"Yes, I recollect that steer very well enough," he assured me, after I had described Lep. "Couldn't help noticing that pair of horns. Don't know when I've seen a longer pair. No matter where he goes, you can track him by his horns, if anybody sees him. It was four or five days ago that he stopped here. Guess you'll just about run across him somewhere between here and the mountains. If you don't find him standing under a live-oak, I'd advise you to go on to the gap yonder. Some springs there that never dry up, and it's a great watering-place for cattle."

I was starting on, when Kelly said:

"I'm going to ride over to the Little Pecan country after dinner. I'm agent for a nursery, you know. I

# High-Priced Hay

## Can I Feed It to Dairy Cows?

Answering the question, "Can I afford to feed my high-priced hay to my dairy cows," L. W. Fluharty, director of extension work of the University of Idaho, says:

If you are testing your cows and finding that you are losing on all of them, then it is no doubt better for you to sell them and your hay to the highest bidder. If you are not testing them it is impossible to correctly advise you. Be perfectly fair to yourself and your cows. No doubt some are good and some are poor. Keep the good ones, and dispose of the poor ones, because you can not afford to feed a "star boarder." It is an unquestioned fact that a good cow will produce as much net profit as 25 poor ones.

Another factor that will determine whether to sell or not is the amount and kind of feed to be fed. If alfalfa hay alone is fed, a different problem is presented than where a balanced ration is available. As eminent an authority as Professor Eccles has suggested the following ration:

For 100 pounds live weight: Feed per day 1 to 1 1-2 pounds alfalfa hay and 2 1-2 to 3 pounds succulent feed (corn, beet top or other silage and root crop, etc.).

And 1 pound grain per day for every pound of butter fat produced in a week. Adjust this to the individual needs of your cows.

It is usually considered that the value of the manure and the calf will offset the labor and investment.

Assuming this to be true, then the value of the milk produced should equal the cost of feed.

In general it may be stated that a cow should produce 200 pounds of fat per year, or be sold for beef, and the goal should be 365 pounds or 1 pound per day for every dairy cow, and the ideal much higher.

Other points to remember are:

The added advantage of feeding your hay on your own farm, thereby retaining all of the fertility, by which 50 per cent greater crops may be raised on your farm. This is not an exaggerated statement, but has been proven by many dairymen over the state.

Also the monthly pay check which gives expense money while waiting for the returns from the cash crops. This one factor has very often produced success from apparent failure.

It is also a war measure because the dairy cow will produce more human food than any other animal from a given quantity of feed.

It is also well to remember the failures due to the absence of diversified farming, and dairying is an important part of successful diversified farming systems.

The presence of the dairy cow on the farm is desirable because of the better distribution of labor effected, relieving the labor congestion in the busy harvesting and planting seasons.

And finally let us take a glance into the future. Will it be an easy matter to buy what dairy cows we need if hay is cheaper next year and we desire to buy back our cows? Will the price of hay remain as high indefinitely? Will our cash crops continue to return us as good a profit? Undoubtedly the dairy situation for the future is very bright.

## Dairy Outlook Poor.

First-hand investigation of the dairy situation throughout the United States has convinced B. H. Rawl, chief of the dairy division of the department of agriculture, with headquarters in Washington, that the industry is in a serious plight in many places. The situation in Oregon is none too favorable to the dairymen, he said, at Portland, Ore., on completing a two-day survey, which covered points in Washington, Yamhill, Clackamas and Multnomah counties.

## Feeding of Artichokes.

Will you please tell me the feeding value of root artichokes for milk cows? J. G. F.

The tubers of the artichoke have about the same feeding value as potatoes. It is claimed by many that it is excellent feed for hogs, but for dairy cows the yield is not sufficient to warrant its use. In some places silage of good quality has been made from the stems, especially when it is mixed with other green feed such as corn or clover. A. B. N.

## Selling Butter.

Please tell me what to do in regard to selling butter? Do I have to have my cow tested? Whom shall I write to for a permit? J. W. P., Oregon.

Your cow must be tested for tuberculosis or the butter must be made from pasteurized cream. Apply to the state dairy commissioner, Salem, Ore., for a permit. A. B. N.

## Marketing in Motor Trucks.

An example of how motor trucks are relieving railroad transportation in many sections of the country is shown in the receipts of hogs delivered to the Omaha market by this method of conveyance. According to a report recently compiled by the bureau of markets there was an increase of 180 per cent in the number of hogs transported to that market by motor trucks during the first six months in 1918 as compared to the corresponding period of 1917. The number carried in this way amounted to 92,780 for the period in 1918 as compared to 33,084 for the corresponding months last year. Estimating 70 hogs as an average carload in railroad shipments, the number delivered by motor trucks on the Omaha market during the first six months of 1918 aggregated more than 1300 carloads, or an average of more than eight carloads for every market day during the period. The motor truck business is becoming so important that commercial organizations of Omaha are taking active measures to utilize the trucks on return trips to country points for hauling various kinds of freight. Experience has shown that motor truck marketing is as feasible in winter as in other seasons, as more than 26,000 hogs were delivered directly from farms to the Omaha market during January and February.

## Mrs. Williams a Pioneer.

Mrs. Ina Phillips Williams knows what pioneering in central Washington means. Her father died soon after the family came to the Yakima valley and at an early age she worked hard for her board while attending North Yakima's first school. She worked her way through grade and high school and later through the Ellensburg normal. Mrs. Williams is one of the women of the Pacific northwest who have been interested and active in public affairs, having been chairman of the legislative committee of the State Federation of Women's Clubs. As a member of the last Washington legislature she was instrumental in passing two important measures, the "single standard of morals bill" and the bill establishing an agricultural experiment station in the Yakima valley. She was also an effective worker in behalf of the "bone dry" law, the water code bill and the drainage bill. Mrs. Williams is a candidate for the republican nomination to congress from the Fourth district.

## Walla Walla Crop Low.

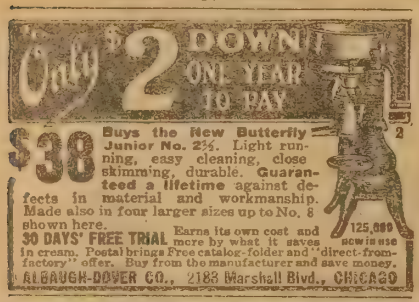
The latest reports from Walla Walla indicate that the wheat crop this year in that county will not exceed 3,000,000 bushels. These figures are considerably lower than the latest estimates prior to the beginning of harvest. They are likewise about 300,000 bushels less than last year, which was one of the shortest crop years ever known in that county.

### Most Unusual.

Two business men were discussing their partner during his absence from the office.

"A funny chap, Rattlepate," said one.

"How's that?" asked the other.



"Well, can you believe it, he didn't meet the prettiest girl in the world during his holidays."

## Believes It Pays

### Two Litters of Pigs a Year

By MRS. L. KOPPEL, Pullman, Wash.

I have tried raising two litters of pigs a year and have found it very satisfactory, although it was done on a small scale. There was only one sow. Last year eight pigs were saved from the first litter. Ten were saved from the second litter. The first litter came about the middle of April, and the last litter came about the middle of November.

I think it better to have the second litter come in September or October. Of course a program can not always be carried out to the very letter.

The sow mentioned above raised 22 pigs year before last, 12 of the first litter and 10 of the second litter. This gives 40 pigs from one sow in two years. This may not be a real big record, but it is at least fairly good. The sow when sold last winter weighed over 600 pounds. She was a grade Duroc Jersey and was a very well formed animal.

Only one of these litters had pasture. The others were raised in a dry lot. The first litter was fed some green stuff from the garden, turnips, carrots, etc. The third litter had plenty of alfalfa pasture all summer. The other two litters received very little green stuff from any source. All of the litters developed well, weighing from 200 to 250 pounds at 6 or 7 months old.

These pigs were fed plenty of ground or rolled barley and shorts. I began by feeding barley, but when the price went too high I turned to shorts. The barley was fed dry. The shorts were soaked in a barrel and fed as a slop. The last litter were finished on dry shorts, during about a period of six weeks.

I do not think these pigs were raised as cheaply as could have been done by using more pasture and more root feed. Still there was some profit in it. My plan now is to use more pasture and less grain feed. I think it pays to give a liberal amount of grain to young pigs running on pasture.

This year I have a grade Chester White and she has a fine litter of eight. I expect her to bring another litter this fall.

## VETERINARY

By DR. S. B. NELSON.

**Abortion In Sows**—Can you advise me as to the cause of abortion in sows? I have had two cases recently, one after the sow had been bred two months and the other three months. They are in apparent good health and have been on good pasture with some boiled potatoes and grain. They are in good condition, but not fat. Have had one litter each previously and were not good mothers. Is there anything against allowing a boar to run with the sows at all times? J. G.

Eastsound, Wash.

I can not give you any suggestions as to the reason why sows abort. It is not often that contagious abortion gets into a herd of sows. I believe it is generally considered better to keep the boar away from the sows except during the breeding period than it is to allow the boar with them constantly.

**Continuous Diarrhea**—Wish you would tell me what is the matter with my mare from the following description of the animal and her condition: The mare is a three-year-old, apparently sound other than a continuous diarrhea or scours. It may be her teeth or stomach. The animal has been fed dry hay and some of the time rolled barley also. This has run three months and the condition seems to have but little change with change of feed. Please advise me through the Farmer. JOHN HALLAN.

McCammon, Idaho.

You really ought to have the veterinarian see the animal, and make a diagnosis and give you advice and treatment accordingly, but until you can get a veterinarian I would suggest the following treatment: Cut down the feed to one-fourth of what you are feeding now. Keep her on this light ration for a few days, four or five. At the same time give her in her drinking water or in a drench two teaspoonfuls of listerine morning, noon and night for that period of time. If she should bet better, gradually increase the feed. Naturally you will have to do this anyway, but increase it very slowly, and then you can also decrease the medicine given, first giving twice a day, then a teaspoonful morning and evening, and then one teaspoonful at noon for a few days' time. This advice may be of service until you can get some one to make a definite diagnosis for you and give you the treatment indicated.

**Cow Gives Stringy Milk**—Can you tell me what to do for a cow that gives stringy milk, sometimes a little bloody? We thought perhaps she bruised her udder. She has been fresh since March. She has been giving this kind of milk every few weeks, but not all the time. MRS. N. M.

Chitwood, Ore.

Give your cow one teaspoonful of sodium hyposulphite in one pint of water night and morning. Give her light, easily digestible food and not too much of it.

**Don't Fail to Read It.**

# Wheat Substitutes

## That Give Best Financial Returns

Without considering prices, I would say that corn is the best single substitute for wheat for poultry. Corn has pretty much the same chemical composition of wheat. It has a little more fat and starch, but in composition and palatability it is a better substitute for wheat than any other single grain. Moreover, corn is a good poultry feed when fed in proper combination with other feed. No one pretends to say that corn alone will give good results in egg yield; neither will wheat nor any other single grain, but when fed in the proper combination it proves satisfactory, and it is doubtful if a ration with wheat as the base will prove any more satisfactory than one with corn. It all depends on the combination.

But profitable poultry feeding does not depend upon any best food. The best food may be too high in price to make it profitable to feed. So the poultryman must study prices as well as quality of feed. The question is not what is the best substitute for what, but what is the substitute that will give the best financial returns. Porterhouse steak may be better for egg production than meat scrap or fish scrap, but on account of its price it is not profitable to feed; at any rate the cheaper product will give better financial returns. Profit is not dependent altogether upon the egg yield, but the final result is measured by the cost of producing a dozen of eggs.

The cost of producing eggs will be high or low, not because we feed wheat or corn or oats or barley, but because of the kind and amount of other foods that we feed in combination with any of these. Wheat has a certain value, say 50 cents, when fed alone, but when the same amount of wheat is fed with animal food, green food and grit, it has a different and greater value, say $1. So it is with corn. Feed some other supplementary feed with it and corn or wheat—either of them—has a greater value.

As explained in a former article, it has been demonstrated that the protein of corn and wheat has an efficiency of only about 30 per cent when fed alone, but when fed with milk the protein has an efficiency of 60 per cent. In other words, there is a waste of feed in the single food, but combining different foods in a ration conserves the food.

The prohibition against feeding wheat applies only to the whole grain. We can feed parts of the wheat, probably the best part so far as poultry feeding is concerned—the by-products, bran and shorts. We are really not on a wheatless ration so long as we can get bran and shorts. If we can get bran and shorts and corn and meat scrap or milk, not forgetting green food, we have all that is needed; the rest of it is a matter of feeding, good feeding.

If corn is high in price, as it is at present, it will be cheaper to feed barley or oats, and barley and oats, or either, will do as a substitute for whole wheat.

We have then three grains that we can substitute for wheat or the hard part of the ration. To the list may be added screenings, a mixture of different grains. If a good quality of screenings can be had, and there should be a considerable quantity of screenings in the 50,000,000-bushel crop of wheat in the northwest, we can do without corn, oats or barley for hard grain, or scratch grain.

If neither of the three grains or screenings is available at a reasonable price, it is usually possible to buy commercial scratch feed, put out by the millers, of good quality. These contain a mixture of grains. If the price is not much in excess of oats or barley or corn, this feed can be fed profitably. Samples of different brands should be examined before purchasing, but if of a well known brand or from a reputable concern they may be fed without misgivings.

If the three grains are of about the same price, it will pay to mix them to give variety. If oats and barley are the grains selected, feed about two parts of oats to one of barley by weight. If oats are of poor quality, mostly hull, and the barley is good, feed barley alone. Corn is worth a little more per ton than oats or barley, and oats and corn or corn and barley will be a better combination than oats and barley.

So much for the whole grain, or hard grain. The hen requires some hard grain to keep her digestive organs functioning properly. The next question is, what proportion of hard grain to ground grain will give best results, and by best results I mean best financial results. Here is where war-time feeding comes in. Government regulations have made it profitable to feed more mill feed than ordinarily. The price of mill feed or bran and shorts has been fixed at a low figure, and it pays to feed more of the ground feed or mash than formerly. Best results may come in egg yield from feeding more hard grain than mash, but it is certain that the proportion of mash may be largely increased at present feed prices with profit. The more mash that is fed the less high priced hard grain will be needed.

One of the best ways therefore to win the poultryman's feed war is to feed more mill feed and less whole grain.

As much mash or ground grain by weight as of whole grain will give good egg yield and will give a better profit than if twice as much whole grain than of mash be fed.

As to mill feed, poultrymen do not know how to handle the combined product. As I understand it, there is more shorts than bran in mill feed. Poultrymen usually feed more bran than shorts. The composition of bran and of shorts is very much the same. There is a little more ash or mineral matter in the bran. This is what makes it laxative. I do not believe, however, that there will be any material difference in results one way or the other in feeding the combined product or buying it separate and mixing it in different proportions.

Combined bran and shorts and corn and oats, or oats and barley will give a good egg yield, with, of course, the animal feed and green feed.

As to method of feeding: In feeding a heavy mash, it will be better to feed it in the evening, or the last feed of the day rather than in the morning. If a heavy mash feed is given in the morning, the hens will not be as active during the day as if given a light feed of whole grain in the morning and the mash at night, and it is important that the hens have exercise. Give a light feed of grain early in the morning and another light feed about noon, then mash at 5 or 6 o'clock, or about an hour before dark. If the hens have free range on the farm one feed of whole grain will be sufficient. That is, all the grain may be fed at one feed.

There is another thing that may upset our calculations. The supply of mill feed may not be sufficient for the dairymen and poultrymen's needs, and there will be a question of a substitute for bran and shorts. Other by-products, therefore, may have to be fed. The chief of these are linseed oil meal, cocoanut oil meal and cottonseed oil meal. Alfalfa meal may also be included. The oil meals are rich in protein, cottonseed meal being the richest, linseed oil meal second, and cocoanut meal third They can not be heavily fed, therefore. Approximately 10 per cent cottonseed meal, by weight, 15 per cent linseed meal and 20 per cent cocoanut meal may be used in the mash mixture. If bran is scarce, or can not be had, use alfalfa meal at the rate of 10 to 15 per cent.

If bran can not be had, use ground barley and ground oats. Where mill feed can not be had, try the following mash: Ground oats 10, ground barley 10, ground corn 10, oil meal 10, alfalfa meal 20. Soak the alfalfa meal in water or milk for an hour, then mix with the ground grain and feed it. If mill feed is available, use it to the extent of 50 to 75 per cent of the other grains. That will cheapen the ration.

Let us hope that a large part of the wheat crop of the northwest will be milled here, so that there will be no severe shortage of mill feed. J. D.

---

### Increased Poultry Products.

Government poultrymen are appealing to the American people, both in the country and in the cities, to increase poultry production as much as possible. The following nine suggestions have been offered as a means to attaining this end:

1. Keep better poultry; standard-bred poultry improves the quality and increases production.

2. Select healthy, vigorous breeders to produce strong chicks.

3. Hatch early to produce fall and winter layers.

4. Preserve eggs when cheap for home use.

5. Produce infertile eggs, except for hatching.

6. Cull the flocks to eliminate unprofitable producers.

7. Keep a small backyard flock to supply the family table.

8. Grow as much of your poultry feed as possible.

9. Eat more poultry and eggs to conserve the meat supply.

CHANDLER SIX

*FAMOUS FOR ITS MARVELOUS MOTOR*

**You Need the Very Best of Motor Cars**

YOU men of the farms who are doing big things, bigger things in these days than ever before, and *getting more* for doing them, must demand the highest efficiency in all your equipment.

Your motor car must be dependable. It must be well built. It must be powerful and full of life, ready to go when you want it to go. It must be economical in its operation and maintenance.

The Chandler, famous for its marvelous motor, now in its sixth year without radical changes but with such constant refinement that the whole mechanism of the chassis approximates perfection, is the type of car you want and need and will get the most out of.

And there is no other car of this type so good at such fair price.

Nearly fifty thousand Chandler owners, many of them progressive and successful farmers, know how great a car this car is.

Let your new car be a Chandler Six. It will be a more than worthwhile addition to your equipment. It will help you to do more for your country and your family. In owning and driving a Chandler you experience the greatest motoring satisfaction.

**Choose the Chandler for Your Car**

*7-Pass. Touring Car, $1795* *4-Pass. Roadster, $1795*
*Four-Passenger Dispatch Car, $1875*
*Convertible Sedan, $2495* *Convertible Coupe, $2395*
*All prices f. o. b. Cleveland*

There are Chandler dealers in all principal cities and in a thousand towns. Some one of them is in position to show you the newest Chandler models. Write us today for catalog and folder "How Chandler Checks with High Priced Cars".

# Orchard Troubles

## Diseases, Pests and Remedies

By GRANVILLE LOWTHER.

**Red-humped apple tree caterpillar**—These pests feed on many other trees besides the apple. Among those infested by them are the plum, cherry, rose, thorn, pear, blackberry, birch and poplar. They are not very destructive in those portions of the country where the orchardists spray regularly for codling-moth, because the same spray that kills the moth will also kill them. The same is true of the red-necked apple tree caterpillar.

**Red spider**—This insect, or mite as it is sometimes called, has done considerable damage in the northwest. The color is red with a yellowish tinge, with two darker spots on each side of the body. They spend the winter in the ground, and begin to appear with the approach of warm weather. They spin threads, so as to conceal themselves and their young on the underside of the leaf, and feed by sucking the juices and substances of the plant. They feed on most kinds of fruit and garden vegetables.

The tobacco solution is the best we have tried, although other contact sprays such as lime sulphur, kerosene emulsion and soap solutions are good.

**San Jose scale**—This pest is one of the most common known to orchardists. It is so small that it is likely to be overlooked, except for its effects upon the trees, or fruit. It is of a grayish color, much like the bark of the tree, but causes a reddish appearance, especially on the fruit. They multiply very rapidly and in a few years, if unchecked, will kill the tree. It is thought to be difficult to tell whether the scales are dead or alive; but if the branch on which they are found is scraped, the dead scales will rub off like a dry, gray scurf. If they are alive the crushed bodies will give off a yellow oil-like fluid, which gives the bark a greasy appearance.

While scale always causes red spots on the apples, very marked on the yellow varieties, but not so clear on the red varieties, yet there are other mites, insects, etc., that puncture the fruit, causing red blotches. However, red spots should cause us to examine closely to see if scale is present.

There is one remedy more commonly used than any other, and that is lime sulphur. This is generally applied before the buds open in the spring. If applied after the buds open, there is danger of injuring the foliage. The tobacco spray is more expensive, but it does not injure the foliage, and will kill scale, codling moth, or any other insect commonly known as an orchard pest.

**The tent caterpillar**—The tent caterpillar builds nests of silken threads, secreted by the larvae, and these nests, or tents, serve both as a shelter and as a protection against natural enemies.

The eggs are laid in masses on the small branches or shoots of the trees, and are covered with a cement-like substance which is impervious to water and climatic conditions. The larvae come forth from the eggs, early in the spring. The adult moths are about one inch long and are cream colored with indistinct white bands on the wings.

The tents may be cut off and burned, or they may be controlled by the arsenate of lead spray.

# Poison Leaf Eaters

I have a letter from Tom Neighbor, Loma, Mont., in which he says: "I have some poplar trees, infested with a little green worm in the leaf, and turns the leaf black. I would be glad if you could tell me what to do with them?"

If it eats the leaf, spray with arsenate of lead or some other poison. If arsenate of lead is used, apply one pound to 50 gallons of water thoroughly mixed. If it is a sucking insect and sucks the juices rather than eating the leaf, some contact spray must be used. Black leaf 40 is the best when the danger of injury to foliage is considered. It should be applied one quart to 150 or 200 gallons of water. G. D.

**Switzerland Rations Cheese.**

Rationing of cheese in Switzerland has been in force since June 1. The allowance is half a pound per person monthly.

# Cleaning Is Difficult

To the Editor: In The Washington Farmer of August 8 R. J. Stevens makes the following statement: "Cracked grain and trash, all of which could have been eliminated if better threshing methods had been used." I must say for his and the public's benefit that there is not a machine of any make that will clean green thistle out of grain. If he or any one else can produce such a one he will have made his fortune. It is easy to sit in a cushioned chair in an office and say what can be done, but it is quite different when you have to demonstrate. Let him come to Downs, Lincoln county, where there are combines and headers and threshing being done, and demonstrate what he says can be done. We are from Missouri, and we have to be shown, and are willing and glad to be shown. It is something that we are not capable of doing ourselves. We object to no one showing us. Show us how it is done and we will do our best to imitate the process.

F. H. DRINKARD.

Downs, Wash.

# State Fair Program

The following is a list of the special attractions at the state fair at Yakima September 16-21, by days.

Automobile day, Monday, with five auto races, sheep auction at barns at 1, boys' stock judging at 10 and dedication of new auditorium, with concert by U. S. naval reserve band at 7:30 p. m.

Tuesday—Children's day, boys' and girls' club festival parade, 11; picnic, 12 m.; moving pictures of club work at 1; athletic contests and games, closing with fireworks at night. Sheep sale continued at 10; live stock judging at 1; horse races.

Wednesday—Spokane and Yakima day.

Thursday—Governor's and Seattle day.

Friday—Elks' day, with special Elks' derby race.

Saturday—Patriotic day, closing with fireworks.

Every day features will be: Wortham shows, open at 10; sheep school in auditorium, 10-12; concert by Yakima band in horticultural building at 2; moving pictures and illustrated talks in auditorium, 2-5; concerts by U. S. naval reserve band at 1 o'clock in grandstand and 7:30 in auditorium, and moving pictures at 9 p. m.

The Dependable Samson Sieve-Grip Tractor

THE cheapest farm power—365 days in a year. Ready any minute—power for plowing, harrowing, drilling, sawing, silo cutting and filling and pumping—any farm work.

It isn't what you pay for a tractor, it is what it costs you to operate and maintain.

We have been building tractors for farm work for the last 15 years and we KNOW—get that,, WE KNOW. It has cost us many hundreds of thousands of dollars to find out—you get the benefit of that costly experience with every tractor we sell. No experimental features—note that, no experimental features.

Samson sieve grip wheels do not pack the ground—but leave it in the best condition for tillage.

*Make us prove Samson Sieve-Grip Tractors give the most dependable power for the money. They are "Built like a Battleship."*

# Fruit Brings Good Returns

## Yield Heavier Than Had Been Expected; Corn Best Crop in Years; Silo Construction Being Pushed

WAPATO, Yakima County, Wash., Sept. 3.—Farmers have had a very prosperous season. Fruit has brought good returns and was a heavier crop than expected by the ranchers, although it was considerably under the early estimates of the transportation companies. Sugar beets and potatoes are the disappointing crops, being far below an average yield. Corn is the best crop in years and will be out of frost danger by the middle of September. The high price of hay is stimulating silo construction, while there are a few old silos that will not be filled owing to the high value of matured corn. But little of the grain has been threshed, but there will be plenty for local seeding. J. F. M'CURDY.

### Oats Yield Good Crop.

MT. VERNON, Skagit County, Wash., Aug. 29.—The harvesting of oats is progressing satisfactorily. The cutting with binders is fully half completed and threshers will start in a few days. While labor is scarce, yet there is enough to comfortably take care of the harvests. The most serious labor shortage is felt by the small farmer who needs extra help for only a few days. The condition of pastures was never better at this season of the year, almost like May. There will be a considerable amount of alfalfa hay shipped in this season. Our hay crop was short and the acreage was short owing to the unusually large acreage of oats. Conditions in the county generally are satisfactory. While all expenses are very high, farm products are also high. The dairy farmers feel that they are hardly getting their share in that the prices of dairy products hardly correspond with the high costs of feeds. The unusually good pasture conditions help to compensate in this matter. C. S. PHILLIPS.

### Everybody Is Busy.

PORT ANGELES, Clallam County, Wash., Aug. 29.—As summer fades away our citizens commence to make preparations for an annual fair to be held at the county seat. If the writer's judgment is correct the interest in the enterprise is not as great as in former years, which I attribute to the abnormal times in the wake of the great world catastrophe. Everybody is so busy and the interest of the people is absorbed with dire necessities. Our community is very prosperous, due to the enormous activities of the government in opening up the great spruce stands of the west end of the county, the building of many miles of new railroad, and the construction of a very large mill at Port Angeles for the milling of the timber, all of which creates an enlarged market for the farmers. The hay crop has suffered somewhat from the recent incessant rains, but the damage will to some extent be offset by late feeding for the stock.

J. P. CHRISTENSEN.

### Conditions Exceptionally Good.

VANCOUVER, Clarke County, Wash., Aug. 30.—The conditions of this section are exceptionally good. Up to the present time there has not been any falling off from the last report and the help has responded better than was expected in harvesting the first crop of alfalfa, which was put up in splendid condition, and was a little above normal. The farmers are just beginning to cut the second crop and most of it is being sold in the field at $25 per ton. Grain harvest is over and the report from those who have threshed is about one-half of last year's crop, owing to the exceedingly dry weather just as the grain was filling. However, there will be plenty to carry through the stock that is held for winter feeding. Indications are that the dairymen will have a good season owing to the brisk demand for butter and hogs as conditions seem to stimulate this branch of industry more than any other. Up to the present time we have been supplied with sufficient labor to meet the demands, but our cannery, which is running at full blast, here in Vancouver has drawn on the available help, boys and girls being drafted into service, making room for the stronger help to work in the shipyards and on the farms. We are exceptionally fortunate in conditions that exist in Clarke county. Our prune crop is the best that we have had in years, and the indications are that the price will be 100 per cent better if the weather stays favorable and the help can be had when needed for drying. Tents are going up in the orchards for housing the help; women and boys are being engaged, and women who have always scouted the idea of working in the field are anxious to help out, and if the gun don't miss fire there will be a merry time and the crop will be a banner one for Clarke county. The nut crop is reported good and the price quoted is 25 cents per pound. This is one of the best crops for this section. Creameries are complaining that their supply is dropping off, which is less than one-third what it was last year at this time of season, and they give for the reason that selling off of part of the cows, owing to the high price of feed and the shortage of help to take care of the stock. This has a tendency to make butter a good stiff price, being 65 cents per pound. Buttermilk is 15 cents a gallon, which is rather high for pancakes or feeding hogs. Oats were a short crop and turned about 30 bushels per acre, and wheat went about 20 bushels per acre. Early potatoes have all been dug and the market price is 3 cents per pound. Over the counter farmers realize about 2 1-2 cents a pound. Eggs are bringing 60 cents retail, about 5 cents above the wholesale price. It has put the housewives at their wits' end to keep the table supply up to the standard during the time of canning and harvesting, but good, common sense has come to the rescue and women are finding out that they can get together a good, palatable meal without sugar, eggs and heaping spoons of melted butter. The Washington Farmer put it just right when it said that "Instead of man power that the war demands it is human power that the country is using." Women, children and men are all drafted into the world war. It is no uncommon sight to see women in overalls working on the sections in the shipyards and driving teams on the street and doing many things in the outdoor labor line that they were not doing before the war. C. C. BROWN.

### Feed Supply Is Adequate.

YAKIMA, Yakima County, Wash., Aug. 28.—There will be very few fairs in this county with the exception of the state fair at Yakima. Some of our granges are planning on holding community fairs, which, of course, will be of interest only to the community in which they will be held. The farm conditions in this county this year are still good and the community in good financial condition. The greatest difficulty experienced so far this year has not been so much in the number of laborers available as in the quality of the laborers. Most farmers have complained of the inefficiency of a great deal of the help they have been able to secure. It will be necessary to ship in very little feed of any kind with the exception perhaps of a small amount of mill feed or other supplementary feeds. As usual there will be a large amount of hay shipped out of the county and there will perhaps also be some corn available for shipment to outside points. With a proper balance of farm crops it should not be necessary to ship any feed into this county; but since the farmers have confined their crops largely in the past to alfalfa and corn, we usually find it necessary to ship in supplementary feeds. If it is possible to make arrangements this year to have the sugar beet pulp from the sugar factory distributed in this state we shall be very well supplied with feed. JAMES N. PRICE.

Electric blasting easier and cheaper

GIANT FARM POWDERS
STUMPING—AGRICULTURAL

The use of an electric blasting machine results in economy. It reduces the amount of powder required often by 10% to 20%. With it you can shoot several stumps or other blasts at one time. You can fire several lighter shots under a difficult stump or rock with better effect and less trouble than with a single large charge. It is the only reliable means of exploding charges under water.

Safety favors electrical blasting. There are fewer misfires and no hang-fires. Should a misfire occur, all danger of explosion is over when you disconnect the wires from the machine. As you can time blasts to the second, traffic along roads is not held up unnecessarily.

The smallest Electric Blasting machine fires five charges or fewer at a time, weighs but six pounds and cost is saved on a job in a very few days. Anyone can work all sizes of this simple, handy machine.

Send coupon (or postal mentioning this paper) for big free book "Better Farming." Tells you scores of money-saving ways of doing farm work.

# Housing Rabbits

By H. E. GIBSON.

One does not have the care of rabbits very long until he feels the need of having them housed so as to economize time in cleaning and feeding, so that we have no hesitation in advising you to build your hutches so that they will be self-cleaning by making all the floors of simple strips of laths a short distance apart so that all the droppings will fall through to a slanting floor underneath which will carry the refuse through to the back of the hutches which can be lifted up daily and drawn away in a wheelbarrow.

The average size of a hutch should be about 30 or 32 inches long by 24 inches deep and 22 inches high, but these sizes can be varied according to the breed; larger rabbits should have a larger hutch than a smaller breed. The four sides should be made of small mesh wire, the front door so built as to contain in itself the box for grain and stand for water bowl so that when the door is opened it carries out both box and water bowl, making it a very easy task to provide fresh water and grain. The fodder rack should be built at the front, and between every two hutches with a partition between so that the hay or green feed can be put in without opening the doors.

By this simple arrangement one can walk along in front of the hutches with watering can and feed, supplying all required without going to the rear of the hutches except to carry away the manure, which should be done once every day.

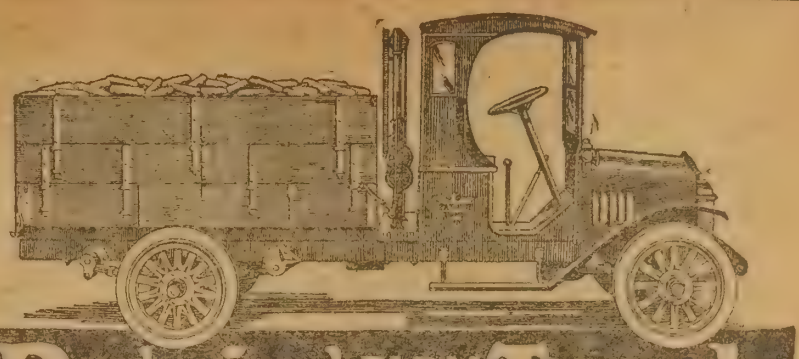
We would suggest having only three tiers of hutches, one above the other, with an extra roof say 18 inches above the top tier of hutches for air space, which will mean much to you in hot summer weather; also have the outer roof closed in overhead between the two rows of hutches so that the passage way between the hutches will be covered overhead, making it comfortable for the attendant to feed and take care of your stock in wet weather.

If your capital is limited and you have some outbuildings that have been used for barn or garage, etc., you can easily turn them into a rabbitry building by placing your hutches along the walls, or, if the building is wide enough, leave a passage way at the back to go behind to clean up.

There is no particular definite rule to go by, but every one should decide for himself and adopt these plans and suggestions to his own particular conditions and the money he has to spend on the proposition.

You should have a nest box in each hutch. It should be about one foot by 18 inches, ordinary apple boxes will do very well. This box should be closed in entirely except for a hole through which the rabbit will jump in and out. The hole should be about eight or nine inches square, according to the breed of rabbit. It is well to have a nest box for bucks as well as does. The rabbit will occupy this box during wet or cold weather, and when it happens to be frightened in any way; besides it likes to jump on and off the box, which is a source of enjoyment as well as good exercise.

A little bedding of clean hay or straw should be put in the nest box especially for does. What is left over after they have picked out the choicest can be used for this purpose.



## Helps New Zealand Farmers.

A government hydro-electric plant is helping out the farmers and dairymen of South Island, in New Zealand. Electric power is used extensively by dairymen about their barns and sheds for lighting and the operation of milking machines, creameries, etc. In one case a farmer reports that the yearly charge covering all of these uses was a little over $80 for a herd of 60 cows. The government has now under consideration a big project for the hydro-electric station in the North Island of New Zealand. It is expected that this will provide power as cheap for the use of the general public as has been furnished in the South Island.

### Every One Should Watch.

The government is doing its best to regulate business so as to insure fair dealing. Every one should study the regulations and watch for violations, thus assisting the government in enforcing them.

TO the Editor of The Washington Farmer: I wish to take advantage of your big bargain offer and enclose herewith 50 cents, for which enter my subscription to The Washington Farmer for three years. CARL LAAKSO.
Winlock, Wash.

# Patriot FARM Truck

## Built for Country Roads
## Built for Country Loads

***The Patriot is the first Motor Truck*** built especially for farm work. ***It is equipped with a practical farm body,*** similar to what you have always used on your farm wagon.

***It saves horses*** and high-priced feed. ***It brings better markets nearer,*** for with a Patriot you can readily drive loads to a market 100 miles distant.

***It lays down 15,000 to 20,000 pounds*** at market in practically the same time that a team will deliver 5,000 pounds, literally bringing the farm to about one-fourth its actual distance from market.

Business farmers can easily see how such perfect transportation greatly increases the value of their farms, to say nothing of the convenience in being master of roads and weather. Every farmer with 160 acres or more should find out what a Patriot Farm Truck will save. Write for information.

# KATE AND KARL GET ONE ON DINAH

# Farmers May Get Seed Aid

## *Government May Allot Washington $300,000 From Fund*

Following a conference in Spokane last week, at which G. I. Christie of the United States department of agriculture was present, a telegram was sent to Washington, D. C., with the approval of Mr. Christie, asking that $300,000 of the $5,000,000 which President Wilson recently set aside to assist creditless farmers in securing seed wheat, be allotted to the state of Washington, W. S. Thornber of the state college, chairman of the seed wheat committee for this state, presented evidence to show that there are between 500 and 1000 farmers in Washington who need the kind of assistance the fund is intended to render.

Under the provisions governing the fund a wheat grower who is unable to give security that a local bank will accept for a loan is entitled to a loan of $3 per acre up to $300. Interest on the loan is charged at the rate of 6 per cent.

A farmer who desires to negotiate a loan of this kind should go to his local bank and present evidence of his need and allow the local bank to lend him money if it is willing to accept the security he is able to give. If the bank will not accept the security it will issue a certificate to the applicant showing he is unable to give bankable security. The applicant then goes to the county agent, who will investigate his application. If the county agent finds that the applicant is deserving under the provisions of the loan he will approve the application, which will then be sent to the office of G. I. Christie at Great Falls, Mont. There his application will be again passed upon and if approved the loan will be made by the federal land bank, which has its headquarters at Spokane, but which also has a personal representative in the office at Great Falls to handle these seed loans.

One provision of the regulation governing the loans provides that a borrower shall pledge that if he produces a crop of seven bushels or more per acre he will contribute to a guarantee fund at the rate of 15 cents per acre for every bushel per acre over six that he produces. The maximum pledge of contribution to this guarantee fund is 75 cents an acre regardless of how heavy a crop is produced. This would amount to 25 per cent of the loan in case a farmer were called upon to pay in the amount pledged.

On this point, however, Mr. Christie emphasizes the fact that an impression that this guarantee requirement is likely to work a handship upon a farmer is entirely unfounded. The government, in lending this $5,000,000 to creditless farmers has no desire to collect interest on the amount, he says. All it wants is to get back the $5,000,000 which it lends. The 6 per cent interest on the $5,000,000 would amount to $300,000, which Mr. Christie feels undoubtedly would take care of much, if not all, of any failure on the part of the government to collect on some of its loans. He believes there will be no need to collect any considerable part of the guarantee fund pledges.

One of the unique features of the measure is that absolutely no administration costs are to be paid out of the $5,000,000 set aside for seed loans. The department of agriculture, the federal land bank and the county agriculturists share in administering the fund and all are required to pay the administration costs out of their regular operating funds.

Mr. Christie says that at first he found private banking institutions opposed to the movement, but that when it was fully explained the opposition disappeared. That it is a community proposition rather than purely a seed wheat proposition was the argument that he put up to the bankers, showing that where a number of farmers in a drouth stricken community secured loans it meant that several thousand dollars of government money were being dropped into that community and put into circulation, aiding business of all lines.

The counties in Washington that will share in the allotment proposed for this state are Douglas, Grant, Adams, Lincoln, Franklin, Benton and Klickitat.

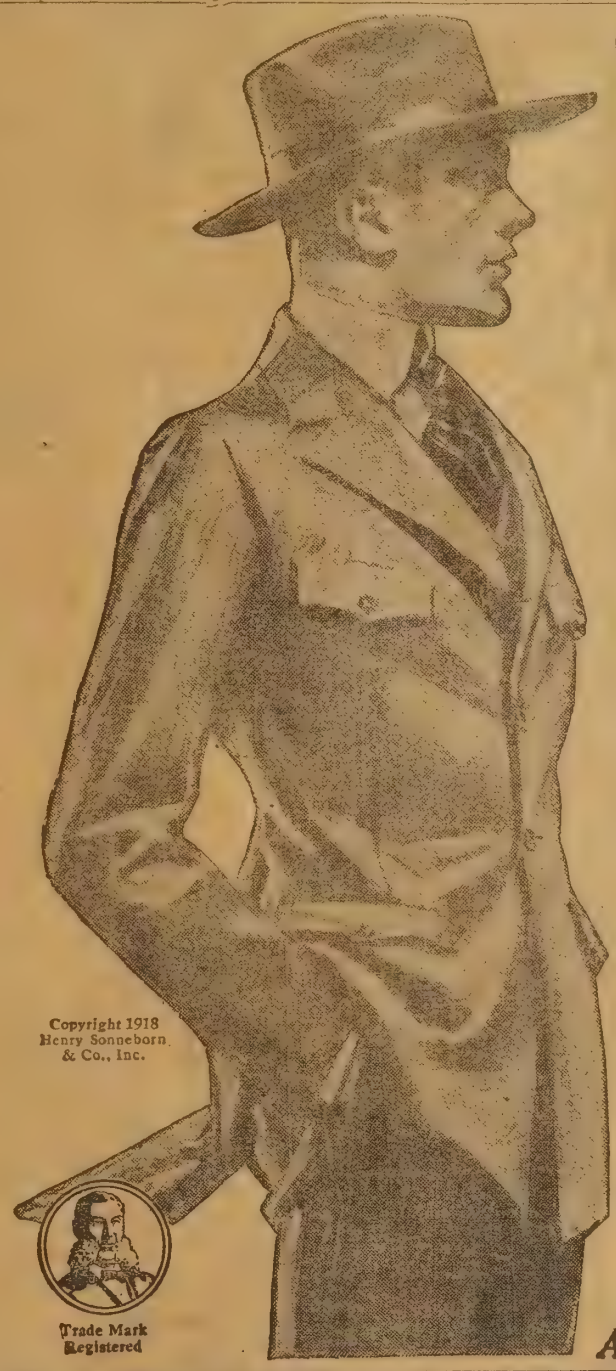
# Prepare Shipment Well

That the wheat growers of the northwest actually lose probably 10,000 or more bushels of grain feed every year by failing to clean their wheat at home before shipping to the terminal warehouses or elevators is the belief of Daniel Morgan of Spokane, one of the representative wheat growers of the Inland Empire. Mr. Morgan estimates that when wheat is shipped to the mills uncleaned a deduction of one pound per bushel for cracked wheat and other nonmillable materials is not unusual. With the Inland Empire producing from 40 to 50 million bushels of grain a year, according to the seasonal conditions, this would mean probably not less than 700,000 pounds of cleanings annually, or more than 10,000 bushels.

On this 10,000 bushels the growers necessarily pay $1000 or more in freight to the terminals. In a large percentage of cases they likewise pay freight on the cleanings when they come back in the form of mill feeds. Thus the farmer who does not clean his wheat at home and keep the cleanings for feed is giving something that he has to buy back at a stiff price and is paying the freight on it going and coming.

Mr. Morgan is an urgent advocate of first-class preparations for grain shipment. Where farmers are shipping their grain subject to weights and grades at the terminals every precaution should be taken to prevent losses. Car bottoms should always be inspected and every opening of any kind well closed with old sacks or other material. Where grain is shipped in sacks every precaution should be taken to see that the sacks will not leak out grain while being shipped or handled.

Mr. Morgan, while always alert to prevent unfair or injudicious methods on the part of any one handling or regulating the handling of wheat, has the utmost confidence in the grain-buying corporation as represented in the northwest by M. H. Houser and his staff of assistants. "Mr. Houser has been one of the wheat growers' best friends," said Mr. Morgan, discussing his activity in the wheat markets during the last several years. He credits Mr. Houser with having been one of the principals in providing active competitive buying of wheat in the northwest in recent years.



## Mr. Bouck Says Not Guilty.

William Bouck, master of the Washington state grange, who was recently indicted by a federal grand jury on the charge of violating the espionage act, entered a formal plea of not guilty before the federal court in Seattle last week. His case will come up for trial October 22, when Assistant United States Attorney General Clarence Reames will conduct the prosecution.

Mr. Bouck is charged with having made a seditious speech before an audience in Skagit county, Washington, several weeks ago. He has been given his liberty on $5000 bond.

## Everybody Should Vote.

The man or woman who fails to vote is to some degree a slacker. Every vote cast should be primarily a win-the-war vote, but the future when the war will be over should not be overlooked.

The nation's standard in clothes of moderate price

Styleplus are the only clothes in America identified each season at nationally known prices.

Each Styleplus grade is one price the nation over.

We center our volume on a few grades—cut down the expense of manufacturing—this is the reason behind the famous Styleplus quality.

No matter where,—no matter when—you buy Styleplus Clothes you *know* they are right in style, in wear, and in price.

Go to the Styleplus Store and see for yourself. Try on the clothes. Get exactly the kind that suits your build and your taste—that fit right and look well.

When you see your clothes before you buy them you know what you are getting. Buy Styleplus and you will always be sure of the big value at a moderate price.

Two grades in Styleplus suits: $25 and $30.

Three grades in Styleplus overcoats: $25, $30 and $35.

Sold by one leading clothing merchant in most cities and towns. Write us (Dept. S) for Styleplus booklet and name of local dealer.

# Going to the City to School?

## *Country Girl Should First Take Account of Stock*

By ALVARA P. WILLIAMS

PART I.

I have just been hearing one side of the question of Ruth's leaving home this fall for high school in the city, and there is so much to be said on both sides of the question that I feel I must tell you some of my own experiences in the matter.

Ruth has finished the grade school in her country district; there is no young life there; no amusements; nothing but farm drudgery. She had a teacher once who started to give her music lessons; she wants to go to high school, take more music, meet more people, learn something besides milking cows, and feeding pigs, and washing dishes; feel that she is doing something more than trot up and down in one place. I don't blame her. But where, and how? With the cost of board and room in the cities now at 35 to 40 dollars a month, her father can not think of 10 months' school, with the new clothing, amusements, music, and other necessaries besides.

As I have learned the situation, there are at least three courses open to any Ruth in this position. First, most desirable perhaps under present war conditions, she may stay where she is and modify her situation there to a remarkable degree. I want to tell you later more of these war conditions as they affect women in the cities.

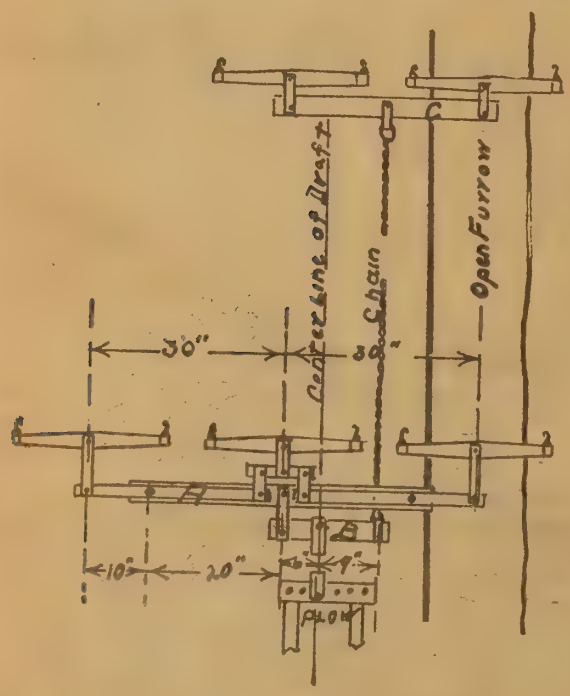
Second, next most desirable from all standpoints in most cases, she may start her higher education at a consolidated school or small town high school nearby—in most cases nearer than a city school would be. Perhaps she will find it possible to go back and forth from home, at least every week-end. If she must board, it will cost far less than in a larger city.

Third, if she is strong enough physically, and above the average in country school preparation, she may go to the city school, and earn all or part of her own way.

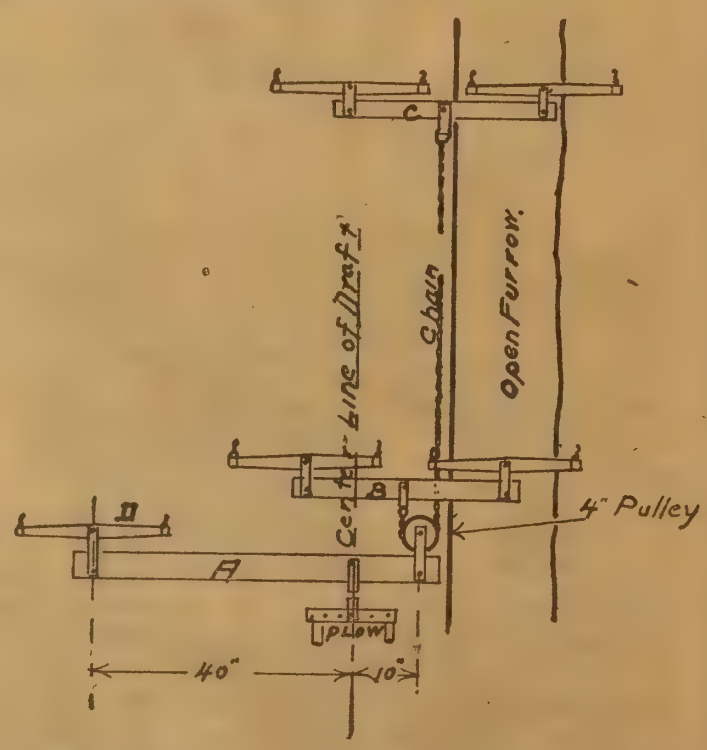
Now I know most of the Ruths will exclaim at once that the order of these should be reversed. Before we prove or disprove that, please, every girl of you who thinks of leaving home for higher schooling or even for work, if you are untrained, take account of stock. If you have lived all your life in the country, with only occasional visits to the city, there are dozens of matters to consider. Alive the city may be, inspiring, broadening—but are you ready for it? I'm not trying to dampen your enthusiasm; too few of us have enough of it, but impetuosity and desire merely will not carry you far. Is this too general? Let us get down to details, then.

You know thousands of things the city girl never dreams of—quiet things learned from all outdoors and its wild life; big, broad viewpoints that go with country air and freedom. You have a physical strength and endurance, if you were born normal and properly raised, that will leave you young at 50, while many city girls will be old at 30. You are slower at some processes than the city girl; slower at analyzing people. Put her in your surroundings, though, and she would be helpless, as a rule. Put yourself in her surroundings and you will be much more adaptable than she would, but it takes a little time to adapt yourself. There is the whole story—the length of time needed for you to make yourself fit. While you are going through this process life will be very hard; study nearly impossible to some; confidence in your own judgment shaken; if you are attempting to earn your own living, that is doubly hard. It is almost as if you were to be put down among a foreign speaking people. I know, for I've been through it.

Suppose you are a girl of 15 or so, perhaps knowing your way about the city, but a comparative stranger. If you are to do housework for your board, as most newcomers do, city houses and ways of living are different. Your studies are based on knowledge obtained in city graded schools, perhaps no more valuable than yours, but still different. Your housework interferes with your studies, and it is hard for you to decide what, if anything, to slight. Your clothes somehow aren't quite right, even if they were bought in the city. They aren't like city girls' clothes. The chatter of city girls is different. In fact, well-trained as you may me, there is so much that is different, so much to which you must adjust yourself all at once, that you can't help being a little upset for a while. Meanwhile school, and those accustomed to the life, go merrily on. I believe it is no exaggeration to say that 75 per cent of the country pupils starting school in the city do not "find themselves" until nearly the end of the first year.



There are two ways in which this can be avoided: The first two I mentioned above. I would like to take these up somewhat in detail, after explaining to you first just what is expected of a girl who "works her own way" in a city school, and how the whole situation is complicated by the war and its demands on industry. Those of you who have already made definite plans for your work this fall in some city may not profit so much, but those who are undecided, or who can not leave the farm until later in the fall, may do some hard thinking and planning between now and that time. I want first of all to assure you that not one word of what I am going to tell you is fiction. It holds true of the large cities of this coast, and is true, with a few modifications, perhaps, of any of the other cities of our big three northwestern states.



"WANTED—High school girl to help with housework after school for room and board. One used to children desired." This is an average type of advertisement appearing in the city papers this time of year. Last fall these ads ran for weeks without answers. Lists of people wanting wirls for help after school were twice as long as the lists of girls wanting work. High school principals, college registrars, Y. W. C. A. secretaries, commercial clubs, employment agencies, even children's homes, all of whom kept such lists, were never able to fill the demand. This year conditions will be about the same, perhaps worse. Here is our first touch of war industries. Bridget and Ellen and Mary have found that housework takes all their time, at perhaps thirty to forty dollars a month, while they may earn from $2 to $2.95 a day at work men used to do, and work only eight hours at that. So the clamor for girls for housework goes on.

Mollie last year took one of these places, a good one, too. High schools as

(Continued on page nineteen.)

# Keeping a Horse Out of the Plowing Is a Problem

In answer to an inquiry for a five-horse hitch for a gang plow so that one horse would not have to walk in the plowed ground J. P. Fairbanks, assistant professor of agricultural engineering at the State College of Washington, prepared the two plans as indicated in the sketches herewith. Figure 2 shows a hitch that is not uncommon and one which is easily understood. In Figure 2, A is a plain home-made evener with the clevis so placed that the one horse hitched to the singletree at the letter D will have the same draft as any one of the four horses at the pulley on the other end of the evener.

The other sketch, Figure 1, is also easily understood, but is considerably less familiar to the average farmer. In this figure B is a short and necessarily strong evener divided by the clevis pin in the ratio of two to three, with two horses on the lead chain pulling at one end and three horses on the somewhat unusual three-horse evener pulling on the other end. The three-horse evener is made about as follows: Take a first-class stick of timber and divide it as if for a two-horse evener or doubletree. Take two pieces of iron bars about one and one-half inches wide by one-half inch thick and make of each one what might be termed a one-and-one-half-horse evener. Attach these by means of pins at the ends of the wooden piece. It is well to bend the ends of these iron bars down over the end of the wooden piece so that the pull will be coming more nearly the center of the wooden piece. Take three pieces of lighter iron and bolt loosely to the other ends of the heavier iron pieces to form an attachment for the third horse's singletree in the center. Other details of the plan may be readily understood by a study of the sketch itself.

The object of each of these hitches is to prevent a side draft when all five horses are kept out of the plowed ground. Speaking of this feature, Mr. Fairbanks says:

"In order to overcome side-draft it is essential that the center line of pull of the team and the center line of draft of the plow nearly coincide. If we should hitch five horses abreast, all equally spaced, the center line of pull of the team would be behind the center horse. The center line of draft of a two-bottom 16-inch gang would be about 16 inches in from the land side of the open furrow. If the first horse walked in the furrow this would throw the center line of pull about 52 inches from the land side of the furrow. This would cause so much side-draft that it would be practically impossible to operate the plow."

### Bring Sugar From Hawaii.

A report from Honolulu says that the United States shipping board is providing 40 freight vessels with a total carrying capacity of 100,00 0tons to bring the sugar crop of Hawaii to the United States with a view to satisfying the needs during the present fruit season.

# SIDELIGHTS

**A Summer Discussion.**

"Whut's dem summer clothes you all is wearin'?" inquired Erastus Pinkley.

"Dat's a Pallum Beach suit."

"Pallum Beach! Mebbe 'tis. But it looks mo' like Coney Island to me."—Washington Star.

**The Secret.**

"How do you explain our friend's position on this public question?"

"I can't explain it," replied Senator Sorghum. "It's like the position of a contortionist. The fact that you can't explain it is what makes it interesting."—Washington Star.

**Can't Believe Him.**

Dorothy's baby brother is only beginning to babble a few words. The other day Dorothy came to our house to visit and I said to her: "Can brother talk any yet?"

She replied: "Yes, he talks a little, but you can't believe a word he says."

**Bedrock Prices.**

"Bernard M. Baruch will keep prices down," said a constituent. "Rich as he is, he never consents to be done without a protest.

"Once a hotel man tried to do Mr. Baruch on his bill. Mr. Baruch studied the bill over grimly. Then, putting it in his pocket, he said:

"'Got any two-cent stamps?'

"'Certainly, Mr. Baruch. How many would you like?'

"'Humph,' said Mr. Baruch. How much are they apiece?'

"The millionaire's bills after that were always reasonable."—Philadelphia Bulletin.

**Rubbing It In.**

Private Smith, after serving three weeks with the forces, had fallen beneath the avenging eye of the C. O. for some petty offense. Thereafter he sent this touching epistle to his mother:

"Dear Mother—I am now a defaulter." His grief was too great to write more, so he got a comrade to post it for him, and sat him down to do his punishment in silence. Five days later he got this:

"My Dear Son—I am so glad to hear of your promotion. Be sure to be kind to the men under you, and never forget that you were a private once yourself."

**In His Neighbor's Eyes.**

"I have been reflecting," said an old-timer, "upon the case of the average man, as his neigrbors see him.

"If he is poor, he is a bad manager. If he is prosperous, every one wants to do him a favor.

"If he is in politics, it's for pork. If he is not in politics, one can't place him and he's no good for his country.

"If he gives not to charity, then he's a stingy dog. If he does give, it's for show.

"If he is active in religion, he is a hypocrite. If he evinces no interest in matters spiritual, he's a hardened sinner.

"If he shows affection, he's a soft sentimentalist. If he seems to care for no one, he's cold-blooded.

"If he dies young, there was a great future ahead of him. If he attains old age, he has missed his calling."—The Lamb.

**Willie's Algebra Lesson.**

Little Willie was poring over his books one evening, when his father said:

"Can I help you, son?"

"I wish you would, father," said Willie. "I've got an algebra problem here, and it's awful hard."

"Algebra, eh?" The father looked rather dubious. "Well, let's see her."

So Willie handed her over. The problem read:

"If A does a piece of work in 14 days, and B does it in 2 days, how long would it take them to do it together?"

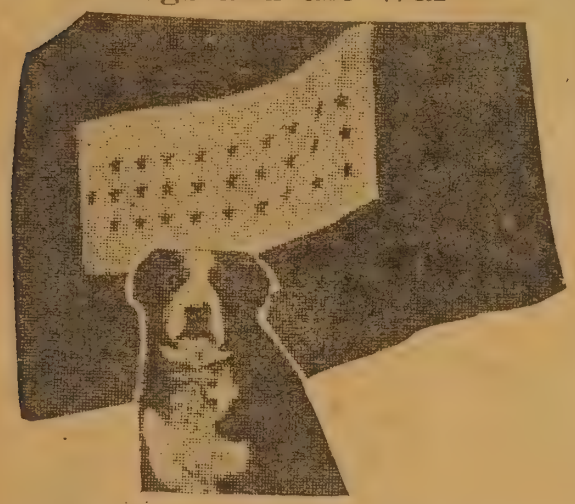
Willie's father frowned. Then he said:

"What makes you think this is algebra, boy?"

"Because," said Willie, "it's got an A and B in it."

His father frowned harder than ever.

"Well," he finally said, "the only proper thing to do in a case of this kind is, of course, to fire A."



# All the World's a Stage, and All the Men and Women Merely Players

## Shows the Great Need in Italy

The above picture is of a group of little Italian children. The scene is in Palermo, at a public building which is called the Massimo. It is 3 o'clock on Thursday afternoon, the hour and the day set for the distribution of food by the American Red Cross. Only the proven relatives of men fighting at the front can be admitted to the Massimo, while the unfortunate ones outside show the need of our saving and sending over still more of the greatly needed food supplies.—U. S. Food Administration.

## Dogs and the War

"Baldy of Nome," who has 28 sons and grandsons serving as sled dogs in the French army in the Alps. Picture taken from "Our Dumb Animals."

## Doughnuts Pies and Smiles!

### A Sidelight "Over-There" on Food Saving Here

U. S. Food Administration.

These are what you might call long distance smiles, because they originated "over here" although they are being smiled "over there." The wheat and sugar tha you have been saving is being made daily by the Salvation Army lassies into doughnuts and pies for our soldier boys in the front line trenches in France. One glance at the picture will tell you that they thoroughly enjoy the treat. You can almost hear the soldier saying, "Just like mother makes!"

## Sound of Wood on Bone.

## Both Doing Their Duty.

—Philadelphia Telegraph.

## Women Camouflage Land Battleship "Recruit" in Union Square

Copyrignt, Underwood & Underwood, N. Y.

Dressed in their neat-fitting khaki uniforms, these women camoufleurs of the Women's National Service league are disguising the land battleship "Recruit" in Union Square, New York. They trained in Van Cortlandt park on smaller objects, like rocks and stumps, but this was the first big stunt they tackled.

# Washington Boys in War Service

From the Twice-a-Week Spokesman-Review.

**VERNON TROYER, Walla Walla, Wash.**—Entered the marines April 25, 1917, and is now in France. His parents are Mr. and Mrs. L. N. Troyer of Walla Walla.

**A. L. DANIEL, Lacrosse, Wash.**—Entered Camp Lewis September 22, 1917. His parents are Mr. and Mrs. R. M. Daniel, who live on a farm near Lacrosse, Wash.

**SAMUEL A. WIGHTMAN, Leahy, Wash.**—Entered military service in 1917. Before entering the service he lived with his parents on a farm near Leahy.

## MILK AS FOOD.

### Essential Element Not Analyzed.

Dr. E. V. McCollum of Johns Hopkins university, whose experiments and lectures on diet have excited much comment, visited the northwest recently, delivering addresses of the most vital importance, particularly at this time.

He hesitated, he said, on entering on the study of diet because nothing had been done that was of value for 50 years, and the idea was pretty firmly fixed 11 years ago that any diet which furnished a proper amount of protein, starch, sugars, oils, fats and mineral salts was all that was necessary. This was not the opinion of Dr. Babcock of the Babcock test fame. He began experiments a number of years ago with groups of dairy cows. These tests were carried on for three years, when anthrax destroyed some of the herd and put an end to them. In these experiments a balanced ration was formed of wheat, the seed, stalk and leaves, another of oats and a third of corn. The results of these experiments indicated that animals fed exclusively on wheat even properly balanced as to protein, starch and so forth, was the progeny was born dead a month before the proper time for dropping, and they were undersized. Those fed on oats were born dead without exception, but came at the right time and were fairly well formed. Those fed corn were dropped alive and were properly formed and of normal size.

This was a starting point for years of experimenting. Hundreds and thousands of experiments have been conducted through from six months to several years and while much remains to be discovered certain well established and indisputable facts have been found out. There is some element needed to the proper sustaining of life in animals which can not be analysed so far. It is not found in seeds of plants. It is not found in tubers or edible roots. It is not found in meats. It is found in milk and eggs. Further, there is another essence or element which is almost as important which is not found in seeds, roots or meats, but is found in the leafy foliage of plants.

What results when the first of these unknown elements is omitted from the [illegible] The first thing that he noticed in his experiments was that the flesh around the eyes became sore and swelled up. Finally the eyes swelled shut. If milk or eggs were supplied the animal got well unless the experiment was conducted too long. Then when the animal recovered it was blind and never regained sight. When the other element was omitted paralysis ensued. With birds the paralysis was all over, but with mammals it affected the hind legs. If these experiments continued beyond a certain point, the animals died.

A perfectly balanced ration so far as proteins, fats and carbohydrates and minerals, chemically pure, fed to animals resulted in the patients' living just about as long as they would if they got no food at all.

Animals lacking these constituents sometimes lived, but they were undersized, sickly and from the first looked and acted old.

Dr. McCollum then drew an analogy between animals and man. In New York, in a negro settlement, almost without exception, the children have rickets. Their spines are affected; their legs are bowed, their chests cave in. The diets of their mothers is made up of wheat flour, corn meal, potatoes, rice and meat. They use no milk and eggs. In Baltimore the mortality from tuberculosis is very great among the negroes. Their diet is similar. The whites of Baltimore are not particularly subject to tuberculosis. In the south the spread of pellagra is very alarming. After considerable study and experiment he is satisfied that this terrible disease is due to lack of proper nutrition. It appears chiefly among poor people. All these troubles come in congested districts, where improper food is supplied.

The milk products, eggs and leafy foods such as spinach, cabbage and turnip tops he called protective foods. We have had them in abundance in the past and they have made us what we are. Take the oriental races; he did not think they are inferior by nature, but by food. They are nearly all undersized and shortlived. They are not progressive or original. The races which show the largest size, the greatest age and the best mental growth are those races which live largely on dairy products. What has saved the oriental races from extinction entirely has been the fact that they do consume very large amounts of leafy vegetables, though they have no milk to speak of.

A disease closely approximating that of the blindness in the animals lacking one of the unknown elements is said to be prevalent in Russia and Japan.

The accepted treatment for tuberculosis today is getting them in pure, cool air, keep them quiet and feed them food which is largely made up of milk and eggs. Degeneration follows lack of these food elements.

Having discovered these facts, the doctor said that he learned that in April, 1917, the normal consumption of milk daily in Chicago was 1,250,000 quarts. This year at the same date the consumption of milk had fallen off 40 per cent. Why? Because people will not buy milk when it advances in price, but they will buy meat at any price, because, he thought, meat has a higher flavor. It is unreasonable to expect milk to remain as cheap as it has been.

A farmer in DesMoines told him that 30 years ago he sold milk at 5 cents a quart and paid $4.50 a ton for bran. Today he got 12 cents a quart and paid $30 a ton for bran. Milk is not merely a good food, but it is almost a necessary food if we are to retain race superiority physically and mentally

At the close of his address he invited questions and replied as follows to them:

Processing milk, heating it and freezing it does not affect these unknown elements unless the milk is alkaline. In that case it disappears.

Certified milk is cleaner milk. He doubted the wisdom of urging all people to buy certified milk, but he believed that clean milk is vital.

He believed that a quart of milk a day should be the quota of every human being, child or adult.

Eggs were a little less valuable than milk because they lack calcium. If we ate the shells we would get it, however.

Buttermilk is an excellent drink, but the fat has been taken out and the sugar has been converted into acid. It is not as good as whole milk.

## Bars Retired Farmers.

The retired farmer who rents his farm to a tenant is not enough of a farmer to get in on the special concessions made by the food administration for eight pounds of wheat flour, according to H. H. Neal, Shelby county, Indiana, food administrator. The only person who may get eight pounds of white flour at one time is an agriculturist who raised the wheat and took it to the mill or elevator.

The LAUSON 15-25

DUST PROOF—ALL GEARS ENCLOSED

KEROSENE TRACTOR

**For Plowing and Belt Work**

Most tractors are measured by their ability to **plow.** Field work is only **half** the work. LAUSON farmer owners now look upon the LAUSON 15-25 as a **power unit** for doing all the heavy work on the farm.

**—for plowing, discing and seeding.**
**—for keeping up the country roads, pulling grader and running crusher.**
**—for running the silo cutter, hay baler or grain separator.**

LAUSON tractors are bought on **performance and reputation.** Very often the **saving** pays for the LAUSON in one season.

# Going to City School?

(Continued from page sixteen.)

a rule have one session, from 8 or 8:30 until 3. Good conscientious preparation of recitations, especially for one with the meager background Mollie had in district 27, meant an hour to three hours to spend on each of her four or five lessons per day, with only 50 minutes in school hours to do this. Some of her work had to be done in the library; you see district 27 had no library and no reference books, and in order to compete at all with her city classmates, she had to do a little extra reading. No chance for bluffing.

The school authorities, who always have some one to look after the welfare of student workers, have figured out that a student may reasonably be expected to work 25 hours a week, all told, to pay for room and board. Good workers are worth 20 to 25 cents an hour for short time work. Mollie, then, faced a daily two or three hours' housework, with extra work on Saturdays, and occasionally a Sunday off. She must be up by 6 in the morning to help with the breakfast dishes before leaving for school. No chance for study then. She must be home by 4:30 or 5 to help get dinner, perhaps do a little ironing or sweeping; do dishes after dinner, and be free to study by 8 o'clock, if her dishes were done. Generally they weren't, as the family dined at 7. What could she do about it? Somehow she couldn't stay awake to study after 10; that left her, if she had no recreation between 3 and 5, time to prepare thoroughly her two hardest recitations each day; one more already done in school hours left her one, or two, some days, undone. Saturday she had a full half day of baking and cleaning to do; and there still remained her own laundry work, mending, etc., to be done before Sunday night. I haven't mentioned that Mollie was on call any evening and Sunday, to keep an eye on 5-year-old Eleanor. Or that she happened to live a few blocks from the school, and thus saved the hour or more a day that some of the girls had to spend. Where in her program were amusement, recreation, companionship, music, the inspiration of the great city, and all the rest of it?

I haven't overdrawn it. In the middle of the year, Mollie was interviewed by the school authorities and requested to carry only three studies, taking five years for her course instead of the usual four. She was a good student, or they wouldn't have done this for her.

If you think this is unjust, here is Mrs. B's side of the question. Her home is exquisite, worth between five and ten thousand dollars. Mollie had to learn from the beginning the care of her floors, rugs, woodwork, windows, curtains, furniture, all expensive; how to cook with gas; how to manage electric appliances. Mrs. B. had to teach her all this, to endure poorly done work, poorly ironed clothing, broken china; a girl who expected to be one of the family on all occasions, and was correspondingly sulky when she could not be. She had to give up a room which she would have much preferred to rent for $10 a month, and furnished heat, light, laundry materials and food, all of which amounted to much more than the value of Mollie's unskilled and at times uninterested labor. She had to do the hardest work herself, which was exactly the opposite of what would happen if she had a servant. Was it worth it?

Please do not misunderstand this. After a year or two of this, any girl of average quickness can better these conditions; she can apportion her time and energy better, and as a rule find some work less exacting. But to the newcomer, unskilled, unused to city ways and studies, about the best she can expect is some variation of Mollie's experience.

If Ruth still persists in her plan of going direct to a city school, she will have no trouble in finding a home in advance, by listing her name with one or more of the authorities I have mentioned, preferably of the school and the Y. W. C. A. But she must expect long, hard, dreary days at first, among people who care nothing for her moods and whims. She will be very fortunate indeed if she finds time or permission from the family she is living with, to take up music with her other work.

Mothers, am I leaving you out of all this? Not at all. If your daughter faces such a task as this, you can help to an untold extent. Little things you can still do for her, perhaps mending and a bit of sewing. But most of all, your attitude towards her and her work will help or hinder her. Please be cheerful, be spunky. Let her know you're proud of her successes; you have faith in her ability, her independence. This is the hardest thing about the abrupt break from home life, that the more independent you can make her of your support, still keeping your sympathy and affection, the better she will succeed. The self-pitying girl will never finish the hard course ahead of her. The self-reliant girl, backed by your love and understanding and confidence in her, can accomplish wonders. A writer has said recently, "Boss yourself, and you become a member of the great ruling class. For 'he that ruleth his own spirit is greater than he that taketh a great city.'" Can you do this for yourself and for your daughter?

# A Crooked Trail

Continued from page six.)

talked with your father last spring, and he told me he might want some fruit-trees this coming fall. So I'm going to call on him and others and take their orders."

"If you're going over there," I said, "please be sure to tell the folks you saw me, and that I'm riding Dick and on Lep's trail, and that they needn't look for me till they see me."

"All right; I'll tell your father what has become of you."

"And be sure to tell him I'm riding Dick." Then I explained that I had started from home without anything, and had accumulated what I had on the way.

Kelly laughed. "I'll tell him how it is. And you don't seem to have any lariat. If you'll ride over to the house I'll lend you mine. I've got a good one, 50 feet long. You can leave it here on your way back."

"It might come in pretty handy, and I'm much obliged to you, Mr. Kelly," was my reply. And when he came with the rope I added: "But no telling when you'll see your lariat again. I'm going to overhaul that ox, if it takes me all the rest of the summer."

"That's all right," he assured me. "I don't expect to need it any time soon." He coiled the rope neatly and handed it to me.

I hung it on my saddle-horn and rode on.

Kelly lived in the post-oak and blackjack woods, but the road soon led me out upon the high prairie. Ahead of me, and apparently less than a mile away, a range of low mountains, rising steeply up out of the prairie, stretched across my course. But I had traveled this road twice already, and knew that those mountains were 12 miles distant.

The summer before, father and I had made a wagon-trip up into the Little Pecan country to look at the land father afterwards bought. And my first view of the whole region had been obtained from the top of those mountains. We had returned by a different road; but in the November following we had come again. This time we were moving—changing our home from within sight of the capitol building at Austin to this new and sparsely settled part of Texas. On the second trip father drove our heavily loaded covered wagon, while my brother and I rode behind, pushing along our little herd of 27 cattle and two yearling colts. We had camped one night in one of those mountain-coves, near Lookout Gap, through which the road ran, and which was now in plain sight. As I well knew, there was not a human habitation from here to the mountains, and none till 10 miles beyond. It was easier to live in the timber in those days than it was to haul wood and rails out upon the prairie. So the nearest house was 22 miles ahead.

Lep was not one of the cattle we had driven into the country. Father had bought him and Coaly, for heavy plowing, soon after our arrival on the Little Pecan. About the beginning of warm weather, having been allowed to run out on the range with nothing to do for a good while, Lep had deserted Coaly, his work-mate, and started off across the country. It might have been mere restlessness that made him go—the restlessness, or desire to travel, that often seizes animals, and especially horses and cattle, as well as people. But we knew that he and Coaly had been brought from somewhere in southwest Texas, three or four hundred miles away, and the natural inference was that he was trying to get back to his old range.

We had missed him soon after he started; and father had followed and overtaken him somewhere on this very prairie. Since then Lep had worn hobbles constantly.

But now the hobbles were off and he was gone again with four or five days the start of me. If he had kept traveling steadily all this time, except when grazing or resting, he must be more than a hundred miles ahead. It was important that no time be lost; otherwise I would have gone back and taken a new start.

So I pushed on into the unsettled country, fearing that there was a long chase ahead of me, yet trying to persuade myself that Lep would be tempted to linger along his way, and that I should overtake him somewhere out here before he had wandered many miles farther.

(To be continued.)

**Shotguns and Shotshells**
*for Shooting Right*

GETTING the bulge on your year's work means a lot—a lot more if you love dog and gun. By getting yourself in trim with the *right* amount and kind of recreation, you will tackle next year's work with more vim.

There is much additional satisfaction in store for you if you buy a Remington UMC Pump Gun or Autoloading Shotgun for your days off this Fall. When your well earned chance comes to bag some game, you will then have in your hands a gun made to shoot *right*. Guns of the same design helped win the Grand Prize, highest of possible honors, "For Modern Firearms and Ammunition," awarded to Remington UMC at the San Francisco Exposition.

The wonderful Wetproof process invented for and exclusively used in the manufacture of Remington UMC Smokeless "Arrow" and "Nitro Club" Steel Lined Shotshells, has been pronounced the greatest advance in shotshell manufacture in a decade. *These shells as now made are the first completely wetproof shells.* Another Remington UMC contribution to shooting *right*.

In *black powder*, buy the old reliable Remington UMC "New Club," now Wetproof sealed at turnover and top wad.

# Watch for Defects

## Ways to Make Things Go Farther

By MARGARET PALMER.

We are all trying to make everything go as far as possible these days as well as prolonging the usefulness of everything we possess or come in contact with. So there will not be quite so much discarding as heretofore, instead, we will be more on the lookout, watching for little rips or defects, etc., and see that these things get immediate attention.

Ragged window shades will be turned end for end and, if not too bad, they may simply be cut off a little and rehemmed on the sewing machine by setting the stitch very long. Worn rugs are often a big problem, for it is hard to do much with them, yet sometimes much can be done with these to prolong their usefulness. All frayed ends should be rehemmed, broken threads fastened as soon as discovered they have worn or broken through or cut in two. Holes and rips, no matter how small, should be mended and sewed up. Small rugs with frayed ends may often be made to look almost like new again by simply adding new fringe.

Often a badly worn rug can be cut to pieces to insert in holes worn in large rugs and the spot covered with a small rug. Obtruding knots and the sharp edges of doors are often to blame for worn spots and holes in rugs. Where there are knots or sharp edges, they should be chiseled off smooth with the rest of the floor before they can do any damage. If any are missed, as soon as they are discovered, chisel them down.

This is especially true of floors covered with linoleum, as nothing is harder than knots and rough sharp edges. The best of linoleum will soon break and wear through over such places.

The furniture should be looked over, too. Often shabby and scuffed furniture can be made to look almost like new again through a coat or two of paint, or stain or enamel or varnish. The cost will not be great if one can do the work at home.

Sometimes it is a good plan to remove all the old varnish, but this is not necessary unless it is badly marred or cracked or worn off. This can be very easily and quickly done with any of the varnish removers sold on the market now. If this is done, sandpaper all rough places until smooth before applying the new stain and varnish.

In using white enamel on furniture and woodwork, it is best to give it a coat of flat white paint first, then when the white enamel is applied, there will be that thick lustrous white which can only be obtained in enamel. The flat white paint also will prevent the enamel from turning yellow, as it usually does if ordinary paint is used, or the enamel is put on without this flat coat of paint.

A little knowledge of staining, painting and varnishing is always of great value to every housewife, for then she can keep her furniture and often the woodwork and floors in good condition herself.

One can also soon learn to put in new bottoms or recover chairs, couches, etc., to prolong their usefulness, and it behooves us to make everything go as far as possible so we can help that much more in taking out Liberty bonds or in buying thrift stamps, or giving and helping the Red Cross. Often much of this work can be done on rainy days and the men then often find they can give a few hours of their time to help out.

# Little Sugar Hints

Fresh fruits and green vegetables used freely in the diet will cut the demand for very sweet desserts.

Serve very ripe, sweet peaches, pears and figs without the addition of sugar, or with cream whipped up with a little white syrup or honey.

For dark cakes and chocolate, cofee or caramel ice cream use half and salf sugar and molasses. For light cakes and light creams use half and half sugar and white syrup.

Fruit canned without sugar can be sweetened later by opening and reheating with sugar, sorghum, molasses, sugar cane syrup, white syrup, beet syrup, honey or maple sugar.

All fruits can be canned successfully witnout sugar for future jelly making, pie filling and marmalades. Can in hot water, in their own juice, or the concentrated juice of apples, pears or grapes.

Fruits can be preserved in grape juice or apple juice in place of a sugar syrup. Extract the juice from very ripe fruit and boil down to one-half the volume to form a thin grape or apple syrup.

Syrup made by reducing the juice of grapes, apples or pears to one-seventh of the original volume can be used in preserving, in canning or on the table to replace sugar to a great extent.

If sorghum syrup and sugar cane syrup is sealed to prevent fermentation, it will prove a good winter sweetener. Well made cane syrup can be used to take the place of sugar even in coffee.

If fruit is allowed to become soft ripe on the trees it will acquire enough sugar on its own account to make it very palatable for canning without sugar. Where fruit is abundant can ripe fruit in its own juice.

Drying fruit concentrates the sugar. The amount of sugar in some fruits is over 50 per cent. Dried fruit makes excellent jam, pickles, salads and ice cream, and when eaten as stewed fruit need less sugar than fresh fruit. Select the sweetest fruits for drying.

Too much sugar is used on the American table, with a consequent loss of variety and piquancy of flavor. The nutty flavor of grains, the natural sweetness of cornbread, the distinctive flavor of fruits and the real coffee taken are too often smothered with sugar.

### Sorghum Cake.

Half cup fat, one and a half cup sorghum, one cup boiling water, one-fourth teaspoon salt, one teaspoon ginger, one cup flour, one cup substitute flour, two eggs, one teaspoon soda.

Cream the fat, and add the sorghum, and the boiling water. Add the sifted dry ingredients to the first mixture. Add the eggs last. Bake the cake in a loaf or in a shallow pan in a moderate oven.

**Apple Sauce Variation**—To two cups of apple sauce, cooked until very thick, add one tablespoon butter, three tablespoons of syrup and cinnamon as desired. Spread the apple sauce half an inch thick over the bottom of the pan. Pour the cake batter over the sauce, and bake it in a moderate oven. When the cake is done, turn it out of the pan so that the apple sauce is on top. Cut it in squares and serve warm.

### Your War and Other Questions Answered.

Do you know the routine of the soldier's life in camp?

Do you know how your trade can be used in a shipyard, the wages paid, and how to apply for work? Over 75 trades are used in shipbuilding and yours may be needed.

Would you like to secure a copy of the latest cnogressional bills? State which one you want.

Do you know the status in the draft of the college man?

Do you know how to make 10 pounds of sugar do 14 pounds of sweetening?

Do you know how to put up grape juice?

Do you know how to care for a sick canary?

The Washington Farmer maintains, at its own expense, a free information Bureau in Washington, D. C. If there is anything you want to know, ask—and every possible effort will be made to give you correct information. # SUBSCRIPTION PLAN SAVES YOU MONEY

**RATES**
For Subscription to The Washington Farmer
**25c**
For 1 Year
**50c**
For 3 Years
**$1**
For 5 Years

We are holding open our direct-to-the-reader subscription plan during the summer months. It means a real saving at a time when most things cost more.

The central idea of the plan is to deal direct with our subscribers in securing and renewing subscriptions, thus eliminating the middleman and giving our friends the benefit of every penny saved.

It is gratifying to know that the new cooperative system has had the heartiest kind of backing; and that it has been put on a successful basis. We could not have got along without the assistance of well wishers who have told their neighbors about the plan and passed along copies of the paper.

There are many things of value which your state farm paper can bring you and your neighbors during the summer months. The various departments will be full of helpful hints, instructive articles and entertainment. Send in the orders!

# PATTERNS

2596—Girl's dress. Cut in 4 sizes: 4, 6, 8 and 10 years. Size 6 requires 2 3-4 yards of 36-inch material. Price, 10 cents.

2586—Girl's dress. Cut in 4 sizes: 6, 8, 10 and 12 years. Size 10 requires 3 1-2 yards of 36-inch material. Price, 10 cents.

2591-2600—Lady's costume. Waist 2591 cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure, and requires 2 1-2 yards of 44-inch material for a medium size. Skirt 2600 is cut in 7 sizes; 22, 24, 26, 28, 30, 32 and 34 inches waist measure. Size 24 requires 2 2 5-8 yards of 44-inch material. The skirt measures 2 1-4 yards at the foot. Two separate patterns, 10 cents for each pattern.

2285—Girl's dress. Cut in 4 sizes: 6, 8, 10 and 12 years. Size 10 requires 3 1-2 yards of 44-inch material. Price, 10 cents.

2556-2442—A stylish suit. Coat 2556 cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It requires 4 3-4 yards of 40-inch material for a 38-inch size. Skirt 2442 cut in 7 sizes: 22, 24, 26, 28, 30, 32 and 34 inches waist measure. Size 24 will require 2 5-8 yards of 44-inch material. The skirt measures about 1 7-8 yards at the foot. Two separate patterns, 10 cents for each pattern.

2358—Child's rompers. Cut in 4 sizes: 2, 4, 6 and 8 years. Size 6 requires 3 1-8 yards of 36-inch material. Price, 10 cents.

2585—A smart dress. Cut in 3 sizes: 16, 18 and 20 years. Size 18 requires 5 7-8 yards of 40-inch material. The skirt measures about 1 7-8 yards at the foot. Price, 10 cents.

2404—Lady's dress. Cut in 6 sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Size 38 requires 6 1-2 yards of 44-inch material. Price, 10 cents.

2287—Child's night drawers. Cut in 5 sizes: 4, 6, 8, 10 and 12 years. It requires 3 yards of 36-inch material for a 6-year size. Price, 10 cents.

2582—Lady's apron. Cut in 4 sizes: Small, 32-34; medium, 36-38; large, 40-42, and extra large, 44-46 inches bust measure. Size medium will require 4 3-4 yards of 36-inch material. Price, 10 cents.

2587—Girl's dress. Cut in 4 sizes; 8, 10, 12 and 14 years. Size 12 requires 4½ yards of 40-inch material. Price, 10 cents.

2433—Lady's house dress. Cut in 7 sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 requires 5 3-4 yards of 44-inch material. Price, 10 cents.

## Catalogue Notice.

Send 10 cents in silver or stamps for our up-to-date fall and winter, 1918-1919 catalogue, containing 550 designs of ladies', misses' and children's patterns. A concise and comprehenstive article on dressmaking; also some points for the needle (illustrating 30 of the various simple stitches), all valuable hints to the home dressmaker.

## Sofa Cover of Premium Ribbons.

Mrs. Frank Brown, wife of the well-known Shorthorn breeder at Carlton, Ore., has a beautiful sofa cover, made from the premium ribbons won by Mr. Brown's Shorthorn herd. Blue and red ribbons predominate and they are mainly from the leading fairs and stock shows in the Pacific northwest. Five ribbons make a square, so blue and red ribbons made into solid squares while alternating blue, white, red, white and blue or red make up a square. There are not not enough whites for entire squares. H. A.

## What Do You Know About Pianos?

Assuming that you can "tell a good tone," can you judge the hundred and one things which enter into the making of a Piano, the things which have their part in making and maintaining a good tone? Do you know the differences in plate and scale design? Are you familiar with the various "actions"? Are you a judge of the wood, the wire, the felt, the veneers and all the other materials which enter into the making of a Piano?
Probably not—not one person in a thousand possesses this expert knowledge. After all, when buying a Piano you depend greatly upon the expertness and the integrity of the Dealer or House. **Let your greatest care be the selection of the Piano House.** Tell that house what you would like and what you can afford and they will guide your selection of a Piano with expert judgment and a sincere desire to serve you well.
Beware of a "cheap piano"—in the end it is the most expensive. Avoid the alluring statements of some dealers—they are but pitfalls to catch the unwary. Protect yourself by going to a Piano House with a reputation for integrity and fair dealing—you will never regret it.

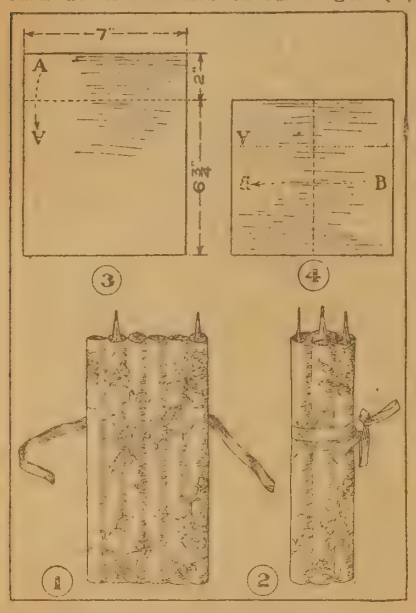
**We invite you to call at any of our stores—or write us asking for illustrated catalogues and prices.**

*We are dealers in Steinway and other Pianos, Pianola Pianos, Aeolian Player Pianos, Player Music, etc.*

**Sherman, Clay & Co.**

Sixth and Morrison Streets, Portland.
Third Avenue at Pine Street, Seattle.
928-30 Broadway, Tacoma.
808-10 Sprague Avenue, Spokane.
Stores Also at San Francisco, Oakland, Sacramento, Stockton, Fresno, San Jose, Vallejo.

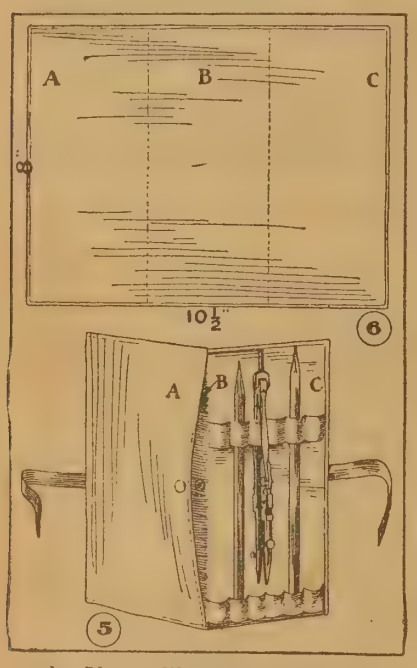
# Handicraft for Girls



By DOROTHY PERKINS.

(Copyright by A Neely Hall.)

## For Your School Desk.

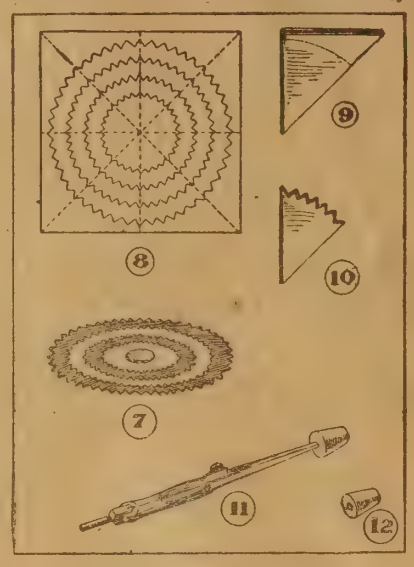


Every girl should have a holder for pencils and pen-holder, to keep them from scattering about in her school

Cretonne of a dark color, with a small pattern, is the best material to use. For the holder shown in Fig. 1, first cut a piece of cloth 7 inches wide and 8 3-4 inches long (Fig. 3). Then turn down 2 inches of its length (A,

Figs. 3 and 4) and stitch the turned-over edge as indicated by the row of small dots in Fig. 4. The heavy dotted line in Fig. 4 indicates where to make the second fold to bring side B over to the opposite side. Turn in enough of the side and bottom to conceal the cut edge of the cloth; then stitch along the side and across the bottom.

The pockets are partitioned off with up-and-down rows of fine stitching. In a holder of the width given, five rows of stitching will make six pockets of the right size so the pencils will fit



snugly. If you like, one or two of the pockets may be made a trifle narrower then the others, to provide for slim penholders.

Sew a short piece of tape to the center of one side of the holder, to provide for tying the holder in a roll (Fig. 1 and 2).

Some of you girls will prefer the holder shown in Fig. 5, because of its pocket for erasers, pencil-sharpener, pen-knife, pens, pencil stubs, etc. Figure 6 shows the pattern by which to cut the cloth; also, how the edges should be turned over slightly, or else be bound with a narrow braid, to conceal the raw edge. The dotted lines indicate the folding. The outer third A folds over on to the center third B, to form the pocket, and it is stitched to B along the top and bottom edges; and the outer third C is provided with small pockets for pencils. Form the pencil pockets with pieces of tape. Stitch the bottom tape along the bottom edge, as well as at the ends. Partition off the pockets by rows of stitching.

Sew a dress snap-fastener to parts A and B, for fastening shut the large pocket, and sew a piece of tape to the center of the back of the case for ty-

ing it after it has been closed and rolled up.

The pen-wiper shown in Fig. 7 is composed of four layers of light weight flannel, 4 1-2, 3 3-4, 3 and 2 1-4 inches in diameter, sewed together through their centers with a fancy button sewed to the top.

Figure 8 shows the four circular pieces placed one on top of the other. This diagram also shows by dotted lines how to prepare the pieces by first folding over a square of cloth from top to bottom, then from side to side, and then from corner to corner, into the form of Fig. 9. Cut off the upper corner on an arc of a circle, as indicated by dotted line in Fig. 9, and notch the folded edges (Fig. 10).

Use two colors of flannel, alternating them, and you will have a most attractive penwiper.

Never carry a pointed instrument in your pocket or lay it away in your desk without protecting the point. A cork pushed far enough on to the point to hold fast makes a good protection (Figs. 11 and 12).

## Some Good Recipes.

The following are some recipes suggested by the Delaware Agricultural college extension service:

Apple gems—Sift together one and one-half cups flour, one-half teaspoon salt, two teaspoons sugar, one cup cornmeal. Add one cup milk, four sour apples (chopped fine) and two tablespoonfuls molasses. Beat well. Bake in hot, greased gem pans 15 to 20 minutes.

Buckwheat biscuits—One and one-half cups buckwheat flour, one-half cup wheat flour, one teaspoon salt, four teaspoons baking powder, one teaspoon fat, milk or water to make dough. Mix as for baking powder biscuits and bake in hot oven 10 or 15 minutes.

Cornmeal ginger bread—Mix in a double boiler two cups cornmeal, one-half cup cornmeal, one-half cup molasses, one-half cup sugar, two tablespoons fat, one teaspoon salt, one cup sour milk, three-fourths teaspoon ginger, one teaspoon cinnamon, one-half teaspoon cloves. Cook over hot water for 10 minutes, stirring constantly. Cool, and add one cup wheat flour, one and one-half teaspoons soda, and one egg well beaten. Bake in a shallow tin pan.

## German Hens Must Lay.

What will be done with a hen in Germany when she refuses to lay 40 or more eggs a year is not officially stated, but it is stated that the owner of the hen must turn over to the kaiser's government 40 eggs annually for every hen that he possesses. The kaiser is quite reasonable, however, in agreeing to turn over $1.60 to the owner of the hen for each 40 eggs so requisitioned.

### Americans Give Europe Confidence.

While it is unfair to give this country credit for the success of the present allied offensive, it is true that the appearance of more than 1,500,000 U. S. soldiers in France and their dash and daring and general efficiency have given the allies the necessary confidence to insure success.

### What Irene Did One Day.

Dear Aunt Nellie: The last day of school I got up at 6 o'clock and milked four cows, Pet, Buch, Blacky and Reddy. I then came to the house and fed six lambs. Their names are Spotty, my lamb, Lanky, Inky, Pinky, Sniffles, Snorts and Jerry. Then I was ready to eat a good hearty breakfast at 7 o'clock. After breakfast I put up two lunches, one for my brother, Chester, and the other for myself. Now it was time to get ready for school. After I got ready I dried the dishes for mama. My cousin Luther saddled my pony, Puss, then we rode to school. When I came home I borught the cows in. It was then time to milk the cows again, while mama got supper. After supper I fed the lambs again. Papa was going up to Leonardo's in the car, so I went with him. Coming back I drove the car. I think the people who saw my tracks think that some one who was drunk drove the car. The steering wheel was loose, so that was the reason I couldn't keep it on the road. I did all this in one day and think it enough. I will write again.—Irene Alma Clarke, Grand Dalles, Wash.

### Mildred Likes to Play.

Dear Aunt Nellie: I have not written to the Children's Corner for a long time. Since then I have gotten three little kittens, Spot, Fluff and Whiskers. It is lots of fun to see them play. We also have about 30 little chickens. Vacation has come and I have lots of fun playing. I like to play and I think all the rest of the cousins do, too. I have passed in all my studies at school. There was a girl, I don't remember her name, who wrote to the Corner and said she would like to correspond with me. I did not read that Farmer, so I did not know she wrote till a girl at school showed it to me, the letter. But I forgot to copy her address, so I would like to know if she would kindly write another letter telling her name and address and tell if she was the one I mean. — Mildred Tormey, Spokane, Wash., Star route.

### Every Little Bit Helps.

Dear Aunt Nellie: This is the first time I have written to the Children's Corner. I am eight years old. My birthday is January 27. I passed into the third grade this year in school. I have two sisters and one brother. They are 13, 12 and 11 years old. I am going to buy a war saving stamp to help win the war. I have read many cousins' letters who say they have brothers in the war. I have a little kitty and a hen that Mrs. Dick gave me. The hen is setting on 15 eggs. I made a little garden this year and planted many different garden seeds. My sisters made five quilts, six handkerchiefs and seven wash cloths. My letter is getting long, so I will close and go help brother and sisters as much as I can, for every little bit helps.—Frances Ruchert, Box 3, Peola, Wash.

### Plants Beans and Corn.

Dear Aunt Nellie: I read the letters and there are only a few boys' letters in the Children's Corner. I have five thrift stamps and I think I will buy more. I live on a 140-acre farm, but we have in wheat and oats about 500 acres. I have three sisters and one of them is married. I have four brothers and one of them is married. We are milking 11 cows and I milk three of them. We have 11 calves. We have 36 head of cattle altogether. We have about 30 horses and five little mules. I just got through planting beans and corn. I will be in the sixth grade next year. If I have a twin I wishthey would write to me.—Glenn Hiday, Coulee City, Wash.

### Produces Food for Soldier Boys.

Dear Aunt Nellie: This is the first time I have written to the Corner. I like the Farmer so well I will write a letter to you. Last year I picked some cherries and raspberries and made enough money to buy a pig. I kept it all summer and made $16 on it. I was 10 years old on December 20. I am buying thrift stamps with all the money I earn. I am going to get a pig this year, so I can help raise more bacon and ham for Uncle Sam to feed his soldiers and sailors at the front. I am trying to do my bit. We live on a five-acre farm and my father is away most of the time, so I have to take care of the garden this summer. I will have to do most of the hoeing. This fall I will have to put in the corn and potatoes and wheat for papa. We are going to get about six pigs this year. We will have to feed the corn to the pigs. I like to feed the animals, and I will have to feed them. We have two cows, and I milk them most of the time. I helped put up the hay this year, which I like to do. Our vacation has just begun. Have I a twin? If so, I wish he would write to me.—Robert Austin, Route 6, Box 233, Bryant avenue, Walla Walla, Wash.

### People Call Her "Johnny."

Dear Aunt Nellie: I have never written to the Corner before. I live in Seattle but most every summer I stay with my aunt and uncle on their 860 acres of land. Uncle Bud has a good many head of horses and cattle. They have three dogs, Jack, Bob and Jitney. Minnie is our cat. She has three of the sweetest kittens. Their names are Patty, Boots and Slippers. I love to ride horseback. My horse's name is Snowball. He is very small and easy to get on. My other pets are Boots and Jack. I always wear overalls around the ranch, and for that reason people who know it call me Johnny. My birthday is June 18. I was 12 years old. Have I a twin? Every morning I poison sage rats. One day Jitney killed 15 rats. I can milk. Our old cow's name is Red. She is very gentle, and will even let you ride her. Uncle Bud has a car. We go to town very often. We live nine miles from town.—Marguerite Weston, care Bud Weston, Ellensburg, Wash.

### Has a Dog Named Midget.

Dear Aunt Nellie: This is my first letter to the Corner. I like to read them. I am 10 years old and my birthday was March 31. It was on Easter this year. I am in the fourth grade. I have brown hair and brown eyes. Have I a twin? If so, I wish she would write to me. I have a pony. His name is Tom. I can ride him without a bridle on. He is half Shetland. I have two sisters and one brother. My sisters' names are Myrtle and Leona, but we call her Oney. My brother's name is Ernest. I missed some school on account of scarlet fever. I live on a 680-acre farm, but we have more land. I have a dog named Midget. He is 8 years old. We have some horses and cows. I do not know how many.—Bertha Wilke, Okanogan, Wash.

### Best Baby in Crescent.

Dear Aunt Nellie: This is the first time I have written to the Corner. I was nine years old February 21. Have I a twin? I live in the country, 10 miles north of Reardan. We have a 120-acre farm. We have nine head of cattle, two horses, one dog and five cats. I have four sisters, and two brothers and one half-brother. My baby brother's name is Ira Milton Haines. I think he is the best baby in Crescent. I belong to the junior Red Cross. We made quilts at school. I live one mile from school. I like to go to school very much. My friend's name is Eva McGough.—Ethel Clarke (Rourke), Reardan, Wash.

### Helps Sammies Lick the Kaiser.

Dear Aunt Nellie: The last time I wrote to the Children's Corner I received the second prize. I have decided to write on "Helping My Country." I have invested in a thrift card and my two brothers and sister also have one. We planted 24 rows of beans to help the Sammies lick Kaiser Bill. The beans will bring a dollar a row. Papa has promised one-fourth of the money to each. I am going to invest it in a baby bond. I would like to correspond with Delma Guffin, Warden, Wash. I am 10 years old and in the sixth grade.—Frances Cannon, Dayton, Wash.

### Play in the Grass.

Dear Aunt Nellie: This is the second time I have written to the Children's Corner. I have a sister and one brother. Their names are Lorena and Johnnie. We have two pet colts. The color of one is blue and the other is yellow. The blue one is mine and the yellow one is Lorena's. Our yard has got lots of grass and we play in it. I rode my pony today after the cow. I go barefooted. It is rainy today and so I have to keep on my shoes. I will write a riddle: I went across the bridge. I met my sister and cut off her head and sucked the blood and let the body stand. What is that? It was a beer bottle.—Anna Thomson, Goldendale, Wash.

### A New Little Brother, Bobbie.

Dear Aunt Nellie: I have written to the Corner once before. I have another brother now. His name is Robert. We call him Bobbie. He is seven weeks old. I found a little bluebird the other day with no feathers on it. I thought maybe she would leave her pest but she didn't.—Freda West, Dot, Wash.

### Going Camping This Summer.

Dear Aunt Nellie: This is the third time I have written to the children's Corner. I hope I will see my letter in print. My birthday is September 17. I saw a girl in the Corner that had the same birthday as I have. If she reads my letter I wish she would write to me. I could write to her, but the Farmer got lost. We have four kittens. Two of them are mine. I named them Bunny and Brownie. We are going camping this summer. When I have been up there I will write and tell you about it. I have joined the Red Cross at school. We have a pet calf. The other day my sister and I went out to feed him some milk. We couldn't find him. But at last we did. He tried to knock the bucket over. Our school is out now. —Edith Christensen, Box 143, Route 3, Cottonwood Farm, Ellensburg, Wash.

### Asks the Cousins Some Riddles.

Dear Aunt Nellie: This is my second letter to you. I did not see my letter in print. I saw my little friend's, Eula Manis. My birthday will soon be here. It is June 19. My brother, Carl, and my friend, Eula, are writing. I will ask the cousins some riddles. Why is a musician like an infant just learning to walk? A musician is like an infant because it is A minor and if it C sharp it will soon B flat. Our school is out. It is the Darden school. My teacher was the best teacher I ever had. Her name is Miss Fleeta Kinder.—Edna Short, Route 1, Waitsburg, Wash.

### Cleans Up the House for Mother.

Dear Aunt Nellie: I am 9 years old. I was born August 28, 1908. My brother, Derzil, and I wash the dishes for my mother. There are five in our family. I clean up the house for mother. I have two brothers and no sisters. I have a little baby brother and one 12 years old. I live in Pataha City. —Elma Moem, R. F. D. 2, Pomeroy, Wash.

### Has Hazel a Twin?

Dear Aunt Nellie: This is the first time I have written to the Corner and I hope it will not be the last. I am 11 years old. My birthday is January 1. I am in the sixth grade and my teacher's name is Mr. Thornton. I have three sisters and two brothers. I live on a farm. We have four horses and three cows. The horses' names are Buck, Dick, Fannie and Dock and the cows' names are Blossom, Buttercup and Bell. Have I a twin? If I have I wish they would write to me.—Hazel Lackey, Fruitland, Wash.

### Likes the Country Real Well.

Dear Aunt Nellie: I am 18 years old. My birthday is May 30. Have I a twin? If so I wish he or she would write to me. I live on a 280-acre farm five miles from Rockford. We have eight horses and three cows. I have two brothers, one of whom is in the aviation section of the United States army. We also have six hogs and nine pigs. I like to live in the country real well. I like to read the letters very much and enjoy the paper. This is my first letter.—Reno V. Carmack, R. F. D. No. 2, Rockford, Wash.

### Esther Has One Sister.

Dear Aunt Nellie: This is the first time I have written to the Corner. I am a little girl 6 years old. I started to school in January. I like to go to school. I have light hair and grey eyes. We have nine sheep, two horses, eight cows and one dog. I have one sister. Her name is Wilma. My birthday is October 24. Have I a twin?—Esther Peterson, Route 2, Mead, Wash.

---

During the last week Aunt Nellie has received letters from the following cousins: Laura Lee, Mabel Bender, Eugene Bender, Stanley Bender, Helen Wilcox, Olive Wilkinson, Laura A'Shaughnessy, Flossie Packwood, Ruth Cory, Ollie Ervin, Jane Adams, Edith Miller, Pauline Swanson, Doris Jones, Thelma Chapman, Evalene Maurer, Elmer Benson.

Your Local

# HOME PAPER

and

Your State

# FARM PAPER

at a Special Club Price

A special clubbing arrangement has been made with a number of newspapers throughout the northwest. We can now offer you a one-year subscription to your local home paper with a one-year subscription to your state family farm paper at a special rate for both.

**YOUR HOME PAPER** is of great value to you because it brings you all the local happenings and news of the affairs of your community and keeps you posted on the gossip of the social and commercial life. It brings you the news of the home boys at the front and prints many interesting letters from them.

**YOUR FARM PAPER** brings you each week interesting facts of the agricultural development of your state, all the farm news, features for every member of the family, including color comic pages, women's and children's pages. Departments devoted to every phase of farming and farm life.

We can now send you your local home paper and your state family farm paper for one year each at the special clubbing rates as quoted below:

| | | | |
|---|---|---|---|
| The Daily Journal, Bellingham, Wash., and Washington Farmer. | $3.00 | Puyallup Valley Tribune Puyallup, Wash. and Washington Farmer. | $1.50 |

(Continued on page twenty-seven.)

# JERSEYS The Profit Breed

WHY waste feed on cows that skim their own milk? Jerseys produce the highest percentage of butter fat at the lowest feed cost. The man with one Jersey is never satisfied until he has a herd. Write to breeders for pedigrees and prices. Let us send you profitable facts about the Jersey.

**The American Jersey Cattle Club**

314 West 23rd Street New York City

## TWO RICHLY BRED JERSEY BULLS

Dropped August 22 and November 28, 1917, both sired by a son of St. Mawes Susie, whose official record at 10 years old is 1012 pounds 85 per cent butter in a year. One dam is out of St. Mawes Mabel (660 lbs. butter), and she by Rosaire Olga Lad, sire of over 20 register of merit daughters, including St. Mawes Beauty, 870 lbs. butter as a junior 3-year-old. The other dam is by Poppy's St. Mawes, son of St. Mawes Poppy, 1120 lbs. butter.

Both solid color, cows were bred when I bought them and they have all the productions back of them that made the Ed. Cary herd famous. Will be sold far below their value.

**E. R. McCornack, Florence, Ore.**

## Sunny Bank Jersey Farm

A few choice young bulls old enough for service, from imported sires and dams. Sired by Fussy Fern's Noble, son of the great $25,000 bull, Golden Fern's Noble. Dams milk 40 to 50 pounds a day with ordinary farm care.

On account of renting my farm, these bulls will be sold very reasonable if taken soon. Mention this paper.

**H. WEST, Proprietor.** **L. J. SMITH, Manager.**
SCAPPOOSE, ORE.

## Doerfler Farm Jerseys

Have largest herd average in the world considering size. Entire herd of eleven head average 599.42 fat. Herd headed by Gertie's Poppy's St. Mawes. The Cary breeding is our standard.

See us at the state fair.

**F. A. DOERFLER, Silverton, Ore.**
Phone 54 Silverton or 43F24 Salem.

## ANOKA FARM

REGISTERED JERSEY CATTLE.

Bull calves of serviceable age this fall, for sale at reasonable prices. Their sire's dam has record of 700 lbs. butter and grand sire's dam 1120 lbs. St. Mawes breeding the best in the west.

**R. B. SEELEY, Sherwood, Ore.**
R. R. Sta. Wilsonville, on Ore. Elec.

## Register of Merit Cows

Three registered Jersey cows, with good register of merit records. Two are on test again and will increase their records; all in class AA. Two are bred to the great sire FOXHALL'S FERN LAD. Come and see them or write for prices and full particulars.

**FOX BROS. Silverton, Ore.**

## LYNDEN JERSEY FARM

Herd sire son of Fororio's Olindes Pogis, of Hood Farm and St. Mawes of Lynden, whose dam and granddam have records up to nearly 1000 lbs. of butter. Young bulls out of the Hood Farm bull for sale. Cows under official test and blue ribbon herd at Whitman county fair, 1917. You will find both type and production in the herd. For information write to

**P. MEENDERINCH, Lynden, Wash.**

**GOLDEN GLOW'S CHIEF.**

Bred by estate of W. S. Ladd, has 37 daughters, 41 granddaughters and 5 proven sons in the register of merit, and a WORLD RECORD JUNIOR 3-YEAR-OLD DAUGHTER, who is dam of ONE OF OUR HERD BULLS by the old bull himself. Our second sire is also a son of Golden Glow's Chief, out of a Gold Medal Hood Farm cow. Write us for a young bull calf.

D. Brooks Hogan, Mgr., Iron Mine Farm, Oswego, Oregon.

**W. M. LADD, Owner. Portland, Oregon.**

## All High Record Blood

Bull calf out of Lucy of P. V., full sister to St. Mawes Susie; 936 lbs. butter in a year; to St. Mawes Blossom, 823 lbs., and to Susie's Twin Maiden, 642 lbs. Sire, Poppy's St. Mawes, son of St. Mawes Poppy, 1120 lbs.

**ED CARY, Carlton, Ore.**
Station, La Fayette, Ore.

## ASHBURN FARM

REGISTER OF MERIT JERSEYS.

St. Mawes-Golden Glow's Chief-Baronet. To breeders interested in any of these leading strains we can furnish a line bred calf with the best possible outcross. More big records back of it than any other herd in the west.

**J. M. DICKSON & SON, Shedd, Ore.**

## Jersey Bull for Sale

I am offering at a sacrifice my young herd bull, dropped December 15, 1916. Has blood of Golden Glow's Chief and Majesty's Togo. None better anywhere. Write

**E. F. MARYATT, Grandview, Wash.**

## Edgewater Farm, Breeders

Foundation stock is from most noted Island Jersey families—Golden Lad, Golden Jolly, Oxford Lad, Old Raleigh—names that stand for high production and showring winners as well.

**E. T. SMITH. Myrtle Creek, Ore.**

## Meridian Dairy and Fruit Farm

Oldest Jersey herd in northwest Washington. Young stock for sale, both sexes, from good, producing dams. Herd headed by Kolander's Eminent 148256. A very fine bunch of young stock, both sexes, for sale.

**B. C. CRABTREE, Lynden, Wash.**

## Luckiamute Farm

Register of Merit A. J. C. C. Jerseys. Home of Octavia's Duke breeding. Daughters test as high as 7.58, second highest in U. S. A few good young bulls for sale.

**FRANK LAUGHARY & SON,**
MONMOUTH, ORE.

## Who Wants This Bull?

A double grandson of Kadia F., world's Jersey milk record for senior 4-year-old, 16,191 lbs. He is also a grandson of Holger and Engineer's Bluster. Because slightly broken colored, will be sold cheap. Other good young bulls and a few heifers and cows, same line of breeding.

**N. H. SMITH, Oregon City, Ore.**

## Goldie's Nehalem Beauty

won grand champion of the Jersey breed for production, 1917. Her record, 80 per cent basis, 1131 lbs. butter as 4-year-old. We have two bull calves sired by her son. Their dam's yearling records: 492 lbs. (average per cent fat, 6.08) and 433 lbs. butter. Both have been grand champions in show ring.

**CLIFFORD F. REID.**
Wilcox Bldg., Portland, Ore.

## Thirteen Registered Jersey Heifers

Two years old in Oct. and Nov. Nine of them will freshen this fall, 4 in April. All bred to St. Mawes Noble. Several of these heifers from register of merit dams. Will sell in lots to suit purchasers.

Priced for quick sale.

**J. C. BROWN & SONS, Shedd, Ore.**

## Where Can You Beat It?

Young bull, ready for service. Sire's dam, St. Mawes Poppy, 1120 lbs. 85 per cent butter, or 1190 lbs. 80 per cent, in a year. Is 75 per cent same blood as Poppy's Grace, that has recently finished year's test as junior 2-year-old, with 601 lbs. 85 per cent butter. His dam and dam's dam both register of merit cows. Priced at $250 for quick sale.

**F. E. LYNN**
**Perrydale, Ore.**

## Breeders of Registered Jerseys

**ERICKSON BROTHERS, Yakima, Wash.**

## Rose Lawn Jerseys

The Island bull (Rosy's Jolly Golden Fine 135023) at head of herd. Bulls for sale out of Register of Merit and high-testing dams. Bred right, of right type; priced right.

**S. H. KAYLER**
Twin Falls, Idaho.

## WAIKIKI FARM

Register of Merit Jerseys. Largest Jersey herd in the northwest. Young stock for sale.

**IRA P. WHITNEY, Manager.**
Route 7, Spokane, Wash.

## Dairymen, $75.00

buys your choice of two bull calves, both two months old; solid color, good individuals; out of register of merit dams and by bulls with heavy R. of M. backing. If you are looking for a bargain here it is.

**JOHN B. STUMP & SON, Monmouth, Ore.**

## Ashnook Farm Jerseys

Young bulls by Silver Chimes of S. B., whose first 6 daughters average 710 lbs. 80 per cent butter. A few good cows and heifers for sale.

**DEL PERKINS, Carlton, Ore.**

## Jersey Home Jerseys

Young bull out of Olalla 2d, daughter of Olalla (806.25 lbs. butter as junior 3-year-old). Bull's sire, St. Mawes Prince, by Poppy's St. Mawes, and out of Gertie's Fern Princess (842.5 lbs. butter), both 80 per cent. Also other good young bulls.

**THOMAS WILLIAMS, Forest Grove, Ore.**

## St. Mawes—Rinda Lad

The two most popular strains of Jerseys in the northwest. Young bulls from register of merit cows for sale.

**G. G. HEWITT, Monmouth, Ore.**

## Ready for Service

Young bulls of Golden Glow's Chief, and King Melia Ann strains, out of register of merit dams. Priced to meet the unfavorable conditions. Write for full particulars and pedigrees.

**HENRY STEWART, Albany, Ore.**

## Jersey Farm Dairy

Peter Mouw's Poland China hogs, Cotswold sheep, White Leghorn and Buff Orpington poultry, carefully bred, great foundation stock.

**E. S. PILOT, R. F. D. 5, Idaho Falls, Ida.**

# Our Entire Guernsey Herd

**FOR SALE AT THE**
**WASHINGTON STATE FAIR, YAKIMA, SEPTEMBER 16-21.**

Direct descendants of the great May Rose family. A few heavy milking cows, ten 2-year-olds in milk, a few senior and junior yearling heifers, a few bull calves, and two bulls of serviceable age. They combine production and Guernsey type.

**MIDDLEDALE FARMS, EUGENE, ORE.**

## Just What You Want

may be offered in this week's Want Ads at a bargain. It's a good idea to look them over every week.

The department editors of this paper are anxious to be of service to you. Do not fail to write to us if they can be of help to you.

# News for Breeders

C. S. Haupt of Castle Rock, Wash., recently purchased a fine yearling Jersey bull from G. G. Hewitt of Monmouth, Ore. The purchase was made on the advice of L. S. Keyes, county agriculturist of Cowlitz county, and Mr. Haupt is much pleased with him. He is by Rhinda Lad of S. B. and out of a cow imported in dam that has an official record of 542.3 pounds of fat or 638 pounds of 85 per cent butter.

Frank Brown, the Carleton, Ore., Shorthorn breeder and representative of the American Shorthorn association for the Pacific northwest, will judge beef cattle at the Montana state fair at Helena, September 10-17.

Mr. Brown will show a young herd and calf herd at the Los Angeles and San Francisco stock shows this fall and at North Portland. These are the only places at which his Shorthorns will be exhibited.

S. O. Poole of Wenatchee, while on a trip to Spokane August 20, rounded up a carload of high-bred Jerseys for shipment to his ranch. Nine head of pure-bred Jerseys were secured from the Dillworth herd. Eight were obtained from Jay P. Graves of the Waikiki dairy farm. In the latter lot is included Raleigh's Golden Nellie, purchased for $500, who has just finished a test as a 2-year-old with a record of 12,500 pounds. Mr. Poole purchased the only brother of this heifer a year ago and is building up a fine herd of pure-breds.

At least nine Duroc breeders and at least eight Poland China breeders will compete in the futurities of these two breeds of swine at the Oregon state fair. Among them are the best known breeders in the state, besides one or two in each breed who have never shown before. As only under year pigs will be shown the futurity will comprise the greater part of the show. But as numbers will not be lacking, competition promises to be sharp and quality of the finest. H. A.

## Hias Pete Visits Fair

Hias Pete, one of the few remaining Indians of the Chehalis tribe, was a visitor at the Southwest Washington fair, midway between Chehalis and Centralia. Pete is about 85 years old and now belongs on the Black river reservation. This was his native land, and he claims to have had his teepee at one time where the fair grounds are now located. He claims he never ceded his rights and that title to the land never properly passed. On this account all Pete asks is that two acres of land be deeded to him so he can call it his own and live on it if he wishes.

Pete tells many interesting stories of early days. He was raised practically by Joe Vorst, a well-known early settler. Pete says there is little realization now of the hardships the early settlers endured. He says Vorst wore deer skin pantaloons and slept on a raw hide bed with no bedding and no blankets. He also says that most of the time Vorst had no sugar and no coffee. Pete made for the race track almost as soon as he reached the fair grounds and said the races were the only thing that interested him much. H. A.

## Holsteins Win Milking Tests.

There were eight entries in the milking contest at the Southwest Washington fair this year—exactly the same number as a year ago. Four were Holsteins, three Jerseys and one Guernsey. A handicap of eight hundredths of a pound of fat was allowed for each day under five years of age and five per cent of the cow's daily production for each month over two that a cow had been in milk. Holsteins won the first three places.

Professor G. G. Corman, state dairy inspector, had charge and managed the contest. Figured in money value of both skim milk and butter produced the following is a complete report:

1. Ostego Highlands Butterfly, Holstein, owned by N. Hamilton, Chehalis, Wash., $3.303.
2. Ann Lundy Fourth, Holstein, Nathan Hamilton, $2.907.
3. Buttercup, Holstein, F. M. Svinth, $2.215.
4. Lad's Juno, Jersey, E. L. Brewer, Satsop, Wash., $2.184.
5. Eugenia D., Guernsey, Middledale Farms, Goshen, Wash., $2.117.
6. Jessie Jelke Pontiac, Holstein, A. Wackerbarth, Chehalis, Wash., $2.055.
7. Marigold Juno, Jersey, E. L. Brewer, $1.788.
8. Edna Fogis, Jersey, E. L. Brewer, $1.41. H. A.

### Nobody Can Afford to Fail.

Nobody can afford to fail in his business now if his business is worthy of success. The condition of the world demands accomplishment these days.

# Breeders' Department

## SHORTHORN CATTLE

### Mulhall's Shorthorns and Percheron Dispersion Sale

to be held at

**MULHALL'S FARM, THREE MILES NORTH OF FENN,**

on the N. P. and O.-W. R. & N. R. R., Idaho county, Idaho, Sept. 25th, 1918. The entire herd of 100 registered horses and cattle will be closed out. Have sold my farm and must give possession October 1st, 1918.

**WM. MULHALL, Fenn, Idaho**

## HOLSTEIN CATTLE

### TEN GOOD HOLSTEIN COWS

All of excellent breeding. Three extra heavy producers, and all good. Seven safely in calf to Tobie DeKol 2d's Johanna Duke, a 75 per cent brother to Lady Tobie DeKol, once world's record senior 3-year-old, and sire of Jantilina Colantha Johanna, 22.5 pounds butter in seven days as junior 2-year-old, besides other A. R. O. heifers of fine type. Come and see them or write for full particulars and pedigrees. Will be sold below their value together or singly.

**HERMAN KEUNZI, Silverton, Ore.**

### Registered Holstein Heifer

for sale; also May and June farrowed O. I. C. pigs, either sex, from matured sows, with pedigree; by a son from a grand champion sow. Also 18-month-old sows to farrow second litter this fall.

**E. C. SCHUMACHER, R. 1, Granger, Wash.**

### Registered Holsteins

Finely bred bull calves for sale at prices that are an inducement for you to finish raising them.

**H. R. BOOMER, New Plymouth, Idaho.**

## POLAND CHINA SWINE

### Big Type Poland Chinas

Mouw, Fesenmeyer and Herring strains, either sex. Also registered Shorthorn cattle; good individuals.

**CLARK BROS. Yakima, Wash.**

**Just What You Want** may be offered in this week's Want Ads at a bargain. It's a good idea to look them over every week.

# Grain and Produce Markets

## Chicago Grain.

CHICAGO, Sept. 9.—Dread of crop impairment by frost carried values upward today in the corn market. Prices closed unsettled 5-8 to 1 1-2 net higher with October $1.57 7-8 to $1.58 1-8 and November $1.57 1-2 to $1.57 7-8. Oats finished unchanged to 1-4@3-8 up and provisions varying from 20 cents decline to 10@12 1-2 advance.

Chances of frost tonight over a wide section of the northern states brought about a prompt buying movement on the part of corn traders and kept bullish sentiment decidedly in evidence throughout the day. In this connection reports of a killing frost in North Dakota were received with interest, but most of the anxiety was in regard to possible damage elsewhere, as the prevailing temperature was almost everywhere below normal.

Oats hardened with corn. Hedging by cash houses though, prevented any sharp advance.

Provisions averaged higher owing to an upturn in the hog market and because of large exports of meats last week. Trade was mainly in ribs.

### Chicago Futures.

CHICAGO, Sept. 9.—

| | Open. | High. | Low. | Close. |

Flour unchanged; shipments, 73,903 barrels.

Barley, 84@99c.

Rye, $1.61@1.61½.

Bran, $29.31.

## Seattle Wheat.

SEATTLE, Wash., Aug. 7.—Wheat is coming into market rapidly and storage spaces are filling at such a rate that millers and grain dealers have become alarmed. The port commission has leased all its bulk grain space to private parties, although it was not an approved receiving house until a few days ago.

Weather conditions have favored maturity of late spring wheat on the northern highlands. Cutting of this crop will be completed by the end of next week. Some winter wheat seeding has been done, but the weather generally is too dry.

The space for storing wheat from eastern Washington is becoming so congested that the chamber of commerce has appealed to the department at Washington for relief in detailing ships to the service, necessarily withdrawn for other purposes. It is openly announced that the flour mills in this territory must close down within 10 days unless means of transporting the flour to the Atlantic can be supplied. August grindings for the government orders totaled 25,000 tons at Puget sound terminals alone and is awaiting shipment. The mills have been notified that the government will buy no flour this month because of lack of tonnage. The average mill in this territory has facilities for storing sufficient wheat to operate three to four weeks and flour to run three weeks. Grain now purchased and aboard cars will practically fill all storage spaces in this city. It is stated that unless the government can offer relief all buying of grain will have to stop, together with all receiving of grain at interior warehouses from Washington, Oregon and Idaho shipping points.

Farmers generally are taking advantage of the fixed maximum prices by rushing wheat to market. Combination of this fact, with the shutting down of buying and accepting wheat for storage, will, millers and grain buyers declare, create a serious situation for farmers of Washington, Oregon and Idaho. The problem will be especially serious for farmers because live stock everywhere will be rushed to market for lack of grain feed, and the mills can not supply a short feed market unless they can grind.

## Live Stock Quotations.

### At Omaha.

OMAHA, Neb., Sept. 9.—Hogs—Receipts 3800; market 20 to 30 cents higher; heavy, $19.10@19.50; mixed, $19.25@19.40; light, $19.40@19.65; pigs, $16.50@18.

Cattle—Receipts 15,000; market steady to 10@15c lower; native steers, $12@18; cows and heifers, $12.25@17.50; western steers, $10@15.25; Texas steers, $9@12; range cows and heifers, $7@11; canners, $6@7; stockers and feeders, $6.50@13.50; calves, $9@13.50; bulls, stags, etc., $7@11.

Sheep—Receipts 35,500; market steady. Wethers, $11.45@12.45; ewes, $9@11; lambs, $16.25@17.25; yearlings, $12.25@13.25.

### At Chicago.

CHICAGO, Sept. 9.—(U. S. Bureau of Markets.)—Hogs—Receipts 21,000; market closed fairly active; mostly 25 above Saturday's average; some mixed loads advancing more; good clearances. Butchers, $19.40@20.20; light, $19.50@20.30; packing, $18.65@19.30; rough, $17.75@18.50; pigs, good and choice, $18.50@19.

Cattle—Receipts 8000; good to prime native steers, strong; others slow, mostly steady; top natives, $19.20, a new record; butcher stock steady to 15c lower; calves weak; stockers and feeders steady to lower; beef cattle good, choice and prime, $17@19.20; common and mediums, $10.25@17; canners and cutters, $6.65@6.75; stockers and feeders, good, choice and fancy, $11@14; inferior, common and medium, $8@11; veal calves, good and choice, $18@18.75.

Sheep—Receipts 40,000; market steady to 25c lower; feeding lambs weakened most; best range lambs, $18@18.05; top natives, $17; lambs, choice and prime, $17@18; medium and good, $15.75@17; culls, $10@13.50; ewes, choice and prime, $11.50@12; medium and good, $10.25@1.50; culls, $4@8.

### At Portland.

PORTLAND, Ore., Sept. 9.—Cattle, steady; receipts 2125. Steers, prime, $12@13; good to choice, $11@12; medium to good, $9.75@11; fair to medium, $8.25@9.25; cows and heifers, choice, $8@9; medium to good, $5.75@7.25; fair to medium, $4.75@5.75; canners, $3@4; bulls, $5@8; calves, $9@12; stockers and feeders, $6@8.

Hogs, higher; receipts 1136. Prime mixed $19.25@19.60; medium mixed, $18.75@19; rough heavies, $17.75@18.25; pigs, $16@17; bulk of sales, $19@19.25.

Sheep, steady; receipts 587. Prime lambs, $13.50@14.50; fair to medium, $11@12; yearlings, $10@11; wethers, $9@10; ewes, $6.50@8.50.

## Portland Wheat.

PORTLAND, Ore., Sept. 7.—The grain market was quiet but steady at the close of the week. At the exchange buyers bid $60.50 for sacked oats, $52@53 for bulk oats, $69@71 for bulk corn and $53@53.50 for barley.

Millers are awaiting word from the food administration as to when flour buying for export will begin. The specifications are out, but no offers can be accepted at present, owing to the lack of tonnage.

Hop growers received a jolt Saturday, when word came that the brewing season was ordered closed on December 1. Hop picking is under full headway, but may stop any day. The brewers are believed to have enough hops on hand to carry them until December 1, and in that case they can use none of the new crop. Growers who have sold their hops on contract will, of course, finish picking and try to deliver them, but those who have not sold, and they are in the majority, see only a dead loss before them. On the whole, the federal order appears to have dealt a death blow to the hop industry of the Pacific coast. The far seeing hop men saw it coming and pulled out long ago, but others stuck to the game, hoping something would develop to revive the business.

### War Spoils Porters' Tips.

Pullman porters now demand a wage increase, saying that the war has halved their tip harvest.

## Spokane Stock Yards.

SPOKANE, Sept. 9.—The following is a statement of the business at the union stockyards here for the week just ended:

| | Cattle. | Clvs. | Hogs. | Shp. |
|---|---|---|---|---|
| Monday, Sept. 9 | 134 | 19 | 101 | 13 |
| Saturday, Sept. 7 | 114 | 19 | 13 | 245 |
